"At this time another canoe, containing an Indian named John Bernarr, my son, C. Lorraine, my daughter, Helen E., and my son, Theo, 7 years old, came in sight, and fire was opened upon them. Lorraine saw smoke arising from the bushes on the embankment and immediately picked up his shotgun and returned the fire, at the same time telling the occupants of the boat to lie down, which they at once did, and this undoubtedly saved the life of my daughter. Several shots were then fired in quick succession. At this point the fourth canoe, containing Mr. Harry Lincoln, of Dennisville, Me., and an Indian named Frank Lockwood, came round the bend. Mr. Lincoln saw the situation and the smoke arising from the bushes, and immediately seized his Colt's repeating rifle and fired in that direction. My son Lorraine called to him to go ashore and stay until he found who the villians were. He directed his Indian to put him ashore at once and pulled up the stream, landing him where he could get up to the embankment, as it was perpendicular from the river. The Indian also started and ran, thinking that Lincoln was following him. When Lincoln reached the spot he found the parties had fled.

"In the mean time, his canoe had floated off, and he was obliged to wade in to regain it. He then paddled up the stream a short distance and entered a cove, from which point he could see the place where the firing was done, and some distance above and below. He remained there about three hours watching, when just below the spot where the firing came from, it being the only place where they could land, two men came out from the underbrush, pushing out a canoe which they had concealed there, and, hurriedly jumping into it, pulled to the opposite shore and started down the river. They were distinctly seen by Mr. Lincoln, he taking an accurate description of their clothing and appearance.

"Some half an hour afterward Mr. Lincoln entered his canoe and paddled down the stream. After going about a mile he saw several people on the bank of the river, and landing, asked one of their number to paddle him down the river, as he wanted to catch Maj. Howes' party. He also asked them how long since they had passed, and if there had been any canoes down the river that day except Maj. Howes' party. They replied that there had been one down about half an hour before, with two men in it. Upon asking who they were, a man told him one of them was named Day, and the other Harry Trafton. He asked if those men owned guns, which was answered in the affirmative, and that they were Winchester repeaters, the only two on the river. He then proceeded down stream.

"During this time the other three canoes with their occupants had proceeded down the river some three miles, landing at the farmhouse of J. O. Flanders. Here we were received by the family, who extended to us every assistance and kindness in our heavy affliction. Here the camp equipage and baggage was discharged, so that we might proceed down the river with greater dispatch. I sent a dispatch from here by Mr. Flanders' son to Andover, to notify the sheriff and to get an undertaker at Woodstock, a distance of fifty-seven miles. Up to this time we had had no tidings of Mr. Lincoln. Near by Mr. Flanders lived a magistrate by the name of Samuel Fullerton, to whom I gave the circumstances of the murder. Mr. Fullerton and his son started immediately up the river to find Lincoln. After proceeding about two miles they met him coming down, when he detailed what information he had learned in relation to the men above mentioned. They at once consulted and advised with the settlers, who were greatly excited, and who immediately volunteered their services to arrest the parties who committed the deed. Some twenty-five men were sworn in as special constables, and at once started out on their mission.

"Upon our arrival at Andover, about 9 o'clock Sunday evening, the settlers turned out *en masse*, and the indignation and excitement were intense. The coroner and jury had been summoned, and were ready to proceed at once with the inquest. We were received by J. Allen Perley, the proprietor of the Newcombe House, and every kindness and sympathy possible were extended to us by the residents. The attentions paid by Mrs. Perley, Mrs. Newcombe, Miss Anna Newcombe, Mrs. Stewart and Mrs. Beverage were particularly touching. No sooner had we reached the landing than they took possession of the canoe containing the dead body of my dear wife and bore it tenderly to the hotel. They had strewn it with beautiful flowers, and their sad offices were of the kindest nature."

Mrs. Howes was the daughter of Gen. Luke Lyman, now the secretary and treasurer of the Dominion Bridge Company of Montreal. She was 38 years old, an accomplished lady and beloved by all that knew her. A sister Mrs. M. C. Dizer, with her husband, is now traveling in Europe.

Rev. Leo A. Hoyt, rector of the parish in which the murder occurred, has sent a letter to the Boston *Globe* in which he says that he saw in a Boston paper that "Major Howes's conduct had been perhaps a little arbitrary." Of this he says: "Nothing can be further from the truth. Major Howes, during his summer visits to this country, has made friends of everybody, and his whole manner has always shown his desire not only to receive pleasure, but to impart pleasure to all his surroundings. The same can scarcely be said of all tourists. As for the late Mrs. Howes, though she was not so generally known as her husband, yet whoever had the pleasure of her acquaintance felt that she was only known to be beloved. To fire from behind a stump at a pleasure party in which were women and children is a piece of cowardice and villainy of which we should suppose savages only could be capable.

"Care should be taken that an impression should not be left on the public mind that 'the settlers on the Tobique,' as the people of that district have been called in the papers, are not a lot of border ruffians, of whom such things might be expected. The people living on the Tobique River are as law-abiding and self-respecting a class of people as can be found anywhere. During the past summer they have been irritated beyond measure, and have suffered in silence. Their riparian rights have been invaded, and although the more intelligent of them know that the bills posted along the river forbidding these rights were waste paper, yet these bills were irritating to the ignorant and annoying to the whole population. The threats and oaths of those supposed to be in authority that they would shoot any one caught fishing in the river were insulting to the last degree. The term 'poachers,' applied to those fishing on their own ground or on that of their neighbors by consent, is a needless insult. Firing at persons spearing salmon is as illegal as the spearing itself, and firing in the air is not much better. People are not dogs that they should be fired at, nor crows that they should be frightened from mischief by the smell of powder."

Fishculture.

THE DIGESTIBILITY OF FISH.

BY PROF. W. O. ATWATER.

[Read before the American Fisheries Society.]

IN the course of an investigation upon the Chemistry and Food-economy of Fish, which has been in progress for a number of years, under the auspices of the U. S. Fish Commission, a study of the digestibility of fish has seemed desirable, and a beginning has been made in the form of experiments upon the comparative digestibility of the flesh of fish and lean meat. The object of the present paper is to give a brief outline of the main results. These confirmed, by quantitive test, the general impression that in fish we have one of the most completely digestible of food materials.

The question of the digestibility of foods is very complex, and it is noticeable that the men who know most about the subject are generally the least ready to make definite and sweeping statements concerning it. One of the most celebrated physiologists of the time, an investigator who has, I suppose, devoted as much experimental study to this particular subject as any man now living, declares that aside from the chemistry of the process and the quantities of nutrients that may be digested from different foods, he is unable to affirm much of anything about it. The contrast between this and the positiveness with which many people discourse about the digestibility of this or that kind of food, is very marked and has its moral.

One source of confusion is the fact that, what people commonly call the digestibility of food includes several very different things, some of which, as the case with which a given food-material is digested, the time required for the process, and the effect of different substances and conditions upon digestion, are so dependent upon individual peculiarities of different people and so difficult of measurement as to make the laying down of hard and fast rules impossible. Why it is, for instance, that some are made seriously ill by so wholesome a substance as milk, and others find that certain kinds of meat or vegetables or sweetmeats "do not agree with them," neither chemist nor physiologist can exactly tell.* Late investigations, however, suggest the possibility that the ferments in the digestive canal may cause particular compounds to be changed into injurious forms, so that it may sometimes be literally true that "one man's meat is another man's poison." But digestion proper, by which we understand the changes which the food undergoes in the digestive canal in order to fit the digestible portion to be taken into the blood and lymph and do its work as nutriment, is essentially a chemical process. About this a great deal has been learned within a comparatively few years, so that here we have many important facts that have not yet got into current literature.

*Things do not always, nor indeed, often come to hand exactly when they fit best, but, oddly enough, just as I am writing this the postman brings a letter from the recording secretary of the American Fisheries Society with the following statement: "By the way, I cannot digest oysters, raw or cooked, but can eat clams (both Venus and Mya) and can go to bed on the outside of a lobster mayonaise. Coffee ties a hard knot in the interior department, buckwheat cakes start my 'vinegar factory' to work on full time, beans cause the 'gas works' to be put in operation. This merely proves the adage about 'one man's meat, etc.'" The learned gentleman follows this by the statement that he has already passed the age of forty, at which a man is said to become "either a fool or a physician;" and gives a physiological explanation of his digestive temperament, which he attributes to dyspepsia "aggravated by nine months' diet on corn meal, ground cob and all, and sorghum syrup, in Confederate prisons." Of course it would be wrong to affirm that in this especial case it is the microbe that causes the protein of the oysters to be changed into compounds which make them disagree, or produces the disagreeable fermentations in the buckwheat cakes and beans, but somehow or other different food materials do produce very disagreeable effects in the digestive apparatus of different people, and the science of to-day explains this in part by the action of the digestive ferments, among which microbes play an important role.

The average man swallows, say six pounds of food and drink, meat, fish, potatoes, bread, coffee, milk, water, and what not, per day. Every twenty-four hours, then, all the solid substance, all the protein, fats, carbo hydrates, and mineral matter of this quantity of food, except the small portion that passes through the alimentary canal undigested, must be either dissolved or divided into such minute particles as to be able to get through the microscopic passages that permeate the walls of the canals and thus find their way to the blood. To judge accurately of the nutritive value of our food, then, we must know not simply how much of the different nutritive ingredients, the protein and fats and carbo hydrates, it contains, but how much of each of these nutrients will be digested. This is a matter that can be determined more or less accurately by experiment. But a great deal of labor is needed to make the experiments accurate, the line of research is new, the methods are not yet perfectly matured, and the results thus far obtained, though extremely interesting and valuable, are still far from complete. The side questions, such as differences in the digestive apparatus of different persons; the effects of exercise and rest, or mode of preparation of the food, and of the flavoring materials and beverages taken with it, tend to complicate the problem of digestibility, yet even here experimental research has something to tell us. In brief, we have to-day a tolerably fair idea as to what proportions of the ingredients of a good many of the more common kind of animal and vegetable food materials, meats, milk, butter, cheese, eggs, bread, potatoes, are ordinarily digested by healthy people. But the list of materials the digestibility of which has been accurately tested is far from including all the more common kinds of food, and more experiments are needed, even with the foods that have been tested, to show the variations in digestibility by different classes of people, and under different conditions. The only direct experiments on the digestibility of fish by men or other animals, so far as I know, are those described in this paper.

THE CONSTITUENTS OF FOOD.

But before going further I ought, perhaps, to say a few words about the nutritive ingredients of fish and other food materials and the technical terms which we are coming to apply to them in the chemical laboratory. Fish, like meats and other food, are made up of different constituents. These we may classify as follows:

1. Edible substance, *e. g.*, the flesh of meats and fish, the shell contents of oysters. wheat flour. 2. Refuse, *e. g.*, bones of meat and fish, the shells of oysters, bran of wheat.

The edible substance consists of: 1. Water. 2. Nutritive substance or nutrients. Leaving out of account the refuse and the water, we may consider simply the nutriments. Speaking as chemists and physiologists, we may say that our food supplies, besides mineral substances and water, three principal classes of nutritive ingredients, viz.: Protein, carbo hydrates and fats; and that these are transformed into the tissues and fluids of the body, muscle and fat, blood and bone, and are consumed to produce heat and force.

The principal nutrient of fish is protein. In chemical composition the protein of fish is essentially the same as that which makes up the bulk of the nutritive material of very lean meat. In both lean meat and in fish it is called myosin. It is very similar to the albumen (white) of egg, the casein (curd) of milk and the gluten of wheat. The protein compounds are sometimes called "flesh formers." They are the most important of the nutritive ingredients of food, because they are the only ones that contain nitrogen and they alone make muscle, tendon and other nitrogenous tissues of the body. Of the fats we have familiar examples in the fat of meat and fish, lard, butter, olive oil and other kinds of oil, including the oil of corn and wheat. Some kinds of fish, as salmon, shad and mackerel, contain considerable fat, but the flesh of codfish, haddock, pike, perch, bass, bluefish and the most of our common food fishes contain very little fat, less, indeed, than is found in even the leanest meat. Of the carbo hydrates, sugar and starch are the most important. The carbo hydrates make the chief nutritive material of vegetable foods. Oysters and clams contain a certain amount of carbo hydrates, as does milk. These different substances in food have different kinds of work to do in nourishing the body. The protein compounds, which are the only ones that contain nitrogen, make the muscle, tendon and other nitrogenous tissues. This the carbo hydrates and fats, which contain no nitrogen, cannot do. The carbo hydrates and fats serve for fuel, yielding heat to keep the body warm and muscular strength for work. Protein compounds can also serve for fuel.

Since protein can do the work of the carbo hydrates in furnishing heat and muscular power, and has a work of its own to do in building up the tissues of the body which the other nutrients cannot perform, the protein compounds are the most important of the food ingredients. And when we compare the quantities of the different nutrients in food with the market prices of foods, we find that protein is by ar the most expensive. It costs, pound for pound, several i mes as much as fats and carbo hydrates. The fats are more expensive than the carbo hydrates, and have a higher fuel value. In short, fish furnishes protein to form muscle and other nitrogenous parts of the body. Some kinds of fish contain considerable fat also. Since the protein is the most important and the most expensive of the food ingredients, and fat is more costly and valuable than carbo hydrates, it is evident that fish is an extremely valuable article of food. Indeed, the importance of fish in domestic and in national economy has not yet come to be justly appreciated.

Our national diet is one-sided; we eat too much of the fats and carbo hydrates and relatively too little protein. This comes from our enormous consumption of highly fattened meats and of sweetmeats. As population becomes denser and economy becomes more necessary, we shall have to devote relatively less of the productive power of our land to meat production. If we can replace part of the meat that we consume by fish, it will be greatly to our advantage as regards both health and purse. In the older and more densely populated countries of the world, as Europe and Asia, the food of the people is mainly vegetable, and is relatively deficient in protein. To produce meat to supply protein seems impossible. It thus appears, that, the world over, by fish-culture, the rivers and the sea are made to rightly supplement the land in the production of food for man. I hope in another place to enlarge upon these statements, and to cite statistics to illustrate them, but must now go back to my subject, the digestibility of fish.

THE DIGESTIBILITY OF FISH.

There are two ways of studying experimentally the digestibility of fish as of other foods. One is by experiments in artificial digestion, in which the food material is exposed to the action of the digestive juices in the laboratory, in apparatus fitted for the purpose. The other is by direct experiments with man or other animals. A series of experiments upon the artificial digestion of fish in gastric juice have been made by Messrs. Chittenden and Cummins, and reported in Commissioner's Report of the Commission of Fish and Fisheries of the United States for 1884, page 1,109. In the introduction to the account of their work these experimenters speak as follows:

"Few experiments appear to have been made on the digestibility of fish; this is the more strange when we consider

what an important item of food fish constitutes, particularly along our seaboard. * * * As Voit remarks, 'Nothing certain is known regarding the digestibility of different kinds of fish, although much is said concerning it. Probably digestibility is in part dependent upon the nature of the fat present and the manner of its distribution; thus the presence of a difficultly fusible fat with considerable stearin would tend to hinder digestibility (as in mutton); the same thing probably occurs when the contents of the sarcolemma are permeated with much fat (as in the lobster and eel).' This statement at once suggests the probability of great variation in the digestibility of the flesh of any one species, dependent on a large number of conditions, which, in the case of fish particularly, are somewhat difficult of control; thus age, sex, food, period of spawning, length of time they have been preserved, are a few of the many natural conditions which would tend to modify the digestibility of the flesh and render generalizations from even a large number of results somewhat uncertain."

The outcome of their work is expressed thus:

"The results of the analyses show plainly that the method adopted is as good as could be expected, for it must be remembered that the two results obtained from each sample of flesh are not merely from duplicated analyses, but from duplicated digestions as well, and in these, extending as they do over twenty-two hours, with slight variations in temperature and agitation, small differences are to be expected. The very great divergence noticed, however, in the results obtained from different samples of the same species of flesh show at once that there are other conditions, such as age, etc., which affect the digestibility of the flesh more or less, so that, in order to obtain results from which to draw strict generalizations, it would be necessary to experiment with fish of different species, of like age, sex, and reared under like conditions. As examples of this we have the very divergent results from two samples of veal, and also of two bluefish (88.69 and 73.44). As direct evidence that age, sex, etc., do exert a modifying influence on the digestibility of flesh, we have three experiments on the flesh of the lobster; one with a small young lobster, a second with a large female, and a third with a large male of the same species. The duplicate digestions gave fairly concordant results; the average relative digestibility being for the young specimen 87.81, for the large female 79.06, and for the male 69.13. This shows plainly some modifying influence in the flesh itself. In composition, so far as the solid matter is concerned, there was no appreciable difference in the three samples. Bearing in mind, however, these possible variations, it is very evident from our results that the average digestibility of fish-flesh is far below that of beef similarly cooked. In but two instances, in the case of shad and whitefish, does the digestibility of fish-flesh approach that of beef, although, from the average of our experiments, several are as easily digestible as mutton, lamb and chicken.

"Pavy states that fish with white flesh, such as the whiting, etc., are less stimulating and lighter to the stomach, or more easy of digestion than fish with more or less red flesh, as the salmon. Our experiments confirm this statement, so far as digestibility is concerned. Thus the average digestibility of the salmon and trout is considerably below the average of the more digestible whitefish. The difference between the digestibility of the light and the dark meat of the same flesh is somewhat striking, as in the case of the shad, where the digestibility of the former was found to be 97.25, as compared with beef, while the dark flesh was 87.32. A similar difference, though very much smaller, is to be noticed between the light and dark meat of the chicken.

"This difference in digestibility is in part due, without doubt, to the amount of fat present, for, as Pavy states, in the flesh of whitefish there is but little fat, it being accumulated mainly in the liver of the animal, while in redfish there is more or less fatty matter incorporated with the muscular fibres. For a similar reason, eels, mackerel and herring are, according to Pavy, less suited to a delicate stomach than some of the whitefish, and our experiments show that in digestibility two of them stand below the more digestible whitefish; mackerel, however, from our single experiment with the white portion of the fish showed a comparatively high digestibility. In all of our experiments, however, with whitefish, we rejected the outer layer of dark flesh, except in the case of the shad. The varying differences in digestibility are not to be considered as due wholly to differences in the amount of fat in the flesh; thus the flesh of fresh cod contains but little fat, and yet it is one of the most indigestible of the whitefish experimented with. This agrees with Pavy's experience, 'that it is a more trying article of food to the stomtch than is generally credited.' Again Pavy makes the following statement, based on his experience in fish dietetics 'of all fish, the whiting may be regarded as the most delicate, tender and easy of digestion. The haddock is somewhat closely allied, but it is inferior in digestibility,' while 'the flounder is light and easy of digestion, but insipid.' With all these statements our results agree perfectly, assuming the whitefish of our experiments to be analogous to the English whiting."

It thus appears that Messrs. Chittenden and Cummins found considerable divergence in the digestibility of the flesh of fish of different kinds. These they attribute in part to the varying proportions of fat, the fatter fish being the less digestible, and in part to other characteristics of the flesh. My own impression is, that experiments on the actual digestion in the alimentary canal, in which other juices as well as the gastric come in play and other conditions are different, would show less difference in the digestibility of fish of different sorts than these investigators found in their experiments in artificial digestion with gastric juice alone, and also that there would be less variation in the actual quantities and nutritive material digested than the statements made by the authors quoted by Messrs. Chittenden and Cummins would imply. For we must not forget the distinction between the quantity digested and the ease of digestion. But, of course, this is a matter to be determined by actual experiment and observation.

The ways in which the experiments for testing the digestibility of foods by men and animals are made are very ingenious and interesting. Physiologists use the salivary glands, or stomach or intestine of a living animal, much as chemists do their bottles and retorts and test-tubes. It is easy to get into the way of regarding an animal as simply an organism manifesting certain reactions under given conditions, and in not a few European laboratories a janitor is readily induced by the price of a few months' supply of beer, or a student by his scientific ardor to take this same altruistic view of his own physical organism. In the German laboratories, particularly, one finds not only the needed apparatus, but what is no less important, trained assistants and servants, so that one is relieved of much of the time-consuming and disagreeable detail of experimenting, which is so much of an obstacle with us.

[TO BE CONTINUED.]

THE NEW YORK FISH COMMISSION.—The report of the Fish Commissioners of New York, sent to the Legislature Jan. 24, 1888, has just been issued by the State printer. Although somewhat ancient history now we will review it next week.

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

FIXTURES.

DOG SHOWS.

Aug. 27 to 31.—Toledo Dog Show, Toledo, O. John Farley, Sec'y

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. Entries close Sept. 1. C. W. Robinson, Secretary.

Sept. 18 to 21.—Dog Show of the Westmoreland County Agricultural Society, at Greensburg, Pa. John S. Sell, Secretary. Entries close Sept. 15.

Sept. 18 to 21.—Third Annual Dog Show of the Westmoreland County Agricultural Society at Greensburg, Pa. H. S. Branot, President.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderiffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus, O. Thos. R. Sparrow, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6512.**

DOG AND SKUNK.

Editor Forest and Stream:

Mr. Elmore's statements as to the effect on a dog's scenting powers after an encounter with a skunk would appear to me to be entitled to more consideration than one coming from a fox hunter, on the presumption that his references are to beagles and not to foxhounds. Beagles are much more apt to work over open ground, where their actions can be observed and something more than inference be obtained as to their actions. Foxhounds in nine cases out of ten strike trails where unobservable, and what they do and how they do it is pretty much a matter of inference. From an experience of twenty years of fox hunting, I can say that I never could see any effect whatever on a foxhound's scenting powers from an encounter with a skunk, and have repeatedly known hounds to take up trails soon after a skunk job, which left them fairly reeking with "odor mephiticus." Hounds rarely strike either a fox or skunk in the open, where their behavior can be observed, and I do not see how it can be determined whether they are slow or quick to take up a trail when they are hidden in the dense coverts that either "varmint" is apt to run in.

It may be that the habits of both coons and foxes (and for that matter hounds) are different in the comparatively open country of New England from what they are in the brush and thickets of the Southwest and Middle States, which may explain the difference between my observations and Mr. Elmore's, for certainly ninety-nine out of one hundred fox hunters of my acquaintance will say that a dose of skunk does not in any way impair a hound's nose. This is not to be taken as adversary to Mr. Elmore himself, but as suggested, further explanation and more minute accounts from him on a subject that puzzles most dog men. For myself, I fully agree with your statement that the mystery of a dog's "nose" is one of "those things that no fellow can find out." It seems like nonsense to talk of a dog's "smelling" anything after a full dose of skunk essence; it would be like a man struck by lightning admiring the hues of the sunset.

VULPICIDE.

FAYETTE COUNTY, Pa., Aug. 27.

Editor Forest and Stream:

My dog Rover has treed a coon in less than ten minutes after killing an old skunk; but it was a hot track, for he barked on it, which he never did before, except after a coon had jumped the tree, when he always barks on track. He has always been death on skunks. This season he has already killed twelve. A few nights ago we got three coons with him and four skunks, but got the coons before the skunks. My other dog, Nero, is not a skunk dog, and I find he is beating him now, because I am hunting coons that are out in open fields, as they are catching poultry. I have just returned from Blue Hill, Franklin, where coons have caught a hundred hens and chickens from one farmer, and thirty from another. Spent two nights there; the last night got four coons, the first night one; Nero treed them. Rover was busy on skunks, killing four; have no trouble with him usually, for skunks are mostly in the open fields. I notice the other dog gets the coons when Rover kills skunks; and I think Mr. Elmore's idea is about right in his views as published in last FOREST AND STREAM. J. G. L.

THE COON'S "WHICKER."

Editor Forest and Stream:

In reading current number of FOREST AND STREAM, I note that Mr. N. Elmore, in his communication on coons, states that two opinions prevail, or to be more accurate, that various opinions prevail as to the racoons emitting a cry at night. It hardly seems credible that this should be the case.

The writer was brought up among the hills of old Alleghany county, where the cry of the coon was as familiar a sound as the squawk of the "high-hole" or the chatter of the chipmunk. When a boy, at least at two different times he was the part owner in young coons, and was able to fully identify the cry of the little rascals, which in their half-tamed state made their home under the horse barn, with the "whicker" of the cunning depredator of the corn fields and the apple orchards during the early evening or morning.

It's a curious commentary on the scientific lore of the day that our friend "Procyon" should have been saddled with his affix of "Lotor," because of a fancied habit of washing his food; while the fact of his having an exceedingly loud voice, which he exercises in a very lively manner at frequent intervals between sunset and sunrise, should be a matter of so much doubt.

I well remember the first time hearing coony's cry; how my imagination led me to believe the long, wailing "whicker" to be the cry of a wildcat or an "Ingun devil" on the warpath. A speedy trip to grandfather's knee to beg an explation of the prospective danger brought the encouraging infomation that it was only a coon. As age came, a greater familiarity with coons, coon dogs and coon hunts was developed, and the charming solo of our friend in the cornfield became an old story.

Surely there are plenty of your subscribers who have either heard the wild coon in the field, or his half-domesticated relative on the wood-pile or under the barn. Or better yet, who, having cut down some coon tree and killed Mr. and Mrs. Coon, have found safely stowed away in the hollow tree half a dozen little coons, who loudly voiced their desire to be let alone in a baby-like wail, which only needs the development of lung power and the practice of the adult coon to be at once recognized as the voice of our friend of the cornfield.

Of course coons cry, or as we used to say up in York State, "whicker." A SUBSCRIBER.

Editor Forest and Stream:

Coons do halloa. There are those, whose judgment about coons is entitled to much weight, who say they do not. This is how I know: Last December I caught three old ones, one female and two males; tried to keep them and study their habits, but they made so much noise, fighting, talking and pulling the large wire cage, that we could not sleep nights, so disposed of the two males, keeping the female. They certainly did holloa and enough to break up a camp meeting too. Tried all ways to make them hibernate; at this time we were having some of our coldest weather in January. In Cambridge, Mass., where I had them, the thermometer went below zero several nights, and we had the windows in the attic open, but it was not cold enough to make them stay in the warm box fixed especially for them. In feeding them, I found they did not care for meat if they could get nuts; fed them on peanuts and English walnuts. The three weighed 48½lbs. when caught.

I believe coons breed every year, but I don't think they breed until two years old, for I have killed females in the middle of August, this year, that weighed 11lbs., that had never bred, and that is too large for this year's litter. Caught three young ones July 7, that together weighed less than 6lbs.; have them alive now, and they don't weigh over 4lbs. each now.

Have never heard of any coons being bred in captivity, but have known of its being tried. J. G. L.

ROB ROY KENNELS SALE.

DETROIT, Mich., Aug. 17.—*Editor Forest and Stream:* The drawing of the dogs of the Rob Roy Kennels took place at Dr. Saunders's office, 230 Woodward avenue, Detroit, at 8 o'clock P. M., August 15. Duplicate so fall tickets sold were placed in a closed basket; and six tickets, each containing the name of one of the dogs, were placed in another basket.

The two baskets were held, and constantly shaken, by two members of the committee, while a third member, blindfolded, would draw a ticket from each basket and hand them to the fourth member of the committee, who annouced the number of ticket drawn and the name of the dog on the other ticket, and then handed both tickets to the clerk for record. The number then drawn was put back into the basket for a chance at the remaining dogs, and the drawing thus continued until the last dog was drawn. One hundred and five tickets were sold, and only duplicates of these were placed in the basket.

Ticket No. 36 drew May Queen, held by M. M. McMillan, Mahanoy City, Pa.

No. 237 drew Dryad, held by R. J. Gaines, Greenfield, Iowa.

No. 125 drew Dashing Berwyn, held by F. Kinsinger, 98 Park avenue, Walnut Hill, Cincinnati.

No. 49 drew King Craft, held by E. O. Damon, Northampton, Mass.

No. 103 drew Kelpie, held by L. P. Edgerton, Meriden, Conn.

No. 40 drew Doncaster, held by J. E. Patterson, 27 Garfield avenue, Detroit, Mich.

I wish to publicly thank the brother sportsmen who so kindly came to my assistance in disposing of the Rob Roy Kennels. H. E. COOK.

DETROIT, Mich., Aug. 17.—We, the committee that had charge of the drawing of the Rob Roy Kennels, hereby certify that we were disinterested and unprejudiced in the matter; that we did not know where any of the numbers were held, and that the drawing was done with great care and perfect fairness, every number taken having an equal chance for each dog.—DR. M. V. B. SAUNDERS, GEO. N. HERRING, C. G. MECHEM, WOOD CAMPBELL, Committee.

BUFFALO DOG SHOW.

BUFFALO, Aug. 24.—*Editor Forest and Stream:* We have made these extra classes, as follows: The class for cocker spaniels "any other color" is divided by sex; the spaniel puppy class is divided by color, a class for liver or black, and one for any other color, and a class is made for ruby or Prince Charles spaniels. The special announced for the best pair of black greyhounds should read black, or black with white markings. The Wacouta Kennel gives $5 for the best American bred mastiff; donor does not compete. A pug fancier gives $25 for the best pair of pugs under one year, bred and owned by exhibitor. Please state that Mr. H. W. Huntington is the donor of the specials, a gold lined silver match safe and a picture of the Waterloo winner, Princess Dagmar. Entries will close Sept. 1. J. OTIS FELLOWS, Supt.

THE TWO DOG CLUBS.

Editor Forest and Stream:

With reference to the letter of Mr. Anthony to Dr. Perry, published in your issue of this week, I deem it better not to make any denial, but to have Mr. Anthony make the *amende honorable*, which as a gentleman he is bound to do when I can so easily prove to him that his statements are peculiarly at fault.

For that purpose I herewith inclose in a sealed envelope every communication I have in my possession which I received from Mr. Fellows or Mr. Robinson since Buffalo show was proposed and up to the date of Mr. Anthony's letter.

I have also written to Mr. Anthony the following letter:

James L. Anthony, Esq., New York:

DEAR SIR—I am quite at a loss to understand why you should have written about me as you did to the papers and Dr. Perry. I cannot believe that you evolved such a chemerical tale, but rather that you have been assured that what you wrote were facts. In my intercourse with you I have always found you a gentleman, and a gentleman is never unwilling to repair a wrong he has inflicted. I therefore believe that upon evidence being produced you will withdraw all you have said in your letter as publicly as you made the charge. For that purpose I have sent in a sealed envelope under care of the editor of the FOREST AND STREAM all the letters I have in my possession from J. Otis Fellows, as well as the only communication received from Mr. Robinson since Buffalo show was proposed to be held and up to the date of your letter.

I can assure you you have done me a grievous wrong, and I must, in vindication of myself, ask you to call at FOREST AND STREAM in person and see the letters. You will then see that there is only one course for you to take. It is not for me to contradict your allegations, but for you to gracefully acknowledge that your letter was written under a complete misapprehension of the facts.

It is my purpose to send FOREST AND STREAM and *Turf, Field and Farm* a copy of this letter, with instructions to publish unless they receive a letter from you; for the grossly libelous cannot be passed over in silence. Yours respectfully, JAS. WATSON.

The conditions under which you will show Mr. Anthony the letters are as follows: That he will give you his word of honor to regard them entirely as confidential communications, being personal between the writter and myself; and that he will neither copy them nor quote from them in any way, shape nor form. Further, that he agrees, if he still maintains that they support his position, that the letters, together with any letters of mine in the possession of Mr. Fellows, be referred either to Mr. W. H. Child, secretary of the Philadelphia Kennel Club, and late president of the A. K. C., Mr. J. H. Winslow, treasurer of the Philadelphia Kennel Club and delegate to the A. K. C., or Mr. Dudley, a member of the Philadelphia Kennel Club and a lawyer of prominence, besides being a gentleman interested in dogs. Or if Mr. Anthony prefers it, let all three act, providing they will kindly undertake the task, but I should prefer one as a matter of accommodation, for I would at once go to him and have the thing settled, whereas to get a committee together in Philadelphia at this time of year is very difficult.

Should Mr. Anthony decide that he has done me an injustice, and decide to retract his statement regarding myself, I should feel obliged if you would accept on my behalf any apology he may desire to make, and see that the letter he may write is as complete a vindication of my character as you think his letter to Dr. Perry entitles me to receive.

I do not think I can possibly give stronger proof that I have not had the slightest connection with the course adopted by the Buffalo Fair authorities than by adopting this course.

JAS. WATSON.

[Mr. Anthony had not called at this office up to the time of our going to press.]

Editor Forest and Stream:

There are men in the A. K. C. who *think*, and who are sincere in their desire to promote the real interests of dogs, dog shows and dog owning, and they are not to be blamed for believing that the A. K. C. is the channel through which this can best be done. I do not think that anybody, be he ever so determined a "kicker," doubts the sincerity of Messrs. Peshall, Collins, Elliot Smith, Winslow or Drake (I have just learned that the last two are delegates). I do not lump them in one lot, for they differ, as all men do, but they are alike in honest intent. To them, and to the others who share their views, I would respectfully commend a study of A. K. C. methods in the past, what have been the switches that have shunted it off the path of right and wisdom. Remember that present promise of the A. K. C. is only *promise* after all, and see if you cannot find in its past history just as fair promise, and under as good leadership as it now has, and see if the promise was not frustrated by proceeding in just the same courses that it is now following.

Is the present President of the A. K. C. one whit honester or of wiser judgment than Mr. Elliot Smith? Are Messrs. Winslow, Collins, Peshall, Drake, Smith, etc., clearer-headed or more devoted to the right than Messrs. Porter, Nickerson, Morgan or Child? Have you not still among your associates those who have been guilty of as great disgraces as "Construction," etc.? What possible guarantee do you offer that the future will be an improvement on the past? The very worst disgrace the A. K. C. ever suffered was the Beaufort-Patti M. drama. The actors in it still remain in your fold. What have you done about it? Will you say that the A. K. C. is composed of gentlemen who would not be guilty of discreditable conduct? Faugh! that rot was shoved under our noses at Philadelphia when Mr. Morgan and I labored for some assurance of protection of exhibitors from injustice at the hands of clubs, and right on top of this assurance we had the double dose of bogus medals and the Chicago special, both of which passed uncensured, and now Mr. Belmont submits that the A. K. C. has approved of these disgraces, while the public has so far supposed that its sin was only one of neglect!

Among the great obstacles to the success of the A. K. C. in gaining public respect have been its hide-bound exclusiveness, its arrogance and intolerance of honest criticism. Now just take a sober think and say if in all its history there was ever anything proposed or done so exclusive as Mr. Belmont's practically declaring that "exposing" could only be done through official action of the A. K. C? Was ever anything so intolerant as his saying that the A. K. C. was above "antagonizing"? Was there ever anything so arrogant as his directing Mr. Vredenburg to issue an edict without giving any authority for it? In the sins of the A. K. C. of the past, was there ever one grosser than the assumption of Mr. Child's executive functions by Mr. Vredenburg? Was there ever a wilder proposal than that of an "official gazette" supported by the private purse of one individual? Was there ever a more bare-faced trick than the proposal for associate members?

Mr. Belmont (and I think others) have dwelt on the "misrepresentations" that have been made concerning the A. K. C. This may refer to me or it may not. In either case I don't care a fig, for any one who has ever criticised the A. K. C. has a right to try on the shoe. Now, I challenge any one to point out where *I* have made one representation about the A. K. C. that I did not support by *facts*. What I have *asserted* I can *prove* and *have* proved. Such inferences as I have drawn are clearly deducible from the facts I have given. I think that Messrs. Watson, Mason, Osborne, etc., are all also ready to defend anything they have said or written. Now, you have talked about "misrepresentations." I return the compliment and defy you to the proof.

The temptation of securing recognition for wins at their shows, with the fear that your ban may lessen their entries, may induce clubs to come in under your banner; but do you think that *such* courses tend to your elevation in public respect? And will you not admit that public respect is the only foundation for your permanent existence, and without the respect and confidence of the public the A. K. C. *must* go.

Now I ask all believers in the A. K. C. to take a sober, dispassionate view of what the A. K. C. has done, and say if the public is warranted in trusting to its present apparent good intentions. It was founded on the fundamentally wrong principle, that dog show clubs only were entitled to representation (field trial ones hardly come within the scope of the present inquiry), on the assumption that there were no other distinct or opposing interests in doggy matters, and its very first step was a bulldoze in ostracizing all shows not given by "members of this association." Had the counsels of Mr. Morgan and others been listened to all shows held under A. K. C. rules, respectable in entries and worthily judged, would have been recognized, but that wouldn't have bulldozed members into its fold, and the necessity of winning public respect and confidence was thus done away with, and the inevitable consequences ensued. It has always tried to rule by "ring" methods and selfish appeals, with an utter disregard of the rights of the exhibitor as against "a member of this association." At present the idea seems to be one of plutocracy, which is a system of government that I don't think thrives, except perhaps in New York. There is undoubtedly a war between the A. K. C. and N. D. C. Who instituted it, I don't care, nor is it germane to the question; the whole question has been put before the public and they can decide for themselves; but it *is* pertinent to point out that the arrogant, selfish, domineering methods of the A. K. C. managers, and the boot licking of the toady division, that have several times laid it on the rocks in the past, are now the tactics relied on by A. K. C. champions. Objections to its practices are met by shifty evasions, public demands are choked off with tubs to silly whales, and the invariable rule is still in force, "Do nothing for the public until we are clubbed into it."

Be the outcome of the war what it may the A. K. C. will suffer. A victory and the dissolution of the N. D. C. would simply inflate the A. K. C. emperors to such a degree that the frog and ox drama will be repeated over again, and Cologne will be distanced by the explosion's fragrance. You will say that I am a prophet of evil, but at the same time, you who honestly care for the A. K. C. as a public means to a public end, will do well to think a little, and don't you emulate the historic frog or the proverbial ostrich.

W. WADE.

HULTON, Pa., Aug. 18.

Editor Forest and Stream:

The statements which have been made that the printing of the names of Messrs. Broos, Cook, Mr. and Mrs. Hughes, Hopf, Harrison, Nash, Saunders, Sawyer and Taylor in the pamphlet sent out to the breeders of America was an intentional act of Dr. Perry's to blind the public needs an early and emphatic denial on my part. It is claimed that these members have resigned from the National Dog Club. Mr. Harrison has resigned, and it was so stated in all the prominent sporting papers in the United States. The appearance of his name, which has led to criticism, was an error of the printer, and I much regret it escaped my notice. Mr. Hopf withdrew from the executive committee and the club, but on the intimation that he might reconsider his decision his resignation, at my request, was "laid on the table" at our meeting.

As to the other members mentioned they have not resigned. With gentlemen it is always customary for them to first ascertain and pay what they owe their club before resigning. No club of gentlemen will accept a resignation, nor would any gentleman send in his resignation before his dues had been paid. As the members whose names we have mentioned have not paid their dues the National Dog Club will refuse doubtless to accept their resignations, but will drop them from the membership list at its next meeting. Many clubmen contend that once a list of charter members is properly made up it can never be rightfully changed. In other words, that original list should stand unbroken, whether or not the members have resigned, are alive or dead. Be that as it may, however, that there might be no room for criticism, and advised by Dr. Perry, I instructed the printer to have the names of those who had resigned taken from the list—which had been electrotyped—and I was not aware that that had not been done until notified by Dr. Perry.

I then immediately telegraphed to all the sporting papers and asked them to make the correction. As I was so busily engaged on designs for our club medals, I had directed the printer to read his own proofs, and enclose and mail the pamphlets at once. Nor was the matter of names the only error. If the recipients of the first lot of pamphlets will look between pages two and three they will see that one entire sheet was first left out and subsequently glued in. The mistake was only discovered by me by the merest accident, after the pamphlets were ready to be mailed, after, in fact, they were in the envelopes.

In this connection it should be borne in mind that the tendered resignation of Messrs. Hopf, Saunders, Cook and Harrison had already appeared in print with no little flourish. It is, therefore, absurd—even without the explanation which I have already made—to suppose the error of retaining the names was intentional. Again had we aimed at effect we certainly might have given in an added list the names of those breeders who have applied for admission and now await the action of the executive committee.

The following is a complete list of those who would withdraw from the National Dog Club: Messrs. Broos, Cook, Mr. and Mrs. Hughes, Hopf, Nash, Saunders, Sawyer and Taylor.

H. W. HUNTINGTON,
Secretary-Treasurer National Dog Club.

AMERICAN GORDON SETTER CLUB.—Baltimore, Aug. 21.—*Editor Forest and Stream:* To inform the admirers of the Gordon setter of the first fruits of the American Gordon Setter Club is the object of this letter. The secret of success is success. I am officially informed by the A. K. C. S. B. committee that a class has been made in the Stud Book for Gordon setters. I would advise all owners of Gordon setters to re-enter in their proper class. I shall do so at once. The gentlemen of the Virginia Field Sports and Bench Show Association having seen the justice of our cause, have made a class at their coming show in October next, 9, 10, 11, 12, for Gordon setters. I hope owners of Gordons will show their appreciation of the same by entering their dogs. The American Gordon Setter Club has donated a solid silver cup, the value of which is $25, for the best Gordon setter, dog or bitch, in the show. The club is filling up nicely with members. We have met with great success. The club has come to stay, as the above would plainly show. Justice is mighty and must prevail.—H. MALCOLM. The committee of the American Gordon Setter Club have changed Section 6 in their constitution to read as follows: Sec. 6.—The entrance fee for all members admitted on or before Sept. 1, 1888, shall be $3 each, which sum shall also include the annual dues to Sept. 1, 1889. On and after Sept. 1, 1889, the annual dues shall be $3, and there shall be an initiation fee of $2 in addition for new members after Sept. 1, 1888, as annual dues for the current year, both of which shall be payable at the time of election. The annual dues for each succeeding year shall be payable on Sept. 1 of each year in advance, and any member whose dues shall remain unpaid for the period of three months, shall, after due notice, be suspended, and if after a lapse of thirty days after suspension the dues still remain unpaid, shall without further notice cease to be a member.—ISAAC T. NORRIS, Sec. A. G. S. C.

THE FOX-TERRIER SHOW.

THE third annual show of the American Fox-Terrier Club was held at Saratogo Springs last week. A new departure was made by the club, and classes were provided for the prominent breeds of other than fox-terriers. This move was not well supported by fanciers, and with the exception of Irish and bull-terriers, entries were very few, and many of the classes had not a single representative. There was a grand display of smooth-haired fox-terriers, nearly all of the well-known cracks being present; 31 of the 80 entries in these classes were from the Blemton Kennels, and a grand lot they were, capturing every first and second prize, except one of the latter. The puppies were a very good lot, and a great improvement over those that have appeared at any previous show. Any one with plenty of money can own champions, but the honor of a win with them is not to be compared to the credit obtained by the fortunate breeder who brings out a world-beater. We have in this country as good a lot of fox-terriers as can be found anywhere, and we shall look to see improvement in the puppy classes at future shows much more marked than has been apparent in the past. We regret to say that the attendance was very meager. Like the two previous shows of the club held at Newport, the gate was very nearly nothing, showing conclusively that society as represented at our best two watering places does not take kindly to the fox-terriers, and we have no doubt that the club will accept the verdict and in future hold their shows in New York or some other place where the public will appreciate and support their efforts to popularize the gamy little dog. John Reed superintended the show, and the dogs were benched and fed by Spratts Patent. Mr. James Mortimer judged all classes. The show was held in the Spring street Casino, a large building that would comfortably bench 500 dogs. The building is dark and not well ventilated, although it lights up and shows well at night.

Judging began a few minutes before 12 and was finished soon after 6. In the champion class for smooth dogs Lucifer and Bacchanal were respectively first and second. Both were in elegant condition as were all of the Blemton Kennels' dogs. Mr. Hopkins is deserving of great credit both for the form in which he brings his dogs into the ring and the excellent manner in which he handles them while they are before the judge. Valet, also entered in this class, was absent. In the bitch class the order was Rachel, Diadem and Marguerite. The only other entry, Village Belle, was absent.

The open dog class brought out a lot of good ones. The judge selected for first place Blemton Rubicon, a puppy whelped in October last year. He is a capital puppy and is a credit to his breeder. He is very good in neck, body, back and quarters, and has capital legs and feet, and is a beautiful mover. He is only fair in head, his skull being a bit domed, and his head is also too large; he has a powerful set of jaws with good teeth; his ears are not carried right, and he lacks expression and does not show enough of fox-terrier character; he can stand straight in front and Hopkins made him do so, but at times he is decidedly bow-legged; he might be better in loin, but he is not yet furnished and may improve at this point. He is not a dog that will "grow on," and he will not be able to stay with the good ones for a long race. He was also placed over New Forest Ethel in the specials, a decision with which we cannot agree. The most serious fault to be found with Ethel is that she does not carry her ears properly, but Hopkins handled her so that she carried them very nearly right on this occasion. Dusky Trap, placed second, should have won over Rubicon, and it was a close call between the latter and Raby Mixer for third place. Mixer has greatly improved since we last saw him, having let down in chest, which mitigates his fault of legginess. The remainder of the class were properly placed, Earl Lycester and Resolute were absent. There was nothing new in the bitch class worthy of note. New Forest Ethel, looking much better than when we saw her last, was an easy winner; she is a very taking bitch, with a beautiful head and neck and better shoulders than we often see. She is also good at other points, and except for her badly carried ears, has no serious faults. Richmond Dazzle, placed second, was looking well, and she had need, as we thought Blemton Consequence crowded her uncomfortably close. The latter is improving and is the best puppy that Mr. Belmont has shown, including the wonder Rubicon. Princess, placed fourth, deserved the place, as did Fraulein Mixture her vhc. The dog puppies were a great improvement over anything we have seen at previous shows, and if this improvement continues the present champions will have to look to their laurels. First went to Rubicon, the winner of the open class. Blemton Coronet, placed second, is quite a nice puppy, with no very serious faults. His expression is not quite right and he is just a trifle overshot. Third went to Blempton Volunteer, a well made one with good body and legs. He is a bit dish-faced and weak below the eyes, and might be improved in ears and feet. Blemton Grumbler, reserve, lacks character and is not good in head. He is not yet furnished and may improve, but will never develop into a world beater. Blemton Calculus, vhc., when first brought into the ring carried his ears very badly, and Mr. Belmont went in and tried to twist them into shape, but they were not built that way, and although he improved matters a bit, the ears were still far from being right. It may be proper to manipulate the ears of a fox terrier to make them hang correctly, but we suggest that a better plan would be to breed them right instead.

Rather a good-looking unnamed one, owned by Mr. Fred Hoey, could not be made to show himself at all, several attempts were made to induce him to stand up with the others and display his merits, but it was of no use. Pluck, the chief characteristic of his breed, appeared to be entirely lacking, and he could not be made to stand up or show the least bit of spirit. Finally the class was judged and ordered out of the ring, with the exception of the timid one, and another attempt was made to get him on his feet, but with no better success than had previously been the case, and he was about being ignominiously returned to his stall without a notice when Mr. Belmont suggested that his bitch Marguerite was coming in season and that he would bring her in and perhaps her presence would accomplish the desired result. Amid the breathless attention of the deeply interested spectators Mr. Belmont brought in the lovely Marguerite, and an intense sigh of relief was heard as the unnamed one, more gallant than brave, cocked his ears and tail and made up to the little lady in something like fox-terrier form. The anxious look disappeared from the face of the judge, an appreciative smile overspread his countenance, and the unnamed was taken to his stall with the magic letters vhc. emblazoned on his crest. Blemton Pepper, hc., was not up to the form of the others, his head is not good and he is flat ribbed. Hillside Monk received only a commended card, although he is much better all round than the last mentioned, and was close up to the winners; he should have received the reserve card; his head is above the average and he has good shoulders, quarters, legs and feet. Like his sire he stands a bit high on his legs, and might be better ribbed and improved in muzzle. The bitches were not so good as the dogs. Blemton Consequence, winner of third in the open class, had an easy win, there being nothing in the class to approach her. Blemton Rainbow, placed second, is just a fair puppy, with bad ears and open feet. Fidget, the only other one to show up, was given third. She will never make a show bitch, being long cast, flat ribbed and weedy.

All the winners in the novice class were in the open classes already noticed. In the selling class first went to Blemton Grumbler, the winner of reserve in the dog puppy class. Sly Mixture, placed second, should have had the place as he is a better dog. He is only fair in head, but beats Grumbler in this respect as well as in body, and shows much more char-

acter. He came into the ring a bit lame, but soon went all right. We thought that the judge had selected him for first place, and Hopkins evidently thought the same, as he shook his head and moved uneasily around the ring, but he was soon made happy with the coveted blue ribbon. The next best one in the class was Blemton Pepper, and he was given the three letters—one more than he received in the puppy class.

In champion wire-haired the well-known Bristles, all out of coat, was alone. In the open class Mr. Thayer showed a pair of fair specimens, off in head and not in good coat. Pinwire, the only other entry, was better in head, but was badly shown. The puppies were much too small to show. First was given to Miss Bristles, catalogued as whelped May 10, 1885; she is rather a pretty puppy, but will have to improve if she makes a good one. Her litter sister was transferred to the smooth-haired class, and her half brother, the only other entry, was not noticed.

Welch terriers were represented by the well-known Which and T'other.

There were seven Irish terriers, and all were present except Bedad. They were not a good lot. The winner, Badger Boy, although not the best one, was in the best condition. He won hc. both at New York and Boston last spring. Second went to Gipsey Maid, a bitch with some character and with good legs and feet; she is a trifle overshot and is too long cast. Her dam, a better bitch, too big and out of coat, was third. Dan, litter brother to Gipsey Maid, received hc.; he is heavy in head, carries one ear very badly, and was shown much too thin; he has plenty of bone and a capital set of legs and feet. The two puppies were lacking in several important characteristics of the breed. The two white English terriers that won first and second at New York last spring were the only entries in this class. They occupied the same positions here. There were no entries in the black and tan, over 16lbs., class, and but two in the light weight class; both were absent.

Tees Rock, looking better than we remember to have seen him, was the only representative of the Bedlingtons. Highland Laddie, thin and not in good coat, was also alone in the class for hard-haired Scotch.

In Dandies, Border Wang did not arrive until after the judging, and Cromwell, the only other entry had it all his own way. He is a well formed dog, bad in forelegs and in coat. No Skyes were entered. The bull-terriers were much the best classes outside of the smooth fox-terriers. In the over 30lbs class first went to Cairo, shown a trifle too fat. He has grown thick in head and out at elbows. Bonnie Princess, well known, was second. Grabber, vhc., also well known, should have had the place. He beats her in head and body and shows more terrier character. Duchess of York, also vhc., has seen her best days, although still a young bitch. She has gone wrong in head since we last saw her, and her future winnings, if any, will be in moderate company. My Queen was badly shown; in fact all of Mr. Dole's dogs were far from being in the good form that they are usually shown in. In the light-weight class Mr. Dole won first with Nell Bright, a smart bitch, rather light all round, and second with Sensation, the winner at New Haven last spring. He was in deplorable condition and should not have been shown.

There were no entries in Yorkshires or smooth-coated toys and but one, a moderate specimen, in the rough-coated toy class. Following is a complete list of the

AWARDS.

FOX-TERRIERS.—Smooth-Coated—Champion—*Dogs:* 1st and 2d, Blemton Kennels' Lucifer and Bacchanal. *Bitches:* 1st, 2d and very high com., Blemton Kennels' Rachel, Diadem and Marguerite.—Open—*Dogs:* 1st, 2d, reserve, very high com. and com., Blemton Kennels' Blemton Rubicon, Dusky Trap, Blemton Coronet, Blemton Volunteer and Blemton Valentine; 3d, 4th and very high com., J. E. Thayer's Ruby Mixer, Reckoner and Luke. High com., P. L. Drayton's Blemton Sentinel. Com., H. P. Frothingham's Mugwump and R. S. Ryan's Linden Splint. *Bitches:* 1st, 3d and high com., Blemton Kennels' New Forest Ethel, Blemton Consequence and Blemton Dahabiah; 2d, 4th and very high com., J. E. Thayer's Richmond Dazzle, Princess and Fraulein Mixture. Com., C. Rathbone's Blemton Arrow.—Puppies—*Dogs:* 1st, 2d, 3d, reserve, very high com. and high com., Blemton Kennels' Blemton Rubicon, Blemton Coronet, Blemton Volunteer, Blemton Grumbler, Blemton Calculus and Blemton Pepper. Very high com., Fred Hoey's unnamed. Com., J. E. Thayer's Hillside Monk. *Bitches:* 1st and 2d, Blemton Kennels' Blemton Consequence and Blemton Rainbow; 3d, H. P. Frothingham's Fidget.—Novice Class.—1st, 2d, very high com. (2) and high com., Blemton Kennels' Blemton Rubicon, Blemton Coronet, Blemton Calculus, Blemton Rainbow and Blemton Dahabiah. Reserve and com., J. E. Thayer's Princess and Ruby Chance. Com., H. P. Frothingham's Mugwump and Blemton Lottery, R. S. Ryan's Linden Splint and Fred Hoey's unnamed.—Selling Class.—1st and very high com., Blemton Kennels' Blemton Grumbler and Blemton Pepper; 2d, J. E. Thayer's Sly Mixture. High com., L. Timpson's Maizeland Festive. Com., R. S. Ryan's Alverda.

WIRE-HAIRED.—Champion—S. Insull's Bristles.—Open—1st and 2d, J. E. Thayer's Dare Devil and Rat Trap. Very high com.; S. Insull's Pinwire. *Puppies:* 1st, C. W. Cornwell's Miss Bristles 2d, withheld.

WELCH TERRIERS.—1st and 2d, P. Lawrence's Which and T'other.

IRISH TERRIERS.—1st, 2d, 3d and high com., T. Wise, Jr.'s, Badger Boy, Gipsey Maid, Gipsey Girl and Dan. *Puppies:* Withheld.

WHITE ENGLISH TERRIERS.—1st and 2d, O. H. P. Belmont's Diamond Spark and Lovely.

BLACK AND TAN TERRIERS.—Over 16lbs.—No entries. —Under 16lbs.—Absent.

BEDLINGTON TERRIERS.—1st, E. D. Morgan's Tees Rock.

SCOTCH TERRIERS.—Hard-Haired—1st, E. D. Morgan's Highland Laddie.

DANDIE DINMONT TERRIERS.—1st, J. H. Naylor's Cromwell.

BULL-TERRIERS.—Over 30lbs.—1st, 2d and very high com. W. F. Hobbie's Cairo, Bonnie Princess and Grabber. Very high com., G. House's Duchess of York. Com., F. F. Dole's My Queen. Under 30lbs.—1st and 2d, F. F. Dole's Nell Bright and Sensation. Very high com., M. Randolph's Peggy. High com., Fannie W. Ogden's Gypsey. *Puppies:* 1st, Fannie W. Ogden's She; 2d, withheld.

TOY TERRIERS.—Rough-Coated—1st, withheld; 2d, F. F. Dole's Napier.

SELLING CLASS.—1st, F. F. Dole's Nell Bright; 2d, J. H. Naylor's Cromwell.

SPECIAL PRIZES.

FOX-TERRIERS.—Challenge cup, Rachel; Apollo stakes and cup, Blemton Coronet; home-bred puppy stakes and cup, Blemton Consequence; produce stakes and cup, Blemton Coronet; best in champion classes, Rachel; open classes, Blemton Rubicon; exhibit of four, Lucifer, Rachel, Blemton Rubicon and New Forest Ethel; best pair, Lucifer and Rachel; best in novice classes, Blemton Rubicon; puppy, the same; dog with two of his get, Lucifer with Blemton Grumbler and Blemton Pepper; wire-haired, Dare Devil; best of any other breed, Cairo; shown by a lady, She; best exhibit other than fox-terriers, W. F. Hobbie; bull-terriers, the same.

SYRACUSE DOG SHOW.—We have received the premium list of the first annual dog show of the Syracuse Kennel Club, to be held at Alhambra Rink, Syracuse, N.Y., Sept. 18 to 21. In the champion classes the prize is $10, with $10 and $5 in the open class, and $5 in the puppy classes. In addition there will be about 100 specials, ranging in value from $5 to $50. The judges announced are Major J. M. Taylor, setters and pointers; A. C. Wilmerding, spaniels; H. F. Schellhass, foxhounds, beagles and basset hounds, and Jas. Mortimer the remaining classes. Wm. Tallman will superintend and Spratts Patent will bench and feed. Entries close Sept. 10. The address of the secretary is Howard B. Rathbone, Lock Box 66, Syracuse, N. Y.

DOG TALK.

We clip the following from the *Stock-Keeper*: "At last has the often rumored, and as often contradicted, sale of Plinlimmon become a *fait accompli*. Mr. J. K. Emmett, the famous American actor, has purchased him from Mr. S. W. Smith, for one thousand pounds, which is the highest price that has ever been paid for a dog of any kind. Mr. Emmett is going to make Plinlimmon his companion. The dog is now with him at the St. Pancras Hotel, where we went to have another look at this famous animal before he leaves the country where he won his laurels. Plinlimmon's new owner does not show his dogs, and, consequently, he retires from the bench to make in future his appearance before the public on the boards with his master, who will, no doubt, take care that the "parts" given to the dog have "some fat" in them. The first play in which Plinlimmon will appear on the stage is "Fritz, our Cousin German." There is one scene in it in which Plinlimmon will have to lie down to form a pillow for a child which has been sung to sleep by his master, and the dog is fired at and supposed to be shot dead. This will, no doubt, be very trying to Plinlimmon before he has got over the stage fever, to which, we suppose, dogs are subject like men and women. Plinlimmon was at Leeds the same as he used to be at Trowbridge, the admiration of the neighborhood, and when Mr. Emmett took him away the scene is said to have been really affecting. As the news gradually spread, friends came round to have a parting look at him. Children were brought in to shake hands the last time with old Plin. Soon the whole neighborhood was alive as it became generally known that the splendid Plinlimmon was going away, and the levée had to be transferred to the street, where, the people were crowding round the grand animal and his new master seated in the carriage. Mr. Emmett said that the idea of taking away this creature, of whom everybody was so fond and proud, being one of the "lions" of the place, made him quite uncomfortable, and when he had driven off at last he felt as guilty as might have done a tourist who, on the pretence of admiring the mountain scenery in Switzerland, goes to Interlaken and elopes with the "Jungfrau." We understand that Mr. Emmett will mate Plinlimmon with a Rector bitch belonging to him, and which he considers one of the finest in America."

Alas! alack! and welladay!—dog day—yaller dog day! The meet for the "fox hunt" at Newport, last Friday, was at the South Portsmouth Postoffice, on the east road, about six miles from town. As the hour approached for the meet the road was lined with carriages, and the hounds, on their way to the hunt, had plenty of company. Soon all was ready, the master gave the signal, the hounds took the scent and the small field of riders started in hot pursuit after the imaginary fox. The hounds ran fast, and for a while kept to the scent, but as the chase continued north a new and unexpected feature was introduced. Resting quietly in a field was a sedate farmer's dog, one of the common yellow breed, and, as he was aroused from his afternoon nap by the cries of the hounds and the approaching horses, he unwittingly started to run. His color was nearer to that of a fox than anything the hounds had seen this year, and the pack was soon in a hubbub. Some of the older ones kept to the scent, but others went for that yellow dog. The master was unable to keep order, and the pack broke, and the days of that dog were numbered, for his carcass soon formed a meal for the hounds. No one was in at this death, as the master kept on the scent with what hounds he could keep together. The hunt was demoralized, but a few undaunted riders kept on the proper scent, and arrived at the prearranged "kill."

The following is from the *Times*: "West Chester, Penn., Aug. 26.—Two or three years ago Mrs. Elizabeth Shee died in this place, leaving a will bequeathing $1,500 to be invested, the interest upon it to be applied to the keeping of a much-loved dog belonging to her. The will also set aside the sum of $100, to be applied to paying the cost of the dog's funeral when that should be necessary, the dog to be laid beside his mistress in the burying ground of the Great Valley (Chester county) Presbyterian Church. Upon the death of the dog the $1,500 was to be passed over to the uses of the church as a contribution. Under this will the dog was put to boarding at the house of a friend of the deceased lady, where he lived in good dog style until last Thursday, when he died of some distemper peculiar to the canine family. Yesterday his remains were taken in charge by a regular undertaker, who, after carefully and artistically shrouding them, placed them in a newly-prepared box (or dog coffin) and took them to the burying ground above mentioned, and neatly interred them beside the animal's former friend and protector. The dog was 14 years old. He was of poor, but respectable parentage, and as a dog held an enviable position among the dogs of the town, with which he was on the best of terms. The $1,500 will at once be handed over to the church, in further obedience to the letter of the will."

Without considering the merits of the case involved in the correspondence between Messrs. Anthony and Perry, printed in our last issue, it is well enough to note that in giving us both letters for publication Dr. Perry was acting in conformity with his rule of presenting each side for the public to weigh. Indeed, the conspicuous and unusual fairness and openness with which the president of the N.D.C. has acted in this respect are in striking contrast with the course pursued by those who have arrayed themselves against him and his club. How different, for example, was the course of Mr. Anthony, who gave out his letter to Dr. Perry for publication but withheld Dr. Perry's answer to it. Mr. Anthony's letter charged Dr. Perry with being the dupe and accomplice of blackguards and blackmailers. It certainly would have been no more than fair to give Dr. Perry's reply to that charge.

The English dog papers have recently contained many tales of the various expedients that have been resorted to by exhibitors to put life into their dogs while before the judge. Dead sparrows, hares' feet, mouse traps, and in one instance a live white rat, are among the devices used. American ingenuity can discount all these, as the little episode noted in our report of the Saratoga show will conclusively prove.

In addition to the purchase of the collie bitch Cora II. by the Chestnut Hill Kennel they have secured from the kennel of Mr. A. H. Megson, Manchester, England, the well-known collie bitch Pitch Dark. She is two years old and is by champion Eclipse and out of Matchless. Before leaving England she was bred to the noted Caractacus and something phenomenal is expected in the coming litter.

At a Cottage City band concert the other evening the Hunting Chorus was one of the selections, in which the men give an imitation of the barking of dogs. A little cur hearing this became greatly excited, rushed up to the stand and began a violent barking. The crowd caught on, the band members laughed and the dog slunk away.

In a private letter from the veteran sportsman Ethan Allin, of Pomfret Center, Conn., he says that there is a great demand for dogs of his breeding from all parts of the country. We have owned and shot over many of these dogs for more than forty years and know them to be capital in the field, especially on ruffed grouse.

The Westminster Kennel Club have made an important addition to their kennel, having purchased the well-known pointers Lad of Bow and Lass of Bow. Both will probably run at the coming field trials of the Eastern Field Trials Club and at the Southern trials.

A well-bred, large and handsome deerhound, that has developed an ugly temper toward his kennel companions, is offered for sale. He will undoubtedly prove excellent for coursing, as he is very speedy. Address Kennel, this office.

We hear that Mr. E. S. Porter has a wonderful litter of bulldog puppies out of Thespian by Lion. One of the dogs is said to be the exact counterpart of Britomartis, and we shall look to see him sweep the deck at the shows next year.

The Wacouta Kennel has resold the mastiff Baldur to Mr. W. Wade, of Hulton, Pa., and a number of other of the dogs will be sold, as the kennel has removed to Chicago, and there are too many dogs for the present location.

The South of Scotland Dandie Dinmont Club recently proposed to change the weight limit for the breed, but a vote of the members was almost unanimous in retaining the old standard, which is from 14lbs. to 24lbs.

Mr. Gerald Hull, of Saratoga Springs, has had the misfortune to lose by death the well-known mastiff dog Ilford Cromwell. On July 24 he fell over the steep bank at Saratoga Lake and fractured his spine.

The Columbus Fanciers' Club of Columbus, O., will hold their first annual exhibition of dogs, poultry and pet stock at Columbus, Feb. 4 to 7, 1889.

Mr. W. Atlee Burpee, of Philadelphia, is in England, and it is reported that he has purchased several collies to bring home.

It has been decided in England at the Court of Queen's Bench that a dog is property the same as a horse or cow.

In addition to the A. K. C. and the N. D. C., there is considerable talk of a C. D. C.—Canadian Dog Club.

Newark's dog pound received 708 dogs, of which 78 had been redeemed. The pound has been closed.

The English St. Bernard Club will hold their next show at Sheffield, beginning Oct. 30.

RICHMOND DOG SHOW.

Richmond, Va., Aug. 23.—*Editor Forest and Stream:* Please publish the accompanying list of special prizes to be competed for at the bench show of the Virginia Field Sports Association. Of course our list of specials is not yet complete, but I think you will find this, as far as it has gone, a very attractive list. Our advices from all quarters are that we will have a very large lot of entries. The entries of foxhounds will be particularly large, and we have already secured enough live foxes to insure good hunting every day and all day.

The Virginia A. M. & T. Exposition offers the following special prizes of $25 each for the best kennel of English setters, pointers, collies and foxhounds (not less than six), to consist of not less than four, and at least two kennels to compete, each kennel to be owned by one exhibitor.

They also offer the following: For the best setter dog or bitch of any breed in the show that has run in a field trial, $20; best pointer, $20; for the best blue mottled foxhound, dog or bitch, $20.

The American Fox-Terrier Club offers for the best exhibit of fox terriers, $20.

A friend of beagles offers for the best brace of beagle bitches owned by one exhibitor, $25.

The American Gordon Setter Club offers a special prize of a solid piece of silver valued at $25 for the best Gordon setter, dog or bitch.

The Collie Club of America offers its club medal or $10 in cash for the best collie bred and owned by a resident of any Southern State, Maryland included.

Jno. S. Wise, President.

AMERICAN PET DOG CLUB.—Worcester, Mass., Aug. 20.—*Editor Forest and Stream:* In the last and previous issue of the Forest and Stream I have noticed two communications, one from Mr. H. F. Schellhass, President American-English Beagle Club; the other from Mr. A. C. Wilmerding, Secretary American Spaniel Club. These two gentlemen torture their imagination and grasp at a shadow in the absence of a single grain of substance upon which to build a flimsy complaint against the American Pet Dog Club, for having placed beagles and spaniels of limited weight on its list of pet dogs. This is not a reply to Messrs. Schellhass and Wilmerding, as their communications contain absolutely nothing calling for a reply. It is only for the information of such of your readers as may not understand what these gentlemen are whimsically trying to complain of. The American Pet Dog Club, upon the organization, declared through the press that it had no intention to clash or interfere, but rather coöperate with all other regular legitimate clubs. This the club has fully verified in its own and its members' patronage of all club shows since held. This is substance against Messrs. Schellhass and Wilmerding's shadows. I can name one member of the American Pet Dog Club who to-day owns more beagles and spaniels than Messrs. Schellhass and Wilmerding have owned all their lives, and I can safely assert that this same member has done more field work in a single season with beagles and spaniels included in the list of pets of the American Pet Dog Club. Again there are several ladies and gentlemen, members of the club, who own small beagles and spaniels, that never have done and never will do an hour's field work. Now, must their owners be disqualified as members of the American Pet Dog Club, and the dogs be disqualified as pets to gratify and satisfy the whimsical views of Messrs. Schellhass and Wilmerding? The American Pet Dog Club will try to help and not hinder the progress and growth of all legitimate clubs, the Beagle and Spaniel clubs included. "Protests" unnecessary and uncalled for. No room for jealousy.—H. R. Surles, M.D., Vice-Pres. A. P. D. C.

THE TOLEDO KENNEL CLUB.—The Toledo Kennel Club, of Toledo, O., was organized Aug. 22, with the following officers: President, Samuel Andrews; Vice-President, Gilbert Canniff; Secretary, Mat. Shoemaker, Jr.; Treasurer, F. J. Trost; Delegate, J. B. Conners. The executive committee consists of the officers of the club and E. A. Longden, H. C. Rushmore, N. W. Coder, John Waters and W. Geroe.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

G P North	9	4	7	10	0	6	7	8	4	8—63

BRADFORD VS. KING CITY, Ont.—The first championship rifle match between Bradford and King City was shot on the ground of the latter last Friday. Below is the score, which is low for each team. It is but fair to the teams competing to mention the fact that at both ranges, both being off-hand, the wind was blowing a perfect gale. The match will be returned in October.

King City.		Bradford.	
W J Crossley	75	G Simmons	79

NEWARK, N. J., is to have a rifle club, formed for open air practice on a 200yds. range. The Monroe Club of that city will hold a tournament in September, in which amateur clubs are invited to take part. The shooting will be at 75ft. and 75yds.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BREWER AT HOME.

JOHN L. BREWER has returned from England, after quite a lengthy visit, and is highly pleased with his success and the reception he received. In an interview with the gun editor of the *Item*, Brewer replied to queries as follows:

"The best pigeons in the world for trap-shooting are the English blue rocks, which are bred in Lancashire. In shooting an important match only the choicest are used, and they go from the trap like rockets.

"In regard to powder, there is only one kind that can be uniformly depended upon for trap-shooting; that is the Schultze powder. In my match with Journu, I was induced to use a new powder, manufactured by the E. C. concern, which they named 'J. B.,' out of compliment to one of their biggest stockholders. It was this powder that lost me the match. I had thirteen shells loaded with the Schultze, with which I made 13 kills. I then began on the 'J. B.,' and found it lacked the force and penetration necessary to stop the birds. I had been assured that in this respect it was equal, if not superior, to the Schultze, and found out otherwise at a cost of fully £800, having backed myself heavily to beat Journu. As persons on the ground did not understand why I did such poor shooting, I ordered the cartridges to be cut open, in order to show the cause.

"Take the English trap-shooters as a whole, they are superior to American trap-shots; they shoot at a great rise, use a lighter gun, and their blue rock pigeons are just as fine as the majority of our pigeons are bad. It is an unusual thing, unless the weather is extremely unfavorable, for a blue rock to linger at the trap. He starts with the pull.

"The weak point of English shooters is their slowness. They would shoot better if they shot quicker. Merwyn Watts (an assumed name) is the best amateur shot in England, but he is too slow, though he 'holds on' well.

"Shooting grounds are generally fine, compared with our own. The gun club ground is a half-moon with a stone wall ten feet high. It has a sixty yard fall.

"I brought three Greener guns with me, all twelves; one 7lbs. 4oz., one 7¼lbs. with Greener's new ejector, and Old Princess, 7lbs. 14oz. The ejector is a new gun, built especially for me. In a trial with this gun, at 116 best half-crown blue rocks, I killed 25 straight at 30yds.; in the balance, at 32½yds., I scored all but three birds, making a total of 113 kills. The exhibition was witnessed by a large company. The oldest referee in England, Mr. Bullock, said it was the most remarkable pigeon shooting he had ever seen.

"In regard to other Americans who have visited England, no one created so much amusement as Dr. Carver. He was regarded as a second-class shot. He once shot against a second-class man, who outshot him; seeing the match was lost, Carver said: "I ate an unusual quantity of sardines last night and I am too ill to continue." The Englishman wanted to continue, and muttered something to the effect that he didn't think Carver was that sort of a sardine.

"Mitchell, the Southerner, would, I think, have a better chance to win in England than any other American, and he ought to make the trip, as there would be both money and reputation in it for him.

"I should like you to state in *The Item* that I will shoot any man on the earth for all the money he wants, if the match is shot at the Welsh Harp, Hendon, England, I to have the right to furnish the birds, and I will guarantee the birds shall be first-class blue rocks.

"Or, I will shoot any man in America, if match is made to be next October, and I to be allowed to furnish the birds. This is a good chance for Carver, Budd, Bogardus and other would-be champions to tackle me and win extra reputation and cash by defeating me."

The Welsh Harp grounds, of which Brewer speaks, are situated at Hendon, about seven miles from London, and are presided over by clever and big-hearted John W. Warner, who is an enthusiastic admirer of trap-shooting. As it is an open question with many as to whether Brewer did or did not do remarkable shooting, while in England, the gun editor of the *Item* would like to hear from Mr. Warner on the subject, believing he is competent to judge what Brewer has done, and give him all the credit to which he is entitled.

A brief *resume* of Brewer's shooting while in England will be of interest not only to his many friends and admirers, but also to trap-shooters generally:

Shortly after his arrival in London he "tried conclusions" with 50 "best blue rocks," and grassed 38. This was at 30yds. rise. He made a big mistake to do so well, as his trial, which had been private, soon became public, and handicapped him at once.

The natural supposition was, that if he could do so well at the start he would do still better with practice. Efforts to match him became difficult, as too much handicap was asked.

Brewer finally concluded to take part in the contest for the Championship of England Cup (value $500), offered for competition by W. P. Warner, at his grounds, "The Welsh Harp," a famous ground at Hendon, near London.

The conditions were: Entrance, $25; 25 blue rocks each; 30yds. rise; 50 per cent. to winner; second, 25 per cent.; third, 10 per cent.; three successive wins to make the cup personal property of winner. The first competition was won by Mr. Farrell, with a score of 22, Brewer getting second money. Brewer then won the next three competitions, with scores of 21, 25, 22 (out of 23), in the latter instance "shooting out" his opponents.

The winning of this magnificent cup against the representative trap shots of England is in itself triumph enough for a stranger, but Brewer did still better, for in a match against Mr. Nolfolk for $500 a side, at 100 best blue rocks, he "stopped" the English expert by killing 48 straight, at 34yds. rise. Mr. Nolfolk, in abandoning the contest, said: "Brewer, you are the greatest trap shot in the world."

Brewer shot three matches against Mr. Norfolk, winning two out of the three. The third match was the one he lost, and he erred in conceding a yard rise, allowing Norfolk to stand at 29yds. Norfolk won by 3 birds, on a score of 75 to 72, out of 100 birds shot at. Norfolk took the lead at the start, killing 22 out of the first 25, and held it to the finish. Brewer killed 21 out of the first 25, but dropped to 18, 17 and 16 on the concluding rounds. Had Norfolk stood at 30yds., the result would probably have been different.

Brewer's ambition was all right, but it led him into snares. Thus Mr. Bull, of the Royal Adelaide Hotel, Windsor, was allowed to back him against F. W. H. Parsons (a second-class shot) to shoot at 50 blue rock pigeons, 30yds. rise, Mr. Bull laying £150 to £100 that Brewer would win. This match was exceedingly disadvantageous to Brewer, but having made it, he then shot it out for all that was in him, winning by a score of 31 out of 40, Mr. Parsons having scored only 19 out of 40, being shot out. Brewer scored a best on record in this match, and opened the eyes of English trap shots regarding his ability, thus interfering greatly with his chances to make matches on fair terms, and undoubtedly preventing a number of matches that otherwise might have been arranged.

Mr. Bull "knocked him out" a second time by matching him to kill 50 first class blue rocks out of 50, at 35yds. rise. Brewer, American-like, faced the music, and scored 50 out of 43! He was "nothing if not a champion." It was at this match that John Lawrence Sullivan tried his hand at shooting, and killed one bird out of twenty-four. The crowd jibed him and advised him to "aim higher."

Reference has already been made to the meeting between the celebrated French champion, Journu, and Brewer, but no mention was made of the fact that Brewer challenged Journu for a

another match, or a series of matches, for $500 too $5,000 a side which the Frenchman declined to accept, evidently believing that it was taking too great a risk against himself, and the reputation gained by his win, to meet Brewer again.

Brewer (who speaks French) told M. Journu plainly that he wasn't acting like a champion, to which Journu replied, "Ca m'otegal," ("It doesen't matter!") It is highly probable, if Brewer gets within reach of Journu, that he will make him shoot another match, or publicly acknowledge that he (Brewer) is the superior.

Brewer took part in an innumerable number of sweepstakes and his average (thirteen first moneys, twenty-seven second moneys and thirteen third moneys) forty-three wins out of sixty-seven contests, shows that he was doing first-class shooting, considering the character of the birds, the radical change of climate and the difference between using an 8lb. 10-gauge gun and a 7½lb. 10-gauge, compared with the rise. In America the 10g. gun is pulled back to 30 or 31yds. and the 12g. gun put at 28 or 29, while in England the 10g. gun is seldom (if ever) allowed, and the 12g. gun handicapped to 35yds. rise, as has already been seen in connection with Mr. Brewer. A 35yds. rise is a man as well as a gun handicap, and it is to Brewer's credit that he scored a record on what looked like an attempt to break him up.—*Philadelphia Sunday Item, Aug. 26.*

WILMINGTON, Del.—Regular monthly shoot for the gold badge of the Wawaset Gun Club, at 15 singles and 5 pairs:

The club has challenged the Baltimore Gun Club to shoot a match at clay birds for $200 a side.—J. R. WOODWARD, Sec'y.

WELLINGTON, Mass., Aug. 25.—There was a good attendance at the grounds of the Wellington Gun Club to day, when the merchandise consolation match was closed. In this match the winners were Wardwell first, with 89; Perry second, with 88; Melcher third, with 86; Sawyer fourth, with 82; Stanton fifth, with 80; Brown sixth, with 79; Moore seventh, with 78, and Hutchinson eighth, with, 75 out of 100 birds.

BOSTON.—WALNUT HILL, Aug. 22.—There was a good attendance of trap shots at the range to-day, and some fine scores were made. The principal event was the contest for the Climax diamond badge, in which there were 14 entries. H. G. Wheeler of Marlboro, won with the fine score of 38 out out of 40 birds. The next shoot will take place Sept. 5. Climax diamond badge match—20 clay pigeons from five traps, and 20 standard targets from three traps:

Wheeler	11110111111101111111—18	11111111111111111111—20—38

Alpaugh gold badge, Macfarlane silver badge.

SHOOTING ACCIDENT.—Ridgefield, Conn., Aug. 25.—This quiet village was terribly shocked this morning as the news spread like wildfire that Dr. Archibald G. Paddock, a leading and eminently respected citizen and a retired New York dentist, had, by accident, shot and instantly killed his 18-year-old son, Harry, a promising young man, and then, in a moment of temporary insanity, had put the muzzle of the gun to his own head and killed himself. The shocking tragedy occurred at 11 o'clock this morning, and the circumstances are as follows: It had been the custom of the father and son to practise at a target in a rear lot of the homestead. This morning the neighbors heard the usual shooting and thought nothing of it, as near as the reporter could ascertain. The boy had been back of the target and suddenly stepped forward, unexpectedly to the father, receiving the contents of the rifle aimed at the mark, killing him instantly. The father was overwhelmed with grief, and in an instant went to the son, whom he loved as life itself, knelt down, and with the same weapon that enacted the first scene in the tragedy, ended his own life.

NORTH END VS. WINGOHOCKING.—Frankford, Pa., Aug. 25.—The third shoot of the series of friendly matches between five members of the North End Gun Club of Frankford and five members from the Wingohocking Gun Club of Germantown was shot off at Atlantic City on Aug. 21. This match, like the first, was decided in favor of the Wingohocking men. All three of these matches were remarkable on account of the close scores made. The members from the N. E. G. C. broke in the series 309 birds to their opponents 303—but the contest being decided by matches this don't count. The failure of the caterer to serve dinner at the appointed time prevented the contestants from shooting at the full quota of 50 bluerocks; 25 each (15 singles and 10 doubles) were substituted. The judges were Mr. C. H. Irwin for the Germantown boys, and Mr. Samuel Richards officiated in a like capacity for the North Enders. The position of referee was acceptably filled by Mr. J. E. Courtney of the Jefferee Arms Company. Some good scores were made—notably that made by the genial Mr. J. Thurman, who holds the office of captain in his club. The members from the N. E. G. C. all used Winchester shot guns in this match. The following is the score:

North End G. C.

Wm Wolstencroft	11111111111111	11	11	12	10 11—24
Geo E Pack	1101010010000111	10	10	11	11 10—15

J. C. E.

NEW YORK SUBURBAN GROUNDS.—By a transposition last week it was stated that the capital stock of the New York Suburban Grounds Association was $5,000 divided into fifty shares of $100 each. It should have read one hundred shares of $50 each. The superintendent of the ground will be Mr. A. V. Canfield, Jr., the secretary is Mr. O. E. Morton. The grounds are at Claremont, N. J. The office in New York at 291 Broadway.

THERE WILL BE GREAT OPPORTUNITIES for trap shooters during the coming two months; Al Bandle's tournament at Cincinnati, Sept. 4 to 7; Chamberlain Cartridge Co. tournament, Cleveland, Sept. 10 to 14; St. Paul Gun Club tournament, St. Paul, Minn. Sept. 12 to 14; Keystone Trap Co's tournament, Jamestown, N. Y., Sept. 18 to 21; St. Louis tournament, Oct. 2 to 5; Jersey City Heights on their grounds, Marion, N. J., Oct. 9 to 12, live birds and inanimate targets; then the Middlesex Gun Club's tournament, Oct. 16 to 19; to be followed the next week by Phil Daly's four days' shoot at Long Branch. The professionals and the agents for the different gun and cartridge makers, like Messrs. Tice, Budd, McMurchy, Tucker, J. R. Miller and others will take most of them in; commencing in the West and working towards the rising sun. They promise to be in force at Marion. All this makes business lively and fun for the boys. They are all welcome; and big times are expected. South Paw, Quinlan and Linsley, the committee who did so much at the recent two days' shoot of the J. C. H. G. C., are working like beavers; and they promise this to be to the biggest shoot of the club and they have had several good ones. The Essex club of Newark are shooting on the J. C. H. grounds now; they are a live club and are having very successful shoots weekly, and the *entente cordiale* between the two clubs is refreshing. We want to see that match so long talked of between the two Esculapians, Pindel of the Essex and Burdett of the J. C. H. They are both men of splendid physique and crack shots. It will be well worth seeing; when it comes off we will let you know.—JACOBSTAFF.

BROOKLYN, N. Y., Aug. 28.—The third medal shoot of the Davison Gun Club brought out eleven members. The score was much inferior to that of two weeks ago. Match shot at New Utrecht, Aug. 25, 20 bluerocks, 3 traps, 16yds. for 12-gauge and 10yds. for 10-gauge, for gold and silver medals, National rules:

Dr G V Hudson, (18)	01110100110011011000—10
Capt J O Mattair, (16)	00001111111011111101—14

J F Flaherty	010111111111010—11

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y.
Secretary-Treasurer: F. L. MIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..W. R. Huntington..E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div. W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 186 Jeroleman St., Brooklyn.
Eastern Div..H. E. Rice, M. D....Maxton Holmes.....H. D. Marsh, Springfield, Mass.
N'thern Div..Robert Tyson.....S. S. Robinson.....Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

FIXTURES.

SEPTEMBER.

3. New York Trial Races, 10:30 A. M., 2 P. M.
3. New Jersey A. C., Bergen Point, Paddling Races.
6. Mohican, Gibson Cup, Albany
8. Brooklyn C. C. Regatta.
13. Mohican, Oliver Cup, Albany
15. Ianthe, Newark, Annual.
15. Springfield Cup, Calla Shasta
20. Mohican, Gibson Badge, Alb'y

OCTOBER.

6. Springfield Cup, Calla Shasta.

A CRUISING RACE.

Editor Forest and Stream:

I am glad to see there appears to be some stir for a special race for cruising canoes. Might I suggest a course and conditions to fellow canoeists who, like myself, favor the canoe as a craft for cruising, specially on waters difficult of access and navigation in ordinary boats. In the FOREST AND STREAM for March 1 of the present year, some canoe waters were given by Mr. Chas. Hallock, which are excellent examples of the kind of waters the canoe ought to be adapted for. A race over part of one of these routes would scarcely be practicable for most of us. A course, however, might be arranged on home waters which would test a great many of the qualities of a good cruising canoe, over a distance which might be taken to represent an average day's cruise, and with conditions as like as possible to those under which such a cruise would be taken; such as: Course—Start somewhere in the locality of Nyack, proceed 9 or 10 miles up the Hudson, land and make a portage of half a mile, cross the "Tappen See" to the opposite side, then down the river to the finish, about Dobb's Ferry. Total distance, 24 or 25 miles, with a carry of half a mile.

Condition.—Any canoe, sail or paddle. Length of canoe not to exceed 16ft. (any canoe over that length being supposed to be too unhandy for one man to knock about with). Width not less than 28in. (the limit of beam of cruising canoes in the A. C. A.). Weight not less than 50lbs.; open canoes to be provided with waterproof aprons and watertight compartments, tested to support the weight of the canoeist and load. Each competitor to go as he pleases, sail or paddle, or paddle and sail.

To carry a load (consisting of tent, bundle of clothing and cooking utensils, etc.) weighing not less than 60lbs. The canoe and load to be carried round the portage by separate trips.

A cup might well be given for such a race, and a paddle "de luxe" for each competitor completing the cruise within seven hours. Another prize might be given at the end of the race for the best equipment, tent, cooking arrangement and outfit generally. Will some one else try his hand at an imaginary cruising race.

LAKEFIELD, Ont., Aug. 13. C. M. DOUGLAS.

LONGUEUIL B. C., MONTREAL.—Two canoe races formed a part of the programme of the annual regatta of the Longueuil B. C. on Aug. 25 at Montreal, as follows: Single canoe race, half mile.—F. J. McClure, Longueuil, first, in 7m.; A. Irving, St. Lambert, second, in 7m. 30s. Tandem canoe race, one mile—J. Morris and A. Irving, St. Lambert, first, 11m.; P. and F. J. McClure, second, 11m. 12s.

GRAND TRUNK B. C.—This club held its 13th regatta at Montreal on Aug. 25, the race for tandem canoes being won by Ellis and Corlett first, with Donaldson and Poshby second, out of 4 starters.

THE A. C. A. MEET, LAKE GEORGE.

Race Week, Aug. 20 to 24.

THE preliminary arrangements for the races this year were better than ever before, everything being settled in good season. The programme was better than in any previous year, and the courses were well located by Mr. Vaux, the chairman of the committee, who placed the buoys on Friday. As Messrs. Butler and Leys of the committee were both entered for the races, the work devolved almost entirely on Mr. Vaux. The only thing which marred in any way the success of the races was the lack of punctuality in starting, thanks to which and the fickle weather, some of the races were not called until Friday morning, by which time many had left camp or were busy packing. This unfortunate delay caused general dissatisfaction and robbed the committee of the praise which they deserve for the large amount of work that was well done in preparing for the race. It is a mistake to appoint upon a regatta committe men who are taking an active part in the racing, as the work of running the races is apt to fall upon one man. This year a very good form of entry blank was prepared by Mr. Vaux, each man being required to file a formal entry prior to Monday morning. The canoes thus entered are as follows, and thought all did not start we give the list in full in order to show, as last year, the class of canoe most in favor.

CANOES ENTERED FOR A. C. A. RACES, 1888.

CANOE.	SIZE.	OWNER.	CLUB.
Eclipse	15.08 ×29[6]	M. V. Brokaw	Brooklyn.
Charm	15.04 ×31	Walter Stewart	Royal.
Notus	15.11[4]×29[6]	R. W. Bailey	Pittsburgh.
Narka	16.00 ×28	H. E. Rice	Springfield.
If	16.00 ×30	G. A. Warder	Jabberwock.
Fly	16.00 ×30	Paul Butler	Vesper.
Ruggles	16.00 ×30	E. H. Barney	Springfield.
Dimple	16.10 ×29[4]	Geo. C. Forrest	Hartford.
Ramona	15.11[4]×30	Ford Jones	Brockville.
Bonnie	16.00 ×28	M. F. Johnson	Toronto.
Madeline	16.00 ×31	W. L. Palmer	Mohican.
Minx	15.00 ×30	C. V. R. Schuyler	Brooklyn.
XXX	15.11[4]×29[6]	H. L. Thomas	Mohican.
Bevis	16.00 ×28	H. Torrance	Brockville.
Guenn	16.00 ×30	Wm. Whitlock	Brooklyn.
Edmeé	15.00 ×28	R. B. Burchard	New York.
Cauna	15.00 ×30	W. R. Haviland	Yonkers.
Evangeline	15.00 ×20	H. L. Quick	Yonkers.
Goblin	14.06 ×28	A. B. Pattou	Yonkers.
Atalanta	14.06 ×30	L. B. Palmer	Ianthe.
Dawn	16.00 ×30	W. A. Leys	Toronto.
Dawn No. 2	16.00 ×30	C. G. Belman	Amsterdam.
Goat	19.00 ×42	Henry Stanton	Knickerb'r.
Agawam	15.11[4]×29[5]	E. C. Knappe	Springfield.
Sea Urchin	15.00 ×28	B. H. Nadal	New York.
Rat	15.00 ×28	Grant Edgar	Newburgh.
Minnie G	16.00 ×30	F. T. Walsh	Vesper.
Don't Know	15.06 ×29	C. M. Shedd	Springfield.
Ethel G	14.11[4]×31[4]	J. H. Campbell	Sagamore.
Ignace	16.00 ×30	L. V. Dorland	Arlington.
	16.04 ×31	J. R. Robertson	Raritan.
Bachelor	15.00 ×30	Barron Fredericks	Ianthe.
Baby Mix	15.04 ×30	H. M. Lawrence	Lawrence.
Scoot	15.00 ×22	L. B. Palmer	Ianthe.
Albatross	15.10[4]×28[6]	J. O. Shiras	Cincinnati.
Scud	16.00 ×30	W. A. Wheeler	Mohican.
Anita	15.00 ×30	O. T. Conner	Ianthe.
Sirene	15.06 ×30[4]	A. S. Putnam	Lakeside.
Joker	14.06 ×31	H. La Motte	Philad'a.
Drift	16.00 ×30	J. A. Gage	Vesper.
Blanche	15.00 ×31[4]	D. S. Goddard	Vesper.
Wicassie	16.00 ×30	R. F. Brazer	Vesper.
Girofla	15.06 ×30	F. A. Nickerson	Springfield.
Slab	16.00 ×30	C. P. Nichols	Vesper.
Kelpie	14.00 ×28	F. L. Hopkins	Lawrence.
Elf	14.00[4]×30	E. L. French	Buffalo.
Pert	14.06 ×30	C. G. Belman	Amsterdam.
Don't Know	15 06 ×28[4]	A. Amory, Jr	Harvard.
Clip	15.06 ×29[4]	W. J. White	L. St. Louis.
Atlantis	18.00 ×36	S. R. Stoddard	L. George.
	16.06 ×32	W. M. Paxton, Jr	
Kaw	14.07 ×29[4]	M. Bender, Jr	Mohican.

These canoes may be divided as follows: 14ft. long, 2; about 15ft., 16; over 15ft. 3in. to 16ft., 32; over limits, 2. The breadths run: 28in., 8; 29in., 4; 30in., 30; 31in., 6; 32in., 1; 36in., 1; 42in. 1. In our report of last year we wrote as follows in relation to a similar list of entries: "This table shows that the favorite length is still 15ft., as 23 out of a total of 42 are about that length. Of the balance, 15 range from 15ft. 3in. to 16ft., while there is one of 17ft. and three of 14ft. The 17ft. canoe is the first yet built to the full limit of Class B, 17ft. ×28½in., and is consequently outside of the paddling classes and not eligible for the record. It is but fair to say that the number of 16ft. canoes is increasing. The beam is divided as follows: 27in., 2; 28in., 9; 29in., 9; 30in., 16; 31in., 4; 32in., 1; 33in., 1. Thus it appears that Class A is in a fair way to be abandoned, and that the majority of canoes in the future will come within Class B limits, some declining to take the beam allowed by the rule and building about 15ft. × 29in., while others run to 15 and 16ft. ×30in." This year the number of 16ft. canoes has increased to 23, or to compare with last year, of canoes from 14ft. 6in. 15ft. 3in., there were 16 in place of 23, while from 15ft. 4in. to 16ft. there were 31 in place of 15. In the matter of beam, 30in. still holds the place as the most popular size.

The racing programme was as follows, the plan being to call the principal sailing races on the first opportunity when the wind served, the paddling and minor events to be called when there was no wind. The natural features of Lake George make the winds very squally and uncertain, and the weather during the week, often threatening and at times with rain, added to the work of the regatta committee:

RECORD EVENTS.

No. 1. Paddling, Class II.—1,000yds. straightaway. Men entering this event shall not enter Nos. 2 and 3.

No. 2. Paddling, Class III.—1,000yds. straightaway. Men entering this event shall not enter No. 3.

No. 3. Paddling, Class IV.—1,000yds. straightaway.

Note A.—Canoes to enter events 1, 2 and 3 must be decked at least half their length, be provided with keel or centerboard to enable them to sail to windward, and have two bulkheads or watertight tanks, one in each end; in other words be properly equipped cruising sailing canoes.

No. 4. Paddling and Sailing Combined.—On triangle, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile; 3 miles in all.

No. 5. Sailing, Classes A and B.—On triangle, no limit to rig or ballast; 4½ miles. To be started in squadrons if necessary.

Note B.—Every canoe entering for the record can compete in three races, one paddling, one sailing and the combined race. Five record prizes are awarded. The man getting first record prize will receive a large practical flag, showing him to be one of the three honor men of the year. There will be a paddling honor man—the winner of the paddling trophy race, and a sailing honor man—winner of the sailing trophy race. Record points are scored as follows: The winner of a race is credited with 10 points, the last man to finish gets one, the number of men in the race determines the points received by the others. Greatest possible score, 30 points. It is not necessary to win any one of the races to score the highest average.

TROPHY EVENTS.

No. 6. Sailing.—On the triangle, A. C. A. trophy, Classes A and B; no limit to rig or ballast; time limit, 3 hours; 7½ miles. The American squadron will be selected according to the result of the trial race—viz., event No. 5, with the exception, however, that the regatta committee reserves the right to name three of the American squadron independent of the result of the trial race, 15 in all.

No. 7. Paddling.—One mile, straightaway. The contestants will be selected as follows: The first and second man in each of events 1, 2 and 3—together with two men selected from among the contestants of events of 1, 2 and 3, by the regatta committee, 8 in all.

OTHER EVENTS.

No. 8. Paddling, Class I.—This race exempt from "one man, one canoe" rule; 1 mile.

No. 9. Paddling.—Open canoes with single-blade paddle; 1,000yds.

No. 10. Paddling Tandem.—A and B sailing canoes, decked with wood; 1,000yds.

No. 11. Paddling Tandem.—Open canoes. Single-blade paddles; 1,000yds.

No. 12. Paddling Upset.—Classes II., III. and IV.; no special appliances all awed; at signal every canoe must be turned completely over, righted, and with the crew inside paddled across the finishing line, 200ft.

No. 13. Hurry-scurry Race.—100yds. run, 20yds. swim, 200yds. paddle.

No. 14. Sailing.—On the triangle, Classes A and B; sail limited to 75sq. ft.; no limit to ballast; 3 miles; to be started in squadrons, if necessary.

No. 15. Sailing.—On the triangle, novices, Classes A and B; no limit to rig or ballast; 1½ miles. Open only to members who never sailed a canoe prior to Sept. 1, 1887.

No. 16. Sailing, Consolation.—Winners of either first or second places in any one of events Nos. 4, 5, 6, 14 or 15 excluded; no limit to rig or ballast; 1 mile to windward or leeward and return.

No. 17. Sailing, Upset.—Classes A and B; no special appliances allowed; canoes to carry two sails; no limit to ballast; ½ mile. At signal canoe to be tipped over until top of the foremast touches the water; canoe to be righted and to cross finishing line under sail.

No. 18. Sailing, Maneuvering Race.—While under way, at signal, to be given by lowering a flag at the starter's station, half a paddle must be thrown overboard aft, out of reach; the same must be recovered and the race continued to the finishing line; ½ mile.

No. 19. Sailing, Class C [Experimental Limits].—Canoes not over 17ft. in length with a beam limit of 36in. On triangle, 4½ miles.

No. 20. Sailing.—Unclassified canoes, sneakboxes and the like. Handicap race, 4½ miles.

No. 21. Club Race.—Sailing two miles to windward and return. Two entries from each club only allowed. The highest combined club score to win the flag. A prize also being given to the individual winner.

No 22. Canoe gymnastics.

In addition a race for the Springfield Cup was arranged to take place during the meet.

The sailing course is shown on the map at F G H, the start being at F. A blue flag on the starter's boat indicated that all marks would be left on starboard, the first leg being F G, while a white flag denoted that the course would be sailed the other way. The paddling races were for the first time all straightaway, a great improvement; the start being at E, abreast of Squaw Point, and the finish at F. The paddling trophy race, however, was paddled from a point below the dock on the east side to the lower end of South Island. The regatta committee used a steam launch which was hired by several members who wished to follow the races. The canoes were timed from a rowboat anchored at the start and finish, the clerk of the course being Mr. David A. Poe, of Montreal, with Mr. Harry La Motte, the camp bugler, as timekeeper.

Monday, Aug. 20.

The camp is now complete, including 228 members up to last night. It is gay with flags and streamers bearing the names of the various clubs. Monday dawned with a strong and steady breeze from N.W., covering the lake with white caps, so the regatta committee decided to call the unlimited sailing race at once, with the principal paddling races later in the day. The course for the sailing race was off the south end of the island, triangular, 3 rounds. The wind had decreased by 10 A. M., but was still so fresh that those who could do so took in one reef, while the others selected their smaller rigs in expectation of a continuance of the blow. With a fleet of over thirty starters it is impossible to describe in detail the many different rigs, or even to assort and classify them, but the majority perhaps were enlarged and distorted copies of Pecowsic's sails. There was but one balance lug (Mr. Stewart's), no lateens, but an odd lot of different rigs, all with sails abaft the mast, those that could be reefed and furled being mainly of the sort in which the yard hoists vertically to form a topmast.

The start was given at 10:30, the racers being in a close group about the line, going over in a tangle, with several collisions. The first leg was one-half mile, a broad reach, with booms to port, and by the time the first mark was reached it was possible to place the leaders. The first was Dimple, sailed by Mr. Forrest, Hartford C. C., with Eclipse, Mr. Brokaw, Brooklyn C. C., second. Then followed Notus, Vice-Com. Bailey, Ramona, Mr. Ford Jones, Charm, Mr. Walter Stewart, and Fly, Mr. Paul Butler. The second leg was also a reach, after jibing at the buoy, and the order was a little changed. When they came on the wind for the third leg, however, the race at once became more exciting. Eclipse rounded and went on starboard tack toward the Canoe Islands, making a long board, while Dimple, followed by Charm, held to port tack, working to the east. When they met again Eclipse led across Dimple's bow, while Notus was close to her. Eclipse was first to finish the round, with Notus second. Dimple came for the buoy on starboard tack and Ramona on port, the latter being obliged to give way and drifting on the buoy. Dawn, Mr. Leys, followed Dimple, with the fleet scattered over the whole course. Charm had lost badly in the windward work.

When the windward work began again on the third leg of second round the order was Eclipse, Notus, Dimple, Fly, Dawn. The wind had been growing lighter, which was bad for Eclipse with two Pecowsic sails of 80ft., while some were carrying 110ft. or more, but she still continued to gain. The last round found the wind dying out fast, but Eclipse still held her place, winning easily with Notus second. Mr. Barney had only 75ft. of sail and made but a poor showing beside the big rigs. The summary was as follows:

	1st Round.	2d Round.	3d Round.
Eclipse, M. V. Brokaw, Brooklyn	1	1	1
Notus, R. W. Bailey, Pittsburgh	3	3	2
Dimple, G. C. Forrest, Hartford	2	2	3
Fly, Paul Butler, Lowell	4	4	4
Minnie, G. F. T. Walsh, Lowell	7	5	
Dawn, W. A. Leys, Toronto	6	6	
Evangeline, H. L. Quick, Yonkers	13	7	
W. A. Wheeler, Mohican	10	8	
Scud, Ruggles, E. H. Barney, Springfield	8	9	
Ethel G., J. H. Campbell, Sagamore	11	10	

Charm was thirteenth boat. The first eleven in this race are eligible to sail for the trophy, the committee having the right to select three others, while Mr. Stewart makes up the required number, fifteen. Eclipse is a new canoe, built by Mr. Ruggles, and has proved a very fast boat in her racing this year at New York. She is owned by Mr. Blake, of the Brooklyn C. C., and was brought to the meet and sailed by Mr. Brokaw.

The first paddling race was started after dinner. Event 8, Class I, the water being very smooth with no wind. The course was one mile straightaway, all turns being abolished this year. The summary was:

Bevis, H. Torrance, Brockville.	Agawam, E. Knappe, Springfi'd.
Narka, H. E. Rice, Springfield.	——, A. Amory, Jr. Boston.
——, W. A. Leys, Toronto.	Kaw, M. Bender, Mohican.
Scoot, L. B. Palmer, Ianthe.	Elf, E. L. French, Buffalo.

Torrance led with Rice second, Leys making a fine spurt near the finish, but coming in 20 sec. nds astern.

The next race was No. 1 of the programme, Class II., paddling, had only two entries:

Goblin, A. B. Pattou, Yonkers	8 28
Rat, Grant Edgar, Newburgh	8 55

Goblin won by 27 seconds.

Event No. 2, paddling, Class III., 1,000yds. straightaway, had but 7 starters. One of these, however, was Vice-Com. Rice, probably the best paddler in the States, and another was Mr. Johnson, of Toronto, so well known from his previous victories at the A. C. A. meets. Mr. Johnson has not paddled for several years at a meet, and much interest was felt in the meeting between him and Dr. Rice. Johnson's boat was an open Canadian canoe, 16×28, while Rice's was a very beautiful decked canoe built by Mr. Ruggles, 16×28, and fitted with a board and mast tubes, but weighing no more than Johnson's boat. Both men used double blades, Rice's being straight and Johnson's spoon. Rice led from the start, Johnson being second until the last quarter of the race, when Knappe, who had been pushing Johnson, put on a spurt and finished in second place. The summary was:

Narka, H. E. Rice, Springfield	9 48
Agawam, Emil Knappe, Springfield	10 00
Bonnie, M. F. Johnson, Toronto	10 33
Dimpie, G. C. Forest, Hartford	11 23

Event 3, Class IV., paddling, followed, with 5 starters, over the same course:

Eclipse, M. V. Brokaw, Brooklyn	7 02
Dawn, W. A. Leys, Toronto	7 45
Charm, Walter Stewart, Royal C. C	7 48
Wicassie, Ralph F. Brazer, Vesper	8 07
Elf, E. L. French, Buffalo	8 08

Eclipse led a sily from the start with Dawn second, but on the last quarter Charm put in a fine spurt and closed up Dawn's lead. This was Mr. Stewart's first essay in a paddling race, and he was loudly cheered as he pushed for second place, but he missed it by 4ft. The other two races set for the afternoon were postponed.

On Monday night the business meeting of the Central Division was held, resulting in the election of Rear-Com. Huntington, of Rome, to fill Com. Bailey's place, of E. W. Masten, of Albany, as Rear-Commodore, F. H. Stryker, Rome, N. Y., as Purser, and F. F. Andrews, Rochester, as member of the Executive Committee. The question of a division meet for '89 was discussed, and the general sentiment was that if the A. C. A. meet, which goes to the Northern Division, should be held far over the Canadian border it would not be possible to secure a large attendance from the Central Division, and it would be necessary to hold a Division meet. If, on the other hand, the annual meet should be held on Grindstone Island the Central Division would make no attempt to hold a Division meet, but would go to Grindstone Island instead. The feeling in camp is generally in favor of Grindstone Island for the annual meet of 1889, and while the choice rests mainly with the Northern Division, the selection of Grindstone would meet with the approval of the majority of members south of the St. Lawrence.

A meeting of the Atlantic Division was also held during the evening at which the question of a Division meet for 1889 was discussed fully. The sentiment was in favor of a meet of at least one week in some locality near New York and west of the East River, probably about the Highlands of Navesink. It is proposed to start a cruise of two or three days prior to the commencement of the meet, so arranged that members from different points in the Division may join, reaching camp at the beginning of the meet.

Tuesday, Aug. 21.

The first race called for Tuesday was the tandem paddling, decked canoes, 1,000yds. The crews were:

Rice and Knappe, Springfield	1
Johnson and Torrance, Toronto and Brockville	2
Brokaw and Schuyler, Brooklyn	3
Patton and Quick, Yonkers	4

Rice and Knappe paddled the Narka, Johnson and Torrance paddled an open Canadian canoe with decks over each end and a centerboard, Brokaw and Schuyler paddled the Eclipse, and Pattou and Quick the Goblin, an old American Nautilus. Rice and Knappe won by a good distance, Johnson being second and Brokaw third.

Event 11 was for open canoes and single blades. The crews were:

Torrance and Leys, Brockville and Toronto	1
Robertson and Kimball, Newton, Mass	2
White and Putnam, Lawrence, Mass	3
Amory and Townsend, Harvard C. C	4

Torrance and Leys won very easily.

The novices' race was next called, the wind being S.E. and moderate, with water fairly smooth. The course was one round of the regular triangle, 1½ miles, the first leg to windward. There were 7 entries, the order at the finish being:

Drift, J. A. Gage, Vesper	1
Minnie G., F. T. Walsh, Vesper	2
Wicassie, R. F. Brazer, Vesper	3
Cnona, W. R. Haviland, Yonkers	4
Anita, O. T. Conner, Ianthe	5
Bachelor, Barron Fredericks, Ianthe	6
Kaw, M. Bender, Jr., Mohican	7

The maneuvering race, event 18, was the last race of the morning. The course was about ½ mile, each competitor being compelled to throw overboard a half paddle and pick it up again. Ford Jones, in the Ramona, was the first to recover his paddle, Brokaw, in the Eclipse, had a good lead, but was slow in getting his paddle, taking second place. Walter Stewart, in the Charm, was third, and Warder, in the If, was fourth.

A very long time was wasted after dinner before the racing was resumed, the 75ft. limit race being called at 4 P. M., by which time the wind, which had blown well for a time, had dropped very light. Two rounds of the course were sailed, Charm took the lead at the line, as she did in the unlimited race, but soon lost it. The race was between Ramona and Eclipse, the former leading over the course, but hotly chased by Eclipse. The summary was:

	1st Round.	2d Round
Ramona, Ford Jones	1	1
Eclipse, M. V. Brokaw	2	2
If, Geo. A. Warder	3	3
Agawam, E. C. Knappe	4	4
Fly, Paul Butler	6	5
Dimple, G. C. Forrest	7	6
Drift, J. A. Gage	8	7
Sirene, A. S. Putnam	5	8
Guenn, Wm. Whitlock	9	9
Charm, Walter Stewart	10	10

There were 20 starters. It was after 5 P. M. when the race finished and no others were called. The weather was cloudy with a little rain, and the general illumination was postponed, but many fireworks were sent off in the evening, with songs about the camp-fire. During the day Mr. and Mrs. N. H. Bishop were in camp.

Wednesday, Aug. 22.

The chief sailing event of the meet, the race for the A. C. A. Trophy, won in 1886 by Com. Gibson in the Vesper, and in 1887 by him in the Notus, was called on Wednesday morning, the weather being cloudy with some rain and a strong N. W. wind. Of the 15 contestants who are admitted to race for the Trophy, one, Mr. Walter Stewart, came from England as the representative of the Royal C. C. Of the remainder 11 were the leaders in the unlimited race, while the other three were selected, as provided in the conditions, by the committee. The full list as posted was:

Walter Stewart—M. V. Brokaw, R. W. Bailey, G. C. Forrest, Paul Butler, F. T. Walsh, W. O. Leys, H. L. Quick, William Wheeler, E. H. Barney, J. H. Campbell—W. Whitlock—D. S. Goddard, G. A. Warder, Ford Jones.

Vice-Com. Bailey was too ill to sail, and of the others Mr. J. H. Camppell withdrew in favor of Mr. E. L. Knappe.

The race was started at 10:31, the first leg, F G on the map, being free. The fleet was closely bunched, some fast boats getting a very bad start, but Charm was in too great a hurry and her big lug mainsail was well across the line before gun fire. Eclipse was just beside her but far enough astern to cross prope ly. Charm did not recross the line but continued in the race, being too far distant from the starter's boat for a recall to reach her. She continued over a part of the first round and then withdrew, as she was doing very badly. The mainyard was entirely too light and the leech was in a bag. Eclipse not only had a good lead over the pack but made the most of it, and at the first mark led the fleet, holding her place through the first of the five rounds. She jibed at the mark and had a good start on second round before the second boat, Dimple, came up. The wind and sea had moderated, but there was still breeze enough to make a jibe somewhat exciting. Instead of jibing at once Dimple ran off her course as though intending to withdraw and then hove to, while several canoes passed her. Fly was the first of these, jibing neatly, then followed Ramona, Agawam and If, before Dimple, after tacking, started on second round. At 11 o'clock the wind was blowing quite fresh with rain and quite a sea near the second mark, the windward one of the course. Fly was overhauling Eclipse, the latter having shipped some water and finally stopping near first mark on second round to bail out. Fly was sailing with a small suit of mainsail sails borrowed for the race, and on this round the lashing at tack and clew parted, leaving the mainsail half loose on the foot. If was sailing very fast on the second round, passing Agawam and then Ramona on the second leg, thus taking third place. When near the second mark on first round "Ruggles" capsized in a sudden "twister" off the hills. Mr. Barney climbed aboard, but went over a second time and was picked up by the launch.

There was some excitement as the leaders came up for the end of the second round, running across very fast. Fly gained on Eclipse each moment, and at the turn passed her and took first place. If was now sailing well in third place and catching the leaders, when on the first leg of the third round she capsized. Several paddlers at once put out to her aid, but Mr. Warder declined all help. Swimming alongside, he unstepped the mainmast and righted the boat, then climbed aboard, and in a most dextrous manner worked forward on deck and stepped the sail a battened Pecowsic sail of 50ft. When it is considered that the wind was still blowing hard, the mast tube was but a foot from the stem, and the sail was of such a shape that the boom could not be topped up against the mast, the difficulty of the feat will easily be understood.

On third and fourth round Fly gained greatly, at one time having a lead of 2m., but on the latter part of the fourth round the wind fell, and Eclipse rapidly came to the front. Fly jibed and started on the first leg with Eclipse a little astern, the latter sailing wing and wing, while Fly had both booms on the same side. They turned the first mark close together, and then Eclipse went to windward of Fly. When near the second mark Fly lost the wind for a short time, Eclipse increasing her lead and coming in first. If was in hard luck, parting her rudder chain at the end of the fourth round, and sailing out the race with a paddle to leeward to steer by. Guenn came to grief through a mast tube that collapsed, the mast tearing up her deck. Ramona was sailing well and holding third place at the end of the first round, but at the end of the second she bore away for home and gave up the race.

The order on the various rounds was:

	1st.	2d.	3d.	4th.	5th.
Eclipse	1	2	2	2	1
Fly	2	1	1	1	2
Dimple	6	5	5	3	3
Agawam	4	4	3	4	4
If	5	3	4	5	5
Charm	Withdrew.				
Scud	Withdrew.				
Minnie G.	Withdrew.				
Dawn	Withdrew.				
Evangeline	Withdrew.				
Blanche					
Ruggles	Capsized.				
Guenn	7	Capsized.			
Ramona	3	Withdrew.			

The times of the rounds were:

	1st.	2d.	3d.	4th.	5th.
Eclipse	10 54 42	11 20 36	11 47 50	12 15 05	12 47 50
Fly	10 55 52	11 21 35	11 45 51	12 14 32	12 50 21
Dimple	10 59 38	11 36 15	12 06 15	12 33 42	12 58 02
Agawam	10 59 20	11 36 05	12 03 00	12 34 06	1 01 42
If	10 59 24	11 25 47	12 05 30	12 35 12	Not timed

As soon as the Trophy race was well under way at 10:37, Event No. 19, Class C sailing, was started with but two entries:

	Finish.
Madeline, 16x31, W. L. Palmer, Mohican	11 52 19
——, W. M. Paxton	11 54 07

Madeline sailed the two rounds with a good lead and won easily.

From the small response that has been made to the attempts of the A. C. A. to bring out entries in this class, it would appear that for the present at least there is no active desire to race on the part of the owners of these canoes, and the same applies to sneakboxes and other unclassified craft.

After dinner a very strong N.W. wind was blowing, and the race for the Springfield Cup, which was set for 3 P. M., was postponed. In the evening the illumination and display of fireworks took place, as in previous years, the canoes being handsomely decorated with Chinese lanterns, the best display being that of the Harvard C. C.

A meeting of the executive committee was held at 8 P. M. with Com. Gibson in the chair, the following members being present: Sec.-Treas. Miss Central Division, Vice-Com. Huntington, Rear-Com. Masten, Purser Stryker; Eastern Division, Vice-Com. Rice, Purser Marsh, Mr. Shedd; Northern Division, Messrs. Edwards, Wright and White as proxies for Vice-Com. Tyson, Rear-Com. Robinson and Purser Fraser; Atlantic Division, Vice-Com. Stephens, Rear-Com. Palmer, Purser Dunnell and Mr. Brokaw. After reading the minutes of the previous meeting, nominations were called for, and Vice-Com. Stephens proposed Col. Harry C. Rogers, of Peterboro, for Commodore, being seconded by Mr. Shedd. Col. Rogers was elected by a unanimous vote, after which Mr. White proposed for Secretary-Treasurer Mr. Geo. W. Hatton, of Peterboro, seconded by Mr. Wright, and the election was unanimous. The question of the terms of office for division officers was discussed, and it was decided that an amendment to the Constitution was desirable, making the term of office date from the close of the general meet following the division meet at which the officers are elected; also that the limit of 30 days from election, within which the vice-commodores must appoint their regatta committees for each division, be abolished. These amendments will be presented to the executive committee at the fall meeting. It was also decided that it would be best to change Article VI., Section 1, by the insertion of the words "October or," thus allowing the meeting at which the camp site for the following year is selected to be held before bad weather sets in.

Vice-Com. Stephens offered the following addition to Article I. of the By-Laws, which was adopted: "Non-members of the A. C. A. when accompanying members, may be admitted to the camp at the discretion of the commodore and secretary; provided that if they spend more than two nights in camp the member introducing them shall pay for each the annual dues and camp fee paid by regular members." A vote of thanks was passed to Com. Gibson and Secretary Mix. Messrs. Edwards and Wright were appointed a committee to wait on the commodore and secretary-elect and inform them of their election. On motion of Vice-Com. Stephens a committee consisting of the vice-commodore and purser of each division was appointed to draw up a form of application for membership to be used in common by all divisions.

Thursday, Aug. 23.

Thursday was clear and pleasant, and at 10 A. M. the race for the paddling trophy was called, the following men being elegible: Pattou, Edgar, Rice, Knappe, Brokaw, Leys, Johnson, Torrance. The course was on the east side of the camp, something over half a mile. Only three starters came to the line.

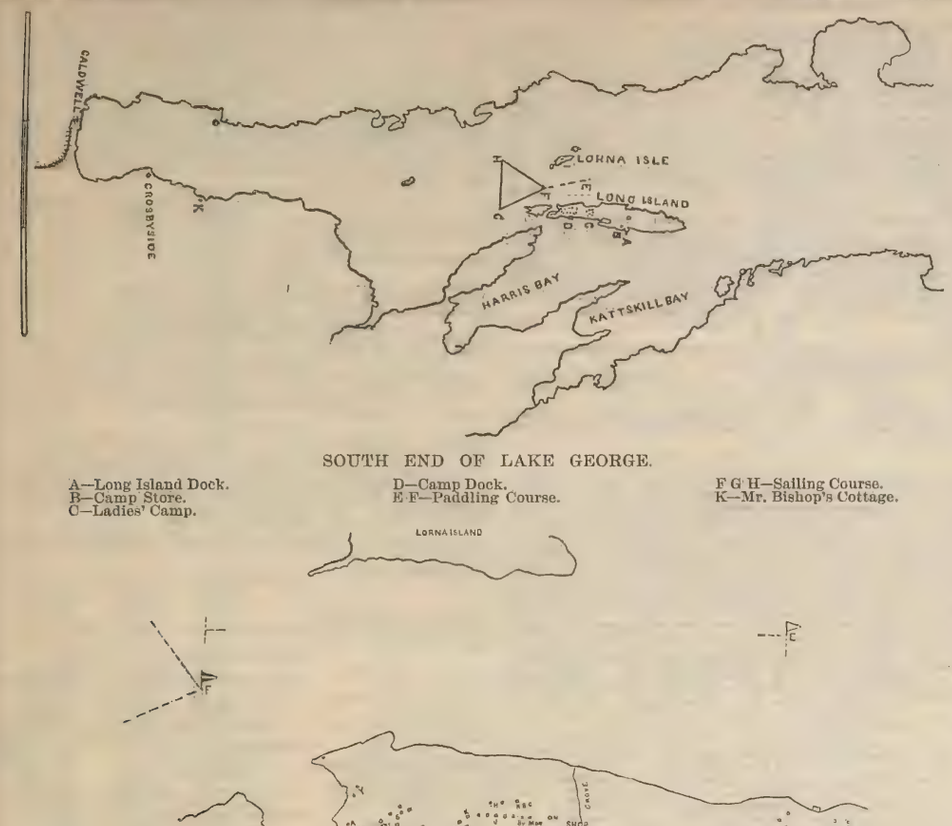
Narka	H. E. Rice, Springfield.
Bonnie	M. F. Johnson, Toronto.
Agawam	E. C. Knappe, Springfield.

Narka and Agawam are regularly decked canoes of the usual type, Bonnie being a Canadian canoe, with decks at end, two bulkheads and a metal board, so as to come within the rules. Narka had no bulkheads, their place being supplied by pigs' bladders. Narka took the lead, her crew sitting back easily and paddling with little apparent exertion. Dr. Rice takes a long stroke, using feathered paddles and turning the blade a quarter-turn on each stroke, thus easing the work on the wrist, as each hand grasps the paddle in turn while it revolves in the other one. Mr. Johnson stood upright in his canoe, using two paddles spliced together to make a 12ft. blade. He stooped down and leaned far forward on the beginning of the stroke, to all appearance working very much harder than his antagonist. Mr. Knappe was seated in his boat in the usual position. At the start both Narka and Agawam led Bonnie, the latter gathering way very slowly, while Narka started off like a flash. Soon Bonnie took second place, but could not hold Narka, the latter gaining every stroke. At the finish Narka led by seven to eight lengths. As Johnson crossed the line he fell in a faint in the bottom of his canoe and for a minute threatened to roll her over, but soon recovered himself. The race was a beautiful one, probably the best that has ever been paddled by the A. C. A.

The race for the Springfield Cup was called at once and started at 10:37 over the triangle, two rounds. The day was clear, with a moderate N.W. wind, sometimes coming in heavy puffs and again dropping to a calm. The starters were:

	1st.	2d.	Finish.
Eclipse, M. V. Brokaw	2	1	11 27 18
If, Geo. A. Warder	1	2	11 27 55
Charm, Walter Stewart	3	3	11 29 54
Ramona, Ford Jones	5	4	11 30 34
Giroffa, F. A. Nickerson	6	5	Not timed.
Dimple, Geo. C. Forrest	7	6	
Wicassie, Ralph Brazer	4	7	
Blanche, D. S. Goddard	8		Capsized.
Minnie G., F. T. Walsh	9		
Evangeline, H. L. Quick	10		
Slab, C. P. Nichols			Capsized.

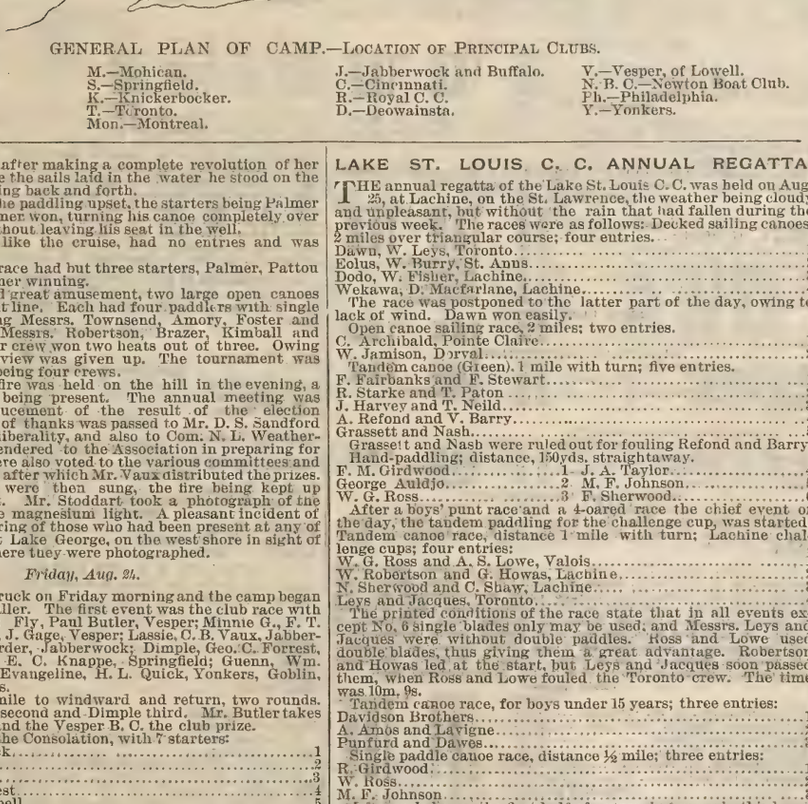
The start was down wind, Eclipse going over in good season, with Charm close astern. On the first leg If took second place and near the second mark passed Eclipse. The latter steered a better course running for the third mark, but still If held her and started the second round with a good lead. Blanche and Slab capsized on the first leg. The windward leg of the second round was very pretty, Eclipse gaining a little on If. The latter turned the second mark ahead, but laid for a minute or so becalmed, Eclipse coming up on her with a breeze. When the wind did come it was a puff off a high hilltop and struck her very suddenly. Each sail jibed three times, the boat running away, while her crew had all that he could do to keep her up without any thought of the course or finish. Eclipse too was reeling about before the same squall, but probably caught less of it than If; at any rate she was driven less off her course. She came out of the squall with a safe lead and If could not catch her in the short distance to the finish. Eclipse thus holds one leg for the cup and is entitled to enter the final sail off this fall at Springfield. The cup is a very handsome piece of metal work, of oxidized copper, resembling silver in appearance.



The next race, Event 4, paddling and sailing combined, was started at 12:13 with 8 starters.

	1st.	2d.	Finish.
Eclipse, M. V. Brokaw	1	1	1 05 23
Dawn, W. A. Leys	4		
Agawam, E. C. Knappe	3	2	1 09 05
Evangeline, H. L. Quick	2	3	1 09 05
Charm, Walter Stewart	6		
Goblin, A. B. Pattou	7		
Wicassie, Ralph Brazer	5		
Dimple, Geo. C. Forrest	8	8	

Mr. Stewart threw away whatever chance he may have had by starting with a small single blade, all the rest having double blades, which useful article does not form a part of the outfit of the Charm. Dimple came to the line after all the others had covered a good part of the first leg, and then started to paddle half a mile to windward with sails half stowed and blowing about. She held on pluckily, but with no show of success. On the second round the wind fell to a calm.



After dinner the sailing upset was started with five starters: If, Geo. A. Warder; Atalanta, L. B. Palmer; Charm, Walter Stewart; Sirene, A. S. Putnam; Ethel G., J. H. Campbell.

At the start Mr. Palmer's mainmast carried away at the deck. Mr. Warder capsized his canoe at the signal until her masts and sails laid flat in the water, then stepped outside on the centerboard, wetting only his feet, and righted the canoe, sailing over the line. After finishing he again capsized the canoe, this time until the masts were downward and the centerboard up in the

SOUTH END OF LAKE GEORGE.

A—Long Island Dock.
B—Camp Store.
C—Ladies' Camp.
D—Camp Dock.
E F—Paddling Course.
F G H—Sailing Course.
K—Mr. Bishop's Cottage.

GENERAL PLAN OF CAMP.—LOCATION OF PRINCIPAL CLUBS.

A.—Arlington.
B.—Brooklyn.
Br—Brockville.
I.—Ianthe.
N.—New York.
M.—Mohican.
S.—Springfield.
K.—Knickerbocker.
T.—Toronto.
Mon.—Montreal.
J.—Jabberwock and Buffalo.
C.—Cincinnati.
R.—Royal C. C.
D.—Deowainsta.
V.—Vesper, of Lowell.
N. B. C.—Newton Boat Club.
Ph.—Philadelphia.
Y.—Yonkers.

air, then righting her after making a complete revolution of her under his feet. While the sails laid in the water he stood on the side of the boat, walking back and forth.

The next race was the paddling upset, the starters being Palmer and Pattou. Mr. Palmer won, turning his canoe completely over by a quick motion without leaving his seat in the well.

The obstacle race, like the cruise, had no entries and was abandoned.

The hurry scurry race had but three starters, Palmer, Pattou and LaMotte, the former winning.

A tug of war created great amusement, two large open canoes being joined by a stout line. Each had four paddlers with single blades, one crew being Messrs. Townsend, Amory, Foster and French; the other Messrs. Robertson, Brazer, Kimball and Schuyler. The former crew won two heats out of three. Owing to lack of time the review was given up. The tournament was very amusing, there being four crews.

The annual camp-fire was held on the hill in the evening, a number of visitors being present. The annual meeting was first held, the annoucement of the result of the election being made. A vote of thanks was passed to Mr. D. S. Sandford for his kindness and liberality, and also to Com. N. L. Weatherbee for assistance rendered to the Association in preparing for the meet. Thanks were also voted to the various committees and to the donors of flags, after which Mr. Vaux distributed the prizes. A number of songs were then sung, the fire being kept up until nearly midnight. Mr. Stoddart took a photograph of the group by means of the magnesium light. A pleasant incident of the meet was a gathering of those who had been present at any of the previous meets at Lake George, on the west shore in sight of the Canoe Islands, where tuey were photographed.

Friday, Aug. 24.

Many tents were struck on Friday morning and the camp began to look decidedly smaller. The first event was the club race with the following entries: Fly, Paul Butler, Vesper; Minnie G., F. T. Walsh, Vesper; Drift, J. Gage, Vesper; Lassie, C. B. Vaux, Jabberwock; If, Geo. A. Warder, Jabberwock; Dimple, Geo. C. Forrest, Hartford; Agawam, E. C. Knappe, Springfield; Guenn, Wm. Whitlock, Brooklyn; Evangeline, H. L. Quick, Yonkers, Goblin, A. B. Pattou, Yonkers.

The course was ½ mile to windward and return, two rounds. Fly won, with Lassie second and Dimple third. Mr. Butler takes the individual prize and the Vesper B. C. the club prize.

The final race was the Consolation, with 7 starters:

Guenn, Wm. Whitlock.....1
If, Geo. A. Warder.....2
Lassie, C. B. Vaux.....3
Dimple, Geo. C. Forrest.....4
Ethel G., J. H. Campbell.....5
Minnie G., F. T. Walsh.....6
——, Bennett.....7

This finished the racing, and in the afternoon a large number left camp. Some will stay a few days longer and then cruise down the lake.

OTTAWA C. C.—The second paddling race in the challenge series of the Ottawa C. C. took place on Aug. 18. The entries were: O. A. Wheeler, Clarabelle; W. H. Cronk, Greta; C. G. Rogers, Joe; F. H. Gisborne, Omide. Clarabelle is an open English canoe 15ft. x29½in., and 11in. deep; Greta is an Ontario Co. patent longitudinal strip canoe, 15½ft. x30., and 11in. deep; Joe, an Ontario Co. open canoe, 16ft. x28in., and 9in. deep, and Omine, an Ontario Co. partially decked canoe, 16ft. x28in., and 10in. deep. There was a westerly breeze, which made the canoes hard to steer, especially the deeper ones, but otherwise the day was perfect. The canoes made a good start, Cronk leading, Rogers second, Gisborne third and Wheeler fourth. Cronk turned the buoy first, Rogers next and Gisborne third, and then the hard paddle home began, the three canoes being well together. The extra depth of Greta now began to tell, and she became very hard to steer. Gisborne then took second place, and the race laid between Rogers and her, the former being a length or more ahead. Each paddler did his best to vary the relative position of the canoes, but not much success was apparent, the time at the finish being: Rogers 10.15, Gisborne 10.18, Cronk 12. Wheeler's time was not taken.

N. J. A. C. CANOE RACES.—Gold medals will be given to the winning crews in each of the canoe races, single and tandem, paddling and upset, of the New Jersey Athletic Club at Bergen Point on Labor Day.

LAKE ST. LOUIS C. C. ANNUAL REGATTA.

THE annual regatta of the Lake St. Louis C. C. was held on Aug. 25, at Lachine, on the St. Lawrence, the weather being cloudy and unpleasant, but without the rain that had fallen during the previous week. The races were as follows: Decked sailing canoes, 2 miles over triangular course; four entries.

Dawn, W. Leys, Toronto.....1
Eolus, W. Burry, St. Anns.....2
Dodo, W. Fisher, Lachine.....3
Wekawa, D. Macfarlane, Lachine.....4

The race was postponed to the latter part of the day, owing to lack of wind. Dawn won easily.

Open canoe sailing race, 2 miles; two entries.

C. Archibald, Pointe Claire.....1
W. Jamison, Dorval.....2

Tandem canoe (Green), 1 mile with turn; five entries.

F. Fairbanks and F. Stewart.....1
R. Starke and T. Paton.....2
J. Harvey and T. Neild.....3
A. Refond and V. Barry.....4
Grassett and Nash.....5

Grassett and Nash were ruled out for fouling Refond and Barry.

Hand-paddling; distance, 150yds. straightaway.

F. M. Girdwood.....1 J. A. Taylor.....4
George Auldjo.....2 M. F. Johnson.....5
W. G. Ross.....3 F. Sherwood.....6

After a boys' punt race and a 4-oared race the chief event of the day, the tandem paddling for the challenge cup, was started.

Tandem canoe race, distance 1 mile with turn; Lachine challenge cups; four entries:

W. G. Ross and A. S. Lowe, Valois.....1
W. Robertson and G. Howas, Lachine.....2
N. Sherwood and C. Shaw, Lachine.....3
Leys and Jacques, Toronto.....4

The printed conditions of the race state that in all events except No. 6 single blades only may be used, and Messrs. Leys and Jacques were without double paddles. Ross and Lowe used double blades, thus giving them a great advantage. Robertson and Howas led at the start, but Leys and Jacques soon passed them, when Ross and Lowe fouled the Toronto crew. The time was 10m. 9s.

Tandem canoe race, for boys under 15 years; three entries:

Davidson Brothers.....1
A. Amos and Lavigne.....2
Punfurd and Dawes.....3

Single paddle canoe race, distance ½ mile; three entries:

R. Girdwood.....1
W. Ross.....2
M. F. Johnson.....3

Johnson led over the first half of course, but came in third.

Canoe race, four paddles, distance ½ mile with turn. For this event six crews entered:

Valois crew—T. Paton, A. S. Lowe, J. A. Taylor, J. G. Ross.....1
Beaconsfield crew—Messrs. Patterson, McDonald, McIntosh, and Stevenson.....2
Lachine crew, No. 2—G. Auldjo, White, A. Howard, Fairbanks..3
Lachine crew, No. 3—C. Shaw, F. Stewart, S. Howard, W. Robertson.....4
Dorval crew—Fry, Jamieson, J. Jamieson, J. Campbell....Upset.
Toronto crew—Leys, Jacques, Johnson and Girdwood....Gave up.

The tug of war and hurry-scurry races were abandoned. The greatest fun of the day was over the dug-out race:

Dorval crew.....1
Pointe Claire crew.....2
Lachine crew.....3
Valois crew.....4
Lachine crew, No. 2.....5

The day ended with a hop at the hotel, the prizes being distributed there.

A. C. A. MEMBERSHIP.—Northern Division: E. B. Alport, Geo. Grant, Ed. Cook, F. J. Delany, T. N. Green, M. D., W. M. Donald, Jas. Henderson, C. McNabb, A. C. Ross, A. M. Rice, H. Wright, W. Jephcott, J. D. Kelly, Geo. Sparrow, A. Shaw, F. Goodwin, Geo. Martin, J. McEchren, Jas. Jephcott, H. S. Scadding, D. J. Fortier, J. Wellis, W. L. Parrish, F. Roden, F. Arnoldi, J. Monypeny, F. J. Gillespie, W. M. Harvie, J. C. Smith, G. L Bolster, Thos. Goffatt, Jr., H. Torrance, W. A. White, J. Sanson, R. Grant Dalton, H. D. Leask, F. Evans, C. U. Wiffen, C. E. Howard, G. D. McLeod, Jas. Walker, H. L. Knowles, E. F. Hatton, O. T. Wright, Chas. Stephens, J. H. Vernow, H. C. S. Elliott, C. H. Fitton, G. M. Black, Dr. N. A. Powell, Thos. Carscadden, J. A. Ross, G. H. Tompson, H. C. McLean. Atlantic Division: J. Price Warricke, New Jersey; Albert B. Pattou, Yonkers; Henry La Motte, Philadelphia, and Arthur S. Vosburgh, New York. Central Division: E. R. Bowdish, Skaneateles, N. Y.

LITCHFIELD C. C.—Officers for 1888: Com., C. R. McNeill; Sec.-Treas., W. H. Wheeler. The club was organized last year at Litchfield, Conn., and has eight members. A week was spent in camp last month.

NEW YORK C. C.—The trial races to select one defender for the New York C. C. challenge cup will be held off the club house, Tompkinsville, Staten Island, on Sept. 3, Labor Day. The morning races will be called at 10:30 A. M., and the afternoon races at 2:30 P. M. The races are open to members of all American canoe clubs, with no entrance fee.

25. Cedar Point Pennant.
29. Quaker City Cruise, Review.
29. Toronto, 2d and 3d Classes.

RACING ON LAKE MAHOPAC.

THE third race for the Dean House Cup was sailed Saturday, Aug. 18, in a very light wind, shifting between southwest and northwest. The course was the usual one sailed over twice—ten miles in all. The start was made about 11 o'clock with a light breeze from the southwest. Trifler crossed the line first, followed by Mattie, Vixen, Mist, Mischief, Dart and Flora in the order named. Spinakers were set for the run through the Gut, but a sudden shift of the wind to northwest caused them to be quickly taken in. Although the last to start, Flora carried a good wind all the way to the first buoy, and gained rapidly upon the other yachts. After rounding the first buoy, and while leading the fleet, the Trifler's throat halliard came away at the gaff and her sail came down with a run. Before the damage could be repaired and the sail again hoisted she was far behind. The second buoy opposite the Thompson House was turned by the yachts in a bunch. At this buoy Flora wrongfully compelled Vixen and Mattie to run out of their course to avoid collision, and also fouled Mischief by running into her from behind. In the mean time Trifler, having regained some of her lost ground, rounded the buoy and started for home first, but was quickly picked up and passed by Flora, and afterward by Vixen, both yachts carrying clubtopsails, which were of immense service to them in the very light wind. The first round was made by Flora, Vixen, Trifler, Mattie, Mischief, Mist and Dart as named. The same order was maintained to the finish, except in the case of the Trifler, whose throat halliards gave way a second time on the beat home, causing her to again drop back. She, however, regained her relative position and finished third.

The Flora, which is owned by the proprietors of the Dean House, was sailed by the crew of professionals under Captain Fabian, who have been brought to the lake on the occasion of each cup race this year, and have been allowed to sail notwithstanding protest. All other boats were handled by guests of the hotels and cottages, the captains being: Vixen, W. S. Patterson; Trifler, E. C. Dusenbury; Mattie, E. Ponwert; Mischief, W. Nash; Mist, D. Sturgis; Dart, Mr. Engler.

The fact of the Flora's having run amuck at the Thompson House buoy did not prevent the awarding of the race to her; and a broom raised to the topmasthead was the proud emblem of victory at last, though through much tribulation. D.

LARCHMONT Y. C.

THIS week will be a busy one at Larchmont as the annual fall regatta will be sailed on Saturday, while on Friday a special race will be sailed for yachts from 35 to 41ft. l.w.l., the course being 27 miles. A special cup will be given and it is expected that Nymph, Pappoose, Banshee, Baboon, Chiquita, Crocodile and Rival will start. The usual oysterboat race was sailed on Aug. 18, and was a decided success, all the arrangements being well carried out by the regatta committee, Messrs. Willard, Greacen and Scott. The summary was:

CLASS 1—CABIN SLOOPS OVER 35 FEET.

	Start.	Finish.	Elapsed.	Corrected.
Watson	12 30 33	5 44 20	5 13 47	5 12 17
Lizzie D. Bell	12 28 34	5 47 11	5 18 37	5 13 22
C. D. Smith	12 34 34	6 11 02	5 36 28	5 36 28

CLASS 2—CABIN SLOOPS UNDER 35 FEET.

Bertha	12 28 39	5 59 52	5 31 13	5 31 13
Annie K	12 33 38	Did not finish.		
Allie Ray	12 30 31	5 57 12	5 26 41	5 24 26
Lucy Neal	12 30 47	6 14 10	5 43 23	5 40 16
Puritan	12 29 33	Did not finish.		
Eliza Bird	12 29 57	Did not finish.		
Alice B	12 29 40	6 18 29	5 48 49	5 42 57
Jennie Baker	12 29 44	5 55 00	5 25 16	5 19 16
Maggie Holly	12 28 45	6 22 26	6 53 41	6 43 56

CLASS 3—OPEN SLOOPS OVER 30FT.

Loon	12 32 20	6 19 28	5 47 08	5 47 08

CLASS 4—OPEN SLOOPS UNDER 30FT.

Georgie B	12 29 44	Did not finish.		
Florence May	12 28 52	6 02 40	5 33 48	5 33 48
Jennie A Willis	12 36 33	5 59 25	5 22 52	5 19 15
Minnie S	12 31 42	6 02 00	5 31 18	5 27 18
Emma C	12 30 15	6 02 50	5 32 35	5 27 50
Addie B	12 36 44	6 03 10	5 26 26	5 21 11
Delphine	12 31 53	6 02 33	5 30 40	5 26 10
Carlew	12 32 11	Did not finish.		
Frou-Frou	12 36 05	Did not finish.		

CLASS 5—CATRIGGED BOATS.

Joke	12 32 05	6 27 48	5 55 43	5 43 58
Fannie M	12 32 24	6 50 28	6 18 04	5 57 19
Parthenia	12 28 27	6 49 09	6 20 42	6 20 42

Thus the winners are Wa son first prize, Lizzie D. Bell second in class 1; Jennie Baker first, Allie Ray second in class 2; Loon first in class 3; Jennie A. Willis first, Addie B. second, in class 4; Parthenia first, Joke second in class 5.

MONTGOMERY SAILING CLUB.—Fourteenth weekly cruise, Aug. 26. Course, Norristown to Indian Creek and return; distance, 5 miles. Wind fresh, westerly:

	Length.	Start.	Finish.	Corrected.
Playford, tuckup	15.00	1 40 00	3 06 42	1 26 42
G. W. Bowers, tuckup	15.00	1 40 00	3 07 30	1 27 30
Volunteer, tuckup	15.00	1 40 00	3 11 12	1 31 12
Querner, tuckup	15.00	1 40 00	3 12 30	1 32 30
Iola, ducker	15.00	1 30 00	3 16 00	1 56 00
J. S. Frith, tuckup	15.00	1 40 00	3 22 40	1 42 40
Gracie, skiff	12.00	1 30 40	Withdrew.	
Warren, ducker	14.00	1 30 00	Withdrew.	

It was a beat to the buoy and a run home. Gracie started with 85ft. of sail, and at the end of three-quarters of a mile reefed to 69ft. The other boats carried full sail, from 18 to 27yds. At the end of 1½ miles the Warren, being far in the rear, gave up. The Gracie gave up at the end of 2 miles. George Ritter, the owner of the canoe Sadie, sailed the tuckup Volunteer.

STRANGER.—Mr. Warren's cutter arrived at Queenstown on Aug. 12, after a passage of 23 days, in which she experienced some very heavy weather, springing her boom and boxing her bowsprit. On one day she ran 218 knots.

BEVERLY Y. C., AUG. 25.

34TH REGATTA, THIRD BUZZARD'S BAY CHAMPION, MONUMENT BEACH.

COURSES for first and second classes: Leaving B Buoy No. 3 on starboard, Bird Island Buoy and Scraggy Neck Buoy on port and return, 11 miles. Third class: Leaving B Buoy No. 3, Abeel's Ledge Buoy, judges' yacht and B Buoy No. 3 on starboard and return, 8 miles. Fourth class: Leaving B Buoy No. 3 on starboard and return, 3¼ miles. Fresh S.W. wind.

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Surprise, J. M. Codman	26.00	1 54 45	1 42 50
Whisper, S. M. Weld	26.02	2 11 43	1 59 59
Mattie, Vice-Com. Stockton	26.10	. . .	. . .

SECOND CLASS.

Mist, G. H. Lyman, Jr.	22.02	2 00 44	1 49 00
Beatrice, C. E. Curry	22.08	2 03 44	1 50 28
Tantrum, Wm. Amory, 3d	22.10	2 07 03	1 51 11
Lestris, Joshua Crane	23.05	2 10 22	1 55 07

THIRD CLASS.

Daisy, Vice-Com. Stockton	20.06	1 52 07	1 38 06
Petrel, Geo. H. Richards	20.06	1 57 49	1 43 48
Eleanor, John Parkinson	22.02	1 58 14	1 46 01

FOURTH CLASS.

Wink, M. Williams, Jr.	18.09	0 40 42	0 34 09
Polly, Richard Codman	16.02	0 44 03	0 36 00
Nymph, C. W. Amory	16.11	0 44 08	0 37 34

Polly protests Wink for a foul; decision awaits a hearing by committee. Winners of first prizes were Surprise, Mist, Daisy, Wink; second prize, Beatrice. Surprise wins and holds first class pennant; Daisy wins third class pennant, tieing Eleanor and Dolly; a sail off is necessary. Judge, A. H. Hardy; judge's boat, Mollie.

135TH REGATTA—OPEN—MARBLEHEAD.

Courses, 1st and 2d classes—Leaving B. Buoys 5 and 3, Tom Moore's Rock, Turkey Island, Roaring Bull and Pig Rock stakes on starboard, Graves Whistling Buoy, Half-way Rock and B. Buoys 3 and 5 on port and return, 20½ miles. 3d class—Leaving B. Buoys 5 and 3, Tom Moore's Rock, Turkey Island, Roaring Bull and Pig Rock stakes on starboard, stakeboat off Spindle Rock, Swampscott, stakeboat off Egg Rock, Pig Rock stakes, Roaring Bull, Turkey Island, Tom Moore's Rock and B. Buoys 3 and 5 on port and return 13¼ miles. 4th class—Leaving B. Buoys 3 and 5 on port, S.E. Pig Buoy, Half-way Rock and Buoys 3 and 5 on port and return, 10 miles. 5th, 6th and jibmainsail classes—Leaving Marten's Rock, Gooseberry Ledge; Satan and stakeboat anchored one mile south of Marblehead Rock on starboard, B. Buoys 3 and 5 on port and return, 7¾ miles. Wind—S.S.W. to S.W., moderate, rather variable. Summary:

SECOND CLASS.

	Length.	Elapsed.	Corrected.
Shadow, John Bryant, B.	34.02	4 13 50	4 06 05
Ramona, M. N. Bray, B.	33.10	4 16 40	4 08 26
Magic, E. C Neal, L.	31.01	4 21 24	4 08 48
Violet, H. J. McKee, S. B.	33.08	4 28 12	4 19 42
Albatross, J. J. Henry, H.	34.02	4 28 39	4 20 44
Hilda, C. P. Curtis, B.	31.05	Withdrew.	

THIRD CLASS CENTERBOARDS.

Mucilage, C. C. Hanley, M. Beach	26.00	3 04 21	2 50 00
White Fawn, W.C. Cherrington, S.B.	24.08	3 23 00	3 06 45

SIXTH CLASS.

Rocket, H. M. Faxon, Q.	16.02	1 37 22	1 18 11
Mirage, John Dearborn, D.	17.05	1 38 02	1 19 58
Dolphin, Royal Robbins, B.	17.01	1 49 38	1 31 48
Nonpareil, E. J. Lanning, D.	16.11	1 52 52	1 34 48
Wildfire, H. A. Keith, Q.	17.02	1 53 39	1 35 56

JIB AND MAINSAIL CLASS.

Eureka, Geo. Hutchins, S. B.	20.02	1 22 19	1 08 22
Tom Cat, C. H. Lockhardt, L.	19.00	1 24 03	1 08 44
Coyote, Walter Abbott, B.	20.03	1 26 53	1 13 02
Diadem, L. Hayward, Q.	18.01	1 28 55	1 12 37
Climax, W. E. Tucker, C. A.	18.06	1 31 02	1 15 05
Tarantula, J. S. Poyen, H.	20.09	1 32 56	1 19 38
Zoe, W. H. Farmiloe, J.	18.01	1 33 20	1 16 51
Budge, P. J. Lowell, A.	19.05	1 33 34	1 18 45
Nora, E. P. Boynton, H.	21.06	1 49 21	1 36 27
Elf, Blake & Bailey, A.	17.06	1 51 13	1 35 18

Alpine, White Wings, Silver Cloud, Spark, Olen, Isabel and Flora Lee did not start.

Number of entries, 85; starters, 56; completing course, 61.

Winners of first prizes were: Shadow, Mucilage, Mignon, Sea Bird, Thelga, Mosca, Mabel, Rocket, Eureka. Second prizes, Ramona, White Fawn, Saracen, Hazel, Echo, Kathleen, Peri, Mirage, Tom Cat. Third prizes, Black Cloud, Beetle, Expert, Swordfish, Wraith, Niobe, Dolphin, Diadem.

Protest were entered against measurement of Eureka, Echo, Tom Cat, Diadem and Mignon, and against Daphne for cutting inside Martin's Rock. Echo and Eureka were measured and results are as above. Diadem protest withdrawn, others to be settled.

The number of boats handicapped in first class resulted from a light wind, in fifth and sixth class because they all waited for the fastest boat to cross first.

Abbreviations of club names: B., Beverly; B. H., Bunker Hill; A., American of Newburyport; C., Corinthian; C. A., Cape Ann; D., Dorchester; H., Hull; J., Jeffries; L., Lynn; M., Monatiquot; Q., Quincy; S. B., South Boston: W. L., West Lynn; S. H., Savin Hill.

Kathleen was officially measured on the 24th, but the figures have not yet been received; those given are the C. Y. C. length; official figures may change places between her and Wraith.

Regatta Committee: W. Lloyd Jeffries, A. H. Hardy, John B. Paine, Robert Saltonstall and R. B. Crowninshield. Judges: W. Lloyd Jeffries, W. A. Jeffries, H. Ellerton Lodge, Edmund Parker. Judges yacht: Steamer Gleam, J. P. Cushing, B. Y. C.

MARBLEHEAD Y. C.—A club with this name has been organized at Marblehead, Mass., with the following officers: Com., Fred. B. Litchman; Vice-Com., Joseph G. Stacy; Secretary, Frank Ramsdell; Treasurer, Everett Graves.

THE MACKINAC REGATTA.

THE competing yachts arrived at Mackinac in time for the race of Aug. 15, but some had more or less trouble by the way. Both Verve and Minnie M. were disabled, and Cora went on a reef near Mission Island. The race was postponed until Wednesday, as Idler's racing rig had not arrived. The course was about 20 miles. The race was started on Aug. 16, with three entries, Idler, 96ft. 9in. l.w.l., Oriole, 60ft., and Wasp, 63ft., all schooners; but the wind was so light that the race was postponed. On Thursday a start was made in a moderate breeze, the weather being cool and rainy. Speranza, the much vaunted New York schooner, did not start: unless she is very much faster in fresh water than she ever was in salt, it is an utter absurdity to talk of racing her against such a boat as Idler. The start was timed;

Wasp	10 20 31	Idler	10 31 49
Oriole	10 28 21		

The first leg was to windward, Oriole leading at first mark, with Idler second. Oriole led down 2d round until she lost the wind, Idler passing her, but soon lying becalmed also, while Wasp profitted by their fate and kept more off shore, gaining all the time. When the wind did come, Oriole was first to profit by it, sending her spinaker out to port. Oriole led around second mark, with Wasp but 5 seconds astern. On the next leg, to windward, the wind fell very light at times. The third mark was turned:

Idler	3 04 24	Wasp	3 36 37
Oriole	3 08 57		

Oriole finally won easily, passing Idler on the windward work to the fourth mark. The times were:

	Elapsed.	Corrected.		Elapsed.	Corrected.
Oriole	6 31 00	6 20 58	Wasp	7 17 07	6 55 25
Idler	6 38 00	6 38 00			

Oriole was designed by Mr. A Cary Smith for Mr. Gooderham, of Toronto. Idler is the old racer once owned by Mr. Colgate, and is well known about New York.

CORINTHIAN Y. C., COOPER'S POINT, AUG. 7.—*Editor Forest and Stream:* The Wilkins having returned from a ten-day cruise in Chesapeake Bay (two men in the boat) 20 minutes before the race, started and won club pennant (first over the course) and challenge flag in Class 2. Cook wins challenge flag in Class 3. Fitch retains challenge flag in Class 1, Aug. 13, challenge from Anderson to Cook for "cock of the walk" flag, a purse of $25 and supper. Blowing hard from N.W., oyster schooners and large sloops double reefed. Sailed to Billingsport Buoy and return, 24 miles. The racers, 15ft. long, carried whole sail, three men in each boat. Anderson wins. Aug. 21, thirteenth race, Wilkins wins both flags again, and Anderson 2d. This race was sailed in a N.E. storm, and great damage was done on the Delaware River and Bay on that day. Challenge from Anderson to sail any 15ft. boat to Reedy Island and return, 100 miles, two men only in each boat, and no professionals allowed. The challenge has at last been accepted by the Cook, a twin sister boat, to be sailed on or before Sept. 4. It is claimed for this type of boat that they are built for the boat to win, while the tuckup is built for the crew to win. Not a race (which takes place every two weeks) has been postponed on account of bad weather or otherwise, save one on the death of Commodore Funk. A 15ft. boat, third class, carries 600lbs. of dead weight. A 16ft. boat from 800 to 900lbs. A first class boat from 18 to 19ft. long, all of the extreme dish order, carries no dead weight at all, and, like the tuckup, has to depend on live weight for her stability. The writer witnessed the Anderson-Cook race in one of his finest lined and speediest dish boats, and with men "hiked" out to windward, was obliged to double-reef, and with decks awash, and one man continually bailing, was beaten most unmercifully by the honest little boat (Anderson). Her sail is low and wide, and of 8oz. duck, double-bighted; while the lightest twilled muslin has to be used on boats depending on live ballast. As cruisers these boats seem to fill the bill, and seldom go with more than two men. The "pancake" has had her day even on the Delaware River.—R. G. W.

PLEON, Y. C.—On Aug. 17 the third championship regatta was sailed over a 6-mile course, the wind being light from E. with rain. The first class failed to make the race within the time limit of 2 hours. The summary was:

SECOND CLASS CENTERBOARDS.

	Length.	Elapsed.	Corrected.
Perhaps, B. B. Crowninshield	12.10	1 30 30	1 27 42
Jay Gee, F. B. Litchman	12.07	1 33 55	1 30 53
Monarch, W. O. Taylor	12.03	1 38 00	1 34 11

SECOND CLASS KEELS.

Estelle, J. W. Dunlap	11.09	1 30 20	1 26 47

Perhaps and Estelle win first prizes and the championship of their class for this year. Judges, J. B. Cummings, C. M. Wright and D. W. Lane.

On Aug. 22 the open race was started in a strong N. W. wind and heavy sea, 18 yachts starting. The summary was:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Jay Gee, F. B. Litchman	25.00	1 01 00	0 58 30

SECOND CLASS CENTERBOARDS.

Perhaps, B. B. Crowninshield	12.01	Capsized.	

The winners were: Jay Gee, Anna L., Monarch, Snail, Reba, Zip and Estelle. Judges, Marshall Brown, N. Goddard and Capt. Reed.

DUXBURY REGATTA, Aug. 25.—An open regatta was sailed on Aug. 25, off Duxbury, Mass., in a light S. W. wind, the courses being: For first class, from judges' yacht to a stakeboat off Two Rocks, thence to a stakeboat off Plum Hills, round Clark's Island to stakeboat off Standish House, to judges' boat. Distance, 10 miles. Second and third classes, from judges, yacht to stakeboat off Two Rocks, to stakeboat off Plum Hills, thence to stakeboat off Standish House, to judges' boat. Distance, 8 miles. The start was made from an anchor at 12:18 P. M. The summary was:

THIRD CLASS.

Clar de Track, O. Hunt	15.05	2 10 05	1 02 57
Hornet, A. M. Watson, Jr.	16.04	2 13 20	1 07 40
Paul Revere, C. Smith	16.00	2 11 25	1 05 13

Judges, T. A. Hutchins, M. J. Gaines and John A. Irwin.

CORINTHIAN Y. C., MARBLEHEAD.—The official list of winners in the regatta of Aug. 18 is as follows: Special class, Magic, first prize, Ramona second. First class keels, Saracen first, Elf second, Mignon third. First class centreboards, Mucilage first, Moondyne second, White Fawn third. Second class keels, Brenda first, Marguerite second, Swordfish third. Second class centerboards, Black Cloud first, Good Luck second, Sea Bird third. Third class, Zoe first, Climax second, Farmer third, Holden fourth, Greta fifth. Of the above class the Nerena was withdrawn disabled, and the Coyote, Tom Cat and Tarantula failed to sail over the course, and the Pixy fouled a buoy. Fourth class, Vesper first, Mosca second, Vaga third, Flying Yankee fourth, Grace W. fifth. Fifth class, Alpine first, Mirage second, Dolphin third, Olin fourth.

SOUTH BOSTON Y. C., AUG. 15.—The last club race of the season was sailed by the South Boston Y. C. on Aug. 15, off City Point, the courses being for first and second classes: From the starting point, leaving Thompson's Island on starboard, Spectacle and Long Islands on port, Rainsford's Island and Wilson's Rock Buoy on starooard, George's Island Buoy No. 7 on port returning through "The Narrows," leaving George's and Galoupe's Islands and Nix's Mate Black Buoy No. 9 on port, Lovell's Island and Red Buoy No. 8 on storboard, Long, Spectacle and Buoy No. 7 on port, to finishing point; distance, 10 miles. Third Class: From starting point, leaving Cow Pasture Red Spar Buoy No. 6 on port, Black Can Buoy No. 7 off Fort Independence on starboard, Spectacle Island, Sculpin Ledge Buoy, Red Can Buoy No. 6, lower middle on port, to finishing point. Distance, 7 miles. The summary was:

FIRST CLASS KEELS.

MIRAMACHI Y. C.—Cups and Cash Prizes Regatta, Aug. 20.—Course on Miramichi River from stake boat at New Castle around stake boat at Chatham and back to starting point, being five miles to leeward and return. Weather fine. Wind strong westerly and and squally; tide flood.

FIRST CLASS.

	Length.	Start.	Elapsed.	Corrected.
Kilbride, J. C. Miller	22.09	1 38 18	1 41 57	1 41 57
Kittoch, Jas. Miller	22.05	1 38 44	1 45 10	1 44 50
Fedora, J. L. Stewart	25.00	1 39 03	1 48 35	1 45 04
Blondy, W. R. Gould	19.00	1 36 00	1 48 55	1 45 38
Arrow, Geo. Watt	19.07	1 41 02	2 16 03	2 12 39

SECOND CLASS.

Poohbah, H. Muirhead	16.09	1 26 50	2 05 09	2 05 09
Mackerel, Geo. Watt	16.10	1 27 05	2 36 06	2 36 06

Winner first prize, Class 1, Kilbride; Class 2, Poohbah. Second prize, Class 1, Kittoch; Class 2, Mackerel. From start to finish the first class race was closely contested between the competing yachts, but the splendid windward qualities of the Kilbride carried her a winner as usual. The sudden squalls, which were the order of the day, tested fully the helmsmanship of the various captains as well as the sea going qualities of the yachts. In the second class the race was close to the turn, but Mackerel was unfortunate enough to fill in a squall, which caused detention. Judges, R. R. Call, E. Lee Street, W. A. Park.

MARBLEHEAD Y. C.—The first race of the Marblehead Y. C. was sailed on Aug. 24 in a S.W. wind of varying strength. Jay Gee filled and nearly capsized on Archer's Rock. The summary was:

FIRST CLASS KEELS.

	Length.	Elapsed.	Corrected.
Ella, P. Carter	17.08	1 56 54	Walkover.

FIRST CLASS CENTERBOARDS.

Inide, J. Bowder	17.02	1 29 00	1 11 48

Milo, E. Mason	16.00	1 51 49	1 53 45

FIRST CLASS DORIES.

Anna L., H. Martin	15.06	1 07 13	Walkover.

SECOND CLASS KEELS.

Estella, Dunlap & Pierce	11.09	1 00 39	Walkover.

SECOND CLASS CENTERBOARDS.

Ruth, J. Dunlap	12.00	1 00 09	0 37 01
Perhaps, B. B. Crowinshield	12.10	1 04 37	0 45 23

SECOND CLASS DORIES.

Ethel, H. Stone	12.06	0 59 44	0 40 24
Jay Gee, F. B. Litchman	12.07	1 05 55	0 46 39
Maud S., N. Blaney	12.05	Withdrew.	

ST. LAWRENCE Y. C., 4TH REGATTA.—On Aug. 18 the 4th regatta of the St. Lawrence Y. C. was sailed at Valois in a fresh breeze. The summary was:

YACHTS.

	Start.	Finish.
Madge	4 23 30	6 45 00
Black Eagle	4 20 20	6 50 25
Lulu	4 27 00	6 51 30
Marga	4 27 30	7 20 00
Ishkoodah	4 31 10	7 26 00

SKIFFS.

Tara, M. Wallace	4 40 00	7 14 30
Korale, C. Young	4 40 10	7 15 00

A protest was entered against Lulu. Judges, Messrs. J. Simmon and L. Gordon.

RACING AT DENNIS, CAPE COD.—On Aug. 24, a race was sailed in a reefing breeze from S.W., the course being 8 miles. The summary was:

	Corrected.
Ariel, East Dennis	1 32 09
Madge, Orleans	1 35 25
Nobscussett	1 39 26
Percy, Allen Brewster	1 53 28

SECOND CLASS.

Magic, Barnstable	1 56 31
Iris, East Dennis	2 28 35

TORONTO Y. C.—On Aug. 25 a race of fourth class boats was sailed, resulting as follows:

	Finish.	Corrected.
Alvaetta	4 33 00	1 22 00
Finette	4 46 45	1 41 45
Molly	4 46 46	1 34 46
Caprice	4 46 50	1 46 50
Daisy	4 59 00	1 14 00
Maia	5 02 00	1 47 00
Pixie		Not timed.

Daisy takes second and Molly third place.

ATLANTIC Y. C.—A race for yachts under 25ft. was sailed on Aug. 25 over a course from the club basin around Buoys 20 and 18, two rounds, 10 miles. The wind was light S.W. Frolic, Gleam and Wave entered the cabin class, and the little Burgess cutter Wona, lately purchased in Gloucester, by Mr. St. John, was allowed to sail over the course, though not in the race, as she carried a small sprit topsail. She beat the centerboard boats easily in the windward work and finished within 18s. of the winner, Frolic, on elapsed time. By corrected time she would receive nearly 2m. from Frolic. In the catboat class were Bijou, Dindon and Cid. Bijou finished first.

FORTUNA.—On Aug. 15, the schooner Fortuna, with her owner, Mr. Henry S. Hovey, and Mr. Chas. A. Longfellow on board, anchored in Gloucester Harbor, after a voyage of 32 days from Southampton. After landing Messrs. Hovey and Longfellow, she sailed for Marblehead, arriving at 2:30 P. M. The racing mainboom, gaff and topmast were shipped by steamer, the foretopmast being carried on the mainmast. For the first half of the voyage the winds were strong and dead ahead: for the latter half they were light, but from the same quarter. The record of the trip is briefly as follows: Left Southampton on the afternoon of July 14, at 2:15; weather was rainy; passed the Lizzard on the 16th, near dusk; wind S.W.; distance made 32 miles. On the 17th experienced fresh gales from S.W.; covered 137 miles that day. On the 18th 164 miles, 19th 125 miles, 20th 133 miles, 21st 79 miles. On the 25th made 131 miles, and on the 26th had heavy winds, with a head sea, and covered only 66 miles. On the 27th 63 miles, and on the 28th 128 miles. It was a head wind two-thirds of the time, and when the fog did not set in head winds did. The largest day's run was made Aug. 7, when 187 miles were covered; 24 miles was the smallest day's run. Capt. Newcombe, who took Fortuna across last year, is still in command.

MARGUERITE.—Mr. Burden's schooner has been out at Lawley's and no less than thirteen tons of lead have been cut out of her keel, part at each end. The draft has thus been decreased about 5in. She will be trimmed more by the stern than formerly, two or three tons being replaced inside for trimming ballast. According to the Boston *Globe* very elaborate calculations had been made before commencing the alterations. If the calculations in the first place had been more elaborate, both in Sachem and Marguerite, there would probably have been no occasion for the troublesome and expensive alterations which both have undergone.

MONUMENT BEACH.—On Aug. 22 a race was sailed off Monument Beach for prizes contributed by residents. The course for class 1, 2 and 3 was 14 miles, for class 4, 6¼ miles. The race started in a very heavy S.W. wind, which moderated later in the day. The winners were: First class, Surprise, Mollie, Mattie; second class, Wildcat, Mist, Success; third class, Daisy, Trump, Star; fourth class, Edith, Red Wing, Nymph. The prizes were: First class, $12, $9, $5; second class, $10, $8, $5; third class, $8, $6, $4, fourth class, $5, $3, $1. Judges, A. F. Tolhurst and Ambrose E. Pratt.

NEPTUNE AND LIZZIE F. DALY.—A match for asilver cup and $50 a side will be sailed to-morrow, starting off Commercial wharf, Boston.

LAKE CHAMPLAIN Y. C. ANNUAL REGATTA.—The first annual regatta of the Lake Champlain Y. C. was sailed on Aug. 18 over a course from opposite the clubhouse, southwest to Rock Dunder buoy, thence to Juniper Island and back to starting point, 8½ miles. A part of the race was a mere drift, the wind increasing toward the last. Ripple won, with White Wings second and Emily third. The annual regatta for the ladies' silver challenge cup, worth $500, and for other races for prizes of $100 each, will occur Sept. 21.

YACHT RACING AT GREENWICH.—On Aug. 15 a race was sailed off Greenwich, Conn., in a fresh S.W. wind, the course being 12 miles. The starters were: Class A, Sirene, Doremus and Outwater; Rival, F. J. Hitchcock, of Bridgeport; Mystic, T. C. Stratton; Ione, H. A. Sherman; Alpha, W. Gilmore; Telephone, J. G. Porter. Class B, Ida K., Mr. Beck; Sayonara, B. B. McGregor, Larchmont Y. C. Rival won in Class A, with Serene second, and Ida K. won in Class B.

SAN FRANCISCO.—A new sloop, named Volunteer, has lately been completed by Mr. Stone at Hunter's Point, for Capt. Geo. Engel. She is 47ft. over all, 43ft. l.w.l., 15ft. beam, 4ft. 6in. hold, and 3ft. 6in. draft. The frame is of oak, with planking and ceiling of Orford white cedar from Oregon. All the frame was dressed with linseed oil while building. The boat has a pole mast, a 50ft. boom and a single jib. She will be ballasted with iron.

POINTS OF THE NEW YORK Y. C. CRUISE.—*Editor Forest and Stream:*—To the five points made by your correspondent "X." last week, I would like to add a sixth. In the windward work from New Bedford to Newport, schooner Miranda and cutter Bedouin outcarried the wider centerboard vessels, and the cutter Pappoose outcarried her centerboard classmate Nymph. The usual assumption that beam can outcarry depth is upset by this and many like lessons in practice.—Z.

ARRIVAL OF MINERVA.—The new Fife 40 footer built for Mr. C. H. Tweed arrived at Boston on Aug. 23, after a passage of 29 days from the Clyde. Captain Charles Barr was in command, with Captain Donald Kerr, who was in Thistle last year, as navigator. The racing spars arrived by steamer and the yacht is now refitting. She will be in some of the fall races.

JEFFRIES Y. C. PROTESTS.—In the regatta of Aug. 4 E. W. D. was protested by Wraith and Moondyne on the ground of short measurement. The judges find after a careful investigation that E.W.D., though entered as 23ft. 8in. waterline, is really 25ft. 1in., and they have therefore awarded first prize to Moondyne and the second to Wraith. E.W.D. takes third prize.

EASTERN Y. C.—It is proposed to hold a fall regatta of the Eastern Y. C. probably about the middle of September.

Answers to Correspondents.

H. C., Brooklyn.—Tell us what birds you want.

R. S. L.—Dalmation insect powder can be had of the druggist.

W. S., Trout Vale, Cal.—The open season for grouse and quail in your State is Sept. 10 to March 1.

R. H. A., Hoboken, N. J.—You cannot find grounds within 20 miles of New York where you will get good "woodcock, quail, partridge, also duck and snipe shooting."

W. B. P.—Will you please inform me through the columns of FOREST AND STREAM, of which I am a regular reader, how back sights would work on a shotgun for snap shooting. Ans. We would not advise their use; but a plain front sight, like the Lyman is of advantage.

M., Northampton, Mass.—Can you tell me if there is a fish known as "Otsego bass," peculiar to the waters of Otsego Lake situated in central New York? Are the fish found in no other waters; if so by what name are they known? If not found elsewhere what is the explanation of it? Ans.—The so-called "Otsego bass" is not a bass. It is the whitefish of the Great Lakes, *Coregonus clupeiformis*, and was described by DeWitt Clinton as a distinct species. Later naturalists do not consider it distinct. The name of Otsego bass is a flagrant instance of the many misnomers in popular use applied to our birds, beasts and fishes.

C. P., Tecumseh, Mich.—1. In your last number Prof. Forbes gives instructions about artificial feeding of fish. Would the same treatment do for frogs? 2. Can frogs be cultivated in artificial ponds? 3. What could they be fed, and how could the creatures which feed upon them be excluded from a natural pond which has been filled with frogs? 4. Is there any place in this country, or any other, where frogs have been raised for market? Ans. 1. No. 2. No. 3. We do not believe that frogs can be raised artificially because their natural food consists largely of insects. 4. No. Every year some newspaper prints an account of a frog farm, but on investigation we have always found it to be untrue. We have repeatedly said this, but the imagination of the reporter creates a frog farm every season, and keeps us busy in a fruitless search for the man who owns it.

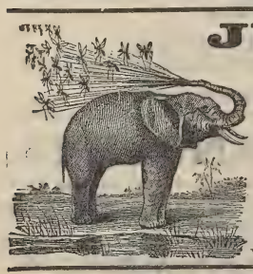
Palmer's Pat. Knapsack.



This knapsack is the invention of Capt. Geo. H. Palmer, U. S. A., and has been approved by a Board of Army Officers, convened for the purpose of selecting the best knapsack. After examining a large number of knapsacks, haversacks, etc., they gave Palmer's equipment their unqualified approval. It has also been adopted by the Militia and letter carriers in different parts of the country. It is equally well adapted to the use of pedestrian tourists, mining prospector, or any one who wishes to make long or short trips on foot, and carry more or less luggage.

We are the sole manufacturers under license from the patentee for these knapsacks for all purposes except the regular army, militia outside of the State of Illinois, and the letter carrier department.

TWO NOTABLE WORKS.

Americam Game Birds.

Names and Portraits of Birds which interest gunners. With Descriptions in Language Understanded of the People. By GURDON TRUMBULL. 90 illustrations and an Index. 8vo., Cloth, Extra, Gilt Top, $2.50.

A book that is entirely new and curious, which possesses a very great interest for the student of ornithology, and which will be still more warmly welcomed by the gunner. . . . For many years we have received inquiries for a book containing descriptions of our game birds with figures by which they could be recognized, and we have always been obliged to say that we knew of none which answered these requirements. At last, however, we have such a book in this.—*Forest and Stream*, N. Y.

A novel and genuine piece of work, made up of information not to be had elsewhere. It will not fail to take and hold its own place. . . . A very interesting book, scholarly, leisurely, smelling of the library shelves and the easy chair after the muddy boots and shooting iron have been put away.—*The Nation*, N. Y.

Trees and Tree-Planting.

By Gen. JAMES S. BRISBIN, U. S. A. Portrait. 12mo., Cloth, $1.50.

Of immense value. General Brisbin writes simply and in a most manly way. . . . He is a tree lover by nature and from natural conviction, and his love has borne rich practical fruit in this excellent work.—*Chicago Times*.

One of those books which contains that information which has been wanted for a long time.—*N. Y. Times*.

In the Stud.

AT STUD. FEE $25.

The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended: for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ST. JOE KENNELS,
Niles, Mich.

PRIZE WINNERS.

Lillian (3735) Dad Wilson (3371)
Di (3637) Chance
Lit II.—Dad Wilson (3371)

Three beautiful litters of strong, rugged pups from the above famous bitches, and by the two great sires that stand second to none. Address for prices and particulars to W. C. NELSON, Hastings, N. Y., or HOWARD B. RATHBONE, Sec'y, Syracuse, N. Y. aug2,6t

FANCIERS.—FOR SALE.—EIGHT THOROUGHBRED Gordon setter puppies, by imported Murkland Ranger, registered in England and in the A.K.R. 5208), out of champion Beaulah, registered A.K.R. The only thoroughbred Gordons in this country, with a full and straight printed pedigree. Address with stamp C. T. BROWNELL, Mount Pleasant Gordon Kennels, Box 335, New Bedford, Mass.

Hound Puppies For Sale.

I have a lot of finely bred deer and foxhound puppies, and having more than wanted will sell some. The stock is the best bred and selected in Virginia, as my paternal ancestors have been hunters for many generations, and my father especially has been devoted to foxhunting.

I refer to Hon. John S. Wise, of Richmond, Va., as to my reliability, and also as to stock of dogs.

MINOR BOTTS LEWIS, Harrisonburg, Va. aug16,3t

BRANFORD KENNELS
BREEDERS OF
Pointers and Gordon Setters.

Young dogs and pups on hand. Also a fine litter by champ. Beaumont ex Queen.
Address with stamp, Box 302, Branford, Conn.

FOR SALE.—FIVE LIVER AND WHITE pointer puppies, whelped July 26, 1888, by Doctor (A.K.R. 6316) out of Guess (A.K.R. 6317). Address all inquiries to DRY HILL KENNELS, Monterey, Mass. aug16,3t

COCKERS.

Full grown cockers, broken and unbroken, for sale at MOUNTAIN KENNEL, Cabin Hill, N. Y. aug23,5t

FOR SALE CHEAP.—A FEW FULL pedigreed prize-winning Irish setter pups, 6mos. old; also some old stock, all guaranteed as represented. ISAAC FERGUSON, aug23,2t Winsted, Conn.

MASTIFF BROOD BITCH ALPHA (A.K.R. 3921) whelped May, 1886. Fawn color, with very black points; very large, with plenty of bone and muscle. She is a big breeder, having 16 pups in one litter. Affectionate and thoroughly house-broken, and fine watch dog. Address aug23,1m F. A. PAGE, Bath, Me.

RABBIT HOUNDS.

A large lot of English beagles, 14 to 16 inches high, dogs and bitches, well broken; $15 each. Pups from 6mos. to 1yr. old, $8 each. Satisfaction guaranteed. WM. W. SILVEY, 135 South Eighth street, Philadelphia, Pa. aug23,tf

LLEWELLIN SETTER PUPPIES BY GUN (champion Gladstone—May B.) out of Victoria Laverack (A.K.R. 4677) and Dora Gladstone (Boss Gladstone—Nell). Handsome and healthy; price $10, dog or bitch. For full pedigree and description address with stamp, CHAS. YORK, 9 & 11 Granite Block, Bangor, Me.

WM. GRAHAM, NEWTOWNBREDA, BELfast, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen 1sts, nine specials, three 2ds and one 3d. At New York, 1884 seven 1sts, six specials and one 3d.

For Sale—Imported English Mastiff "BEN,"

6 yrs. old, fawn with black muzzle. Very gentle and sold for no fault. Price $250. Apply to
1t Box 104, Ridgewood, N. J.

FOR SALE.—BLACK AND TAN VIRGINIA foxhound puppies, 3mos. old, ears 1½ and 15in. respectively. Also three beagle puppies 10 weeks old, with pedigree. Address
1t T. T. PHLEGAR, Pearisburg, Va.

BEAGLES OR ENGLISH SETTER PUPPIES exchanged for amateur photographic outfit, if in good order. J. M. FRONEFIELD, JR.,
1t Wayne, Pa

FOR SALE.—SETTER PUPS BY BUCKALEW ex Frolic Bondhu. The latter was thoroughly field broken by J. C. Schuyler, Buryville, West Virgina. These are something extra and will be sold at a reasonable figure.
1t J. P. GRAY, 270 Alexander st., Rochester.

CHESAPEAKE BAY PUPS.—SOLID SEDGE color; beauties. Sire, No. 9239, dam, 6207, A.K.S.B.; both excellent retrievers.
aug30,4t DR. E. A. PALMER, Blair, Neb.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 6, 1888.

VOL. XXXI.—No. 7. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE WAY OF THE TRANSGRESSOR IS HARD.

AT Lake Placid, in the Adirondacks, last Wednesday, Aug. 29, Assistant United States District Attorney Daniel O'Connell, of this city, shot and seriously wounded his guide, John Shea. It happened thus: O'Connell and Shea had been out partridge shooting, and on the way back Shea was putting up a target, when O'Connell, having just loaded his gun with a charge of bird shot, accidentally pulled the trigger; the gun went off, and the charge striking Shea in the side, would have proved fatal had not a part of the shot been diverted and warded off by a watch in the guide's pocket. In like manner a goodly share of the sympathy which Mr. O'Connell might expect to receive over this tragic ending of his holiday is diverted from him by the circumstance that in taking Shea out to shoot partridges he was breaking the law of the land; and that if he, a lawyer and an Assistant United States District Attorney, had not been violating the law of the land the guide would not have been so cruelly wounded in body, nor he himself caused to suffer so keenly in spirit.

The New York lawyer is not the only person who, having armed himself with a shotgun to kill game unlawfully, has inflicted grievous woe on humankind. There was a notable instance of a similarly instructive character in this line last June. It was literally a deed of darkness; but by reason of the prominence of at least one of the participants it deserves to be made light.

Those sportsmen who may have visited Tim Pond when it was under the management of Mr. Kennedy Smith know that the proprietor never winked at offenses against the game law. His rule was that he was conducting a camp for gentlemen; and no one who was not gentleman enough to observe the law was tolerated there. Mr. Smith was succeeded by Mr. Julian K. Viles. Unfortunately for himself, as the event proved, Mr. Viles does not share Mr. Smith's sentiment about observing the law.

Four miles from Tim Pond is Barnard Pond. This is a famous deer resort. One night about the last of June, two young fellows named Scribner and Myers went to this pond to jack deer. Unknown to them, three others, Will Douglass, a guide, landlord Viles and one Walker, repaired to the same pond on the same night for the same purpose. There was but a single boat on the pond; Scribner and Myers were in this with their jacklight. Viles, Douglass and Walker, coming to the pond and seeing by the jacklight that the others were looking for deer, determined to take their chances to secure a shot. They secreted themselves in the bushes and waited. One of them having dropped something, they turned up their light dimly and began searching. The two hunters in the boat saw this light flash through the interstices of the brush; and taking it for the reflection of a deer's eye, Scribner blazed away with his gun loaded with buckshot, and Myers was about to follow suit with his Winchester rifle, when the affrighted Walker shouted in terror. And none too soon, for, as it was, all three of the men on shore had been wounded already; Walker had one buckshot through his arm, Viles three in back and hip, and Douglass was wounded yet more severely in the breast. At last accounts all the victims were doing well.

If Mr. Viles has not come to the conclusion that the proprietor of a sportsmen's resort can be engaged in better business than jacking deer out of season, he has at least learned that when different gangs go out to jack in June they will do well to have some understanding about it, so that one party may not fire into the other, through stupidly mistaking them for deer, when they are only common poachers; or if they must shoot, let them shoot to hit if it's a deer, and miss if it's a poacher.

THE ZOOLOGICAL PARK.

A VERY large number of our readers will learn with sincere regret that there seems to be no prospect that the bill establishing a National Zoölogical Park at Washington will become a law at this session of Congress. The cry of one political party that there will be no surplus this year is met by the determination of the other political party to pass no appropriation bills which can be held over until next year. The House conferees have declined to agree to the passage of the bill, and it will probably not be acted on. Next year, however, we hope that the Park may be established.

It is not always true that a matter of great scientific importance is also one which interests the public as well, but the project to establish at Washington a National Zoölogical Park, is equally popular among scientific men and among people who are entirely indifferent about scientific matters. There should be in Congress a large number of men with sufficient breadth of intelligence to realize the importance of carrying through this measure, and the sooner it becomes a law the better.

Until this bill is passed the collection of living animals now on exhibition in the Smithsonian grounds at Washington must suffer for lack of money to properly care for them, and many opportunities for securing rare specimens of our native fauna must necessarily be lost because there are no funds with which to pay for them. We may be sure, however, that the authorities who have the matter in charge will make the most of the scanty means at their command, trusting that before long Congress will see the importance of providing more liberally for this interesting collection.

TAKING THE BULL BY THE HORNS.

LAST week we explained the failure of the Commissioners of Fisheries of New York to appoint a chief game and fish protector. The reason given was that they would not toady to the political behests of the Governor by appointing a man who would be useful to him; and on the other hand they hesitated to appoint a protector on his merits who would be unacceptable to the Governor, for in that case the Governor might ask for their resignations. Our comments on this condition of affairs have been widely copied and have evidently attracted much attention. The press has recognized the fact that the FOREST AND STREAM has no political bias in the matter, and our expressed opinion that the game protective system of the State should be absolutely free from any smirch of politics has of necessity been indorsed.

The Commissioners have now taken the bull by the horns. Last Tuesday, at a meeting in this city, they appointed Mr. Fred P. Drew, of Washington Mills, chief game and fish protector. There is no politics in this appointment. The Commissioners have chosen the candidate whom they consider the best qualified to perform the duties of the office irrespective of his political affiliations. They have appointed him to do the work prescribed and the character of his service will be measured by its efficiency in game and fish protection, not by its usefulness to politicians.

The Commissioners adopted the following resolution and acted on it in making their choice:

Resolved, That in the designation of a chief game and fish protector this board will take into consideration only the practical merits of the candidates, and that as between those who have had no experience as protectors and those whose qualifications have been tested by such experience, preference should be given to the latter, other considerations being equal.

The office of a chief game and fish protector is exacting. The appointee has had much experience as a protector in the Eleventh District. His practical training there and the knowledge he has acquired of the devious ways of offenders against the laws as well as of shifty public officials will be of service to him in the wider field to which he has been called. Next week we will print the report which Protector Drew sent to the Commissioners giving his work in 1887. The office of the protector will be in Albany.

SNAP SHOTS.

THE death of Sir John Rose, the eminent Canadian banker and statesman, adds another to the list of those who have been overcome by excitement in the hunting field. The cable reports that one day last week, as Sir John was about to shoot at a stag in a deer forest in Carthness, Scotland, he dropped dead. Last September Lord Lovat died in a like manner on a grouse moor near Inverness. Although it is not explicitly so stated, it is probably true that Sir John's death was caused by derangement of the heart, due to the excitement of the moment, or what is known as "buck fever."

By the death of "Crowley," the chimpanzee at the Central Park, whose pranks have for several years amused the children of this city and greatly interested their elders, a severe loss is inflicted on the Central Park collection. Under less careful and conscientious management than that of Dr. Conklin it is doubtful if the chimpanzee would have survived so long as he did. Kitty, the younger chimpanzee, who survives, will not soon be able to fill the place in the children's hearts left vacant by the death of poor "Mr. Crowley."

What morbid trait of human nature is it which so often prompts friendless and poverty-stricken men and women to befriend a horde of poverty-stricken dogs? William Smalley, an eccentric old pauper, was removed to an Ohio infirmary last week, and the officials found in his home no less than thirteen dogs which the old man had collected and was caring for. This is only one of numerous instances which are constantly coming to public notice of misanthropic individuals who have foresworn human society for that of curs.

At the Lake George canoe meet prizes were offered for a proposed competition of campers. The plan was for competitors to go into camp, cook supper, arrange and remain in camp for the night, and cook breakfast in the morning. Those doing these things most acceptably were to be declared the winners. The project did not succeed. Camping is not a pastime to be made the subject of competition, in spirit and essence it is something that cannot be reconciled with mug-hunting.

One of the FOREST AND STREAM'S readers, who is a skilled field shot, owns a pointer who has been brought up in the the way he should go. The dog knows when Sunday comes, and he refuses to hunt on that day. He will put in his best efforts from early Monday morning till late Saturday night, but not a step will he budge toward the field on Sunday. This is not a dog story; but the facts are actually as stated.

When one comes upon the heading "A Quail-Breeding Farm," in a newspaper, he expects to find under it something more than the announcement that a man in New Jersey has had ten out of sixteen quail eggs hatched out. The tug of war is to come; to hatch out the birds is simple enough; to rear them is quite another matter.

The Sportsman Tourist.

Addresss all communications to the Forest and Stream Pub. Co.

THE SINGING MOUSE.—II.

BY E. HOUGH.

THE Singing Mouse came out and sat on my knee. It fixed its little red eye on me, and lifted up its tiny paws so thin I could see the firelight through them. And it sang. . . . Like the voice of some night-wandering bird of melody, hid miles high in the upper realms of darkness, came faint sweet notes to me. And then, if you can think it, out of the deep air above, out of the wide air around, came dropping and drifting small links of silken steel, gentle and strong, of some sort I know not of. And so I listened and I saw.

* * * * * * * * *

There were low, round rolling hills, crowned and covered with thick growth of hazel brush and stubby oaks. Between these hills ran long strips of green, strung on tiny threads of silver. And as these threads thickened and braided themselves together, the cottonwoods halted in their march, the box-alders, and maples, and water-elms, and walnuts, and such big trees, swept grandly in with waving banners, and wound on and on in their long procession, even down to the two blue distant hills set at the edge of the world, unpassed guardians of a land of dreams. Ah me! Ah me! I look back at those two blue hills now, and the land of dreams lies beyond them, on the other side, back there, where I can't get again; back there, up along that murmuring, crystal mystery of the little stream I knew when I was young. . . .

Oh, little river, little river, but I am coming back to you! I'm coming back to push away the swinging boughs and the long grass, and look into your face again. I'm coming back to dabble my bare feet again, and scoop up my straw hat full and watch the water run out in tiny streams. I'm coming back to stand again, bare and white and trembling, on the bank, wondering if I can swim across the "big hole" to the other side. And—say! little river, I'm going to cut the pole at the old place up on the hill, and I'm going to hurry on down, running the last quarter of a mile in sheer expectation, but tying on the line all the time; and I'm going to pull a handful of worms out of that same old pocket; and I'm going to cast my float on that same swinging, thimpling, gentle eddy, and let it swim in under that bank, and—No! Can it be? Have I again in my hands that strange and wonderful creature, the gift of the little stream? Is this its form, utterly lovable? Is this its coat, wrought of cloth of gold and silver? Are these diamonds its eyes? . . . . Oh, little river, little river, I'd give all I've got, and more than I'll ever have, if you'd just give me back that little shiner to keep by me all the time. I've hunted him, believe me. I've hunted him hard and faithful in many a place, but he isn't there—he is isn't there any more, I tell you. . . . But this is he! This, in my hands here, is my first, my grand, glorious, iridescent, radiant prize! He has cleft long dark waters and come back to me! Well, well, well. I didn't expect this. Well, well.

And now out of the gray hazy hazels of the past, steps a form and comes down to the bank by me, and by that light which is not now on land nor sea, on hill nor stream any more, we sit and fish together. . . . I pray, Singing Mouse, turn on that light a little stronger.

I know that form and face. Every day, grave and quiet, I saw it over the big Bible. Every meal, grave and pleasant, at the head of the table. Once, grave and stern, in hours of sore trials, but yet the lighthouse and the tower of all our hopes. Grave and kindly, on each Saturday, interceding at the right place for permission for me to go fishing. And at rare and happy times coming fishing too, and sitting, as now, on the bank beside me; with hands idle, sometimes, and blue eyes dreaming, whether of the past or future I know not. They say that youth has a melancholy of its own. Is there a melancholy that comes of watching youth? There might well be.

"Supreme foolishness—fishing away the time!" Ay, foolishness; grand and glorious foolishness! Too glorious, too supreme for you down below there, you little fellow, you pedant Wagner out of the Faust story. You can't fish—you! But let us be here, beside this strange and magic stream, myself and the form from out the hazels. For I do love thee well, my first friend. If my eyes be dry or running wet, I do love thee well.

* * * * * * * * *

In those low, round hills strange creatures dwell. Birds of brown plumage and wondrous, soul-startling burst of wing. Large gray creatures, a foot long or longer, with light tread on the leaves, and long ears which go a-peak when you whistle to them to wait till you get ready to shoot. Were ever such things seen before? Was ever a boy of such bravery before, to put copious tallow on his copper-toed boots, to shoulder a shotgun, to insist that he should carry the lunch in his game bag—a world too large for his young form—and to tramp out all day over the low, round hills, over the country, almost to the Delectable Mountains themselves? Following that same tall, striking figure with the grave and kindly face. Wondering and wondering how he loaded that gun so fast with that deft ramrod. Wondering at the superhuman skill which brought ten out of the dozen of those brown lightning balls whirling down. Rejoicing to hold up over the snow the first rabbit bowled over by that unfailing hand. Rejoicing beyond all count or measure at the first lepine murder committed by himself from a rest on a forked tree. Groaning in spirit at the great weight of that awful gun before night came. Wincing a little, mayhap, when the stiff boots were pulled off that night by the kitchen stove; but happy, oh! so happy, holding up the "one he killed all by himself."

* * * * * * * *

Now, as we walk down the banks of the magic river, tell me, am I mistaken, or is that familiar form bent a little? Is the quick eye less bright? Did it—was it, now was it a twig flew up and hit him in the face and made him miss that last mallard? There weren't many twigs out there in the grass either. And say, do we like these breechloaders as well as the old muzzleloaders? And tell me, do I imagine it, or is old Rex getting a touch of rheumatism? Don't he range as he used to? Don't he break the ice as quick and go in after the mallards? Does he keep closer at heel? Does he look up once in a while mournfully, with a dimmer eye, at an eye getting dimmer, walking there slower by a step which is not quite so fast? Does he look up? My God! Is there melancholy in a dog's eye, too?

Say, these are ghosts! I cannot endure it! O, Singing Mouse, you are cruel! In pity's name let me awake—let me awake and go to work!

Natural History.

DEATH OF "CROWLEY."

"CROWLEY," the chimpanzee, which for several years has been on exhibition at the Central Park menagerie, died Aug. 30. He was brought to this country as a tiny baby in June, 1884, by Mr. W. H. Smyth, U. S. Minister to Liberia, who purchased him in Sierra Leone, Africa, just before starting to this country. From Liverpool, "Crowley" and his owner sailed in the Cunard steamer Gallia, and the little chimpanzee was an object of great interest to all the passengers. Often when the weather was fine he would be brought on deck and receive in the most engaging manner the petting of the lady passengers. At this time he was very small, and though his body was covered with fine soft hair his face was naked and his hands nearly so. He was very gentle and affectionate and enjoyed receiving attention. Oranges were his delight, and on receiving one, he would quickly tear off the rind and throw it on deck, and after eating the pulp as quickly as possible, would look around as if expecting another one to be offered to him. If none was forthcoming he would get down on deck, pick up each piece of rejected peel and look it over with the utmost care to see if any bits of pulp still adhered to it. In appearance and actions he is reported to have been very like a negro baby of two or three years old. At this time he was said by Mr. Smyth to be about nine months old. When the Gallia reached New York, Remus, as he was called by Mr. Smyth, was turned over to Superintendent Conklin, of the Central Park, and was given in charge of Jake Smith, a keeper who thereafter, up to the time of his death, had the exclusive care of him.

Each winter since he came to New York "Crowley" has had a severe attack of pneumonia, and it has only been by the utmost care and devotion on the part of his keepers that his life has been saved. The attack of last winter left him much weakened, and it was evident that these continued attacks had not been without their effect on his vital organs. Recently he has had attacks of chills and fever, and his liver has been out of order. About two weeks ago he was again attacked by pneumonia, and at length after much suffering died at 11:40 A.M. on Friday last.

Some time before his death when in fairly good condition "Crowley" stood 4ft. 9in. high and weighed 104lbs. His strength was very great, and it is thought that so far as physical power goes, he would have been more than a match for any ordinary man.

An autopsy was held on Saturday last which showed the chimpanzee to have been a physical wreck. His left lung adhered to his side, the right lung and the pleura were congested, the liver was filled with tubercles and his heart was badly diseased. The immediate cause of death was congestion of the lungs.

The skeleton and skin of the chimpanzee will be mounted for the American Museum of Natural History.

THE PILEATED WOODPECKER.

Editor Forest and Stream:

My attention was attracted to-day while sitting in my office, which is situated on the bank of Sunflower River, in the Mississippi bottom, by the notes of the pileated woodpecker, on a tree in my back yard. By the aid of a glass I perceived that the bird was eating the immature berries that cluster on the Virginia creeper with which the tree is abundantly robed.

There are two points in natural history here exhibited that appear to me to be worth attention. First, the pileated woodpecker, according to Audubon, inhabits the hill country exclusively, while its congener, the ivory-bill, is a denizen of the Mississippi bottom, and this is in accordance with my own long observation of these birds. But this place is in the heart of the delta, thirty or forty miles from the nearest hills. The other point is, the fact of its eating berries, whereas I had supposed both species to be purely insectivorous. I have seen them tearing to pieces dead trees and stumps, sending down fragments two or three times their own size, in search of grubs and larvæ.

These birds are the largest of our woodpeckers, being about the size of a teal duck. The two species are very much alike, being not readily distinguished at a little distance except by their respective notes, which are very dissimilar. The pileated variety, inhabitant of the hills, is a very noisy fellow uttering a quick succession of "quack-quacks" which sound very much like boisterous laughter. This he does while flying from tree to tree, or while hopping up and down a tree trunk, hammering at the dead bark and looking for "a lead." When he has found his mine he works energetically to develop his "claim" without uttering a word, but makes his presence manifest by the loud hammering and throwing down the large chunks of "dead wood," which he has on the worms. He is a cheerful and loquacious fellow, and when off duty appears to enjoy a noisy "confab" with his companions. His cousin, the ivory-bill, is a silent bird, who finds congeniality in the dark and sombre recesses of the cypress brake. He rarely ever utters a note, except when calling his mate, which he does by emitting a plaintive note at short intervals, which sounds like the expression *"puit, puit,"* with the French accent. He probably learned this from the creoles in lower Louisiana, in which locality he is most abundant.

My recollections of childhood days have pleasant reminiscences of the pileated woodpecker. I have in mind a time when, being about eight years old, I went forth into the woods early one morning, armed with a long single-barreled gun, which my prudent father placed in my hands saying that it was too long to admit of my shooting myself, he having required that I should go alone, so that I could not shoot any one else. I was so much enamored of the woods that I wandered far, and did not return to the parental roof until 9 o'clock at night. I was much abashed to find my mother lamenting my loss in bitter tears, and I was afraid I should never be permitted to go hunting again. But a diversion was created in my favor when, after the excitement in the family circle subsided somewhat, they began to question me about the day's adventures, and especially as to what I did to appease the gnawings of hunger. I told them I had killed two big woodpeckers, and finding a log burning in the woods had cooked one and eaten it. The other was in my bag, and I produced it. It was of the pileated variety.

"You didn't have any bread or salt?" one of the children asked. "No, I ate it without bread or salt." "How did you clean it?" "I picked it, and cleaned it with a horse-shoe nail I have to pick out hickory nuts with, and washed it in a branch. Then I put it on the fire and cooked it." "Was it good?" "Yes, it was first-class."

I do not suppose that I would now relish a woodpecker as I would a teal duck or a fat woodcock, but I certainly enjoyed that impromptu dinner of my own killing on my first adventurous hunt. COAHOMA.

OF SERPENTS.

Editor Forest and Stream:

As it is now the season when we see and hear snake stories of a more or less sensational character, I feel inclined to relate my observations concerning these creatures, and to say a few words in their defense. Having made surveying a specialty, for nearly half a century surveyed in every county in the State, and in more than fifty towns, besides spending two years in other States, in which I traversed many towns, I think I have had rare opportunities for making snakes a study. I know of nothing else which has life that is the subject of so much misconception, misrepresentation and downright falsehood.

In the earliest history of our race the serpent got a bad name, but I cannot conceive how the Satanic power of that original serpent can have been transmitted to all the little innocent snakes known in New England at the present time. I have heard statements in regard to them that I could not believe, and so expressed myself when the relator would say, "then you believe I lie!" or he might say that a reliable person, who would not lie, was an eye witness to it. My reply would be, "I do not necessarily believe they lie, but simply say they are mistaken." I have heard witnesses, perfectly reliable for truth, under oath, testify to facts which they saw, which by the natural laws of the universe could not be true. They were mistaken, but believed what they said.

The commonly entertained and expressed opinions about serpents are such that I expect criticism, and I welcome it.

The utter horror produced in almost every one at the sight of a snake I conceive to be the result of education. From my earliest recollection, when going into a bush pasture for the cows or for berries, my good mother would caution me to "look out for snakes," or "don't let the snakes catch you;" and during those early years I heard awful stories about snakes, which created a fear of them from which I have suffered much, and I suppose that has been the experience of the average New England boy. Now I earnestly protest against that kind of education, as it proves an element of great discomfort to children in after life. Snakes are perfectly harmless (excepting the venomous species) and as timid as birds, and children should be taught so; and they should no more be allowed to be cruel to a snake than to a frog or a turtle. When young I heard the maxim, "If you kill the first snake you see, it is a sign you conquer your enemies." And also, "Break the first brake and kill the first snake, and it will insure good luck for the year." Unnecessary cruelty to anything that has life should be censured. A century and a half ago Jenyns wrote, "I know no right we have to shoot a bear on an inaccessible island of ice, or an eagle on the mountain's top, whose lives cannot injure nor deaths procure us benefit. We are unable to give life and therefore ought not wantonly to take it away from the meanest insect without sufficient reason. They all receive it from the same benevolent hand as ourselves, and have therefore an equal right to enjoy it." Fifty years later Wm. Cowper wrote:

> "I would not enter on my list of friends
> (Though grac'd with polish'd manner and firm sense,
> Yet wanting sensibility) the man
> Who needlessly sets foot upon a worm.
> An inadvertent step may crush the snail
> That crawls at evening in the public path;
> But he that has humanity forewarned
> Will tread aside and let the reptile live.
>
> * * * * * * *
>
> The meanest things that are
> Are free to live and enjoy that life,
> As God was free to form them at the first,
> Who in his sovereign wisdom made them all."

It is now to me a pitiful sight to see a man turn aside to pursue a little innocent snake, as harmless as a fly and not half so annoying, as though some dire calamity was to be averted by his success in destroying it. Although I must confess to having done the same thing and practiced much cruelty toward them, it was simply the result of education; and now, since I have thoroughly made their acquaintance, I feel disposed in some small measure to atone for my past indiscretions. In youth I was taught to regard toads with disgust, no less than the snake, but not with the same peculiar dread. I was told that to handle them would cause my hands to be covered with warts, etc. I have since known people who were fond of playing with them, and I now call to mind a lady of culture and refinement who would catch a toad and pet it, tell it what pretty eyes it had, call it one of God's beautiful, beautiful creatures, and lay it against her face as a child would a pet bird. Toads and snakes are equally harmless, but neither of them have any attraction for me; still I can be merciful toward them.

In the fall of 1873, having seen published something of that foolish old story of snakes swallowing their young for protection, I left a short article at the office of the Hartford *Times*, stating in substance that some species of snakes lay eggs, and many people suppose they all do; whereas with some the young are matured in the mother's body; and when persons not informed in this regard have captured a snake, and found its body to contain young ones, the presumption with them was that the mother

has swallowed them for protection, which they never do. That article called out the following, which appeared in the Hartford *Times* of Oct. 18, 1873:

"NEW YORK CITY, Oct. 16, 1873.—Your correspondent is wrong. Snakes do swallow their young for safety. If you please I will give you a true story of a snake that I and my brother Warren Marshall were eye witnesses to. We were living at the old place in Windsor, formerly known as Pigeon Hill. My brother and two apprentices were returning from mowing bushes. They heard a strange noise which attracted their attention to the pines, and they saw a copperhead and many small snakes running down her throat. He secured the snake and brought it home. I saw them coming, and at first thought it an eel, as they had crossed the brook running from our mill pond. He dropped the snake from the point of his scythe in the yard, and little snakes over an eighth of a yard in length commenced running and hissing out of her mouth all around us, until we counted twenty-five. Our family all saw them. It was long ago, but the occurrence is as clear to my mind as if it was but yesterday. Yours very truly, EMILY M. WOLCOTT."

Let us analyze Miss Wolcott's "true story" a little. She does not pretend that she saw the mother swallow them. It is the instinct of any snake with which I am acquainted to hide as quickly as possible, and twenty-five of them from four to six inches long would disappear in the grass in an instant, while it would require some time for them all to seek shelter in their mother's mouth, while she in the meantime is waiting to be captured with all her progeny. That does not look like instinct. Besides if they went there for safety, why did they come out? I do not doubt that a snake was captured with young in her body, and that the young, after escaping, could crawl and run out their tongues; but further than this, Miss Wolcott's "true story" is all nonsense. I cannot learn from the oldest inhabitant that a copperhead snake was ever seen in Windsor. They are usually found in rocky places, and I have never seen them except in traprock districts. I do not know of a locality where water snakes live in greater abundance than in the valley of Mill Brook in Windsor. I have seen them there, and many times have I crossed the bottom lands, where the boys captured the snake, crossed Mill Brook on a pole and ascended the bluff to the table land, where the old Marshall mansion now stands, and where snakes from five or six inches long hissed. It was doubtless a water snake, the young of which had matured in the mother, but had not yet been born. Miss W. says they commenced running out of her mouth. Perhaps the snake was so ruptured internally as to make it possible for them to escape at her mouth; but as she was carried up to the house on a scythe, it is more than probable that they escaped from a wound in her body.

As to the boys seeing them enter their mother's mouth, that is only hearsay, but their presence evidently led them to believe they had done so. Miss W. says it was a copperhead; perhaps it was; they too are viviparous, and the facts would remain the same.

I do not believe they heard those twenty-five snakes hiss any more than I believe they saw them enter their mother's mouth. I think I have seen more than a thousand snakes, and I am not aware that I ever heard one hiss. The "American Cyclopedia" says: "The hissing attributed to serpents is of faint character, produced by the slow escape of air through the mouth or nostrils during expiration, and only exceptionally would make a noise noticeable by an indifferent observer." If large serpents are but exceptionally heard to hiss, what must have been the display of those 5 to 6in. long, and no larger than a goose quill. One author says: "It has been said that they receive their young into their mouths for protection, but the anatomy of the snake seems to forbid this conclusion. The stomach is little more than a prolongation of the œsophagus, and the intestines are very short."

THE WATER SNAKE OR WATER ADDER (*Tripedonotus sepedon*).

In 1831, while passing along near a swamp, in one of the last days in August, in company with a brother, we saw the hinder part of a snake of monstrous size drawn into an old stone wall. We took down the wall and secured it without wounding it. We threw it out upon the ground. It was a water snake, about 4ft. long, and it must have been at least 9in. in circumference. It tried to crawl, but it was so heavy that it moved but slowly. Its head and neck were no larger than that of other snakes of that length. At about one-fourth of its length from the head, and just below the vital organs, the body began to assume enormous proportions. We severed the snake at that point, and then pressed upon the body and forced out of it fifty-four young snakes; they were five or six inches in length, and some of them would crawl, run out their tongues and act like little reptiles, as they were. I have on two other occasions witnessed the like. I have thought it singular that the habit of the water snake's breeding was not more generally known. But my observation has been that when in young, being unable to move rapidly, they seek a place to lie in the sun where they can quickly conceal themselves when disturbed. There were weeds and brakes by the side of this wall, and where the snake had lain they were matted as though a hen had nested there. I had previously been told that snakes swallowed their young for protection, and had captured a striped one that had young in her and supposed she had swallowed them; but the examination of the water snake convinced me that they had never been born.

About the 1st of Sept., 1882, I saw a paragraph in the paper saying that Mr. Wm. H. Cutler of Danielsville, Conn., had killed a water snake and found thirty-seven young ones in its body. I wrote him asking for particulars, he says in reply that he "found the snake in the rear of his barn where he had never seen one of that species before. It had been seen by some boys several days previous. When he discovered it, it was coiled up on the top of some old hay surrounded with water. As he approached near enough to see what it was she went into the water. A while after he saw her on the hay again and he got a gun and shot her. She was 3ft. 8in. long, and large around the body, and had the appearance of being full of something. Opened her and found her full of young snakes from 6 to 8in. long; counted thirty-seven. When first taken out they appeared dumpish but soon began to move around. One of my neighbors says, that years ago he saw a striped snake killed that had fifty young contained in her. I should like to know if there are snakes that breed in that way? I know that some snakes lay eggs."

Mr. James L. Rowley of Bloomfield tells me that he once captured one, and found her body to contain sixty-six young.

N. STARKWEATHER.

HARTFORD, Conn.

[TO BE CONTINUED.]

MANATEES EXHIBITED IN NEW YORK.

CAPT. J. W. ZELLER, commander and owner of the schooner Manatee, of Titusville, Fla., has arrived in this city with three manatees, and female and two males, which he captured in the Indian River, Florida, or one of its tributaries, in June last. Two of them were brought to this city under contract, and the third having been captured the same trip, was brought along to fill the bill. For the moment, however, they remain on their captor's hands, and he has stored them in South street, foot of Fulton street, where they are now exhibited to a curious public, the captain being willing to make affidavit and depose that, to the best of his knowledge and belief, these are the real "sirens" or mermaids, who have lured so many a sentimental sailor to his doom.

The manatee is a very interesting animal, belonging, as most of our readers know, to the family of the Sirenians or sea cows, aquatic mammalia frequenting rivers or shallow seas, in which they find suitable vegetation. They are entirely vegetarian in their habit and capable of subsisting on perhaps as wide a range of food plants as cows are. In its native state its food consists of river plants, especially of one known as manatee grass, which reaches the surface of the water and then trails, forming in places quite dense thickets, in which the manatees hide and feed. At times they betake themselves to the mouths of rivers and feed on plants growing in brackish or salt water.

There was a manatee in the Central Park some years ago, which subsisted mainly on canna grass alternated with a seaweed, *Fucus vesiculosus*, obtained in the East River. Others have shown a partiality for cabbage, celery tops, spinach, kale, baked apples, lettuce, watercress, carrots, etc., but at times they become very fastidious. Dr. Murie had one in the Zoological Gardens, London, which tried all that was offered him, and then settled down to watercress and lettuce, but growing at length tired of watercress, just when lettuce was scarce and dear, he became rather an expensive boarder, his daily rations costing ten shillings or two dollars and a half, but he had apparently reached the conclusion that life without lettuce was not worth living.

They are very timid animals in their wild state, which is only a natural consequence of their being so much hunted, but they are gentle, confiding, and perhaps, even capable of attachment under domestication. The flesh is very highly esteemed, the skin and oil are valuable products, and the manatee's protection would add much to the natural wealth of Florida, as all the rivers of that peninsula east and west are its proper habitat, but, like its kindred, the sea cows of Behring's Straits, it appears to be doomed to extinction at the hand of man.

These animals ordinarily come to the surface every two or three minutes to breathe, and six or seven minutes appear to be the limit of time they can remain under water without being suffocated. They do not put much of their nose out of water, which is probably due to their timidity and their liability to attack. They never go ashore, being quite unfitted for land travel. The young are born in the water, after a period of gestation which is supposed to be eleven months.

Several of these animals have been taken alive, and as high prices are paid for them, there is some inducement to undertake their capture. Captain Zeller has been some time in the trade; his schooner, the Manatee, is properly equipped for the purpose, and he follows the chase with the same ardor as the Greenlander follows the whale, but not with the same destructive tendencies. His prime object is to save the game alive, and to guard it from injuring itself in its struggles to escape.

His principal appliance is a rope net 300yds. long; and provided with this, a couple of boats, and a capable crew, he drifts around until he sees some floating grass or other indication of the presence of manatees in the neighborhood; the boats are then lowered away and the net run out, one end being attached to each boat. As soon as the boats are in position the schooner shakes out her sails and cruises about with the object of driving the game into the net. This being accomplished, the boats' crews come in for their share of the performances. They overhaul the net until they come up to the animal, which invariably sinks to the bottom as soon as it finds itself entangled in the meshes, and would certainly be killed unless they succeed in getting its head above water within six or seven minutes. But the manatee, having taken in a fresh supply of air, makes desperate efforts for liberty, and with its powerful paddle blade of a tail with a superficees of two to three square feet is capable of a severe struggle as long as it has fighting breath in it, and as the boatmen have to take measures to secure it the needful supply of air, the battle is ordinarily prolonged to about half an hour, when the captive gives in exhausted, and submits to have the slings passed around it. It is then lifted aboard the schooner by the fore and aft halliards, and lowered down into the tank ready to receive it. Captain Zeller allows little superfluous space in his tanks, which are made about 9ft. long, 30in. wide and 15in deep, and fit the animal as comfortably as a tailor-made suit. The captain says that he has found by experience "that the closer they fit the tank the better they ship, and the less they worry or struggle."

The three now on exhibition in New York were taken in June last; they have traveled in their tanks from Florida, first by rail from Titusville to Fernandina, two days, during which there was no water in the tanks, the comfort, or at least the necessities of the animals, having been secured by covering them with wet sacks. On Aug. 9 they were shipped by the Mallory line of steamers to New York, where they arrived in good health on the 14th. On this trip they were supplied with salt water, but declined to feed in it, which is the more remarkable in that manatees in captivity have shown themselves partial to more than one variety of seaweed, which appears pretty conclusive evidence of their feeding in salt water in their natural state. However, Captain Zeller's refused food when aboard, and commenced to feed freely when on arrival in New York they were supplied with fresh water.

The capture of these animals is exciting enough, and not wholly unattended with danger; the manatee, urged by his powerful propeller, glides through the water like lightning, and if, in the course of wagging its tail, a small boat should happen to be in the way, the occupants might think they had been struck by a torpedo. Twice has Captain Zeller been knocked out and his boat upset by a manatee's tail, and considerable weight naturally attaches to his opinion as to the amount of reserve force in the implement in question.

The female is still in her traveling tank, but a tank of 10ft. square has been constructed for the two males, and there they lie as philosophically and calmly chewing the cud of their reflections and of strange vegetables as though, to use the worthy captain's expression, "they had been born in a tank, and knew very well that a careless flap of their tail might let out all the water."

At times they lie so still that incredulous visitors insist on having them stirred up to afford evidence of their vitality, and the captain, who plays the part of showman, has to exhibit the animals in motion. They have no external ears, but their sense of hearing is acute enough, and the female will occasionally lift up her nose when her keeper addresses her in terms of endearment, which he invariably does in deference to her sex, and in the firm conviction that she is the veritable mermaid of history and tradition, although not so charming in person as she is gentle in disposition. Captain Zeller tells us that they never feed with their noses out of the water.

The skin is very thick and tough, and at some seasons of the year presents a very rough, almost black surface, which in time scales away, leaving the animal with a soft, clean integument. Captain Zeller's female is in the former state, but the two males appear to have thrown off last year's epidermis.

HERONS AS PETS.—Dr. W. Van Fleet, who is the author of a volume entitled "Some Native Birds," shortly to be issued from this office, tells these incidents in the September *American Magazine:* "My herons, Tom and Peggy, were plucky in the extreme, and though peaceable enough when not imposed upon, resented fiercely any domineering from the barnyard inhabitants. Their combined forces were always more than sufficient to route the enemy. Once only we witnessed an instance of their partial discomfiture. Tom had accepted the challenge of a bullying young rooster, and at the first pass was placed *hors de combat*, with a spur through his throat. Before the cock had time to sound his clarion of victory, Peggy, with a savage cry, came flying through the air, and alighting full on his back, by a fierce stroke of her spear-like bill, deprived him of an eye. So energetically did she follow up her advantage that most energetic interference was required to save the fowl from complete destruction. Tom's wound was so severe that a considerable portion of his internal anatomy was exposed; nevertheless he recovered rapidly. A contraction of the gullet followed, which often caused him great astonishment by refusing to pass such large articles as formerly. Occasionally he would attempt to swallow a dried sunfish or other spiny object, which, sticking fast, could neither be cast up nor down. A little water, with some careful manipulations, always relieved him from his unpleasant predicament; but to the last, experience did not render him wiser on this point. Their exceeding tameness exposed them to great danger when they chanced to wander from their adopted home; and their fate, at last, was that of being stoned to death."

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 50 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. The Still-Hunter. By T. S. Van Dyke. Price $2.

GROUSE ABOUT BOSTON.

BOSTON, Mass., Sept. 4.—The early shooters have been out. Saturday was the first day of September, and those of the gunners who have observed the law either tried the brush with dog and gun, or wished that they had the time to try. Again Monday was Labor Day in Massachusetts, and a legal holiday, and this gave some of the more busy sportsmen a chance at the early birds. It is not a pleasant thing to do to mention only small bags generally. Somehow the birds do not seem to be plenty in this part of the country, or at least within easy distance of Boston. There is a dark suspicion that the farmers' boys have been breaking the law, and that they have killed the birds in such season this year that no city shootist can get them. Remarkably wild birds found on the first day of September, birds as shy of the dog as they usually are in November, indicate that they have seen the dogs early, while here and there patches of feathers show that somebody has been there with the dogs. To be plain about it, the law against grouse shooting in Massachusetts previous to September first is not observed worth one cent by the local gunners. Indeed it is pretty well understood by these gunners, in some parts of the State, that they stand a much better chance at the birds if they begin early, and there is something of a silent agreement among them that they shall not inform against each other. The gunner from outside would be quickly complained of for breaking the law, but the local gunners are a law unto themselves. The Massachusetts Fish and Game Commission may be doing its full duty, but at the very best there is next to nothing being done for the protection of game birds in the State. I am aware that this is a sweeping assertion, but where is the instance of any enforcement of the law?

Indeed the same is true of the lobster law. Short lobsters are plenty in the markets. The dealers handle such lobsters as the fishermen bring, and no questions are asked. The beach houses have used lobsters indiscriminately this year. Since Deputy Commissioner F. R. Shattuck resigned, some three months since, nothing has been done toward enforcing the law in this section, though there have been a few short lobster prosecutions in the vicinity of Lynn and Beverly; but even these were spasmodic and of short duration. Massachusetts raises some money for the protection of fish and game. Where does it go?

SPECIAL.

NEW YORK GAME PROTECTORS.—At a meeting of the Commissioners of Fisheries, last Tuesday, Robert Brown, of Port Richmond, and J. W. Pond, of Malone, were appointed game protectors. Frederick P. Drew, of Washington Mills, Oneida county, was appointed chief game protector.

THE WOODCHUCK CREEK COUNTRY.

II.—SOLID.

THE wind had continued to increase in vio'ence, and gradually chopped around to the southwest; there was a perceptible falling of the temperature and other indications that the weather was undergoing a decided change. Just as a particularly savage gust of wind struck the castle the door opened and the General entered, and, as might be supposed, was a tolerably "demmed damp, moist, unpleasant body," but his form was adorned by such trophies as drew all attention from himself and concentrated the gaze from four pair of astonished optics upon two specimens of *Meleagris gallapavo*, magnificent as ever fell to the lot of a sportsman.

Tied together at the neck were suspended from the General's left shoulder a pair of gigantic gobblers, and despite the wet and bedraggled state of their plumage, they were unmistakably beauties. Striding across the room with a pardonable pride the General cast his burden upon the floor near the fireplace, and placed his gun in the corner. Then, looking around with sweet content, he said:

"That pays better than sitting around a blazing fire and telling yarns about impossible achievements, or playing poker with a ten-cent ante and a dollar limit. What do you think of that, my lords of leisure and laziness?"

Then replied the Doctor:

"'The honor is overpaid
When he that did the act is commentator.'

"Neverthe ess, my boy, thou hast done marvellously well for a rainy day, and much thanks thou hast for the prospect therein given us of a most worthy and noble Thanksgiving dinner."

"'Nay, an thou'l't mouth,
I'll rant as well as thou,'"

rejoined the General, "but I can't do it on an empty stomach; let's have some dinner, and while we eat I'll give you some account of how the birds were brought to bag. Ah, but what a day—what a day! I have been so unfortunate as to strike some bad weather before now, but the like of this I have never been called upon to face."

Aaron had finished his work in the kitchen and was now laying the table with a snowy cloth and the plain dinner service, and in due time we were doing ample justice to the meal which our accomplished cook had provided. If there was anything that Aaron excelled in, it was roasting a saddle of venison, and a worthy example of his art in this line now appealed to our senses, well larded, and "done to a turn." The currant jelly was not lacking either, nor were the toothsome yellow danvers nor the browned potatoes. The maxim that "actions are more eloquent than words" had never a more satisfied believer than the sable Aaron. He grinned some fearful grins as he beheld the onslaught. But the engagement was not so fierce but there was time and leisure for the narrative of the General.

"To tell the honest truth, lads, I was secretly repentant more than once within the space of an hour after leaving this most comfortable and inviting shelter, to say nothing of

* * * 'this worshipful society
That fits the mounting spirit like myself,'

and all that sort of thing; but having started with the determination of doing something out of the 'general run,' I would not for any consideration give in to any such weak inclination—and it wasn't so weak either—to return to the Castle. So Don and I tramped along through the beating rain—which seemed to increase in ferocity every moment. Yes, it was a mighty juicy tramp, but I had an objective point, all the same. I had marked well the spot where a flock of turkeys were observed feeding down along the wooded bottoms of the creek the first day we came. I had no idea what effect the rain would have upon the probabilities of a shot at them, but I reasoned that they would lie pretty close under cover like sensible birds.

"On this hypothesis I laid out my route straight to the creek. Don seemed to regard the rain as a necessary evil, and worked apparently as well as on a dry day. I sent him out as soon as we struck cover, and once only did he flush a bird (a partridge that I did not want) for which he seemed duly repentant and came to heel immediately. I did not let him out further than a couple of rods, and called him back quickly, as I fancied I heard the soft cluck of a hen turkey. Stopping short and listening attentively, I concluded I had been mistaken, and then started forward cautiously. Don evidently had scented game near at hand, for his actions were very significant.

"Fifteen minutes afterward the sounds formerly noted were heard again, this time unmistakably, and I made up my mind that there was game in the immediate vicinity. We stole along noiselessly, eye and ear alert, for a dozen rods, when, to our left, and plainly in sight, I saw the head of a cock just above the trunk of a fallen hickory. Of course I concluded that this bird was not alone, and that if two were to be bagged by a double shot a little caution was necessary. I stole along from the shelter of one tree to another, until I dared not risk getting closer; stepping upon a dry twig it snapped like a pistol, and up alongside the first came two more heads, wildly seeking the cause of the sound which broke the stillness of their haunts. I did not delay longer, but with a rather hurried aim touched off old 'Wellington,' and one of the heads disappeared. Two magnificent cocks and three hens immediately started up and started at a terrific speed straight out and in front of me, when I covered the largest and checked his unseemly flight. Quickly throwing in fresh cartridges I started, hoping to get one more if possible, but the birds were too fleet for me, and I was forced to be content with the two already slain. Upon taking them up I found them, as you see, elegant birds, and as to weight, I discovered before getting into camp that it was no insignificant matter."

"Well, what about the other shots we heard—there were two more?" put in Sisyphus.

"I had no sooner got the birds together preparatory to a return than I heard a crash in the underbrush off to my right, and turning suddenly I caught sight of two deer just vanishing in the distance. I concluded to reconnoiter for a crack at that grade of game, at the same time removing the cartridges and substituting a couple loaded with buckshot. Don and I made a slight detour to the left, struck the creek, and followed the bank up stream for half a mile. Just at the bend, where we brought down that elegant buck last year, I saw a movement in the hazel brush, and before I could realize the fact that there was something alive there out pranced a fine doe, and sped with the velocity of the wind into the forest. I blazed away with first right and then left, but I don't suppose I ra'sed a hair on the beauty; at any rate, she didn't stop to inform me."

"If it should freeze within a day or two, and a light fall of snow follow, I think we will have some sport here with big game," remarked the Doctor between his sips of coffee.

Aaron appearing at that moment, provided the weather probabilities: "You're mort'ly sartain to git it before to-morrow night, an' you kin jist 'pend on dat. Nebber know'd to fail."

"Never knew what to fail, Old Wisdom?"

"How long we ben comin' here—a'ways to dis here, to dis 'ere Cassil—'bout five year' ain't it? Wall, I have always took notis that when de wind chops 'round to de sou'wes' any whar, twixt 'leven o'clock in de mornin' and one in de arternoon, and comes whistlin' down dat ar chimny wid a 'culiar kind o' tune like I hearn to-day, it onvariable follers dat cole we'der goin' to shet in suddint and mighty sharp, widin twelve hours, and don't you eber forgit dat."

"Aaron, do you feel like putting up a week's wages on that prediction?"

"Yes, or a month's, but I should hate, dreadful, to take any o' your money when I got a dead sure thing."

"All right, we'll see what we shall see."

There certainly were unmistakable symptoms of colder weather, and this with Aaron's prognostications were hailed with delight. Dinner over, cigars were lighted and we proposed to put in a share of the afternoon at whist. In opening the door of the little locker and cabinet which contained various accessories of daily life, the Doctor knocked down a very finely mounted English snipe, and when he had restored it to its place, he stood looking at it with a very amused expression, which finally ended in one of his roaring laughs.

"I have had for some time vague fears that the Doctor's mind was failing," gravely remarked Sisyphus, "and such demonstrations as this confirm them. What there is hilarious or particularly mirth-provoking about knocking down with inconceivable awkwardness a stuffed snipe and then picking it up and putting it back in its place is more than a well-balanced mind can conceive."

The Doctor continued to laugh heartily and ignore the intimation of his friend as he brought out the cards and we surrounded the green baize table.

"The fact is, boys, I never see a snipe in any condition—broiled for the table or stuffed for preservation—without being reminded of a most excellent joke that was perpetrated at the expense of our old friend Commodore P. You remember him, all of you, the genial, gentlemanly and popular commodore of the palatial line of steamers that once (1854-5, I think) plied between Monroe, Mich., the then eastern terminus of the Lake Shore & Michigan Southern Railroad, and Buffalo. That was before the Canadian roads were built. The boats were indeed floating palaces, and the trip from Monroe to Buffalo was a most agreeable change from the hot dusty cars to the passenger from the West, and *vice versa*. The Commodore was a courtly gentleman, a good sailor, a competent commander and a jolly *bon vivant* withal, which naturally rendered him a favorite with the whole traveling public as well as with those who knew him better. He told a good story and relished a good joke as keenly as any man living.

"The Commodore's weakness was snipe, and among his acquaintances he numbered many sportsmen, who kindly remembered this fact, and from the marshes around Monroe, in the season, the Commodore's table was liberally supplied. There were professional 'sportsmen' also who drove an occasional bargain with the lover of good things. During a certain season snipe were unaccountably scarce, but, thanks to the skill and undeviating fidelity of one of these 'sportsmen,' the Commodore's supply never failed nor diminished. The only difference was that 'in order to save time and trouble to the stewart,' the birds were now always delivered plucked and dressed before being offered for sale.

"Matters went along smoothly for some time, when one day the Commodore invited a friend to dine with him, and snipe naturally was a prominent dish, and a greater delicacy than common on account of the scarcity of the game. The guest was posted on snipe, both living and cooked, was not only a thorough sportsman but an epicure as well. He marvelled at the abundance of the temporarily scarce bird, but was assured by the smiling and exultant host that his supply had not failed, though others had great difficulty in getting even an occasional bird. The guest looked closely at the bird on his plate, turned it over, cut and tasted it. Laying down his knife and fork, he looked the Commodore solemnly in the face.

"'Captain P.,' said he, 'do you buy these birds with the feathers on?'

"'No, indeed,' was the reply, 'I get them already plucked and dressed, which seems to suit the cook much better.'

"'Then let me advise you to return to the old way and get feathers, too—thus avoiding snipe in mourning attire—and the consequent blackbird flavor.'

"The story leaked out among a few of the intimate friends of the Commodore, and many was the bottle of fiz that were required to keep silence. The Commodore, it is needless to add, bought his snipe with plumage on thereafter.

"Yes, I remember the old captain very, very well; he was a natural-born steamboat man; made everything delightful for everybody, and as kind-hearted a man as ever lived. I remember he always wore a fine cambric ruffled shirt front and a navy blue suit. He was very portly, and yet as light as a feather. It was a treat to see him dance; he skimmed along as gracefully as a girl."

The afternoon was not half gone when snow succeeded rain, and the air was soon filled with the flying flakes. The wind had gone down and so had the mercury, much to Aaron's evident gratification, for it was freezing hard, and to our own as well, for we were fully reconciled to the thought of waking the following morning and finding—

"* * * the billowy hills
Swath'd in the snowy robe that winter throws
So kindly over Nature; skeleton trees
Fringed with rich silver draping, and stream
Dumb in its frosty chains."

KEUKA.

A DEER HUNT ON RED CHUTE.

BY appointment several of the Knox Point Gun Club were to meet me at sunrise on Flat River, a mile from Atkins's store, to take a deer drive. We were to drive between Red Chute and Flat River, and also Swan Lake, as far down as High Island. In due time Mr. Andrew Moss, James Atkins, James Joyner and Robert Hutchinson came to Flat River Bridge, and John Graham, James Hutchinson and his younger brother, not members of the club, joined us. Mr. Andrew Moss had his three hounds, Mr. James Hutchinson had two, and I had two, which, with one of Mr. John Graham's, gave us a pack of eight fine deer hounds.

My two old hounds, Buck and Stonewall, a very highly prized present from my friend Mr. Ruff Perry, of Marshall, Texas, were the best dogs I ever owned. They would not open on any track but a fox, wildcat or deer. Old Buck had one-fourth bloodhound in him. He was undoubtedly the largest and finest looking hound I ever saw. Unfortunately he died during my absence at the grand fair of Shreveport the middle of last November; about a month after this hunt.

The first drive we made we failed to get up a deer. In the second drive I took the stand where I killed a beautiful little buck a week before. We had two sets of drivers. Mr. Andrew Moss and Graham drove on Flat River with his hounds and mine. Mr. James Hutchinson drove by the side of a long cypress brake. A path leads along the north side of this brake, on which the standers were placed. Should they fail to kill the deer it would cross Swan Lake, then dry, and go to the hills, and were the dogs to follow them for some time, would very often run to Lake Bisteneau and cross to the hills of Bienville parish.

Mr. Hutchinson started several deer that ran back up Flat River and finally crossed Swan Lake near Red Chute, where it empties into the lake. He followed his dogs, and finally got a shot at a young deer, which he shot dead. By the way, Mr. Hutchinson is one of the best shots for deer and ducks in Red River bottom. It is a very rare thing for him to miss. He is a Jehu in riding, and it is not often a deer can escape without he gets a shot at it. I have had some very pleasant hunts with him this fall, which I intend to describe at an early day.

Mr. Andrew Moss, the prince of deer hunters on the east side of Red River, jumped two large bucks, which ran below on Flat River, and finally crossed Swan Lake at the Ripples. Mr. Poole and his little son were standing there, but failed to see the bucks as they passed through the stand. Mr. Poole, the father-in-law of Mr. Andrew Moss, had been to Knox Point that morning, and learning that the party had gone deer driving, hurried back to his house, some six miles, got his little boy, who always accompanies him, and galloped some five miles to the Ripples, where he knew the deer would certainly cross some time during the day. The Ripples is a remarkable formation for the bottom of a long lake, which is not less than ten miles long by a mile wide on high water. Thick thorn bushes extend for a quarter of a mile on the south side, and there a deep bayou, called Alligator Bayou, runs parallel with the channel of the lake. North of this bayou is an island densely covered with thorn bushes, which comes to a good steep bank on its north side. Along this runs a narrow slough, about 200yds. long and 50yds. wide. Across this slough is a narrow willow island of the same length; it is not 20yds. wide. At the east extremity of this slough is a big deer lick when the lake is dry. Cattle from the hills and bottom come there to lick. They have tramped it so much, that after a rain the water stands on part of it and makes a good watering place for stock. Deer go there every night to lick and to drink in the summer and fall. Below the lick is a wide extent of open ground for several miles long, now without water on it, and covered with goose grass. Above Willow Island is another wide expanse of grassy land, two miles long. At the head of this island is a narrow belt of hard clayey rock filled in with thick beds of musselshells. Here the deer can ford at any stage of low water, where they would mire at other grounds. It is this favorite crossing to and from the hills, which begin about a quarter of a mile from the Ripples, but a strip of thick thorn bushes lies after they pass the head of the island, between that and the hills.

Mr. Poole and his son both took this position. He had waited so long without hearing the hounds, that he left his stand and went to another position below the lick, and there kindled a fire, to eat his lunch and smoke. While doing so, the big buck passed by both their stands without their seeing them. When they heard the hounds coming they ran back, and had the mortification to see the hounds run the tracks of the immense deer not 20yds. from them. Mr. Moss was close behind his hounds, and when he came to Mr. Poole, his three blasts of his horn at intervals brought up both standers and drivers. Here we ate our lunch. Nothing had been killed up to this time, except the one deer by Mr. James Hutchinson.

Lunch over, we all rode down by the Alligator Bayou to drive a famous drive known as the Bear Island drive. Many a bear and wildcat had been killed by Mr. Poole on this island before and since the war. Now there is not a bear within forty miles of it. Last fall a freedman killed near the head of the lake a small two-year old bear, the first killed in the bottom for several years. No hunter in this whole section of country has been so successful in killing bear, deer and cats as Mr. Poole. On this same island he has killed as many as three bear and five deer in one day, just previous to the war.

Bear Island is formed by Alligator Bayou on the west side, Flat River on the south, and Swan Lake on the north and east. It contains several thousands of acres of land. When the lake is up there is not much of it but what is covered with water. There is a pond on it that never goes dry. Around this pond the bushes are very thick, and it is a favorite place for deer to lie. When started by hounds they either cross Alligator Bayou and pass out by the Riffles, or cross the open space of Swan Lake, now a grassy bed, to the hills. They never cross Flat River at this point, as Mr. Poole has a big deadening and clearing on the opposite side.

Going down Alligator Bayou, the scene was enlivened by a fusilade of guns. Mr. James Atkins, the best shot of the Gun Club, and who had shot but three times in his life at deer, bagging at each shot, was in advance. A mallard drake, that summered here, ran out of the bayou and flew by him; he shot at missed, and so did four more of the crowd. Five shots had been fired. We were

riding single file; young Mr. Hutchinson was ahead of myself. If he missed it would be my turn, but I did not get the opportunity. His shot, the tenth fired, cut it down. This is the first time I have met with a mallard that spent the summer in this latitude. It must have been wounded in the spring flight, and was unable to go on with its mates. I now regret I did not pick it to discover some scars of its having been previously shot.

The standers were placed, and Messrs. Moss and Hutchinson with Mr. Graham went down to the lower extremity of the island to drive. They were gone an hour when I heard a shot about 200yds. below me on the Argus Bayou. It was made by Mr Poole. His little boy, Robert, stood about 50yds. from my stand. In a short time I heard the cry of the hounds, and then one shot seemingly about a mile away. Half an hour elapsed and I heard the full cry of all the pack. They ran within about 300yds. of my stand and passed out by Mr. Joyner. In a few minutes I heard the horns of the drivers blowing back the dogs and then the three blasts summoning up the standers. Mr. Poole came up to me and reported shooting at a flock of turkeys, too far to reasonably expect to kill. We rode on to the drivers and there saw a very large buck strapped behind Mr. Moss's saddle. "Who killed it?" I asked. "I did," said Mr. Moss; and I will let him tell the tale. Said he, "We struck a number of trails too cold to let the dogs follow them, but when we passed the pond old Buck seemed to warm up on one that led to Flat River, and I rode as fast as possible behind him. The trail led to the river, where the deer had been to water, and after it left the river my dogs opened freely. I was satisfied the deer had been to water since noon, and that if I could keep up with the dogs I would get a shot as it would jump from its bed. Mr. Hutchinson had driven on the other side of the pond, and hearing my dogs opening, he was galloping with his pack to my assistance, and was in sight as I saw a large tree that had been blown down. It struck me that the deer was lying there. I urged my horse to full speed, and as the hounds got within a few yards of the tree I saw the buck spring up. Without stopping my horse I fired, and had the satisfaction to see him stagger and then plunge to the ground. In a moment old Buck had him by the throat, and Hutchinson's hounds coming up, we had a fearful fight with him before I could cut his throat."

"What became of the deer that the dogs ran by Joyner?" I asked of Andrew.

"Oh, Jim said no deer passed by him, and that it had run out before he got to his stand."

"Where did you strike the track?" I asked.

He replied, "A short distance from where I killed the buck."

"Now, Jim," I said, "just own up. It was a buck, the mate to the one that Andrew killed, and it ran out by you. Either you was asleep or it frightened you so that you were too scared to shoot. Tell the truth, for I would swear on a pack of Bibles a mile high that the deer passed your stand after the drivers placed you there. Old Buck never passed a deer track in his life, if it had gone along not over twenty-four hours before."

"Did he strike as you placed Jim at the stand?" I asked of Andrew.

"No," he replied.

"Did your dogs open there?" I asked of Mr. Hutchinson.

"No," was the answer. "I heard every dog in full cry as they passed by me, and I know that deer ran by Jim after Andrew killed his buck."

"Come, own up, Jim," all said, and he confessed he was asleep and did not wake until the deer was too far to shoot. It actually ran within twenty yards of him.

We dressed the deer there and divided. It was the largest and fattest one killed this season. I went to Andrew Moss to spend the night, and I know I never ate so sweet a piece of venison as prepared under the inspection of his charming wife, who often accompanies her husband and enjoys the sport as much as he does.

A week after this hunt I accompanied Mr. Moss, Mr. Poole and his son, and Mr. John Graham, to drive this same Bear Island.

Mr. Poole stood at the head of the island, at the stand Mr. Atkins took on the former hunt, and not far from where Joyner stood; I went to my old stand and little Robert stood near me. The hounds struck a running trail just opposite me. At that moment, not over 150yds., I counted thirty large turkeys running across the bayou, and in a moment I heard two guns, and then a third one, at the interval of a minute, from the point where Mr. Poole stood. Then the dogs passed beyond and ran to the hills. For one hour I could hear old Buck's deep voice over all the roar of the pack. Finally he seemed to be coming back. I rode on with little Robert in the direction he was coming. He came to Alligator Bayou, and Mr. John Graham just behind him. As the deer had crossed, I stopped the hound, and waited for John to come up.

"What luck?"

"None," he replied, "I followed old Buck. He was running the deer Mr. Poole shot at. He ran it to Lake Bistereau, then back through Sibley's fields, over fences ten rails high, and though Mr. Poole said it was badly wounded I have seen no blood, and I don't think he touched it, as no wounded deer could have run so long as this one with old Buck right behind him."

"What became of the other dogs?"

"Andrew followed them to Burr Ridge. I hear his horn. Let us blow for him and Mr. Poole."

In a short time both came to us.

"Tell us what you shot at," I asked Mr. Poole.

"The dogs jumped the deer not far from my stand. I saw three coming straight to me. When they got within 50yds. the largest stopped broadside on and I fired at him, and then got a quartering shot as he dashed back. The dogs met him and he turned back, and I got a shot at him standing about the same distance, and if I could have got the second shell in my gun I could have shot the fourth time. One of the deer was a fawn. I am certain I must have wounded him badly."

"I guess not," said Andrew, "for John and I could find no blood, and the dogs must have run that deer at least fifteen miles. You were looking at the deer and not your gun."

"He was a third larger than the one you killed. Plague these breechloaders. I can't kill a deer with them. If I had shot my old bear muzzleloader I would have killed that buck then and there the first shot. I am going to have it repaired, and I will show you youngsters how to kill deer."

With this sage conclusion he lighted his pipe, and we separated to return to our respective homes. The next week he sent his old bear slayer, over 4ft. long in the barrel, to a gunsmith, had it shortened to 40in. and put in good order, and I have received a message from him "to come down and he would show me how to kill deer." I accompanied John Graham as far as Flat River Bridge; he went to his home at King Point, and I to mine some three miles above. Mr. Graham is a good shot, knows the woods well, and always drives for me when he is not engaged.

Ere long I shall go to Mr. Poole's to take that lesson from him in deer slaying (remember, dear reader, I have killed over two thousand in my life), and if all things are favorable I may write it up in the near future.

KNOX POINT, La. G. A. D.

THE CONNECTICUT ASSOCIATION.

Editor Forest and Stream:

In your issue of Aug. 30, some one who signs himself "One of the Farmers" says: "I see that Mr. A. C. Collins and a few selected gentlemen are trying to combine the interests of farmers and city sportsmen." Now for the facts relating to the "few selected gentlemen." The informal meeting Aug. 10 was generally noticed by the press throughout the State.

Monday, Aug. 13, I, personally, mailed to sixty-five daily and weekly papers throughout the State a circular letter, which contained a notice of the meeting of Aug. 10, and an invitation in the following words: "It is earnestly desired that all gentlemen interested in the protection of game and fish be present at the next meeting [Aug. 7]. All are invited." This nails "One of the Farmers" on his assertion, "Mr. A. C. Collins and a few selected gentlemen."

I give a portion of our by-laws which reads as follows:

The corporate management and business affairs of the Connecticut Association of Farmers and Sportsmen for the protection of game and fish shall be under and according to the following by-laws, rules and regulations:

ARTICLE 1. The office of this Association shall be at the city of Hartford, Hartford county, Conn.

ART. 2. The officers of this Association shall be a president, vice-president, secretary and treasurer, and a board of directors, to be composed of eight directors and the president. There may be such executive or other committee as the Association may see fit to appoint.

The eight directors have not been appointed, but it is the intention of the association to have one director in each county in the State. Article 9 defines the directors' duties.

ART. 9. The board of directors or their authorized committee, may offer a reward not exceeding fifty dollars at any one time for information leading to the detection and successful prosecution of violations of the game and fish laws and appoint such agents, servants or detectives as may seem necessary or expedient in better carrying out the objects of the association, in enforcing the game or fish laws. They may also define and limit the powers and duties of such agents, servants or detectives, within the scope and object of the association and fix their compensation.

Read carefully the following article of our by-laws:

ART. 8. The dues which shall constitute membership shall be the sum of one dollar from each member for each year, and is payable to the secretary at the annual meeting and shall be for the year then ensuing. Each one dollar paid by any person shall be deemed a membership for the current year; and each membership shall be entitled to one vote at annual or special meeting. Any person may hold one or more memberships. Any farmer in the State can have one membership free and is entitled to a vote on the same.

"One of the Farmers" says: "I (he) am not overburdened with this world's goods." I presume he can raise a two-cent stamp and send his name to our secretary, Mr. Allen Willey (editor of the *Globe*), Hartford, Conn., and become a member free and have a vote (see by-laws, article 8).

Here is the "very foolish game law" that your Westchester (Conn.) correspondent refers to:

SEC. 2546. No person shall at any time kill any woodcock, ruffed grouse, or quail, for the purpose of conveying the same beyond the limits of this State; or shall transport or have in possession with intent to procure the transportation beyond said limits, any of such birds killed within this State.

The reception by any person within this State of any such bird or birds for shipment to a point without the State, shall be *prima facie* evidence that the said bird or birds were killed within this State, for the purpose of carrying the same beyond its limits.

SEC. 2547. Any person violating any of the provisions of the preceding section shall be fined not less than seven nor more than fifty dollars.

A very wise law in my opinion.

Your correspondent if he chooses can prevent "city sportsmen from many cities outside this State" carrying "large strings of our game out of the State." All the talk of "it is not a fair deal" is for effect. Your correspondent says he is a shooter, how does he like this law?

SEC. 2545. Every person, not the owner or occupant under lease of the lands upon which said birds shall have been taken, nor a member of the family of such owner or occupant who shall sell or exchange, or offer or expose for sale or exchange, any partridge, quail or woodcock, which have been taken or killed by traps, snares, nets, or similar devices, shall be fined not more than ten dollars for each bird so sold, or exchanged, or offered, or exposed for sale or exchange.

I beg to submit the following clipping from the *Globe*, Nov. 20, 1887:

Fred Alger and his brothers, all of Westchester, this State, have snared and sold over 600 partridges this fall. These Algers are a tough crowd. One has served two terms in State prison and the other two have had a term each. The attention of Game Warden Collins has been called to them, and he will proceed against them as soon as testimony can be secured. Bill Wallace, a Colchester man, has also snared and sold a large number of birds this fall, and will also be prosecuted.

As Westchester, Conn., is the stamping ground of "One of the Farmers," I beg to ask him if he will allow these snarers to get their work in this season? "One of the Farmers" says he is "as much interested (perhaps more) in the protection of game as our would-be city friends." I want proof of this assertion. I am for punishing any one who violates game and fish laws, be the violator rich or poor. If your correspondent is "as much interested" as his city friends, will he allow the same parties to snare in his town as he did last season? Can "One of the Farmers" name a single citizen in his town that does not fear the snarers named in the *Globe*? I could not get a soul in Westchester to act with me last season, they were simply afraid.

I trust the majority of farmers will take a more liberal view of our association than the one who signs "One of the Farmers," and they are most cordially invited to join our association; we have a number now. Editor Willey, in referring editorially to this association, says:

It is a farmers' as well as a sportsman's association, and it is to the farmers that the city men, who are better able than the farmers to call together the land owners and sportsmen, appeal for a hearty support and coöperation. We know from a number of years' residence in the county, how unwilling farmers are to call their neighbors to account for unlawful game killing and deeds which they themselves condemn, yet they are unwilling to stir up enmity with neighbors, although they deprecate such illegal acts. It is possible, however, by the selection of fearless game wardens, who have no local interests at stake, to carry out the game laws thoroughly, and thus protect the farmers and game, so that in a very few years game will be very plenty. We feel certain that this new State Game and Fish Association will do much good, and it is sincerely hoped that all farmers will coöperate with the city men in this most commendable association.

A meeting of the association is called Sept. 7 (Friday) at Hon. Geo. P. McLean's office, Hartford, Conn., at 4 P. M., for the election of a vice-president and eight directors, one from each county in the State. We extend a cordial and earnest invitation to all farmers and sportsmen in the State to lend their aid. Let the State be well represented.

I invite your Connecticut readers to understand that this is no close corporation, and that it is one that is organized for business. ABBOTT C. COLLINS,

President Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish.

HARTFORD, Conn., Aug. 31.

A FAWN SCRAPE.

A PART of my boyhood was spent in Virginia, or what is now West Virginia. There were then, as now, large tracts of land lying among the cultivated farms, the title to which was so imperfect that they had never been improved; and others owned by non-residents who were holding them until they should become more valuable. Some of these sections were thousands of acres in extent, and there were others equally as large adjoining; and thus the improved lands were mountain lands lying further back. In these wooded sections there was plenty of game. The people who lived there were so used to having it within reach that they did not take much trouble to hunt it, except once in a while a party would be made up, who would go some distance and camp out for a hunting trip. I remember seeing them return with the sled loaded with venison, with a bear or two, frozen stiff, and standing up to look as if they were alive.

Near one of the towns where we lived, lived a farmer, whose land joined one of these wild tracts. He had several half-tamed deer, which he kept in a lot surrounded by a very high fence. From this inclosure there was a lane leading out to the woods beyond, and the deer would go out in the morning and generally return in the evening. Wild deer would often come with them as far as the top of the hill overlooking the farm, and stand there while the tame ones came down. I used to stand by the fence and look at the beautiful creatures when they were in the inclosure, but never ventured inside the fence, as it was not safe. In the spring I learned that there was a fawn in the flock, and was very anxious to see it. So I went out one day to get a sight of it. But it was nowhere about. I looked all around, but could not see any of the deer. I knew it was hidden awaiting the mother's return, and concluded that it would be a good opportunity to get hold of it while the mother was not there to defend it. I crawled through between the rails and began searching. It took me a long time, but at last I saw the little spotted beauty lying beside a log, fast asleep. I looked at it until I concluded that I wanted to get it in my hands.

Slipping up on the other side of the log I threw myself over on top of it. I knew enough about deer to know that it would not be healthy for me in that lot as soon as it began to cry. Gathering it in my arms, with its back against me and my arms around its belly, while it kicked and howled, I made a break for the fence. My load was so heavy and struggled so, that I could not run fast; and before I had gotten more than half way I heard something that made me stop and face the music. I was in for it, for there were the doe and a buck within a few feet of me, and they did not seem pleased at the attention I was paying to that member of their family. The buck made for me, but I turned the fawn toward him and backed toward the fence. It was evident by the way he pranced about that he wanted to interview me on some interesting theme, but I was busy, and did not want to be interrupted just then. It seemed a long time before I felt the rails against my back; and even then I was not out of the scrape. The little reprobate that I was holding so lovingly had been kicking and wriggling so that he would get his sharp hoofs in contact with my clothes, and then I would hear something rip and knew that not only the cloth was being damaged, but that he was skinning me alive. I could not let him go because his loving parent hovered near, waiting for his turn to finish the skinning business. I watched my opportunity, and when the irate father had gone a little further away than usual, I flung the little wriggler from me, and made a jump for the fence. I reached it safely, but not a minute too soon, as the horns of the kind parent, in his attempt to help me over the fence, just failed to reach the part of my anatomy aimed at. When safely over, I looked back at him, and he seemed to feel disappointed. He stood by the fence stamping and snorting and looking altogether so unpleasant that I imagined he would try to climb the fence; so I went in the opposite direction as fast as I could, and have never since had any desire to handle any such creature as one which carries a butcher knife on each foot. HOMERUS.

CLEVELAND, O.

DEER CRUSTERS.—Lowville, N. Y., Aug. 31.—Truman Burnham and two sons, George and Frederick, of Watson, who were arrested on complaint of Game Protector George Moyer, of this village, charged with crusting deer last March, in the Independence River country, had their trial yesterday and to-day before Justice A. Perry Harrington and a jury. The jury rendered a verdict of guilty against Truman and Frederick Burnham, but the evidence did not warrant a verdict against the other son George Burnham, and he was therefore discharged. Truman and Frederick Burnham were given the privilege of paying $50 each or serving fifty days in jail. Being unable to pay the fine they were committed. District Attorney Ryel appeared for the people and Jas. D. Smith for the accused. An appeal may be brought.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888," issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee, Wis.—*Adv.*

FEW RAIL AS YET.—The season for rail shooting which opens late in August or the first of September in different States, has so far been an utter failure in the various localities which have been heard from up to this writing. In the lower part of New Jersey the birds are said to be rather abundant, but along the Hackensack River, which has always been a favorite ground for rail shooters, there seem to be no birds at all. On the Housatonic meadows in Connecticut, there are but few birds; not enough in fact to make it worth while to go out. The birds shot at present are those raised on the grounds where they are found, for there are no indications as yet that any flight has taken place, and none is likely to occur until the next moon. A reason which is advanced for the total absence of the rail from the Hackensack meadows is given in the *Evening Post* as follows: "A few years ago the sea broke through and flooded a section of land on the coast of southern New Jersey. The following year this newly flooded region was found to be alive with rail. Parties from Philadelphia, who discovered it, have made in the last few years bags of several hundred birds at one tide. It is thought that the rail which used to feed on the Hackensack have been attracted to this new ground. If so it will probably be long before there will be a rail year in northern New Jersey." Before long we hope to have reports from other rail grounds. More recent reports from the Housatonic meadows indicate that a flight of birds has come on and that there is some shooting. A correspondent writes as follows: "MILFORD, Conn., Sept. 3.—*Editor Forest and Stream:* Flight rail are quite numerous in this vicinity. On Saturday my wife and self went up to the cove and I got thirty-five. Mrs. G. bagging eight. To-day with an unfavorable tide I got twenty-eight. The birds are in excellent condition, being large and fat. I have seen no snipe, nor have I heard of any, though the meadows have been well hunted. The weather to-day is quite cool and we hope for a flight of birds to-night.—M. G."

THE FLIGHT OF THE WILD GOOSE.—The Sacramento, Cal., *Record-Union* of Aug. 7 reported: "At an early hour yesterday morning those who were abroad were greeted with the 'honk' of wild geese, showing that these annual visitors from the far north are already putting in an appearance in this section. This is the earliest, by two weeks, that these fowls have arrived here in their migration toward the south for twelve years past, according to the reporter's data. It is possible that some straggling bands have arrived earlier, as not a few of the wild fowl breed about the lakes and marshes in southern Oregon, and they are apt to arrive a little in advance of their Arctic brethern. However, as none of them take the trouble to register on their arrival, it is impossible to say whether they hail from the North Pole or the Oregon Lakes. The first locality visited by wild geese in this vicinity is Fisherman's Lake, some eight miles north of the city. A few flocks show up there each season earlier than elsewhere, and it is believed that they are piloted directly thither by old geese who had wintered there the proceeding season. The last of the wild geese to leave this section last spring took their departure as late as the 1st of May. It will thus be seen that these fowls tarry with us nearly, if not quite, nine months of the year. A greater compliment to 'the glorious climate' of the Sacramento Valley could not be paid, as these fellows are experienced travelers and good judges of climate. Following are the dates of arrival of the wild geese for the past twelve years: 1887, Sept. 14; 1886, Sept. 12; 1885, Sept. 13; 1884, Sept. 2; 1883, Sept. 12; 1882, Sept. 12; 1881, Sept. 3; 1880, Sept. 17; 1879, Aug. 30; 1878. Sept. 6; 1877, Aug. 31; 1876, Aug. 14."

ONTARIO.—Millbrook, Ont.—*Editor Forest and Stream:* Permit me to correct an error which recently appeared in the columns of FOREST AND STREAM, which if not corrected might occasion considerable trouble and inconvenience to American sportsmen contemplating a deer hunt in Ontario this coming season. Under the heading "Ontario Game Law" the open season for deer is from the 15th of October to the 15th of December, both dates inclusive, which should be from 15th of October to the 20th of November, both dates included. The taking or killing of moose, elk, caribou or reindeer is entirely prohibited until the 15th day of October, A. D. 1895.—GEO. SOOTHERAN.

DEER HUNTING ETHICS.

Editor Forest and Stream:

The Utica, N. Y., *Herald* of Aug. 28 contained a letter headed "A Clergyman's Vacation," describing the experiences of a party in the North Woods. It contained these paragraphs:

"We take an early row on the lake and a visit to the buoy, which we have permission to use. Will this answer for luck and for a breakfast? One salmon trout that weighed 3lbs., one 4lbs., one 6lbs., that is our catch, brought up from a depth of 45ft., with meat icy cold. It was indeed gilt edged in color and flavor, as it came soon upon our table. While these fish lasted, well kept in our ice house, we feasted; but the truth must be told, we have caught not another one in these ten days since. Have we then gone hungry? But we brought well filled packs. Moreover, we are in the woods as well as near the lake. We have not only rods, but guns, and why should any one suffer hunger in this land? Morover, lawful days have come. The sun of Aug. 15 rose none too early to find two of our party dressing a buck that would weigh 200lbs., who went down where he stood looking in wonder at a bright light seen over the water. His head will be mounted as a trophy. His flesh has given us daily feasts, boiled, roasted, and in other shape. One such specimen of game ought to be enough for our party. But who can refuse fortune when she holds forth her prize before your eyes?

"We were all at the landing, and two were just stepping into the boat to try the buoy, when one said, 'See, what's that in the lake? It is not a loon. Is it not the head of a deer?" It was more than half a mile away, but we thought it worth while to know. The boat sped on its way as fast as oars and paddle and our utmost strength could send it, and not in vain. There was the deer. It was a question, indeed, whether we could get between her and the shore. It was done. Then came a contest over many paths, to and fro, for we had neither gun nor club. But there were two against one, and we had an oar and a knife, and we towed the doe to our shore, and were greeted with cheers by those who had looked on with excitement hardly less than our own. We shall carry home jerked venison. Speckled trout have also furnished delicacies fit for a queen. We got them with rod and fly as we waded down the outlet, now knee deep, now waist deep."

Having been over the same "happy hunting ground" thirty years ago and many times since, I read the "Clergyman's Vacation" with great interest, but was sorry to find the cause of the statement. "We were greeted with cheers." Allow me to ask what this sportsman had done that he—or they, for there were "two against one"—should be greeted with cheers? They had, without fear or trembling, or even the slightest touch of "buck fever," rowed up to a timid deer, and with "knife and oar," for they had no "gun or club," killed it. And this deer a doe, which undoubtedly had beautiful spotted fawns on the mountain side, under the protecting pines and spruce, waiting for the maternal support to return. Call you this worthy of cheers, or an exploit to be published abroad? It is simply murdering the innocents on their own stamping ground. This style of sporting is equal to that of a skillful hunter and angler from Ithaca, who in the presence of my party some years since, ordered the stalwart guide, much to his disgust, to fasten a buoy hook to the deer's tail and allow it to swim off some yards, when the aforesaid hunter and crack shot hurled from a double-barreled shotgun quite a hundred buckshot into the struggling, helpless creature, mercilessly deprived of every chance for escape by the cruel hook, which held it to the boat side.

If you wish to secure your deer during the running season, do it as the writer has seen it done—yes, as he himself has done it repeatedly. If the fleet animal is in the water, place your boat beside it, if you can, and if you find you have "cut off" a doe, allow it to escape to the mountains, and by so doing help in the best possible manner to protect the venison. If you have rowed down a buck, drive him to the shore, and when his feet strike the ground and his body presents a fair target, level your rifle with its single shot and "drop him." Then you will merit the cheers of your party. If you miss him he will live to run "another day," and you will have the satisfaction of knowing that you have acted the part of an honorable hunter by giving the deer a fair chance.

A few years ago the writer landed on the beautiful beach just south of Stone Point, head of Fourth Lake, Fulton Chain. He had started to row from Gull Rock Point to Cedar Island, but "the wind was wild and the waves ran high," and his boat was carried at a lively pace to the head of the lake, and hauled on the beach. While admiring the water dashing up into the bushes off toward the inlet, he discovered a buck with fine antlers bounding through the flying waters directly toward him. It was a fine sight, and a good opportunity for an attack of buck fever, if not an attack by the buck himself. On he came with the speed of a railroad flyer, but not a Winchester, not a finger, not even an eyelash moved till the creature with a "rocking-chair on his head and a white handkerchief in his hip pocket" was about to pass, when a .44 long crashed through his brain. His last and first bound was toward the lake, and instantly he disappears beneath the dashing waves. Being sure he was my venison, with no dog nor guide to claim his hide, I calmly waited for wind and water to subside sufficiently to allow me to launch my boat and fish for my venison. In this case I felt justified in using "hook and line" to capture a deer, and was soon back on shore with the magnificent prize, my boat full of water and myself in the state described by the term "fisherman's luck."

My party, with their guides, Hess and Halliday, had witnessed the encounter from Cedar Island, where they were camping, but it was several hours before the guides could join me at the beach to assist in bringing the game to camp, for the water was too wild for their light Saranac boats. As soon as it was safe, however, they set out and were soon blown to the scene, when the deer was laid in Hess's boat, his head made fast to the stern while his hind-feet reached to the bow seat, where sat Fred ready to start, when he was asked, "What are going to do with that deer?" "Take him to camp, of course: what did you kill him for if not for that?" "No you don't," answered the soaked and hungry hunter, "I've a quit claim deed on that venison, and it is not going to the bottom of Fourth Lake even if you go with it, as you certainly will if you start in such wild waters." "Guess you're right," said Hess, "so we'll wait." We finally started in a small procession, Hess and the deer ahead, Halliday and the proud deer slayer following. We also were greeted with cheers from our party, one of whose number was the late lamented M. H. Griffith, of Utica, who, on being presented with the head, induced Halliday to deliver it by sunrise at Boonville the following morning. The antlers were in the velvet, and now grace a dining room where good cheer and hospitality are dispensed to the writer when he is fortunate enough to be found in that beautiful city. B. P. G.

BOONVILLE, Aug. 20.

Camp-Fire Flickerings.

"That reminds me."

240.

MY boy Carl and I had put out a few decoys near the foot of a lake that emptied into the Missouri, and had stationed ourselves in the bushes near by, when in came a pair of mallards. The drake was on my side, and I "downed him" with the second barrel. The boy missed his duck. After that two small bunches of redheads came in, and I got a pair each time and the boy killed one. As fast as we got any he would wade out and set them up for decoys. He had just bought a fine Parker gun; I have a Fox that I swear by; and many a time had we discussed the relative merits of the two guns. He was out setting up the last ducks killed and feeling rather sore over the results of the shooting; so thinking it a good time to give him a dig, I said, "Carl, there are but two things you need to make you a duck shooter, the first is a Fox gun and the other is to learn how to use it." "Yes," he drawled out, without looking up, "there is one thing more—gall enough to claim every duck that is killed."

LAKE EDWARD.

Editor Forest and Stream:

In a recent communication giving my brief experience of the fishing at this place, I stated that I should try it again as soon as I learned that those delightful little black flies had left. Well, here I am, and there are no black flies. A few nights of white frost laid them out cold, and now there is nothing to excuse profanity; any deacon of the church can come without risking his moral status.

I have been here a week and have seen more big trout caught than I ever saw in all my fishing experience; and yet it is said they are not biting so well as a month earlier; but the black flies were biting then, too. On the whole, the present condition of things is preferable.

The rumors of the splendid fishing at Lake Edward has started out a large delegation of fishermen; and every day the train lands more or less pilgrims to this piscatorial shrine. There are many amateurs, whose outfits make us old stagers smile. Some of them are the veriest dudes, in stiff shirt collars up to their ears, looking as if suspended by them; immaculate nickel-plated reels and bamboo rods; boots resplendent with Day & Martin; kid gloves, etc.

We of the regular army of old fishermen wonder how long it will require in this Scotch misty country to take the starch out of man and raiment. We lean against the door posts of our unpretentious hotel, smoking our pipes, in blue flannel shirts, canvas suits and thick boots and watch the arrivals with interest; and not unfrequently a lady alights; then you should see every man of us come to "attention," hide our pipes behind us and essay to look innocent and respectable, feeling at the moment that the despised dudes have the best of us. It is wonderful what a check upon utter recklessness of appearance the presence of a woman exercises.

There arrived a few days ago certainly one of the most beautiful young women one may see in a life time. A glorious creature, a young widow with her father, an enthusiastic fisherman. It was amusing to see every old stager rush to his room and dive into his valise in search of a stray boiled shirt and white collar, and when they appeared at dinner it was like a dress parade, and thereafter every one of us sneaked out doors to smoke our pipes, or over to the grocery store, to sit on the counter, smoke and swap fishing experiences. I refrain from saying lies, for everybody knows the truthful character of a fisherman, little George Washingtons, every one of them.

It won't do to laugh at all times at the seeming greenhorns, for some of them have put us old hands to the blush. A party of three college youngsters came in from camp last evening with more fish and larger ones than any experienced fisherman has caught this season, and one of them never caught anything beyond a sunfish in his life before. It is a lamentable fact that the fishing here requires no science. Skill is all thrown away, because it is not strictly fly-fishing. It is the paradise of the lubber, for unfortunately these trout of the wilderness are so uneducated and benighted as to prefer a chunk of chub or a mouthful of worms to the more refined artificial fly. It is amusing to see with what scorn a newly-arrived old fisherman repels the information that these deep-water fish will not bite at a fly. He smiles a supercilious smile and says, "We will see about that," implying that we stupids have not the science. Next day he goes out in a boat with a guide to row him, puts on a killing fly and begins to cast. Hour after hour as he works down the lake he whips away with an occasional rise and gets a half dozen small ones. He gets down to where he finds a boat anchored and the occupants pulling in big fellows. He looks on a few moments, sees a big fellow lifted over the side of the boat, and can't stand it any longer, science has to give way: and all prejudice put aside, off comes the fly, on goes the bait hook, the guide hands him a piece of chub, he puts it on with a wry face and says: "Well, I have come a long way to catch these fish, and if they are so blankety blank stupid as not to know what a fly means here goes for what they will take." He soon gets a strike and hauls up a two-pounder, which warms him up to his work. He comes in at evening with some fine fish. We are on the *qui vive* for him. "Oh! very good, you have done very well. Fly, probably?" He colors up, is a little embarrassed, hesitates, hates to acknowledge the corn, but finally says: "No, not all of them; some with fly." After that we hear no more about not wanting to fish where trout will not take the fly. He drops into the ranks of still-fishing, accepts the situation, goes home with a fine lot of trout, and his friends are none the wiser as to his methods. That is about the history of Lake Edward fishing.

We fish in about thirty-five feet of water, and the fish don't show much gameness, don't fight as fiercely as when caught on the surface, seem to get a little tired on the way up. They have some peculiarities not within the range of my experience with our brook trout. For instance, I hooked a medium sized fellow, got him alongside, when he dropped off and swam around near the surface. I threw my bait out again near him, which he immediately took the second time, and I hauled him in.

A gentleman at my elbow tells me that he hooked a fish, lost him with hook and snell, five minutes later he caught the same fish with the first hook in his lower jaw. What shall we say of such fish? Can we excuse such untroutlike proceedings on the score of their being unsophisticated denizens of the wilderness, deprived of the benefit of clergy and good moral example?

I don't wish to defame these trout and place them on too low a scale of morals, for I have had some fair sport with the fly during my week's sojourn, have caught some fair fish, what would rate as nice ones at home. A man can, by following the shores around in shallower water, pick up a good many fish; but they are small compared to the deep water catches with bait, and to come in with a couple of dozen small ones caught with fly and see a boat land at the same moment and the guide bring ashore an equal number weighing five times more than your catch, is rather discouraging to science and skill.

Of course this bait fishing is demoralizing. It is mortifying to the flesh. But what shall we do?

At "the discharge" as it is called, *i. e.*, outlet, in running water, fish can be taken with the fly, and in the Batiscan River, a large stream supplied by the several outlets of this and other lakes. In this river plenty of small, ordinary-sized brook trout can be caught with the fly and occasionally a good sized one; but it is rough fishing. This stream was formerly a good one, but during the process of building the railroad the hands fished it morning, noon and night; and in a measure cleaned it out. But it is gradually being replenished and will eventually be good fishing. The Canadian government has refused to lease any fishing privileges on this river, retaining it for the public.

There are undoubtedly many lakes further back in the wilderness that have never been explored, being almost inaccessible by reason of its density and the depth of moss into which one sinks to the knees, and also the steep mountains over which the explorer must laboriously climb. Some day they will undoubtedly be reached, but not for a long time, and even then it does not follow that they all contain trout. For instance, there is another large lake some twenty-five miles beyond this, on the line of the railroad, that contains no trout.

There are quite a number of camps along the shores of Lake Edward, but the weather is too unpleasant for comfortable camping. It has rained almost incessantly for the past two weeks, clearing off for a day with a white frost at night, making heavy blankets essential. Camping out has its fascinations, and occasionally some episodes not agreeable. A party of young gentlemen in camp below caught a fine lot of trout, and to preserve them nicely cached them in moss back of their tent. A couple of days since they broke camp and loaded the boat, the last thing being their trout, which they proceeded to uncover; but what was their astonishment to find nothing, not a fish. The thieving little minks had cleaned out the lot. There are occasions when the best of men are justified in using strong language, and this was one of them.

We had a little episode of our own. One of those little animals that don't rely on Lubin for his perfumery, manufacturing his own, came nosing around the camp, and being of an investigating turn of mind poked his head into our coffee pot; this being a close fit, the head would

not come out; and the way that little varmint cavorted around was a caution. He was making off with the pot, when we settled his case with the gun; but, oh! what an odoriferous camp he made of it. We went without our coffee that morning and put our pot to soak in the lake. Hereafter it will hang high.

There is a good deal of talk about the fishing at Lake St. John, about fifty miles beyond and the terminus of the Quebec & St. Johns Railroad. The lake is a large one, being about thirty miles long and twenty-five wide, and is said to abound in several varieties of fish, namely, the wall-eyed pike, dory, and a fish they call the "ouinniche," by some the landlocked salmon; but the latter term is hardly applicable, inasmuch as the lake, being the source of the Saugenay, is accessible for salmon, the falls being no serious obstacle. From the description of his habits and methods, I should infer he was a grilse preferring to remain in the extensive waters of the lake to making his way to the sea. At the outlet these fish are said to be abundant, and take the fly readily. They are also taken in the lake. As I propose to make personal investigation, I will be able to give you the result of my observations.

Lake St. John offers such temptations to the market fishermen that some Buffalo capitalists commenced an onslaught with nets and seines and had captured and cured many tons when the fish constables pounced down upon them, confiscated seines and the product and made short work of them. It is a great pity that our officers are not equally energetic and prompt in suppression of illegal fishing in our waters. The Canadians don't make as many laws as we do, but they are prompt in their execution of them and stand no nonsense.

A party of amateurs came along here a week or two since and brought some Chinese lanterns, something new to the natives, and on being asked their use said they were going to spear trout. Word was sent down to Quebec, and at midnight, while the boys were soundly sleeping, the constable pounced down upon them, much to the surprise and consternation of the fishermen. The uses of the new-fangled lights were explained, and the constables retired, having had their twenty-five mile row on a false alarm, all the result of an attempt to be funny.

We are all confined to the house to-day in consequence of a cold rain that pours down steadily, and we cluster around the big stove, some writing, some overhauling fishing tackle or reading old newspapers. We know little of what is going on in the outside world and care less. Our pretty woman has gone, and boiled shirts have disappeared. Our thickest woolens are in demand. By the way, let no one coming here omit to provide themselves with warm clothing. They will need it, and waterproofs. Camping outfits can be hired of the railroad agent and groceries obtained at the railroad store at reasonable cost, boats also and good ones, guides at $1.25 to $1.50 per day, good stout fellows who can row all day and build a camp at night. The hotel, although not pretentious, gives you a rough room quite equal to a fisherman's requirements, and good fare at a dollar a day. The people are extremely accommodating and try to make us comfortable. On the whole, there are much worse places than Lake Edward.

I am not going to tell you any big fish stories. You can get those by the cord; but I hope to show you a trout or two on my return that will suffice for your breakfast with something over for the cat. See you later.

LAKE EDWARD, Aug. 28. PODGERS.

ALONG DUNGARVAN.

WHEN the midsummer sun settles squarely down to business, and brick-walled humanity weeps at every pore, the sport-loving citizen sees visions and dreams dreams. There comes to him the sweetly mingling murmur of woods and waters, and in fancy he beholds the beauty of a winding river in the wilderness, with salmon-hunted pools aglow in sunlight in the dusk agloom, or in the darkness giving back the glory of the stars. And straightway the sport-loving citizen girds on his raiment, and his city haunts know him no more, till he returns from the river in the wilderness, flushed with victory and fly bites.

There were four of us to whom the vision recently came, in the fair city of Fredericton, N. B. A portly physician, who in prudent abstinence from his own medicine had waxed rotund in proportions; a retired captain of militia, who still burned with ardor to kill—if only a salmon; a limb of the law, who is, of course, never so happy as when he has a victim in the toils; these and myself comprised the party that boarded the Northern and Western railway train at Fredericton one fine morning, en route for the sporting grounds of the Renous and Dungarvan Salmon Club.

The Nashwark Valley unfolded to our gaze its wealth of summer loveliness in stream and intervale, sloping meadow and grove and wooded heights, as we whirled swiftly through and on to Boiestown. Boiestown is a pleasant inland village, situated at a point where the Taxis mingles its waters with those of the southwest Miramichi. Here a well equipped team was in waiting, and a brisk drive of nine miles brought us to the spot where Holt's pleasant farmhouse, set in a beautiful garden amid encircling fields, invites the hungry traveler. We had dinner at Holt's, and a toothsome meal we found it. Before going further we laid in a supply of potatoes, eggs, and butter, stowed carefully under the supervision of the captain, who watched over the commissariat department throughout the trip with the eye of an old campaigner.

From Holt's, a portage of 22½ miles brought us to the club house, which is situated on the Dungarvan at the mouth of the McConnell Brook, and 43½ miles from the mouth of the former stream. We had taken a man with us from Holt's, and at the club house were met by three more, who had crossed from Blackville station to the mouth of the Dungarvan (seven miles) and brought up the canoes, for our intention was to fish down the stream. Dan and Duncan Moon were two of the men, and being withal well acquainted with the stream, naturally shed much light on the trip. One of them suffered a partial eclipse one day, when he tumbled out of the stern of a canoe and disappeared almost completely, a portion of his face only remaining above the surface at the moment of occultation. After coming out he cast some reflections on the stream. We found the club house a most comfortable building, with snug kitchen adjoining and containing everything needful for our comfort. Our evening meal on that first day was made the more appetizing by a supply of fine trout that we paused to catch in a stream we crossed on our way from Holt's. We spent a pleasant Sunday at the club house before beginning operations on the stream. One of our party had put a hymn book in his pocket before leaving home, mistaking it, no doubt, for the "Complete Angler;" and a portion of the day was spent in singing, waking woodland echoes with delightful old familiar airs that all of us had known from childhood. When night came it was an interesting and unique spectacle to behold the Doctor and the Captain making their preparations for slumber. In anticipation of a mosquito invasion, each had provided himself with a sort of hoopskirt attachment of netting, to be drawn over the head and fastened there; and never did mediæval executioner, or modern baseball umpire, arrayed for action, present a more formidable aspect than did these two arrayed for bunk. The Lawyer and myself were unprotected, but suffered no inconvenience, for very few flies put in an appearance. The nights are cool on Dungarvan, whose waters are never warm, and these are assigned as reasons for the absence of those tiny pests that haunt most streams and woods in summer. Another explanation has been volunteered, and may be given for what it is worth. It is related that an American Senator, who does not believe that Canadians have any fishery rights that should be respected, once found himself on the Dungarvan and laid him down to rest beside its murmuring stream at eventide. A large mosquito came that way, and after mature deliberation concluded to sample the cheek of the slumbering statesman. The result was not to say gratifying. He tried again. Same result. Then he sat down on the statesman's nose and reflected. His reputation was at stake; he would try once more. He tried once more. Same result. The statesman slumbered on. The mosquito lost temper. Moosehide had never baffled him; would he have it whispered in all the nooks along Dungarvan that a Senator's cheek—a Yankee Senator's cheek—was too tough for him? Perish the thought! He tried once more. And still the statesman slumbered. Exasperated beyond endurance, the mosquito summoned help. It came promptly in the shape of more mosquitoes. Seating himself once more upon the statesman's nose, he directed his companionr' operations, and a general attack was made. Still the statesman slumbered. More help was summoned and a grindstone, and all night long relays of furious foes with sharpened bills hovered over the recumbent Senator. 'Twas vain. At dawn there was not a mosquito in all that region whose bill was not bruised and broken. But still the statesman slumbered. That day there was an exodus, and from that time down even to the present the Mosquito Hades has been called Dungarvan. The writer does not vouch for the truth of the story, but can testify to the gratifying scarcity of flies along the stream.

On Monday morning our sport began. The Doctor and the Captain went up stream four miles to Little Falls, where they spent the day on the pools in that vicinity. The Lawyer and myself visited the four pools at Rocky Bend, two and a half miles down the stream. When it is stated that we (the Lawyer and myself) killed fourteen grilse (a grilse weighs from 3 to 5lbs.), the sportsman needs not the assurance that we had a royal day. Returning to the club house and finding the others still absent, we resorted to a little mild deception, such as all sportsmen will appreciate. Eight of the grilse were packed away in a box, and the other six ostentatiously paraded on a board in full view. When the others returned they were able to conceal all appearance of envy while regarding our catch, as exhibited, and were able, after supper, to indulge in some general congratulation at the outcome of the first day's work of four amateurs. Ten grilse, they thought—and, indeed, not without reason—were a very good showing.

"John," I said to one of the men, "could't you hustle around and scare up another scale or two?" John hustled, and then the fun began—for two of us. The box was produced, and a fine grilse brought out and placed beside the others. Forth came another, and another, until the whole eight had been brought to view. The eyes of the Doctor and the Captain bulged out a good deal at sight of the first one, and bulged more and more as the process went on. At the conclusion of the performance the Lawyer murmured, as if to himself, "Yes, ten grilse is a fine day's work." The Doctor and Captain put on their hoopskirt attachment and crawled into bunk.

Next day, however, they had their revenge; for while we went up stream and at the falls hooked three grilse only to lose them, our rivals went down to the bend and killed a fine salmon. We, however, did not return empty-handed, having succeeded in landing fourteen large trout. On Wednesday morning everything was packed on board the canoes, and we were off down the stream. We did no regular fishing that day, but at New Pond, near Rocky Bend, killed in passing a salmon and a grilse. We halted for dinner at the mouth of the Little Dungarvan, a picturesquely beautiful spot. At 3 P. M. we reached Island Pool and went into camp. In the evening we were out for a little while, during which three grilse were hooked and lost, one of them snapping my trout rod into three pieces. The Lawyer, who wandered to Clark Pool, about 200yds. above the camp, hooked and lost a salmon. On Thursday morning we were out at 5 o'clock and the Doctor and the Captain killed a grilse each before breakfast. The Lawyer broke his record of the previous night by going up to the Clark Pool to hook and lose two salmon. After breakfast we reloaded the canoes and went down to Blair Pool, where the Doctor killed one grilse and lost another. At the falls, a little lower down, we killed in the evening four grilse and two salmon. Of the latter the Doctor killed one and Duncan Moon the other. Moon hooked his at the upper end of the falls. He had just killed a grilse and laid it down on a little bar in the stream. The salmon took the fly and started down stream. Seizing the grilse with one hand and holding the rod with the other, Moon followed the lead, over rocks and through rapids, to a basin a quarter of a mile below, where he finally played and landed his kingship. It was the most exciting episode of the trip, and our attendant Moon became at once in our estimation a most brilliant satellite. There was not one of us but envied him his skill and coolness, and, most of all, his success. Our total catch for the day was seven grilse and two salmon.

It rained that night, and Friday was dull and cloudy. That morning the Doctor and Captain went down to The Jaws, where the stream narrows and rushes between two bee tling walls of rock. In a pool there they killed a salmon and a grilse, and lower down, at the lower basin of the Falls, captured two more grilse. The Lawyer and I remained at camp and in the pool there captured three grilse, total for the day one salmon and six grilse.

The Lower Falls referred to above, extend in a succession of rapids for a mile or more, forming pools and basins as they go; but we found no difficulty in shooting them with our canoes. The next day we captured two grilse before breakfast. After that meal the Doctor inveigled the Lawyer away down stream, and they brought back with them at night five grilse. The Captain and I had an off day at camp, but killed one grilse in the afternoon. That day ended our fishing, making a total catch of forty-two grilse and five salmon, besides a large number of trout. The rest of our trip was uneventful. Our return home was by way of the mouth of the stream, thence to Blackville station (seven miles) and over the Northern and Western to Fredericton.

Healthy, hungry, happy—these words describe our condition after an outing such as only the sportsman can appreciate at its worth, on one of the finest of the many fine salmon streams of New Brunswick.

The Dungarvan is a tributary of the Renous, which in turn is a tributary to the southwest Miramichi, joining the latter not far from tidewater. The Dungarvan lacks nothing essential to a favorite salmon haunt and has abundance of natural beauty to delight the eye of the sportsman. The distance from the mouth to Little Falls is 43½ miles, except for the first few miles from the mouth, where there are scattered farms, it flows through a finely wooded wilderness of undulating country. The banks are for the most part high and rocky, in places precipitous; and if the sportsman is of a scientific bent there is a world of changing interest in the exposed strata worn and scarred by the persistent waters. The waters are very clear and cool, flowing over a shaly or rocky bottom. Pools are of frequent occurrence, and the result of our party's efforts, remembering we were but amateurs, shows that the pools are well stocked. The stream is easily navigable by canoe to the Little Falls, above which there are pools, though somewhat difficult of access.

The whole region about the upper waters of the stream abounds in lakes, all of them stocked with large and gamy trout. To one of them, Bamford Brook Lake, one and a half miles from the club house, a road is being constructed. Pure cool brooks, trout-filled, empty into the lakes and into the Dungarvan. At the Lower Falls, on the summit of an overhanging rock, a second club house is to be built this year. The rock overhangs a fine pool, into which the sportsman will be able to cast his fly from the club house door. The region of the Lower Falls is a marvel of picturesque loveliness, worthy of being visited even by those who do not wield the magic rod. This property of the Renous and Dungarvan Salmon Club is perhaps less known than some of the others in that region, but those who know say it is second to none. It is carefully guarded and the amount of fishing during the season limited. Those who have the good fortune to spend a week or so in careless abandon along the winding stream in the fishing season, have an experience that in the opinion of sportsmen at least cannot be surpassed. The place is now easy of access, and as the stream is a favorite spawning ground for salmon, abounds with trout, and is carefully guarded, it will doubtless become more and more the Arcadia of sportsmen's dreams.

PISCATOR.

THE TOBIQUE TRAGEDY.

Editor Forest and Stream:

It cannot but occur to any one who gives the subject careful and impartial thought, that Mr. Howes made a fatal mistake in allowing a gun to be discharged while in pursuit of the poachers the evening before the Tobique murder. It was natural and perfectly proper that he should try to prevent infringement on the laws of the land and the rights of his lease. It was right that he should use every effort to ascertain who the offenders were, with a view of having them punished, and considering the number of men and canoes in the party, it does look as if a little more might have been done in that direction.

When dealing with such characters as poachers, it is a wise precaution to go well armed, for you can never safely forecast their line of action. But to fire a gun to intimidate, when every one knows that in nine cases out of ten it is perfectly safe to lay down your weapons and walk right in and kick the man who does it, is, to say the least, very imprudent, and is usually the outcome of thoughtlessness or want of self-reliance. Such an act gives many a lawless ruffian a chance to commit a murder, and get in the plea of self-defense; and in the case under consideration the sympathizers of the criminals will say in extenuation, "The Howes party fired on them the night before." Doubtless, in discussing the matter among themselves, the murderers used this plea to key themselves up to the proper pitch to do the deed.

It would also be well if camping parties would remember that in New Brunswick there is a stringent law against hunting on Sunday, or even discharging firearms. The coroner's jury had evidently more than the murder of Mrs. Howes in mind when they commended that "The authorities on the Tobique should look after the lawless and careless use of firearms by fishing parties and others."

There has been a diabolical crime committed, one without parallel in the history of the Province. No one who has read the evidence adduced at the inquest can doubt that the right persons have been arrested. On finding against them a verdict of wilful murder, the coroner's jury did their duty. It now only remains for the good people of Victoria county to see that the miscreants get their deserts, and thus, as far as possible, to wipe out the blot on the fair name of our little Province, and at the same time convince others of the Day-Trafton-Phillipin stripe that New Brunswick is an uncongenial climate, as well as a mighty uncertain footing for that order of savage that ambushes and pours in deadly volleys at short range on the heads of defenseless women and children.

L. I. FLOWER.

WICKHAM, N. B.

PLYMOUTH, N. H., Aug. 27.—Have just returned from Sunapee Lake, where I spent two weeks. The number of trout and salmon taken there this season is wonderful. Dr. Quackenbos took a 5lb. salmon on Aug. 21, trolling for bass. Some large ones were taken with the fly in July.—E. B. HODGE.

A TOKEN FROM THE ST. LAWRENCE.

NEW YORK, Aug. 30.—*Editor Forest and Stream:* There are amenities in this world of "carking care" that come like glorious sunshine to a poor fellow condemned to remain in the city at his daily toil during these long sweltering days. It comes very pleasant to be remembered by his more favored fellow laborers.

Such has been our fortune. R. H. Eggleston, of our bank, brought down for the president, Hon. Thos. L. James, and your humble servant a fine box of fish, the result of two hours' catch up among the Thousand Islands yesterday morning. He apologized for the smallness in size of the catch. The wind was high and they could go but a short distance from shore and remain out but a short time. The largest in the box was an 8-pound pickerel with several of 4lbs. and 3lbs. weight; the bass smaller.

Mr. Eggleston has been highly favored by Dame Fortune in his summer retreat. He is the owner of an island among those one thousand, of about six acres, two and a half miles from Alexandria Bay, near enough to civilization for convenience and far enough away for seclusion. The island is admirable in shape and situation, being almost quite round. On one side it is high, with precipitous rocks; the other gracefully slopes to the water's edge. Fine bathing and the best of pickerel and bass fishing within a stone's throw. A picturesque and commodious cottage, a swift sailboat and safe rowboats, sufficient grove for shade, lawn tennis and croquet grounds, swings, etc. What a paradise!

Dick is an enthusiastic sailor and fisherman, seconded by an intelligent and appreciative wife who enters with a zest in all his sporting propensities. Mrs. E. is something of a fisherwoman herself, having brought to gaff several times the biggest of the day; among them a 28lb. maskalonge.

Dick is rather high-toned, in fact a connoisseur in his fishing; decries the trolling spoon, gangs and such like, but prefers an 8oz. rod and tackle to correspond. He tells me, that having no gaff, nor net, nor even a club in the boat, going such a short distance from shore, he was thirty-five minutes drowning the 8lb. fish. He had him six times up by the side of the boat and had to let him run again each time. It must have been rather exciting work.

Mr. Ed. Seybel, a friend visiting with him recently caught a ten-pounder on a 6oz. rod; and Dick says he will beat that record yet.

We found the fish excellent eating, firm in flesh and good flavor, but are they not rather coarser in grain than our pond pickerel? It struck us so.

In the fall they have splendid duck shooting—thousands congregate in their neighborhood and some of the neighboring islands are crowded with grouse. Why should not Dick be a happy, happy man, and desire a prolonged existence?

A party of Jersey boys are planning a ten-days' trip to the wilds of Pennsylvania, Canadensis way, where we found the trout this spring. We expect to find grouse in abundance if we can kill them, woodcock and some quail, hares of course, may be a deer or a black-coated bruin. If we have good luck we will tell you about it; if we don't, well what's the good of saying anything about it? JACOBSTAFF.

A VOICE FROM SUNAPEE.

Editor Forest and Stream:

The article of your correspondent "Waltham" on Sunapee Lake, published in the issue of Aug. 23, leaves on the mind of the reader an erroneous impression in regard to the abundance of trout in our waters, and the success attending the efforts of those who angle for them. It would appear that he fished for two days (phenomenal persistence! I have a friend who fished through a spell of bad weather for 72 hours before he had a bite) and, if a blistered nose is any indication, these two days were hot, still and therefore unsuitable. "Waltham" also fished "off the Hedgehog," which he advertises as "probably the best trout fishing ground in the lake." The knowing ones will smile at this piece of intelligence, for the desirability of a fishing ground varies with the season, in regard to the depth, the character of the bottom, and the bottom temperature. At certain seasons of the year I have killed trout in water as many feet deep as they would separately register pounds; at others I have found the requisite temperature at a depth of from 60 to 70ft. "Off the Hedgehog" is a fair ground in August. An experienced guide would have shown "Waltham" where to fish in July, June, May or September.

"The expectation of taking some of the new trout," writes your correspondent, "has brought many here this year; but so far as I can learn without any great success." His opportunities for learning must have been singularly limited. Permit me to offset this statement with a brief description of several catches which have fallen under my personal notice. Mr. A. H. Powers, of Grantham, brought to my house this season as the result of two hours' fishing in a certain place off my shore, six trout weighing as follows: 2½, 2¾, 2¾, 2¾, 3 and 3¼lbs. Commissioner Hodge took in one day on the same ground and exhibited the catch to a hundred witnesses, nine trout and salmon, aggregating 45lbs., the largest being a winninish 8½lbs. in weight, the smallest a 3lbs. trout. W. Scott Trumbull, of Potter Place, and A. Morey, of Wilmot, fishing together a mile from my cottage, brought to net in a single day twenty-five trout and salmon, weighing 61lbs. "Jake" Hutchison, of Newport, the most indefatigable and one of the most successful fishermen on the lake (his dreams made us merry last spring, but it seems they were premonitors of success), has taken so far this season one hundred and twelve trout and salmon, his thirty-five largest trout weighing 88lbs. These figures can easily be corroborated by correspondence with the parties named. Such is some of the "poor luck" which attends the angler for trout at Sunapee Lake.

As for the bass, it has ceased to be an accomplishment to catch them in their season. An expert caster can repeatedly hook doublets. But it takes patience, and some knowledge of localities, to fill the basket with trout, and perhaps this explains "Waltham's" failure to secure his share of the "three tons" of *Salvelinus sunapee*, which, it is estimated, have been taken from the lake this summer.

"Waltham's" remark that the lake "is becoming civilized too rapidly," is, alas! too apparent to be questioned. Yet rod-fishing can make little impression on the hundreds of thousands of fish annually planted by the State Commissioners. The supply is far in excess of the consumption. Nor are we likely to see any illegal fishing so long as the vigilance, the fearlessness and the industry of our worthy commissioner, Col. E. B. Hodge, are enlisted in the interest of the angling public.

JOHN D. QUACKENBOS.

SUNAPEE LAKE, Aug. 25.

BLACK BASS IN LAKE HOPATCONG.—New Jersey has but few lakes but the black bass thrives in her waters wherever they are suitable. For years Greenwood Lake, which lies partly in New York, has been the favorite place for black bass, notwithstanding the constant and severe drains made upon it. Hopatcong is now coming to the front as the best black bass waters in New Jersey. It was not stocked with this fish until long after Greenwood was, hence it has not come into such general notice. Five years ago the pickerel predominated and there were not many of them, but the black bass has steadily gained until to-day there is good fishing there. Last week a gentleman and his wife took from Hopatcong seventy-five pounds of black bass, the smallest fish being a little under two pounds and the largest one weighed over four. Truly, a good day's sport.

REWARD FOR LARGE BLACK BASS.—A newspaper slip has gone around saying that the Fish Commissioners of New Hampshire had offered a reward of one hundred dollars for a black bass of certain weight, caught in their State. It was sent to us for verification, and we inclosed it to Commissioner E. B. Hodge, of Plymouth, N. H., who replies as follows: "I do not know how such a story started, we have not offered a reward for a bass of any kind or size." This disposes of that product of sensational ingenuity, and anglers who go to New Hampshire for black bass must content themselves with the fact that a 6lb. fish is its own reward.

RHODE ISLAND COAST FISHING.—Newport, R. I., Aug. 31.—I have just returned from a ten-days' camp with my brother-in-law, Mr. J. C. Harrison, not many miles up the coast from Newport. We were accompanied by that very able baiter, W. M. Hughes, to whose skill in chumming much of our success was due. Our catch was as follows: Twenty striped bass, weight 141¼lbs.; bluefish, 7lbs.; sea bass, 15½lbs.; flounders, 90lbs.—HUGH L. WILLOUGHBY.

Fisheulture.

THE DIGESTIBILITY OF FISH.

BY PROF. W. O. ATWATER.

[Read before the American Fisheries Society.]

(*Concluded from page 109.*)

THE QUANTITIES OF DIGESTIBLE SUBSTANCES IN FOOD.

THE first question we have now to ask may be put in this way. What proportion of each of the nutrients in different food materials is actually digestible? In a piece of meat, for instance, what percentage of the total protein and fats will be digested by a healthy person, and what proportion of each will escape digestion? The proportion of food constituents digested by domestic animals has been a matter of active investigation in the European agricultural experiment stations during the past twenty years. Briefly expressed, the method consists in weighing and analyzing both the food consumed and the intestinal excretion, which latter represents the amount of food digested. The difference is taken as the amount digested.

Such experiments upon human subjects, however, are rendered much more difficult by the fact that in order that the digestibility of each particular food material may be determined with certainty, we must avoid mixing it with other materials. Hence the diet during the experiments must be so plain and simple as to make it extremely unpalatable. An ox will live contentedly on a diet of hay for an indefinite time, but for an ordinary man to subsist a week on meat or fish or potatoes or eggs is a very different matter. No matter how palatable such a simple food may be at first to a man used to the ordinary diet of a well to do community, it will almost certainly become repugnant to him after a few days. In consequence, the digestive functions are disturbed and the accuracy of the trial is impaired, a fact, by the way, which strikingly illustrates the importance of varied diet in civilized life. For instance, in an experiment conducted in the physiological laboratory at Munich, by Dr. Rubner, the subject, a strong, healthy Bavarian laboring man, lived for three days upon bread and water, a diet the monotony of which was much more endurable than one of meat or fish or most any other single food material would have been. He was able to eat 1,185 grams (about 2lbs. and 10oz.) of bread per day. This contained 670 grams of carbo hydrates, mainly starch, of which only about 5⅓ grams, or a little less than 1 per cent., escaped digestion. In this case, therefore, about 99 per cent. of the carbo hydrates of the bread were digested. The bread contained 13 grams of protein, of which 13 per cent. were undigested, and 87 per cent. or ⅞ of the whole protein, digested. The quantity of fatty matters in the bread was too small to permit an at all accurate test of their digestibility. In another experiment the digestibility of meat—beefsteak, was tested. The man consumed a little less than 2lbs. per day, but though it was cooked with butter, pepper, salt and onions, so as to make it taste "extraordinarily well flavored," it was very difficult to swallow it the second day, and required great effort the third. The digestion, however, seemed to be normal, and all but about 1 per cent. of the protein was digested. Other trials with meat and with fish have brought similar results, and it is reasonably safe to say that when a healthy person with sound digestive organs eats ordinary meat in proper quantities, all or nearly all of the protein is digested. Some of the fats of meats, however, seem to fail of digestion. The number of accurate experiments of this kind is still very small. Some sixty or thereabouts have been reported. Nearly all have been made within ten years past, and the majority in one laboratory, that of the University of Munich. Most of the subjects have been men with healthy digestive organs, two or three laboratory servants, a soldier, several medical students and a few others. Several have been made, however, with children of a few families. All but a very small number conducted in Germany.

Some time since it was my fortune to pass a number of months in Munich, where, through the courtesy of Professor Voit, Director of the Physiological Institute of the University, I was enabled to make some experiments on the digestion of meat and fish by a man and by a dog. Each lived for three days upon haddock and then for three days upon lean meat—beefsteak. The dog was used to such experiments and got on very comfortably indeed. The meat and fish were each cooked with a little lard. He did not take to the fish at first, but after he got used to it seemed to like it. The first attempt with a man was with the same healthy, rather stolid Bavarian laborer, with whom Dr. Rubner's experiments with meat and bread, above referred to, were performed. He bore up very well through the trials with both the fish and the meat, but the assistant discovered at the end that he had surreptitiously eaten sourkrout, and the experiment was spoiled. Fortunately, a medical student, then working in the laboratory, became interested in the subject, and offered himself as a martyr to the cause. He had for three days flesh of haddock, fried with butter, flavored with salt, pepper, mustard and Worcestershire sauce, and taken with beer and wine. Then came a period of rest, that is to say, ordinary diet, and then a similar trial with beefsteak. I was with him at every meal and can bear warm testimony to his fortitude and determination. The *menu* was made as appetizing as possible under the circumstances. The first day of each trial went pretty well, the second day it was difficult, and the third day almost impossible to swallow the whole. I used all sorts of devices to make it easier, especially by distracting his thoughts from the food; told stories of America, cracked jokes, made fun of him, at times almost angered him. And it is safe to say that all the effort was needed. As the result, it appeared that he digested nearly the whole of both the meat and the fish. The results of the experiments are stated in tabular form herewith. The percentage of each ingredient which escaped digestion is given. In some cases a correction for certain errors of experiment, which need not be discussed here, is applied to the figures for amounts "apparently undigested," to show those estimated to be "actually" digested.

SUMMARY OF RESULTS OF EXPERIMENTS ON THE DIGESTION OF THE CONSTITUENTS OF MEAT AND FISH BY A DOG AND BY A MAN, PERCENTAGES UNDIGESTED.

EXPERIMENTS WITH FOOD.	DOG.		MAN.	
	Meat and Lard.	Fish and Lard.	Meat, Butter, etc.	Fish, Butter, etc.
	Per ct.	Per ct.	Per ct.	Per ct.
Water-free substance, apparently undigested	3.4	3.2	4.3	4.9
Nitrogen (protein), from meat or fish, apparently undigested	2.2	1.6	2.5	2.0
Nitrogen (protein), from meat or fish, actually undigested	0.3	0.0	0.7	0.5
Fat, mostly from lard or butter, apparently undigested	2.8	3.0	5.2	9.0
Ash, apparently undigested	14.3	14.1	21.5	22.5

According to these experiments, therefore, practically all of the nitrogenous materials (protein) of both the fish (haddock) and the lean beef was digested by the dog, and all but one-half or three-fourths of one per cent. by the man. While more experiments are needed, the agreement of these results with what would be expected from the nature of the nitrogen compounds, and what is known of the laws of digestion and absorption, leaves little ground to doubt that very nearly all, indeed, we may say, practically all, of the protein of both, will be digested by a healthy organism under normal conditions.

The conclusion that the flesh of the common kinds of fish agrees very closely in digestibility with that of the common kinds of meat, at least so far as the protein (the chief constituent of the "lean" of meat and fish) is concerned, seems equally well grounded. It would seem, however, from other considerations and especially from actual experiments with meats, in which the fat is imperfectly digested, that fish, having generally less fat than meat, is, on the average, more easily and completely digested. Perhaps it will be interesting to note how different food materials compare in digestibility as shown by experiments such as those just described.

DIGESTIBILITY OF NUTRIENTS OF FOOD MATERIALS.

In the food materials below.	Of the total amounts of protein, fats and carbo hydrates the following percentages were digested:		
	Protein.	Fats.	Carbo hydr's.
Meat and fish	Practically all.	79 to 92 per ct.	.....
Eggs	" "	95 " "	.....
Milk	41 to 100 per cent.	93 to 98 " "	?
Wheat bread	81 to 100 " "	?	99 per cent.
Corn (maize) meal	89 " "	?	97 "
Rice	84 " "	?	99 "
Pease	86 " "	?	96 "
Potatoes	74 " "	?	92 "
Beets	72 " "	?	82 "

The amounts of fat in the vegetable foods are so small that the experiments do not tell exactly what proportions are digested. The meats and fish contain practically no carbo hydrates. The digestibility of the carbo hydrates (sugar) of milk was not determined, those of the vegetable foods, except the beets, were almost completely digested. That the protein of cow's milk should be so much less completely digested than that of meal seems a little strange. Children have been found to digest a little more than adults, though the difference is not large. Thus Dr. Camerer, a German experimenter, found his boys and girls of from two to twelve years of age to digest from 91 to 97 per cent. of the protein of cow's milk, while grown men in experiments by Dr. Rubner digested from 88 to 94 per cent. But in experiments in which milk and cheese were eaten together by a man, the laboratory servant of Dr. Rubner's experiments, all or nearly all of the protein of both was digested. The percentages of fats of milk digested was practically the same with adults as with children. It is worth noting in these experiments, both children and adults digest only about half of the mineral salts of the milk. Why so much of the fats of the meat, from a twelfth to a fifth, should have failed to be digested it is not easy to say. Some of the food materials, as meat, bread and milk, have been tested each by several experiments with more than one person. With others, as eggs, corn meal, rice, peas and potatoes, only a single trial has been made. Doubtless extended series of tests would give averages differing more or less from these figures. Another thing that makes the results a little uncertain, is that some of the food materials may perhaps be more completely digested when taken in small quantities with others in the ordinary way than when so much of them is eaten and without any other food. These and other sources of slight error make more extended experiments very desirable. But enough has been done to show pretty clearly that:

1. The protein of our ordinary meats and fish is very readily and completely digested.

2. The protein of vegetable foods is much less digestible than that of animal foods. Of that of potatoes and beets, for instance, a third or more may escape digestion, and thus be useless for nourishment.

3. Much of the fat of animal food may at times fail of digestion.

4. The carbo hydrates, which make up the larger part of vegetable foods, are very digestible.

5. The animal foods have, in general, the advantages of the vegetable foods, that they contain more protein, and that their protein is more digestible.

6. The comparative digestibility of fish and meats, and of the different kinds of fish, is not well enough decided by experiment to warrant as definite conclusions as are desirable. It seems probable, however, that the leaner meats are

rather more easily digested than those which are more fat, and that, in like manner, the leaner kinds of fish, such as cod, haddock, perch, pike, bluefish, sole, flounder, etc., are more easily and completely digested than the fatter kinds, as salmon, shad and fat mackerel, and that for like reason fish, which is, in general, less fat than meat, is on the average more digestible.

7. People differ in respect to the action of foods in the digestive apparatus, and fish, like other food materials, are subject to these influences of personal peculiarity.

One point more is worthy of remark before closing. The nutritive value of food is of course decided by other factors as well as by the proportion of digestible ingredients. In one respect fish is peculiarly adapted to the diet of that very large class of people whose occupation involves but little muscular exercise. As already explained, we consume excessive quantities of fat. This comes with our habit of eating highly fattened meats, as well as butter and lard. Even when we attempt to reject the fat of the meat which comes upon our tables and is served on our plates, we consume a great deal of fat in the visible and invisible particles diffused throughout the lean. Statistics of dietaries in this country show the fat consumption to be enormous. Fat serves as fuel, and is useful for those who do hard muscular work or are exposed to severe cold. For others it is not needed, and excess is a burden imposed on the system. The excessive eating of fat is contrary to good economy, and hygienists assure us it is a very serious damage to health.

Fish supplies the protein which meat furnishes and which is needed to build the tissues of the body without the large amounts of fat which are not needed by people of sedentary habits. For brain-workers it seems to be on this account a very useful food.

WESLEYAN UNIVERSITY, Middletown, Conn.

SOME OBSERVATIONS UPON THE GRAYLING.

BY DR. J. C. PARKER.

[Read before the American Fisheries Society.]

THE question as to whether the grayling (*Thymallus tricolor*), could be successfully propagated artificially being practically undecided by this Commission, it was decided to prepare waters as nearly in accordance with natural conditions as possible and make as careful and systematic an attempt as we could to solve it. Accordingly ponds were made on the Buck Horn creek, of just sufficient depth to admit of screening and through which the whole creek flowed, with the hope that if placed here, they would in the spring—the spawning season—give us an opportunity to observe and handle them, under less difficult circumstances than in their native streams. We hoped that as the Buck Horn had originally been a good grayling stream, it would place at our disposal the most advantageous conditions. The ponds being in readiness, the several members of the Michigan Fish Commission proceeded on the 20th of August to the west branch of the Manistee, fifteen miles from the railroad station at Kalkaska, with boats, cans and camp equipage, prepared to make a week of it. The fish were to be captured with rod and line, it having been demonstrated that this was more certain, and the results more satisfactory, than any attempt to use nets of any description. The result was that at the end of the week we had caught and had in excellent condition about one hundred fine specimens. From five to six of these were put into a can, the temperature of the water—which was comparatively low—kept down by the addition of ice, and nine of these cans loaded into a lumber-wagon and the journey to the station over a bouncing corduroy road commenced. Only one opportunity to change the water *en route* was afforded, but, notwithstanding all this rough handling, they reached their destination with only the loss of some four or five specimens.

During the winter they were watched and cared for, but the loss was about twenty-five per cent. When the spawning season arrived a close watch was kept to see when any signs of spawn-laying should commence, but we watched in vain. So far as could be ascertained there was nothing to indicate that they had, would, or could, ever spawn, and today we are no nearer a practical solution of the vexed question than when we commenced During this, and a subsequent visit to the same locality, I was enabled to make some observations upon their food and their habits in feeding, which may be of interest. Near the camp was a pool in which two small fish had their haunts, one about six inches in length, and the other half the size. The larger one when at rest was on a bit of clean sand in plain view; the other lay under some sunken drift wood, dark in color, and under which he concealed himself, only the tip of his nose being visible, and the contrast in color corresponded exactly with their resting places; the larger one was so nearly the color of the sand on which he lay as hardly to be distinguished from it; only when in motion as he arose to the surface for his food; the other was as dark as the sticks under which he lay, showing that the question of color is one of bottom locality and undoubtedly a circumstance of more or less light. I was somewhat surprised at the tenacity with which they adhered to a locality when once domiciled in it. Three or four times I drove them out of their haunts; one afternoon chasing the larger one several rods up the stream only to find him in the same spot the next day, and when I returned to the same locality, after an absence of four weeks, I found the same fish apparently in the same places. In rising for food I never saw either of them more than a yard from their haunts, and only rarely but a few inches. They would detect their prey at a considerable distance and slowly rise to meet it as it floated to them, and then a sudden flash, and they were back to their respective resting places. The deviation from the point where they lay was, from side to side across the stream, hardly ever but a few inches up or down. One day, when they were rising with more than usual frequency, I carefully crept out on a projecting log until I was nearly over them, and could watch their every movement, and, with watch in hand, counted the "rises" of the larger one for fifteen minutes. In this time he came to the surface and secured his prey fifty times. Sometimes he would rise nearly to the surface and then slowly settle down again, but whenever he actually seized anything he was back to his haunt again with a motion so quick the eye could scarcely follow him. After considerable observation I could detect the particular insect I was sure he would rise for, sometimes before he would show any motion in that direction. Watching his quick, unerring sight, and his ability to detect what was food, and what was not, led me into some generalizations on what their food really was, that were new to me.

In eviscerating fish for any purpose, I have always been in the habit of examining the contents of the stomach, and the stomach of the grayling had always puzzled me by the quantity of vegetable matter so often found in it; but the *a priori* conclusion was that he was necessarily a carnivorous, or insectivorous fish; the thought that he was a vegetarian as well, never occurred to me. I had observed that the fronds of the white cedar—*arbor vitæ*—were quite usually among the contents of the stomach, but I had always considered it as something adventitious, an accident, occurring in the procuring of his food, and not deliberately taken. But a somewhat singular circumstance that occurred upon this last expedition staggered me somewhat. On the afternoon of the day of my arrival, after the tent was pitched, and camp life organized, I proceeded to a pool below a flooding dam near camp, thinking I could secure enough grayling for the supper of myself and little daughter, who accompanied me. I succeeded in securing two nice ones, weighing probably about six or eight ounces each, and upon dressing them and examining the stomachs as usual, judge of my surprise upon finding one of them full of oats; there were eight kernels stored away in first-class style, and my first question was, where in the name of the Prophet could they have come from, for I knew that there wasn't a spear of grain growing within a dozen miles of this pool and the condition the grain was in showed that they could have been in the stomach but a short time. I finally solved the mystery by remembering that the man who brought us out—we arrived about noon—fed his horses some oats at a point just above the pool, and the grain was either blown into the water or carelessly thrown in by some one. I frequently found in their stomachs portions of the leaves and seeds of the water plants growing in the streams. Among the latter was in several instances a round seed about as large as a No. 4 shot, which I at first thought was a mollusk, a species of spherium, but on examining it with a glass what appeared to the naked eye to be the striations of the shell proved to be the venation of the seed. It may be urged against the vegetarian theory that many fish take that which in no way resembles their ordinary food, as the artificial fly and the different varieties of spoon and spinning baits, and that this particular fish could in no way have had any previous knowledge of oats as food, and consequently the taking of it must be in the nature of a freak rather than a habit, but I do not remember to have ever found in the stomachs of other fish any substance other than their food but which could be accounted for as accidental, while in the grayling the presence of vegetable matter in some forms is of so frequent an occurrence as to point strongly to the fact, that a part of their food at least is vegetable.

Another point in favor of this theory is the peculiar flavor of the fish and that which has given it its specific name. It is a well-known fact that the flesh of all animals is to a greater or less degree flavored by its food. Now, if this fish fed upon exactly the same materials as the brook trout, could there be a reasonable doubt but what its flesh would taste like that of the trout, while the fact is, that it is distinctly different.

You are probably aware of the difference between a liver-fed trout and one caught in its native wilds; a difference so patent, that a person relying upon the taste alone would pronounce them an entirely different fish. One thing is certain, whatever its food is, it must have existed in unlimited quantities to have supported such a large multitude of this fish as absolutely swarmed in the northern streams of this State at an early day. D. A. Blodget, now living at Grand Rapids (and one of the pioneers of the Muskegon at the Hersy-branch) told me that when he first built a dam at the mouth of this stream, that in the spring, during the spawning season, when the grayling were trying to find their way to the spawning grounds, that he has seen the inhabitants fill the box of a common lumber wagon full of this fish in a few hours and carry them out into the country, not only one such load, but half a dozen, each spring for several successive years, while as many more must have been taken away in smaller quantities, and he estimated the quantity taken by tons each year; that during the first winter he spent there, he supplied his table with this fish by taking a common nail-rod and sharpening it with his axe, and cutting a barb on it with the same tool, and going to any of the bends in the stream, and cutting a hole in the ice, he could in a little while get all he wanted by thrusting this primitive spear at random into the waters beneath; and as the number of fish that any stream can furnish is to a great extent limited only by the food supply, it seems that so great a number as was then found, not only in this particular stream, but in most all the streams in which they were found, must have had some food in much greater abundance than what is usually found in our ordinary trout streams.

GRAND RAPIDS, Mich.

REPORT OF THE NEW YORK FISHERY COMMISSION.

WE have the sixteenth report of the Commissioners of Fisheries of New York for 1887, including the management of the hatcheries, the superintendence of the game and fish protectors, and the oyster franchises. At the hatcheries at Caledonia, Cold Spring Harbor, Adirondack and Fulton Chain the number of fish produced was larger than usual, and there were distributed 3,227,000 lake trout, 1,620,945 brook trout, 392,985 brown trout, 954,000 rainbow trout, 487,150 sea salmon, 61,950 landlocked salmon, 6,526,000 shad, 1,977,000 whitefish, 200,000 frostfish, 3,400,000 tomcods, 21,500 Loch Leven trout, 5,000 saibling and 6,000 white perch, a total of 20,879,531 fish of the several kinds, the streams and lakes stocked and all details being given in the reports of the superintendents of the different hatcheries.

The shad catch in the Hudson was larger than that of any season during the past three years, being 1,568,634; but the law requiring shad nets to be taken up one day in each week so as to permit a free run to the spawning grounds, is of no utility, because a clause confines its application to that part of the river above Westchester county where it is not needed, the blockade being below.

The report is very full, covering 223 pages, and contains much that is interesting on the subject of fishculture, especially in the reports of the superintendents, where various questions are discussed. It has been delayed so long by the State printer that it has not the freshness that it should have, and the next report ought to be ready by the coming of the new year in order to be of use.

EXPERIMENTS WITH THE FRY OF WHITEFISH

BY DR. J. C. PARKER.

[Read before the American Fisheries Society.]

THE question as to whether the young of the whitefish would find food and live when planted out of season much earlier than at the time they usually mature had been one of much discussion among those interested in fishculture in Michigan, it being generally thought that while the lakes were filled with ice the temperature of the water would be so low that there would be no organisms upon which the young fish could feed, and, consequently, starvation would ensue. To test this question Superintendent Marks directed the overseer, Mr. A. W. Marks, of Petoskey Station, of the Michigan Fish Commission, to institute certain experiments and to report the same to the Board. The report is as follows:

On March 1, 1887, a small screen or crate made of wood and wire netting, three feet long and four and a half in diameter, in the form of a cylinder, was placed through the ice in Little Traverse Bay, in 100 feet of water, and 10,000 whitefish placed in the crate and lowered to the bottom with a strong rope. On March 5 the crate was raised and the young fry were nearly all alive, only six dead ones found. On March 10 the crate was raised again and twelve dead fish were found. The fry had turned to a light brown, the yolk sac was nearly absorbed and the fish seemed in good health. On March 12 the crate was again raised and some of the fry taken out and brought home; also a jug of water from the bottom and another from the top was taken. One drop of this was placed under a strong glass and life could be seen very plentiful. The stomach of one of the small fish and a drop of the water was placed under the glass and it was found to be full of diatoms and vegetable matter. The diatoms seemed to be working around the small pieces of vegetable matter; the sac of the fry had been absorbed and they were feeding upon the vegetable matter and the animalcule. On March 14 the crates were again lifted, and the fish seemed to be doing well in about the same condition as on the 12th. About 100 dead fish were found on the 14th. The crate was lifted on the 18th; no change could be seen. On the 24th the crate was again lifted, and some of the young had turned to a light green, the color of a herring a year old. On March 24 another crate was sunk, containing 5,000 fry. This was lifted on the 28th, and two dead fish were found in the crate. At this date the first crate sunk contained fish forty-five days old that had been under the ice twenty-eight days About the last of March the ice moved out of the bay, thus preventing any further systematic observations. Later on the submerged crates were recovered, but the wire screens had become filled with sediment, caused by the rolling of the water consequent upon the breaking up of the ice, and no live fish were found in them. This closed the experiments for that year, and circumstances prevented their continuance this spring.

GRAND RAPIDS, Mich.

THE NEW HAMPSHIRE HATCHERY.—The new hatchery at Plymouth, which replaces the one burned last fall, is now completed. It is 26 by 55ft. and has a capacity of two million eggs. The work of hatching salmon and trout, which was interrupted by the fire last year, will now go on in the new building, which is a decided improvement on the old affair.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. Entries close Sept. 1. C. W. Robinson, Secretary.

Sept. 18 to 21.—Dog Show of the Westmoreland County Agricultural Society, at Greensburg, Pa. John S. Sell, Secretary. Entries close Sept. 15.

Sept. 18 to 21.—Third Annual Dog Show of the Westmoreland County Agricultural Society at Greensburg, Pa. H. S. Branot, President.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Ratsbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 2 to 5.—National Exposition Dog Show, Kansas City, Mo. C. R. Evans, Manager, Room 16, New England Building, Kansas City, Mo.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 93 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascontah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus, O. Thos. R. Sparrow, Secretary.

FIELD TRIALS.

Sept. 11.—Third Annual Field Trials of the Manitoba Field Trials Club. Derby entries close July 1. All-Aged entries Aug. 1. Thos. Johnson, Secretary, Winnipeg, Manitoba.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6512.**

THE COON'S WHICKER.

Editor Forest and Stream:

I was somewhat amused at the doubt expressed by some of your correspondents in regard to coon cries; and even one denied that they ever made any. Why, any country boy whose father had a corn field near his woods or sugar bush would tell you different. How well I remember the discomfort a young scamp gave us, who could imitate the particular cry or "whicker" to perfection. In fact a raccoon has two different cries, one short, the other prolonged or rather repeated. The juvenile I spoke of could entice us into the deep woods, deceiving even old coon hunters, but not the dogs; and after cracking our shins and scratching our faces trying to locate the animal or to persuade the dogs to hunt where there wasn't any coon and they knew it, we found out from the chuckling that the varmint was a two-legged one.

Yes, coons do holler at night. JACOBSTAFF.

THE TWO DOG CLUBS.

Editor Forest and Stream:

Mr. Anthony declines to avail himself of the opportunity I offered him to prove his title to the term gentleman by withdrawing his libelous statements about myself in his open letter to Dr. Perry. This is his reply:

AUGUST 27, 1888.—*Mr. James Watson:* SIR—I have yours of Aug. 25. I have not called at the office of the FOREST AND STREAM for *a long time*, and *do not propose doing so.* If you have any evidence to offer that I am mistaken I shall be glad to see it. I am at my office each day between 12 and 1 o'clock, where you can see me; or if you will notify me, making an appointment, giving me due notice of *another* hour, I will be present. It seems to me that for a man who writes so *loosely* as you do that you are pretty thin skinned. But that is always the case with people who live in glass houses. I am, etc., JAMES L. ANTHONY.

The open letter was published in the *Turf, Field and Farm*, and received an editorial indorsement. I therefore wrote to the editor, with the result that he gave equal publicity to the following:

We publish this week a card from Mr. James Watson. He says that he did not influence the bench show action of the Buffalo International Fair Association. This is explicit. * * * We have known him, as he reminds us, a good many years, and during that time we have had occasion to agree and disagree with him. We did not lose faith in him when he ceased to think as we thought, nor did we praise him extravagantly when he made our fight his fight. We try to preserve an intellectual poise no matter what happens. Mr. Watson has been a long time in building up a reputation, and it is but natural that he should feel sensitive when it is assailed. It is his capital, his stock in trade.

I do not think I need say anything further on the subject, except that under no circumstances would I visit Mr. Anthony's office after his having told me that on one occasion when a gentleman was to call on him respecting a field trial match his own stenographer was to be within hearing to take the conversation, unknown to the visitor.

I think you had better head this "Knocked out in the First Round," unless you object to pugilistic reminders.

JAS. WATSON.

Editor Forest and Stream:

A transposition of order of names appears in my communication as printed in your issue of Aug. 30. I wrote that I had just learned that Messrs. Elliot Smith and Drake were delegates; but, as printed, it reads that I had just learned this of Messrs. Winslow and Drake, which would doubtless make Mr. Winslow question either my sanity or my veracity. W. WADE.

HULTON, Pa., Aug. 31.

"DISGRUNTLED ASSOCIATES."

Editor Forest and Stream:

One more misstatement of Mr. Belmont's remains for disposition, and that chess stack is thrashed out. Concerning the pewter medal business, Mr. Belmont says that "Mr. Drake, of St. Paul, offered a new rule, which was adopted *and is now in force*, that on and after that date medals advertised as gold and silver must be of the purity of U. S. coin; medals of alloy *can* be described as club medals" (my italics). That is the rule that Mr. Drake proposed. The rule that was adopted, or at least given forth as what was adopted, reads that medals of alloy "must" (or "shall") be described as club medals, a totally different rule, and it is certain that Mr. Drake never proposed any such jackass rule as preventing clubs from honestly describing bronze medals as such. Mr. Belmont says that the rule as he gives it is now in force. Is it? Then why does not the A. K. C. discipline the Philadelphia and Westminster clubs? If he is right they disregarded the A. K. C. rule and enacted one of their own (No. 27), which reads as follows: "All prizes offered by the club or committee in charge of a show must be paid in accordance with the description given of them in the premium list. Medals of silver or gold must be of the purity of United States coin."

Mr. Belmont evidently does not know that when Mr. Watson was a member of the executive committee he devoted his attention to perfecting the rules and constitution af the A. K. C. I suppose he will hardly relish acknowledging the work done by that "disgruntled associate," but the records tell the story.

I suspect that the butchering of the rule, as Mr. Drake proposed it, was done to allow some club to evade direct, honest description of medals of base metal, by the euphemistic dodge of "club medals," an old trick that has often been resorted to, such as "champion medals," "champion cup," etc.

Mr. Belmont's entire course as president shows that he simply cares to throw a tub to the whale, and does not take the trouble to post himself on even the A. K. C. rules in force at the time he is writing. This last mistake is most inexcusable, for a reference to a show premium list would have shown what the rule really is, yet the president announces the law of the A. K. C. "now in force" as something different from the plain words of the statute! NEXT!

W. WADE.

HULTON, Pa., Aug. 25.

MR. BELMONT'S FUTILE FALSEHOOD.

ACTING of their own accord and contrary to the counsel given to them by Dr. Perry, president of the National Dog Club, who advised them to join the A. K. C., the managers of the Buffalo bench show elected to give their show under the rules of the N. D. C. Thereupon the clique, who have the running of the A. K. C., forthwith set to work either to intimidate or bulldoze the Buffalo managers into changing their rules, or else to ruin their show. These intriguers made use of a man named Busbey as a vehicle for communicating their threats to Buffalo. Through Busbey Buffalo was told that if it persisted in holding its show under N. D. C. rules the members of the A. K. C. would withhold their entries; and Buffalo was given to understand that this meant ruin. Not only was this harped on by Busbey both by letter and in person, but Mr. August Belmont, Jr., himself wrote, so we are informed, to parties in Buffalo reiterating the same threats. In short, in every way possible did the members of the Broadway clique endeavor to frighten the Buffalo managers into a change to A. K. C. rules. Mr. August Belmont, Jr., the president of the A. K. C., having fulminated his bull of boycott against Buffalo, went so far as to bolster up his menace by deliberately, in a public meeting of his club, committing himself to a falsehood about the FOREST AND STREAM'S Boston show report. Mr. Belmont had boycotted Boston just as he was threatening to boycott Buffalo. It was essential to the success of his bulldozing tactics that he should make Buffalo believe that a boycott by Belmont would injure the show, hence he must first cause them to believe that a boycott by Belmont had injured Boston. The FOREST AND STREAM had reported that the Boston show was successful. Mr. Belmont, therefore, asserted that the FOREST AND STREAM'S report had been falsified and that it misrepresented the success of Boston. Called to account for this falsehood, Mr. Belmont added to it another one, namely, that the FOREST AND STREAM'S report had been purposely made misleading and untruthful. Then, on the politician's principle that a lie well stuck to will answer for campaign purposes, Mr. Belmont "stuck."

Now what are the effects of all these measures of intimidation? What has been the result of the underhanded scheming, the bluster and the bullying of the Broadway clique, the busy obediency of Busbey and the brazen falsehoods of the belligerent Mr. August Belmont, Jr.? They have been futile, absolutely futile. In spite of the extraordinary efforts of the American Kennel Club—a club ostensibly interested in the success of dog shows—to crush the Buffalo show, its entry list has closed with an enrollment of 400, among which, we are advised, are many of the noted dogs of the country. Buffalo has amply demonstrated, as Boston and New Haven have already demonstrated before, that it is quite practicable to secure abundant support from independent and fair-minded owners, in spite of the active opposition of a club which, while American in name, is now controlled by a band of individuals who have no more respect for fair play than a dog catcher has for the distinction between *meum et tuum*.

Mr. Belmont's futile falsehood respecting the FOREST AND STREAM and the Boston show failed of its purpose and did not injure the Buffalo show. Whether or not it has injured Mr. Belmont's repute for veracity among dog men we shall not pretend to say. We feel that we have done our duty by repeatedly calling on Mr. Belmont to send in for publication anything in the way of alleged "proofs" he might have which would tend to show that he had been deceived by others into making his false statement about our Boston report believing the statement to be true.

The Buffalo entry list having closed, that false statement can of course have no further effect on any dog owners who might be influenced by it to withhold their dogs from Buffalo; and now that there is no further occasion for him to "stick," we once more, and for the last time, urge Mr. Belmont, for his own sake, to retract his false statement or show that he was deceived by others into making it.

TOLEDO DOG SHOW.

THE dog show of the Tri-State Fair Association, held at Toledo, O., last week, had 166 entries. Messrs. John Davidson and H. L. Goodman were the judges, and Mr. Thos. B. Lee superintendent. Following is a complete list of the

AWARDS.

MASTIFFS.—CHAMPION—St. Joe Kennels' Wacouta Nap.—OPEN—1st, C. C. Cook's Moses; 2d, W. K. Warwick's Leo IV. Very high com., P. Boudrie's Nero. Com., C. H. Walbridge's Faun. *Puppies:* 1st, S. F. Stone's Philammon; 2d, S. W. Skinner's Leo.

ST. BERNARDS.—CHAMPION—Alta Kennels' Victor Joseph.—OPEN—*Dogs:* 1st, Meadowthorpe Kennels' Meadowthorpe Enterprise. *Bitches:* 1st, S. Brown, Jr.'s Gail Hamilton; 2d, W. B. Allen's Princess. Very high com., Alta Kennels' Ada. High com., P. Boudrie's Nevada. *Puppies:* 1st and 2d, Alta Kennels' Miss Fortune and Berna II.

NEWFOUNDLANDS.—1st, Meadowthorpe Kennels' Meadowthorpe Prince George.

GREYHOUNDS.—CHAMPION—Abbot Greyhound Kennels' Sister in Black.—OPEN—1st, 2d and very high com., Rockwood Kennels' No Name, Catch Fly and Black Bess. High com., Abbot Kennels' Happy-go-Lucky. Com., Mrs. S. E. Straight's Gallant. *Puppies:* 1st and 2d, Abbot Greyhound Kennels' Happy-go-Lucky and Woman in White.

DEERHOUNDS.—CHAMPION—S. W. Skinner's Mac.—OPEN—1st, very high com. and high com., S. W. Skinner's Ranald, Cluthan and Heatherbelle. *Puppies:* 1st, S. W. Skinner's Maida II.

GREAT DANES.—1st and 2d, Savage & Farnum's Augusta and Hector. *Puppies:* 1st, F. Volk's Lord Barry; 2d, Savage & Farnum's Francis.

POINTERS.—CHAMPION—J. H. Winslow's Bang.—OPEN—*Dogs:* 1st, Meadowthorpe Kennels' Meadowthorpe Duke; 2d, C. G. Stoddard's Trinket's Cash. Very high com., J. B. Conner's Nick B. High com. and com., P. Ely's Rex and Tom Croxteth. *Bitches:* 1st, Dayton Kennel Club's Bodine's Dell; 2d, Mrs. Chas. A. Painter's Nanon. Very high com., Columbus Kennels' Larnock Elsa. High com., J. R. Daniels's Donald's Bess. Com., L. Buller's Spring Fashion. *Puppies:* 1st, J. Hornung's Dig.

RICHMOND DOG SHOW.

RICHMOND, Va., Aug. 27.—*Editor Forest and Stream* Will you kindly give place in your columns to the inclosed two letters; one correcting some mistakes in our premium list, and the other giving the rates from New York to the Virginia bench show via Old Dominion Steamship Co. I sincerely hope that the very low rates given by the Old Dominion line will bring some of the New York fox-hunters with their horses and dogs down to our exhibition, and we promise them the best of sport. We have already secured an abundant supply of foxes, both red and gray.

Yours truly, J. S. WISE, Pres.

OFFICE AMERICAN KENNEL CLUB, 44 Broadway, New York, Aug. 17, 1888.—*John S. Wise, Esq., President Virginia Field Sports Association, Richmond, Va.:* My Dear Sir—My attention has been called to that portion of your premium list that relates to shows recognized by the A. K. C., to wit: New England Kennel Club, 1885 to 1888; should be 1887 inclusive. Hornell Kennel Club, 1886, 1887 and 1888; should be 1886 and 1887. New Haven Kennel Club, 1884 to 1888; should be 1887 inclusive. New Jersey Kennel Club, 1886, 1887 and 1888; should be 1886 and 1887. New York Westminster Kennel Club, 1877 to 1888; should be 1888 inclusive. Philadelphia Kennel Club, 1879 to 1888; should be 1888 inclusive. Pittsburgh, 1881 to 1888; should be 1887 inclusive. As the dates you publish are misleading, I would suggest an immediate notice to all of the sporting papers rectifying the errors. Yours truly, A. P. VREDENBURGH, Sec'y.

OLD DOMINION STEAMSHIP CO., Richmond, Va., Aug. 25, 1888.—*John S. Wise, Esq., President:* Dear Sir—In reply to yours 22d inst., would beg to say that our general passenger agent has given the following rates for passengers to Col. Skinner, viz.: Passengers, $14, excursion; horses, $15 round trip. Attendants' horses, second class, including meals, $10 round trip. Dogs with passengers free, unless in unreasonable numbers. Very truly, etc., GEO. W. ALLEN & Co., Agents.

DOG TALK.

AT the dog show recently held at Penzance, Eng., a black and tan terrier was shown with freshly cropped ears. The *Stock-Keeper* has this to say about it: "This case excited much comment at the time, and we are not surprised to hear that persons of humane feelings expressed themselves strongly upon being thus brought in full view of the cruel custom of cropping. It is really extraordinary that the Society for the Prevention of Cruelty to Animals are powerless to repress this hideously painful practice, and that the Kennel Club should continue to allow it; but, so long as this state of affairs continues to exist, cropping is legitimate. This regretful fact, however, does not justify an exhibitor in showing a dog with the marks of the knife still fresh on its lacerated ears. Besides sickening people with the gruesome sight, the dog cannot be considered in a fit condition for exhibition, and on that ground alone the judge should not hesitate to exert the authority that most committees intrust to him, and disqualify."

Last week we made reference to the manifest and characteristic fairness with which Dr. Perry, the president of the N. D. C., has uniformly given to the public both sides of all questions in dispute; and we contrasted with this the equally manifest and equally characteristic want of fairness with which Mr. Jas. L. Anthony, when he gave out for publication his insulting letter to Dr. Perry, suppressed Dr. Perry's reply. Some unkind friend of Mr. Anthony "called his attention" to this, and as a result we have received from him just such a petulant, childish and blackguard letter as might be looked for from a person who seems to think it necessary to be forever, in season and out of season, telling people that he is a gentleman.

Messrs. E. M. Oldham and J. P. Willey have combined their kennels of spaniels and will hereafter breed, show and sell their stock under the name of Oldham & Willey. Correspondence relating to field spaniels should be addressed to Mr. E. M. Oldham, Box 187, Fort Hamilton, L. I., N. Y., and that relating to cocker spaniels to Mr. J. P. Willey, Salmon Fall, N. H. This combination will make a very strong team.

The Coughcura Medicine Co., Eau Claire, Wis., has received from the kennel of Mr. F. Holford, Eng., the rough coated St. Bernard bitch Noble Ida. She was whelped Jan. 22, 1886 and is by Gantes' Leo and out of Johnstone's Nell. She won first at Dublin and Glasgow. She was bred to Plinlimmon before leaving England.

In addition to the loss of Newton Abbot Jubilee, noted in our issue of Aug. 2, Mr. E. M. Oldham has lost by death three other valuable spaniels, the well-known Newton Abbot Beau, Prince and Prince II. All died from a disease very similar to diphtheria.

Dr. Van Hummell, of Omaha, Neb., has sold his kennel of deerhounds to Mr. S. W. Skinner, Auburndale, O., and in future will devote his attention to greyhounds.

The English Fox-Terrier Club will hold their next show at the Westminster Aquarium, Nov. 14 to 16, in connection with the fourth annual terrier show.

The regular quarterly meeting of the American Kennel Club will be held at 44 Broadway, New York, Sept. 12, at 10 A. M.

Some of the dog men in Connecticut are agitating the subject of the formation of a State Kennel Club.

EASTERN FIELD TRIALS CLUB.—The regular quarterly meeting of the Eastern Field Trials Club will be held at the St. James Hotel, corner of Broadway and Twenty-sixth street, New York, Sept. 11, at 8 o'clock P. M. A full attendance is desired as business of importance will come before the club.

DR. CRYER'S PUGS.—Philadelphia, Pa., Aug. 31.—*Editor Forest and Stream:* I see it is the fashion for exhibitors to announce through the press at what shows they intend sending their dogs. Permit me to state that my dogs will be at Buffalo, Syracuse and Richmond.—M. H. CRYER.

OUT-DOOR PATIENTS, HOSPITAL OF THE VETERINARY DEPARTMENT, U. P.

THE VETERINARY DEPARTMENT OF THE UNIVERSITY OF PENNSYLVANIA.

THE authorities of the University of Pennsylvania undertook an ambitious experiment, when, four years ago, they founded the Veterinary Department. The plan was deliberately laid some time before, and as the proper person to undertake it did not appear to be available, Dr. Rush Shippen Huidekoper, one of the Demonstrators of Surgery in the Medical Faculty, a man of recognized energy and capacity, was asked to go abroad and in the best European schools qualify himself for the task. On his return, in 1883, the scheme was matured, and in October, 1884, the school was opened with twenty-nine matriculates.

The intention from the outset was to furnish an education in veterinary medicine on advanced lines, and the curriculum of study was modeled on the basis of the French and German schools, with a preliminary examination and a graded course of studies extending over three years, with sessions of nine months' duration. During the first year instruction was given only in the elementary branches, and it was not until the session of 1885-86 that the infirmary buildings were completed. The course of study is most extensive and thorough, and, with the exception of Harvard, longer than in any medical school in the country. In the first year the subjects studied are chemistry, materia medica and pharmacy, histology, botany, zoölogy, veterinary anatomy and forging. A very special advantage in this session is the courses which the students take in botany and zoölogy at the Biological Department. I feel convinced, from my Montreal experience, that this is a most beneficial plan for veterinary students, as it not only extends their knowledge, but tends greatly to heighten their appreciation of the scientific aspects of the profession.

In the second year the subjects taught are medical chemistry, physiology, therapeutics, general pathology and morbid anatomy, veterinary anatomy, zoölogy, surgical pathology and internal pathology, and the contagious diseases. The general pathology and chemistry are taken at the medical school, where the students have the advantage of the extensive chemical laboratories.

In the third year the subjects of the curriculum are therapeutics, general pathology and morbid anatomy, surgical pathology and operative surgery, internal pathology and the contagious diseases, sanitary police, obstetrics and zoötechnics. In the second year the student attends clinics, while in the third year he is placed in charge of sick animals, prepares the clinical reports and makes autopsies.

The teaching facilities of this school are exceptionally good, equal to many of the European, and superior to most veterinary colleges of this country. The explanation is simple—more money has been spent. The situation has been most fortunately chosen, and when the projected botanical garden is arranged, the place will rival in beauty of surroundings the Berlin school. The Infirmary stables are commodious and well arranged, and there is a separate department for irrigation and baths. The dog kennels are large and roomy, and a distant portion of the building has been assigned for an experimental station. One of the special features of the school is the farriery—a cut of which is given—in which the student has to learn practically all the details of normal and pathological shoeing. The dissecting room, the histological, physiological and pharmaceutical laboratories are arranged on the most modern plans, and by the exertion of Dr. Huidekoper the museum is annually enriched by valuable specimens, particularly in comparative osteology.

After an existence of four sessions, we should be able to form some idea of the prospects of the school. Naturally, with strict requirements and a prolonged course, a large number of students could not be expected; but in the session of 1886-87 there were forty-nine in attendance, and the first graduating class contained eleven men. In the session just completed the number was fifty-six, and there were thirteen graduates. The chief difficulty in maintaining a high grade school is the heavy expense entailed in the costly laboratory and hospital equipments. The income derived from the students, necessarily limited in number, is insufficient for maintenance, and endowment is absolutely necessary. The State may be looked to for material assistance, as the very existence of such a school in our midst is of the greatest possible benefit to the agriculturist; but in the future, as in the past, it is to generous citizens, like the late Mr. J. B. Lippincott, that the school must look for endowments. The practical success so far attained has been due to the unceasing exertion of Dr. Huidekoper, who has devoted himself early and late to the interests of the school. The University has indeed been fortunate in securing a man to organize the department who has high aims, a proper conception of the dignity of his profession, and, above all, a due appreciation of the fact that education in any line of life, to be worthy of the name, must be thorough.—*W. Osler, in Journal of Comparative Medicine and Surgery.*

BUFFALO DOG SHOW.

WE have received a brief dispatch from Buffalo stating that there are 400 entries to the dog show, including many of the most noted dogs in the country.

SYRACUSE DOG SHOW.

Editor Forest and Stream:

Please state that the Syracuse Kennel Club wish to correct an error made in their premium list. They announce A. C. Wilmerding to judge King Charles, ruby, Blenheim and Prince Charles spaniels. This is a mistake, Mr. James Mortimer will judge these classes and Mr. Wilmerding will only judge the sporting spaniels, Irish water, Clumber, field and cockers. Exhibitors will note that all but two prizes can be competed for by non-residents of Onondaga county, a notable exception from the general rule in specials. Other specials will be added.

HOWARD B. RATHBONE, Sec'y.

SYRACUSE, N. Y., Sept. 3.

LONDON DOG SHOW.—London, Ont., Sept. 3.—*Editor Forest and Stream:* Exhibitors to the London Kennel Club bench show, to be held at London, Ont., Sept. 24, to 27, will have no trouble with the custom authorities at the lines in passing their dogs, as the club has given a bond for the duty, and the dogs will be passed through to London in bond and cleared there. The New York Central & Hudson, West Shore, Erie and all the trunk lines east, Chicago & Grand Trunk, Detroit, Grand Haven & Milwaukee, will carry dogs free over their lines when accompanied by owners. The Canadian railways will return them free. The American, Canadian and Adams express companies will return dogs free, the same having charges paid one way. The club has decided to have two greyhound races in heats, best 2 in 3, $10 to first, $5 to second and diploma to third. No extra entry is required, but the dogs will be required to enter in their regular classes.—C. A. STONE, Manager.

BUFFALO DOG SHOW.—*Editor Forest and Stream:* The Buffalo International Fair Association offer a gold medal for the best pack of foxhounds exhibited at the coming show to consist of not less than five couple. Entry fee 50 cents for each dog. Entries for this will be received up to Sept. 11.—J. OTIS FELLOWS, Supt.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Allie. By Geo. H. Elder, Green Spring Farms, Tobin's, Md., for black and tan, white ruff and frill, collie bitch, whelped Dec. 2 1887, by Bonnie Scotland (A.K.R. 3702) out of Couthie II. (Brickhead's Help—Sonsie, A.K.R. 1632).

Mollie Marco. Liver and white pointer bitch, whelped Aug. 7, 1887, by Devonshire Sam out of Lottie, by C. A. Paetzel, Hope, Ind., to U. R. Fishel, same place.

Devonshire Sam—Lottie whelps. Liver and white pointer bitches, whelped Aug. 7, 1887, by C. A. Paetzel, Hope, Ind., to U. R. Fishel, same place.

Lottie. Liver and white pointer bitch, whelped Oct. 28, 1885, by Pat out of Flora, by C. A. Paetzel, Hope, Ind., to U. R. Fishel, same place.

Nellie. Liver and white pointer bitch, whelped Aug. 7, 1887, by Devonshire Sam out of Lottie, by C. A. Paetzel, Hope, Ind., to Frank Neligh, same place.

Jack Marco. Liver and white pointer dog, whelped Oct. 22, 1887, by Pat out of Flora, by C. A. Paetzel, Hope, Ind., to S. C. Steuber, Williamsport, Pa.

Frank Marco. Liver and white pointer dog, whelped Aug. 7, 1887, by Devonshire Sam out of Lottie, by C. A. Paetzel, Hope, Ind., to Albert Bue, Titusville, Pa.

Bob Berwyn. Chestnut and white English setter dog, whelped June 8, 1888, by Dashing Berwyn out of Kelp (A.K.R. 110), by Detroit Kennel Club, Detroit, Mich., to W. L. Turner, Blairsville, Pa.

Chief's Queen. Blue belton and tan English setter bitch, whelped October, 1883, by Laverack Chief out of Gypsey, by F. G. Tayler and G. G. Davis, Philadelphia, Pa., to S. J. McCartney, Forest, O.

Rodellew. Lemon and white English setter bitch, whelped July 6, 1888, by Buckellew out of Rodreka, by F. G. Tayler and G. G. Davis, Philadelphia, Pa., to W. B. Thomas, same place.

Colonel. Black English setter dog, whelped July 8, 1886, by Drake out of Molly, by Geo. W. Lovell, Middleboro, Mass., to P. H. Van Aukin, New London, Conn.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ST. JOSEPH, Mo., Aug. 23.—The St. Joseph Rifle Club held an interesting rifle and pistol contest to-day at their new 200yds. range, north of the city, the following noted out-of-town sportsmen being present: Dr. R. S. Dinsmore, Fred Close and Charles Higby, of Troy, Kas.; Dr. George Essig and F. H. King, of Plattsburg, and W. F. Whitford, of Barnard, Mo. Following are the scores:

Rifle—200yds., Off-hand, American field Target.

Dr. Dinsmore fired his first 20 shots at a disadvantage, his revolver being leaded.

BOSTON, Aug. 29.—A strong 9 o'clock wind and an unusually bright sky kept the records down in most of most of the matches shot at Walnut Hill to-day. Mr. N. Washburn, an oldtime expert at long range shooting, took a trial at the rest target, and succeeded in rolling up a score that smashed the record. Starting with an 11, he followed with nine 12, giving him the record at this target on a score of 119 out of a possible 120. The score:

Rest Match, 200yds.

N Washburn	11	12	12	12	12	12	12	12	12	12	—119
H Newton	12	8	6	8	12	8	11	9	8	9—	91

NEWARK, N. J.—The coming witer promises to see a revival of the interest in gallery work. At a regular meeting of the Amateur Rifle Association of New Jersey on Thursday evening last another club was admitted, making six clubs in the league, namely, Howard, Our Own, Monroe, Magory, Lakeside and Excelsior. The tournament to be shot will be exciting and interesting, and will cover a period of seven months from Nov. 1. Entries to the association will close on Oct. 5.... The members of St. Michael's Catholic Young Men's Association have organized a rifle club, with the following officers: President, John B. Flynn; Vice-President, John B. Gaskin; Secretary, John F. Kelly; Treasurer, John E. Evans. The club will go to Paterson for its first annual shooting practice on Oct. 16.

PHILADELPHIA.—The new rifle range in the Twenty-fifth Ward, partially built by Major Rush S. Huidekoper, has been named the First Brigade Rifle Range. The grounds have been prepared as far as the funds available will permit during this year, and six targets have been placed in position. Of the number, three are patterned after the Texas or Laidley revolving target, 4x6ft., for use at 100, 200 and 300yds.; the other three are 6x6ft., for practice at 500 and 600yds. each. The walls at the range have been erected and the range, so far as built, has been wire-fenced and thoroughly protected in regard to the safety of the riflemen and markers, as well as the outside public.

THIRD DIVISION RIFLE ASSOCIATION.—The eleventh annual fall meeting of the Third Division Rifle Association will be held at Rensselaerwyck (between Albany and Troy), Thursday and Friday, Oct. 11 and 12. The complete programme is now being made up and copies will be ready for distribution Sept. 5. The following is a summary of matches, etc., so far as they have been arranged up to this time: No. 1. Directors' Match, any rifle. No. 2. Short Range Continuous Military Match, military rifles only. No. 3. Standard American Target Re-entry Match, any rifle. No. 4. Champion Marksman's Badge Qualification Match, military rifles only. No. 5. Decimal Target Re-entry Rest Match, any rifle. No. 6. Third Brigade Military Team Match—Open to teams of six commissioned officers or regularly enlisted soldiers, from any battalion or separate company of infantry in the Third Brigade, N. G. S. N. Y. Prize: State trophy, value $100. No. 7. Company Team Match—Open to teams of six from any National Guard company in the Third Brigade. Prizes: $50 in cash to first team, $25 cash to the second team, and a suitable prize for third team. No. 8. 500yd. Carton Match, any rifle. No. 9. Revolver Match. Liberal prizes, and a suitable number of them, will be given in all matches to insure making the meeting the largest and most successful ever held by the Association.—BUEL C. ANDREWS, Sec'y, 14 North Pearl St., Albany.

SPRINGFIELD, Mass., Aug. 31.—Members of the city guard made these scores at Lake Lookout range this afternoon at 200yds.:

Bull	5544455—32	Taft	4454444—29
Daggett	4544555—32	Bowers	4344445—29
Southmayd	5454544—31	McDonald	5454444—28
W E Hosmer	5445544—31	Cordis	4544435—28
Johnson	4454544—30	Cartwright	3354454—28
Merrick	4444554—30	Wilson	5442444—27
Sterling	5544444—30	F L Hosmer	3344544—25
Wilcox	4445544—30		

Capt. R. A. Whipple, of Co. M, of Adams, shot with a Springfield rifle at 500yds. making 46 points out of a possible 50. Maj. C. W. Hinman, of Boston, State inspector of rifle practice, was in the city.

SEA GIRT, N. J.—Maj. R. Heber Brientnall, of Newark, has won the badge offered by Governor Green to the marksman of the National Guard making the highest score on the range here. The Major is a member of the First Regiment, of Newark, N. J., and made 41 points out of a possible 50 on the 200yds. and 500yds. ranges.

ARMY MARKSMEN.—The annual sharpshooting contest of the Division of the Atlantic, United States troops, is now in progress at Fort Niagara, near Youngstown, N. Y. There are 76 men entered for the competition. Of these 8 are officers, 65 are enlisted men with various ranks, and three men are classed as quite distinguished marksmen. They represent the companies stationed east of the Mississippi River. The men are encamped in the open woods adjacent to the fort. There are six rows of tents, eight tents in a row. Each tent accommodates two men. The camp is called Rifle Camp, Fort Niagara, N. Y. The commandant is First Lieut. Jonas A. Emery, Eleventh Infantry.... SAN ANTONIO, Texas, Sept. 1.—The competitive shooting at the rifle range which has been going on for some days, resulted to-day in the selection of the following as members for the Division of the Missouri of the army team, which will compete at Fort Niagara: Sergt. Geo. M. King, Twentieth Infantry; Lieut. Ce ii Stewart, Third Cavalry; Sergt. Chas. Palmer, Third Infantry; Lieut. Jos. Garrard, Ninth Cavalry; Lieut. M. W. Day, Ninth Cavalry; Farrier Joseph P. Hughes, First Cavalry; Alternate, Lieut. A. C. Macomb, Fifth Cavalry. The Division of the Missouri comprises the Departments of Dakota, Missouri, Texas and the Platte. In the list of those selected Dakota heads with three men. The Department of the Platte has two representatives, and the Missouri and Texas Departments one each. This is Lieut. Stewart's and Farrier Hughes's first year of shooting. Sergt. King and Lieut. Garrard are well-known marksmen.

LEOMINSTER, Mass., Aug. 21.—At the recent meet of members of the Leominster Rifle Club the following scores were made:

Prevear	8	9	8	10	7	8	9	10	9	8—86
Whitney	7	10	9	9	8	7	9	8	7	10—84
Foster	8	6	9	4	7	10	9	10	7	9—78
Munson	6	10	8	7	9	7	7	8	9	6—77
Joslin	7	5	7	6	4	10	9	10	8	9—75
Pitts	4	9	7	6	8	10	8	6	8	8—74

CITIZENS' RIFLE CLUB.—Meriden, Conn., has a new club with A. H. Merrimam President, C. A. Miller Vice-President, W. Tinker Secretary and W. G. Hooker Treasurer. The Executive Committee consists of President Merriam, ex-officio, George A. Foster, S. W. Foster, F. E. Sands, J. F. Ives and W. E. Jones. Charles E. Foster, Shoot.ng Master.

CREEDMOOR, Sept. 3.—The eleventh match for the marksman's badge was shot to-day. The weather was v ry favorable and the scores made were excellent. The winners were:

	200yds.	500yds.	Total.
C A Jones, Co G, 7th Regt	23	24	47
T G Austin, Co G, 13th Regt	21	25	46

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRAP FIXTURES.

Cincinnati, O., Sept. 4 to 7.
Cleveland, O., Sept. 10 to 14.
St. Paul, Minn., Sept. 12 to 14.
St. Louis, Mo., Oct. 2 to 5.
Marion, N. J., Oct. 3 to 12.
Dunellen, N. J., Oct. 16 to 19.
New York Suburban, Oct. 23 to 26.

THE EASTERN CIRCUIT of trap tournaments will include those of the Jersey City Heights Gun Club, at Marion, N. J. (near New York), Oct. 9 to 12, with large guaranteed purse; the Middlesex Gun Club, at Dunellen, N. J., Oct. 16 to 19, with large guaranteed purse; and the New York Suburban Shooting Grounds Association, at Claremont, Jersey City, N. J., with a guaranteed purse of $1,250.

NEW BEDFORD, Mass., Aug. 18.—The Acushnet and Westport Gun Clubs are having some interesting shooting matches. To-day the third match was shot between the clubs at Westport Factory, and won by the Westport club by four points only. The Acushnets had won two matches in succession by two or three points. The following shows the result of the shoot, the first total of each man's score being clays and the second standards. The score:

Westports.		Acushnets.	
A Lewis	7 7—14	J G Wilson	6 9—15
E Sabin	7 7—14	H C Kenyon	7 5—12
F Whalon	8 7—15	Job Spooner	8 5—18
P Simmons	6 5—11	C A Gray, Jr.	7 3—10
G Lewis	7 4—11	W Durfee	4 5— 9
A Wilson	7 6—13—78	C A Gray	6 9—15—74

CAPT. BREWER'S CHALLENGE.—In order to hurry up expected rivals, Capt. Brewer has written another challenge, saying: "I have just returned from England, where I won the cup representing the championship of the world, which was put up for competition in 1880, and which Dr. Carver secured in a rather irregular manner. I now stand ready to defend this trophy against any man in the world, Budd preferred. I will shoot one match or a series of matches with any man in the world for $250 and upward at 100 birds each, London Gun Club rules to govern all matches. Or if any one will accept this match and go to England and shoot, I will allow him $500 for expenses, and will shoot five matches for £1,000 each match. I hope your readers will not take offense at my asking them to go to England to shoot, for it is well known that it is difficult to get good birds in America, and especially in warm weather. I thought I had seen some very good pigeons fly in America before going to England, but I am ready to acknowledge that I knew nothing about good birds before my visit to England. I intend to return to England in November, but before that time I hope that our trap-shooters will pluck up courage enough to come to the front and let the general public know who is the best man behind the traps. I reserve the right to name the grounds and find the birds, and if the latter should not be what we call good birds in America, I am willing to forfeit all claims to the championship which I now hold.—CAPT. JOHN L. BREWER, Champion Wing Shot of the World."

The following telegram from Al Bandle, the famous Cincinnati trap-shot, comes in response to Brewer's wish for a match: "CINCINNATI, O., Sept. 1.—In regard to Brewer's challenge, I wish you to state that we shoot for the championship of America at my tournament, held in this city from Sept. 4 to Sept. 7, inclusive. I would like to have Brewer attend. We will back Budd, or will guarantee Brewer a match for from $250 a side up, if he attends.—AL BANDLE."

WORCESTER, Mass., Aug. 30.—At the tournament at Coal Mine Brook range this week, under the auspices of the Worcester Sportsmen's Club, the attendance was good. In the challenge match between the Massachusetts Rifle Association and the Worcester Club there were five teams. The contest was for the team clay-pigeon badge. The work of each team in detail was as follows:

Massachusetts Rifle Ass'n.		Worcester Sp'tsman's Club, No. 1	
O R Dickey	1111111111—10	A R Bowdish	1011011111— 8
H W Eager	1011111001— 7	M D Gilman	0101111110— 7
Swift	1111111101— 9	W S Davis	0100000011— 3

Dr Bowers	1111011111— 9—32	E F Swan	0101011101— 6—31
Worcester Club, No. 4.			
H W Webber	0111010010—6	L R Hudson	1000100000—2
A B Franklin	1110111010—7	C Crompton	0101011101—5—28
E S Knowles	1101110111—8		

The other contest was for the individual glass ball badge. It was shot on clays from open traps. In the tie Dickey won by a score of five. The work of each man follows: Dickey 14, Larkin 14, Smith 14, Gilman 13, Wheeler 13, Kenerson 13, Dodge 13, Russell 13, Sampson 13, Howe 13, Rugg 13, Eager 12, Stanton 12, Dean 12, Davis 12, Nichols 12, Swift 12, Chapin 11, Franklin 11, Don 11, Perry 11, Webber 11, Bowdish 9, Burbank 9, Bowers 9, Knowles 8, Graham 7, Houghton 7, Claflin 7.

SAN FRANCISCO, Aug. 18.—A bluerock shooting tournament, in which four well-known gun clubs participated, was held at Adams Point, on the banks of Lake Merritt, this afternoon. The object of the tornament was to decide the ownership of a handsome trophy, valued at $75, which all the clubs had contributed. The club beating all its competitors in three consecutive tournaments is entitled to the trophy. The match was at 30 singles and 10 pairs of doubles, 18yds. rise, from the 5 ground traps. Each club sent five of its best marksmen to the tournament to uphold its merits, and some excellent scores were the result. The weather was exceptionally fine, and all enjoyed a pleasant day's sport. Owing to the fact that many of the shooters did not arrive on the grounds until late, the match did not begin until well into the afternoon, and it was almost too dark to see the clay disks before the last round was finished. The Blue Rocks had already won two tournaments, and were in consequence very eager to gain the day, while their rivals were equally as anxious to prevent them from doing so. The singles were tried first, and the Blue Rocks succeeding in making the best total by two points; but the Eucinals, who won second, turned the tables with the doubles, and beat the leaders by five points, thus winning an exciting match.

SAN FRANCISCO, Aug. 25.—The August shoot of the Eureka Gun Club came off to-day at Birds Point, Alameda county. The day was favorable for the sport and there was a fair attendance. The prizes distributed were awarded on the basis of the total of the best three scores of the season's shoot, the highest taking the first prize and so down in regular order, except the seventh prize, which was awarded to the member making the lowest average in any three shots. The prizes were and were awarded as follows: First prize, one pair of linked gold and platina diamond sleeve buttons, won by H. C. Golcher; second, one pair pearl opera glasses, A. F. Adams; third, Colt's new lightning magazine .22-cal. rifle, W. M. Macmillan; fourth, fine split bamboo fishing rod, C. W. Kellogg; fifth, 250 standard shotgun cartridges, S. J. Kellogg; sixth, one-pound bottle of extract, H. Black, and seventh, a $2,0000 accident insurance policy for one year, E. W. Chapin. For the first and second prizes Golcher and Adams had to shoot off their ties, and for the third and fourth prizes Macmillan and C. W. Kellogg shot off two ties, 4 birds for each tie. The score stood as follows:

E W Chapin	1112101022110— 9	A F Adams	1102002221 20— 8

The Cuyahoga Falls won by a score of two out of the three matches.

MONTREAL, Aug. 28.—To-day was not the best day in the year for trap-shooting, but it was not the worst either, by any means, and the Independent Gun Club were very successful in the way they celebrated their second anniversary. From early morning until dark Lepine Park resounded with the reports of the double-barreled guns that meant destruction to Peorias and bluerocks. The Independent Club is a young one, but its members are enthusiastic shots, and the showing they made to-day at the traps was excellent. The attendance was large and the conditions, barring a little cloudiness, favorable to good scoring. Mr. Boucher is president and Mr. A. Marcoux vice-president, but the hardest-worked man on the field, as usual in gun clubs, was the secretary-treasurer, Mr. St. John. The meeting started off with a shoot at 10 birds, 18yds. rise, and the following tells the tale:

J Roberts	0011001110—5	A Marcoux	1101000001—4
P Larcau	1001000101—4	Pariscau	0111111011—8
Guy	1101111011—8		

Messrs. Pariscau and Guy divided first money.

The club shoot was at 12 single birds, both barrels allowed, 21yds. rise, 80yds. boundary:

Boucher	1110110111—10	Macbeth	1101011000—7
Beauvan	1100110001—6	Marcoux	0110111110—9
St John	1111001101—9	Lareau	1111111111—11
Courville	1111010111—10	Guilbeault	1011111111—11
Brouillet	1011100011—7	Garcau	0111101111—10

In shooting off the ties at 11 Larcau took first and Guilbeault second place; Garcau, Boucher and Courville third, fourth and fifth. A shoot at 3 pair of birds resulted as follows:

D Robert	11 11 01—5	Pariscau	11 11 01—5
E Octave	00 01 11—3	Boucher	01 11 11—5
N Lareau	11 11 11—6	Purcell	11 11 11—6
Sicotte	11 10 11—5		

Shooting off ties for first, miss and out, Lareau grassed three pair and took first, while Purcell took second with five birds to his credit. There were a few other sweeps afterwards, with which the guns amused themselves until darkness put a stop to the sport.

MEDIA, Pa., Aug. 29.—The second tournament shoot of the gun clubs of Delaware county, Pa., was held on the grounds of the Maple Run Gun Club to-day. The day was pleasant; but small scores were made, owing to bluerocks being used for the first time.

CORRY, Pa.—The first annual tournament of the Keystone Manufacturing Co. will be held at Corry, Pa., Sept. 18, 19, 20 and 21. Guaranteed purses of $1,000 will be offered, and in addition the following prizes: First day, a silver tankard valued at $250; second day, L. C. Smith Cup; third day, Peters Cartridge Co. silver pitcher; fourth day, championship diamond ring. Programmes and other particulars can be obtained by addressing the Keystone Manufacturing Co., Corry, Pa.

WELLINGTON, Mass., Sept. 1.—The attendance at the Wellington range was good to-day and the traps were kept constantly at work for nearly five hours. The winners of the various events were: Six pigeons, Stanton, Chase and Adams; six bluerocks, Bowker and Snow; six pigeons, Adams and Chase; six bluerocks, Chase; six pigeons, Chase and Bowker; six bluerocks, Chase and Swift; six bluerocks, Hammond; three pair pigeons, Snow; six bluerocks, Stanton; six pigeons, Melcher, Swift and Stanton; six pigeons, Adams and Chase; six bluerocks, Melcher and Adams; six bluerocks, Swift, six pigeons, Bradstreet and Stanton; six pigeons, Stanton; six bluerocks, Snow; three pair pigeons, Moore; six bluerocks, Bowker; three pair pigeons, Chapin; six bluerocks, Snow; six pigoons, Stanton.

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y.
Secretary-Treasurer: F. L. MIX, }

Vice-Com.	Rear-Com.	Purser.
Central Div.	W. R. Huntington,	E. W. Masten, T. H. Stryker, Rome, N. Y.
Atlantic Div.	W. P. Stephens,	L. B. Palmer, F. L. Dunnell, 186 Jerolemon St., Brooklyn.
Eastern Div.	H. E. Rice,	M. D. Maxton Holmes, H. D. Marsh, Springfield, Mass.
N'thern Div.	Robert Tyson,	S. S. Robinson, Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio,
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

6. Springfield Cup, Calla Shasta.

THE A. C. A. REGATTA COMMITTEE.

Editor Forest and Stream:

In your report of the A. C. A. meet and regatta your correspondent takes occasion several times to severely criticise the regatta committee for lack of promptness in starting races, and general tardiness, and expresses the opinion that fault finding was very general among the members who raced. As I am alone responsible for this I ask space for a few words. The racing was announced to begin each day at 9:30. On Lake George the weather is not settled by 8:30 usually, and therefore it was necessary to put off the time of starting the first race, as all the races for the morning had to be announced one hour before the first race started. On Monday morning the launch was an hour late, but as it turned out no loss of time occurred in consequence. There was no wind before 10 A. M. Tuesday afternoon the committee was at fault in that dinner was delayed at the hotel. At all other times they were on hand to the minute. The programme was a long one. Three extra events were added to it at the meet, including the Barney cup trial race—no mention of the fact is made in the report. Not a race was abandoned after being started. All the paddling races were contested under favorable conditions of water, and there was plenty of wind during every sailing race. It has been no unusual thing at former meets to have a number of races dropped from the programme or carried over to the fifth day. Had the Barney cup race been omitted on Thursday, the two races of Friday could have been worked in the four days. Of the two certainly the Barney race created most interest.

At former meets a number of men have had to do police duty and judges work on the courses. Three men with the help of the launch (paid for by the committee and the Commodore) did all the work this year—with the help at times of two men at the outer marks. Thus fewer men than ever before had work to do. It is not a mistake (as your correspondent asserts) to put racing men on the committee. They are the only men in the A. C. A. competent to run a regatta successfully. The chairman must of course give up all idea of racing at that particular meet. There is no pleasure in running an A. C. A. regatta. It is done at considerable expense both of time and money, and the total loss of a vacation, and if the men generally take such a narrow and unwarranted view of the work as your correspondent has done it certainly would be impossible for the A. C. A. to get any one to serve on the committee if the members generally felt as I now feel about it. The thanks a man can expect for the work of three months and the sacrifice of his vacation is a kind appreciation of his endeavors, not unbridled fault finding and harsh criticism.

C. BOWYER VAUX.

THE A. C. A. MEET OF 1888.

THE CAMP AND THE ASSOCIATION.

WHILE the great question of the permanency of the A. C. A. and the success of its annual meets is settled beyond doubt, there is still a wide field for development and improvement before the Association can properly fulfill all the functions of a national body, uniting and governing the canoeists of the United States and Canada. Before proceeding to our regular review of the canoes and their rigs, we propose to devote a little time to the consideration of the camp that has just broken up, and to the condition and prospects of the Association at large. First, then, as to statistics. The Secretary's register shows that there were in camp 153 paying members of the A. C. A., not counting ladies and guests, these members being divided among the four divisions as follows, representing 33 clubs:

Central.	*Eastern.*	*Northern.*	*Atlantic.*
Mohican.	Springfield.	Toronto.	New York.
Pittsburgh.	Harvard.	Peterboro.	Knickerbocker
Buffalo.	Lawrence.	Ottawa.	Brooklyn.
Deoqainsta.	Hartford.	Lake St. Louis.	Yonkers.
Cincinnati.	Vesper.	Brockville.	Philadelphia.
St. Lawrence.	Lakeside.		Keystone.
Newburgh.	Sagamore.		Trenton.
Rochester.	Newton.		Arlington.
Jabberwock.	Puritan.		Ianthe.
Amsterdam.			
Members 47.	Members 43.	Members 12.	Members 51.

The Central and Atlantic Divisions were represented by the full board of officers, the Eastern Division by all but the Rear Com., while none of the officers of the Northern Division were present in person. As to the club representation, but few of the clubs had a large number present, the total was made up largely of two to six men from a club; and while this does not compare favorably with the large club encampments seen in former years, it is offset by the fact that the entire representation was well distributed geographically, a very large territory being represented. Owing to the topography of the camp, the tents such as the Springfield and Mohicans, which have a number of men and tents, made less show than in former years through the scattering of the tents which followed the uneven nature of the ground. The club uniforms which once added so much to the appearance of the camp have almost entirely disappeared, the popular tennis suits of all colors having to a great extent superseded them. While nothing is lost in picturesque effect, the change is rather to be regretted, as the effect of a club uniform was, as in the army, to unite the club, to heighten the *esprit de corps*, and to induce each club to make the best show that was possible.

It is a fact that the character of the camp has changed materially within the last three years, and in a way which to us, as well as to many more of the chronic grumblers, is by no means for the better. This far perhaps no harm has been done, but it is none too soon to speak of a danger that might in time work serious injury to the meets. This danger lies in the fact that each year the camp is becoming less primitive and more civilized; the change within even three years being very marked. It is shown in many ways; the tents are double the size, a board floor is considered a necessity instead of a luxury; a large Saratoga has replaced the modest camp chest; the tent is furnished with spring cots, rugs, chairs and tables. Little or no cooking was done in camp this year, but all dined at the mess shed, practically equivalent to a very poor hotel with all the pleasure of camp life carefully extracted. There was not one club mess in the entire camp, and only one camp kit was discovered as the result of a prize hunt. The fear

camp, over half a mile, with no wagon road nor wagons. A good store is needed in the camp where provisions may be had in a few minutes.

The camp ground itself is most important; many like to camp in a grove, but the majority, fresh from indoors, find it warmer in the chilly nights that sometimes come in August, if the camp is unshaded, having the morning and evening sun, a great matter too in damp weather, as a tent beneath the trees will be damp long after one in the open is warm and dry. The main camp then should be on a gentle slope with few trees, giving a clear view, with if possible some shade where to care to camp in it. The ground should be fairly even and free from stones, and of such extent that each club can find a good location for half a dozen tents. The racing courses should be within view of the camp, as it is always a pleasure, whatever one may be doing, to look out and see the canoes. On tidal waters the beach is a very serious difficulty, but on fresh water landing stages can usually be built at small cost, as at Grindstone, Bow-Arrow and Lake George.

The present camp was open to many objections it was surrounded with a thick belt of dense fir trees, shutting out both the view and the breeze, and in hot weather it was very close; the lake with all its beauties was practically invisible from the camp; while the races could only be seen, and then in part, by going to the West shore, at a distance from the main camp. The ground was so rocky and broken that walking was difficult, while the tents were widely scattered, there being no attempt to keep the clubs together. The committee did all that was possible to make the camp what it should be, but the natural disadvantages were greatly against them.

Looking at the canoes in a general way, the most striking point was the proportion of very good canoes and the excellence of the workmanship of the majority. Never before at a meet have there been so many very good boats present; while the standard of workmanship and finish has visibly improved within a year or two. This year it was evident beyond question that the time has fully come when the cruising and racing canoe must be separated if the former is not to be shut out from all racing, for they have now nothing in common. There were some racing canoes present that were of good model, though as fitted up they were entirely unsuited for anything that a canoe should do save match sailing. Others again—and not a few—were racing machines, pure and simple, built and used for no other purpose. There was a fair number of cruising boats, whose owners loafed and sailed and paddled about the camp, apparently enjoying themselves, and in some cases they entered the novice and other races; but it is now racing for racing boats, and no one need bring a cruiser to camp to win first prizes. The extreme racer is, in truth, a pretty poor sort of machine; some have neither bulkheads nor mast tubes, and cannot keep their shape under sail; some do not boast the ownership of an honest double blade; and one boat that upset and was towed in had neither a ringbolt nor a hole in the stem, in fact, no place could be found to which a painter could be made fast. With a mere shell of a boat, a long sliding deck seat and unlimited sail, some beautiful acrobatic feats can be accomplished and some fast runs made; but there is no question as to the direct and powerful influence of such traps on canoeing, and many at the meet expressed the opinion that the time had come for the enactment of a rule such as we outlined last winter for the protection of men who must use but one canoe for both racing and cruising.

As for the cruisers who came out so boldly last winter, they evidently were not present at the meet, for none of them showed at the line when the events specially prepared for their benefit were called. A very good programme for a short cruise was arranged, but no one cared to start; the prize for cruising outfit brought out only one competitor, and the obstacle race, in which the all-round cruising man and boat was expected to compete, fell through for lack of entries. So with the new experimental Class C, the men who asked for it were none of them present; two canoes only started in the race, and the same was the case with the "unclassified," for large canoes, sneakboxes, etc. If this meet is to be taken as a basis for a future policy, it would seem that for the present the best interests of the Association will be served by concentrating all its efforts on the development of the two classes of canoes which are now found at the meets, the unlimited racing canoe and the racing canoe within cruising limits, leaving out all efforts to encourage cruising or to build up larger classes of canoes or cruising boats. When cruising men who want a cruise at the meet are present in sufficient numbers, it will be time to arrange for them; and when the larger boats come and wish to race there should be a place made on the programme, but there is little use now in preparing in advance or offering prizes for either class.

We spoke just now of two classes of canoes at the meet, but this is not quite correct. This year, for the first time, a third class must be added to the racing and the cruising, and this is the Girling canoe. This most important addition to the fleet is a large open craft, a Canadian canoe about 16×30, of handsome finish and fitted up with carpets, rugs and cushions in bow and stern. One end is occupied by a pretty girl, in many cases by a very pretty girl; of the occupant of the other end the least said the better. Sometimes the manly form of an ex-racer, satiated with the honors of long years of hard-fought battles, wields the single blade, but in other cases it is a wonderful combination of elegance, beauty and the haberdasher's art that lies lazily on the cushions while the fair lady wields the paddle, a canoeist who runs no rapids, who sails no races and who never soils his hands with anything so hard as a frying-pan. Whether or no the Girling canoe is a benefit to the Association we leave others to determine; the question is too deep and delicate for us. Of the desirability of Squaw Point there can be no question; not only is the camp pleasanter for the presence of ladies who are campers and canoeists, but the ladies' camp exerts a very strong influence on the meet as a whole. During the races, and in some very bad weather, a number of ladies were out in canoes to see the sport, showing just as deep an interest as the men. The light open canoe driven by two ladies is a pleasant feature in any view of Lake George, Lake Champlain or the St. Lawrence, but it has been seen at previous meets before the advent of the Girling canoe, and has no bearing on the question of the latter's merits or demerits.

Speaking seriously, however, the open Canadian canoe has found much favor of late in the States, and is coming into use as an auxiliary to the decked canoe. There are now many canoeists who use the latter as they have always done for sailing and some cruising, but who also own an open canoe for general paddling, including a river cruise every season. For such purposes the open canoe is most excellent, being cheap, light, handy, and easily portaged or carried by rail. It has not displaced the decked canoe, but is made to go side by side with it.

In keeping records of the canoes and races there was one point that presented itself, the lack of good distinguishing names for many canoes. Some that were present had no names, they were simply anonymous machines, with no more individuality, so far as their owners were concerned, than a hat or a coat. Others boasted of the possession of names, but gave no visible evidence thereof, there being not a mark nor a letter on their polished sides, making it very difficult to keep track of them. Others again were named on the very ingenious English plan of having but one name and transferring it to each successive boat, so that the identity and merits of a new boat are completely hidden. It would certainly seem that such an object as a canoe, that cannot be called inanimate, and has so marked an individuality of its own, is at least worthy of a distinctive name which it should bear during its life and which should die with it.

There is one very good regulation in the racing rules which has been practically abrogated within the last year, that relating to numbers on sails. Only last season the rule was changed so as to allow the substitution of a totem or device, registered with the secretary, for the A. C. A. number. At first this rule was complied with, but this year a number of canoes were seen with merely a bit of red rag, of no special shape, pinned to the mainsail, the same having been "registered" as the distinguishing device of the canoe. This interpretation of the rule destroyed entirely the spirit of it and made endless work for the timekeepers, who have enough to do in any case. The A. C. A. numbers, already well on to 1400, have become too cumbrous to be placed on a sail, and some change is necessary. It is now the custom to use so many sails, either owned or borrowed, that this plan of numbering fails, some sailing under others' numbers, to the further confusion of the timekeepers. As less than fifty canoes take part in the sailing races at a meet, the best plan would be to have the numbers painted on muslin and assign one to each man when he makes his entry, compelling him to have it on the starboard side of every mainsail he may sail with in a race.

The question of non-members in the camp has at last been definitely settled by the amendment to the by-laws given last week. For six years there was no restriction on strangers visiting the meet and camping as long as they wished, but within the last two years the privilege has been abused by men who came to the meets to camp there but would not join the Association. To prevent anything of this kind and yet to allow members to entertain friends in camp who may not belong to the A. C. A., it is now provided that such guests shall pay the same amount as the regular members for whom the camp is organized. The admission of such guests is left to the discretion of the commodore and secretary-treasurer, the intention being to admit casual visitors or friends of canoeists who may wish to see something of an A. C. A. meet, and to exclude as far as possible regular canoeists who should be, but are not members.

This year, as usual, there were a number who postponed their applications so late that the necessary two weeks' notice could not be given prior to the meet, causing much trouble to the pursers as well as to themselves. In every case perhaps the application might as easily have been made in January as in August, and a great amount of trouble and annoyance saved. With the annual dues so low as $1 00 there is no reason for waiting until one is actually on the way to the meet before applying.

Next year, as a matter of course, the meet goes to the Northern Division, the commodore and secretary-treasurer already being elected with that end in view. The question of a site has already been discussed at the Northern meet and also at the general meet, the location most in favor with all parties being the St. Lawrence River. The Bay of Quinte has also been suggested, but the natural advantages are inferior to the St. Lawrence. As far as the members from the States are concerned, the St. Lawrence would be preferred to any other locality, and the sentiment at the meet was generally in favor of a return to Grindstone itself, provided the place was not objectionable to the Northern Division, and that some definite agreement as to charges could be made with the Delaneys. There is an objection in that nominally the island is in Central and not in Northern Division territory, but this is more imaginary than real, as the island is only half a mile or so from the Canadian border, and is nearer and more accessible to Canadians than to any of the American members. To offset this objection there are two very great advantages, the site in itself is a most excellent one, and the transportation and other arrangements have been made so often that it is known at once just what is needed, saving a great amount of preliminary work both to the committees and to individual members.

The coming year will for the first time see some large division meets in the States. The action of the Central Division will depend on the location of the general meet, if it is taken to a distance inside the Canadian border, where travel will be difficult and expensive, a meet will be held in the Central Division, but if the meet goes to Grindstone, or near there, the Division will hold no meet of its own, but will concentrate all its efforts on a large attendance at the general meet. The Atlantic Division will hold as large a division meet as possible, probably in July, at some point near New York, but it will also endeavor to secure a good attendance of its members at the A. C. A. meet in August. The Eastern Division as yet has made no announcement of its plans, and they will depend much on the location of the general meet. It is time that a large division meet was held in the Eastern States, as the previous meets have been to a great extent local, confined to the neighborhood of Springfield and Hartford. There are many canoeists further east who should be members of the A. C. A., and the time has come for a large meet, perhaps somewhere near Boston, that would attract all unattached canoeists and bring in new members.

With four prosperous divisions now established the plan that has occupied the thoughts of so many for the last four years is at length in successful operation and next year should give a fair test of its success. One thing was plainly evident at the meeting of the executive committee at camp, that the organization is far more perfect under the new plan than the old. Instead of a commodore from one section, a vice-commodore from another, a rear-commodore from a third, with the members at large that composed the old executive committee, each division has now a complete government of its own, vice-commodore, rear-commodore, purser and member or members at large. It is now far better represented at the meeting than in the past, while there is certain to be a strong but friendly rivalry as to which division shall make the best appearance at each meet, and which shall best conduct the general meet in turn, that cannot fail to lead to good results. The wider influence of the A. C. A. in distant localities through the work of the division officers and the attraction of the division meets is certain to result in large additions to the membership, and altogether the prospects of the Association are such as to give every evidence of present and future prosperity.

NEW YORK C. C. TRIAL RACES, SEPT. 3.

THE trial races to decide on a defender for the New York C. C. International Challenge Cup were sailed on Labor Day, the course being off the club house at Tompkinsville, Staten Island. The course was triangular, about 1 mile on a side, the first mark being out in mid-channel, and the second off the Clifton Boat Club. Two races were sailed, one starting at 10:47 A. M., and the other at 2:30 P. M., two rounds to each, making a 6-mile course. The first race was sailed leaving all marks to starboard, and the second was sailed the reverse way. The wind was fresh, drawing straight in the Narrows, making in the morning a reach over the first leg, a reach close hauled over the second leg, and a run home, the tide being ebb.

In the afternoon, the tide having turned, the first leg was to windward, the second with booms well off the port quarter, and the third a reach across the tide. Mr. Blake sailed his own canoe, Eclipse, in which Mr. Brokaw was successful at the Meet. She carried in both races about 98ft. in two Pecowsic sails. Mr. Vaux sailed the Bo-Peep, 15×28 with a reefing sail of over 90ft. and a small dandy. New York is the canoe Jess, having been purchased and re-christened by the New York C. C. Eclipse led over the first leg, with Bo-Peep, New York and Essex in order. She gained on the second leg, but near the end of the round Bo-Peep caught her, the pair turning the mark together. Eclipse left Bo-Peep on the reach across the ebb tide, though sailing with both sheets too far aft. New York caught and passed Bo-Peep and was second at the second mark. The positions were not materially changed over the other two legs, the times being:

FIRST RACE—START 10:47.

	1st Round.	2d Round.	Elapsed.
Eclipse, R. S. Blake, Brooklyn	1 28 00	12 01 00	1 14 00
Bo-Peep, C. B. Vaux, N. Y.	1 28 01	12 02 45	1 15 45
New York, C. K. Munroe, N. Y.	1 29 30	12 03 00	1 16 00
Essex, G. W. Cox, Essex	1 29 30	12 04 00	1 17 00
Vagabond, C. J. Stevens, N. Y.	1 31 30	12 05 30	1 18 30
Will o' the Wisp, W. D. Anderson, Essex	1 32 00	12 07 00	1 20 00
Idlemere, G. P. Douglas, Ianthe	1 32 30	12 08 00	1 21 00
Rattler, H. O. Bailey, N. Y.	Withdrew.		
Wind, P. F. Hogan, Ianthe	1 35 00	12 09 45	1 22 45

In the afternoon some changes were made, Mr. Vaux taking Vagabond, Mr. Warder Bo-Peep and Mr. Nadal Sea Bee. The start was to windward, Vagabond going over first in the weather berth, but Eclipse held a good position, well inshore. The first leg was but slow work, hugging the docks and coves all the way down, to dodge the strong flood tide. Mr. Warder sailed boldly out in the bay, direct for the mark, in blissful ignorance of what a salt-water tide was; thus losing a great deal of ground. Eclipse led as far as Clifton, with Vagabond very close to her, but the latter finally crossed her bows. The order at the weather mark was: Vagabond, Eclipse, New York, Essex, Bo-Peep. On the run across, with the tide, Vagabond left Eclipse, but lost at the second turn through the flag being run down and blown in by a tug with a large bark in tow. This cost her some time, Eclipse meanwhile gaining. Coming across to the end of the round Eclipse steered the better course, but failed to catch Vagabond, the latter leading easily. New York had come up and turned the home mark with Eclipse. On the next leg, to windward, the leaders had a hard fight for first place, Eclipse finally heading Vagabond and securing a lead, which she held easily to the finish. The full times were:

SECOND RACE, START 2:36.

	1st Round.	2d Round.	Elapsed.
Eclipse, R. S. Blake, Brooklyn	3 25 45	4 00 00	1 30 00
Vagabond; C. B. Vaux, N. Y.	3 24 15	4 07 30	1 31 30
New York, C. K. Munroe, N. Y.	3 26 00	4 20 00	1 44 00
Essex, G. W. Cox, Essex	3 32 30	4 22 00	1 45 00
Idlemere, Geo. P. Douglas, Ianthe	3 48 00	Not timed.	
Bo-Peep, Geo. A. Warder, Jabber	3 47 00	Not timed.	
Sea Bee, B. H. Nadal, N. Y.	Withdrew.		
Sweetheart, Wm. Walker, Essex	Capsized.		

No arrangements have yet been made for the cup race, but Mr. Stewart will soon be in New York with his boat. The races were ably managed by Col. C. L. Norton and Mr. Ingalls Drake.

THE A. C. A. CONSTITUTION.—At the meeting of the executive committee at the meet the question of holding the annual meeting of the committee earlier in the season was raised, it being suggested that if held in October the committee might visit any proposed spot, perhaps camping for a day or two. To permit of this a motion was made to change the constitution by the addition of the words "October or" before the word "November" in all articles in which the latter occurs, thus leaving greater liberty to the committee in the selection of a date. Notice is hereby given that such a motion will be laid before the executive committee as soon as the two weeks required have expired. The amendment will involve a change in the wording in several places where November is mentioned.

A. C. A. MEMBERSHIP.—Eastern Division: F. P. Lewis, New Haven, Conn.

A FATAL ACCIDENT TO TWO CANOEISTS.

WE copy from an exchange the following account of the drowning of two canoeists on Aug. 22 in the Conemaugh River, in Western Pennsylvania. Mr. Comingo was a member of the A. C. A., No. 821, the first, we believe, who has lost his life from a canoe. He had never attended a meet and was not known personally to most members. The Conemaugh River was at a most dangerous stage, over 3in. of water having fallen within 26 hours, and it was a regular mountain torrent, sweeping away bridges and obstructing the railways so that it is no wonder that a fatal ending attended such a reckless voyage. The account is as follows:

"So far the bodies of Rev. B. C. Comingo and Mr. Edward Orth, who were drowned in the Conemaugh River yesterday, have not been recovered, although the search for them has been diligent.

"The details of the sorrowful affair are as follows: They had gone up there intending to make the trip down the Conemaugh to Allegheny and down that to Pittsburgh. They had with them a canvas canoe for the journey. About half past ten yesterday the people of Cambria City noticed two men near the toll bridge, each with a pack on his shoulder, approaching the river bank. A short distance below the toll house they threw down their bundles and began unpacking them. The contents were a lot of curious things, the meaning of which those standing by could not make out. The interest of the crowd was awakened as they saw these things taking the shape of a canoe.

"One of the men explained that he and his companion were members of the American Canoe Association. 'This boat,' said he, 'is one of Osgood's patent portable boats. We have traveled 800 miles in it. The longest trip we have made was from Pittsburgh to Maysville, Ky., sixty miles above Cincinnati. This is our third trip from Johnstown to Pittsburgh. Our first trip was made a year ago and the second this spring.' All the while he was talking the man worked away at the rigging of the little craft. He was in a jolly mood, and when asked for his name and that of his friend, he said: 'Oh, that would be too much glory; no, no, we prefer not to have our names mentioned.'

"In half an hour everything was complete and the canoe was carried to the river, and the men stepped in. The older one, the Rev. Mr. Comingo, pushed off, while the crowd on the bank cheered, though some expressed fears on account of the high water. The disaster dreaded came quickly.

"At Sheridan station the wire cable of the foot bridge was invisible, submerged as it was in the water. Against this wire cable the canoe struck and upset. One of the men disappeared under the water and was not seen again. The other clung to the upset boat as it floated on, struggling to right it, but without success. Failing in this he began to cry for help. As he and the boat passed Sang Hollow, Mr. Harding, operator at the tower at the long siding, saw him and heard his pitiful appeal for assistance. He drifted on and passed the rapids at the old dam, and then disappeared, his boat continuing on down the river. The satchel in which the men had their provisions, etc., floated ashore and was picked up by a passer-by. It contained some handkerchiefs marked 'E. C. Orth' and 'A. B. Orth,' and a piece of paper on which was written 'M. J. Orth, No. 404 Hiland avenue.' The news was sent into the families of the unfortunate men last evening, and this morning friends and relatives went up to Johnstown to aid in the search for the bodies."

YONKERS C. C.—NEW YORK, Aug. 31.—*Editor Forest and Stream:* The Yonkers Canoe Club give their fall open regatta Saturday afternoon, Sept. 22. All clubs are most cordially invited to participate in the different events. Handsome prizes will be given in each race. Invitations will be mailed to the different clubs very shortly.—PAUL B. ROSSIRE, Sec'y.

LARCHMONT Y. C.

THE 40FT. CLASS, AUG. 31.

THE one bright event of a very dull season was the race of Friday last at Larchmont, between the leading yachts of the 40ft. class, a race that has been looked for all the season, and which, happily, was an exception to the general rule, a lively and exciting contest between a good field of well matched boats. While it will take more than one or two races to tell which of the several types now included in the class is the fastest, and while neither of the two races at Larchmont is in any way conclusive, it was a great satisfaction to see more than two starters in a class, and to watch a close contest between boats so evenly matched. The arrangements for the race were made last spring, the Larchmont Y. C. offering a prize for a special race of yachts from 35 to 41ft., to be sailed over the 27 knot course of the club, from the harbor to a markboat off Hempstead Harbor, thence around a markboat off Stamford Light, returning over the same course. There is no other class in the country from which so much sport and instruction may be had as the 40-footers, so-called, including, as it does, not only some of the fastest of the old sloops, but the greatest variety of types; in fact three or four good races with all the boats in would teach more than has been learned for a long time from the larger yachts.

The leading boats, old and new, in the class, are:

	Rig.	L.W.L.	Beam.	Draft.
Crocodile, C.B.	Sloop	40.0	14.0	5.9
Rival, C.B.	Sloop	38.3	14.3	5.1
Hope, C.B.	Sloop	38.0	14.0	4.4
Schemer, C.B.	Sloop	36.1	14.6	3.6
Pappoose, K.	Cutter	39.0	12.6	7.8
Nymph, K. and C.B.	Cutter	39.6	14.0	6.0
Baboon, K.	Cutter	39.6	13.2	8.3
Banshee, K. and C.B.	Cutter	39.9	14.0	6.0
Minerva, K.	Cutter	40.0	10.0	9.0
Chiquita, K. and C.B.	Cutter	39.6	13.6	7.0
Xara, K.	Cutter	39.6	13.0	8.0

The above dimensions are not all strictly accurate, especially the lengths, but they are very nearly correct. The old boats, Crocodile, Rival, Hope and Schemer, are well known; all centerboard sloops built with no outside ballast. Nymph and Banshee are centerboard boats of the new type, with cutter rig and heavy lead keels, both with cockpit and cabin house. Chiquita is a new departure, a still deeper boat, with a more clearly marked keel, but with a small board which is housed entirely under the cabin floor. She too has a cabin house. Baboon, Xara and Pappoose are keel boats, flush-decked, with small steering wells and cutter rigs. Of the two larger ones Xara has a little less beam, more displacement, and less hollow in the midship section. Minerva, the new Fife boat, is the narrowest of the lot, her beam being given at 10ft. Baushee was designed by Mr. A. Cary Smith, Nymph, Baboon, Xara, Pappoose and Chiquita by Mr. Burgess. Xara, Pappoose and Banshee have plumb stems, while Nymph, Baboon, Chiquita and Minerva have clipper stems of more or less shapely appearance. Baboon, Pappoose, Nymph, Xara and Banshee are white, the others black. Banshee, however, was potleaded, *à la* Mayflower, for this race, only the bulwark being left white. Nymph and Banshee are fitted below in the conventional style, owner's stateroom to starboard, cabin aft, and passage to port of trunk. Nymph is very well arranged below, plenty of headroom, a large and roomy cabin, comfortable stateroom and toilet room, while the pantry and galley, taking up the port side abreast the trunk, are very commodious.

The arrangement of Chiquita is novel and very good for a boat that is intended for afternoon sailing and short cruises. The trunk, as stated, is entirely below the floor, and the cabin takes up the entire center of the boat. On each side is a very large locker, long enough to sleep two persons, while in the wings behind each locker is a large space for the bedding when not in use.

The cabin and forecastle, with a small toilet room, take up the entire boat. The house is low, only 18in. from deck, but there is plenty of headroom, in fact the house is hardly necessary in such a model. The cabin is very bright and comfortable in appearance and gives the impression of quite a large room in a house. Chiquita is fitted with one of Crandall's extension spinaker booms, a hollow spar. Baboon is similar to Pappoose below, a main cabin amidship with stateroom aft. Of course the added beam and length give more room, but not to such an extent as might be supposed. The cabin and stateroom are each larger, but still there are no more berths. Xara and Minerva did not come round, the latter not yet being in trim after her ocean voyage. Crocodile and Rival were expected to start, but neither did so, though the former was present. The starters were: Banshee, P. S. Pearsall; Nymph, F. W. Flint; Chiquita, A. Hemmenway; Baboon, C. F. Adams; Pappoose, Simpkins and Thayer.

The weather was clear and warm, the wind moderate from S.W. and the tide near the last quarter of the ebb, when the first gun was fired at 11:15, the preparatory interval being but 5min. Banshee, sailed by Mr. A. B. Alley, went over the line first, with intermediate jibtopsail set, while Pappoose came next, with small jibtopsail. All were limited to working topsails. Chiquita crossed in good season. Nymph went over as the handicap gun fired, and Baboon lost 46 seconds by the handicap. The start was timed:

Banshee	11 21 03	Nymph	11 24 55
Pappoose	11 23 00	Baboon	11 25 46
Chiquita	11 24 06		

Baboon was noticeable from her white spars, gaff and topmast, Mansfield's patent hollow spars, wrapped with paper. She had also a liberal allowance of battens, three each in mainsail and jib and one in foresail. She and Pappoose steered with tillers, the others with wheels. Her owner, Mr. C. F. Adams, was at the stick. On board Chiquita were Mr. Burgess, Mr. Hemmenway, Dr. John Bryant and Capt. Crocker, the latter at the wheel. Mr. Flint and Mr. E. A. Willard were on Nymph, while Pappoose was sailed by her skipper, Capt. Watson. The order was not changed on the short reach across to first mark, the times being:

Banshee	11 50 15	Nymph	11 54 02
Pappoose	11 52 27	Baboon	11 56 02
Chiquita	11 53 15		

All set spinakers to starboard as they came round the buoy, there being very little difference in the time in which each executed the maneuver. Balloon jiptopsails were also sent up. Banshee held a good lead, but ran more to the south, and at 12:08 took in her spinaker, running for eight minutes without it, when she set it again. As the rest carried theirs she lost by the change. Chiquita passed Pappoose about 12:15 and then caught and passed Banshee, steering a more direct course than the latter and making the mark a little ahead. Baboon ran very fast and passed Nymph, taking fourth place. The times at the Stamford mark were:

Chiquita	1 09 27	Baboon	1 14 39
Banshee	1 09 51	Nymph	1 14 50
Pappoose	1 12 10		

The actual times over the leg, a distance of about ten knots, were:

Chiquita	1 16 12	Pappoose	1 19 43
Baboon	1 18 37	Nymph	1 20 48
Banshee	1 19 36		

Here the leading boat, a keel craft, in spite of her board, with 7ft. draft, outran the other two centerboards, while Baboon, with 8ft. 3in. draft, came next, and Pappoose, in spite of 4ft. less length, held her own with Banshee and beat Nymph.

Now came the best part of the race, the beat back to Hempstead against a good scupper breeze for all. Chiquita and Banshee were well away before the others turned, both starting on port tack and laying as high as possible. There was little difference noticeable in them at first, Chiquita being, however, the stiffer. Baboon and Nymph came round together, the keel boat to windward, but Nymph soon started to outweather her. Nymph was pointed higher, but Baboon ran away from her too fast and she gave it up. All started home on port tack, the first to go about being Pappoose, at 1:18, making a short hitch and staying again, at 1:21, to windward of Nymph. Chiquita, well ahead, made the same maneuver, standing to the south for 2m. at 1:22. Baboon tacked for the first time at 1:27:30, going about again at 1:30½ between Pappoose and Nymph, then nearly abreast, but astern of both. At 1:45 the two leaders were about ¼ mile ahead of the others, Banshee perhaps 200yds. ahead of Chiquita, but more than that distance to leeward. All were carrying small jibtopsails. At 1:45 Pappoose, on starboard, crossed Baboon's bow, the pair then well to windward of Nymph. At 2:08 both Pappoose and Baboon again made another hitch to the south, holding it for nearly 6m.

All this time Banshee had not tacked and Chiquita had made but one short leg, and yet both were looking up well for the mark. Nymph, too, though astern, was laying her course for the mark. Neither Baboon nor Pappoose could have made the course in a single leg, but both threw away a good deal by the many tacks they made, and the former once literally overstood. When they left the Nymph, about 1:35, the three were about even, and had they stayed nearer to her she would probably have come out ahead, but as it was they threw away a part of the distance by standing over too far. When Banshee set her jibtopsail at the lee mark the halliard was left slack, the sail hanging loose along the stay. She sailed with it in this shape until within a couple of miles of the Hempstead mark, when the halliard was set up properly. The result was at once apparent, as she began to leave Chiquita very fast. Nearing the mark the puffs came in pretty heavily and Chiquita took in her jibtopsail. Both were bothered a little by the working schooners that were passing, but neither gained over the other in this way. The mark was turned:

Banshee	2 43 07	Pappoose	2 52 30
Chiquita	2 45 27	Baboon	2 52 50
Nymph	2 49 22		

The elapsed times then over the windward leg were:

Banshee	1 34 16	Baboon	1 38 11
Nymph	1 34 32	Pappoose	1 40 20
Chiquita	1 36 00		

Banshee and Nymph, both sailing the leg without a tack, came out very evenly in point of time; Chiquita, with one short tack, was next, while the two keels were considerably astern, but partly through bad pilotage. The last short leg, with wind free, was soon sailed. Banshee set her spinaker to port, but Chiquita contented herself with a balloon jibtopsail; Nymph, Baboon and Pappoose also set spinakers. A wandering puff struck the spinaker on Nymph and carried it up over the topmast stay, so that her crew were only too glad to get it in, and the same mischievous squall served Banshee nearly as badly, lifting the spinaker boom high in the air, so that it was quickly taken in. The official times were:

	Start.	Finish.	Elapsed.
Banshee	11 21 03	3 07 46	3 46 43
Pappoose	11 23 00	3 16 47	3 53 46
Chiquita	11 24 06	3 09 25	3 45 19
Nymph	11 24 55	3 13 04	3 48 09
Baboon	11 25 00	3 16 09	3 51 49

None of the boats were officially measured by the Larchmont Y. C. rule, but it is certain that Chiquita wins. Her crew started for Boston at 4 o'clock on Sunday afternoon on Saturday, so she could not start in the club regatta. Thursday Mr. Burgess had telegraphed to the club asking that clubtopsails might be allowed. The reply was that it could not be permitted, as yachts had already entered under the published conditions, but that a prize would be given for a third race on Monday, for this class only, with clubtopsails, and that as many races as desired and under any sail, would be arranged to follow.

ANNUAL FALL REGATTA, SEPT. 1.

It speaks little for the sporting spirit of New York yachtsmen when they allow a good race to go by without entries in some of the best classes and with only one or two in others. The Larchmont Y. C. provided everything, without even an entrance fee, but the racing men did not show up. However, it will soon be winter again, and the lively and exciting sport of newsboat per racing will give a chance to these sportsmen to prove how fast their craft are. For the large schooners and sloops the course and winds are not as good as one could wish, but the 70-footers have had some very good races over the same course. Shamrock and Fanny were in the harbor, and Pocahontas sailed with the fleet, but neither started in the race. Mischief alone turned up in the next class, and Anaconda in the class below, so the two were matched in order to make any race for them. The 47ft. class should have had some entries, but no boats appeared. The 40-footers came out best of all, with six starters, Baboon, Banshee, Pappoose, Crocodile, Nymph and Inez, the latter an old center board sloop not known as a racer, the rest needing no introduction. Unfortunately Chiquita's crew had left, so she did not enter, but started for Boston in the morning. In the class under 35ft. there were but three starters, in the next class two, in the one below that none, and so down to the end. In the schooners only Agnes and Tioga started.

During the night there had been a hard squall of rain, the wind shifting all about, and the day broke with a cloudy sky and a very uncertain look to the weather. The sun came out, however, with a moderate breeze from the northward, and by 9 A. M. there was wind enough to start the race. Knowing the uncertainty of a northerly breeze, it would have been sound policy for the committee to have sailed the race at the earliest possible moment, but a long wait was made, until 11:35, before the start was given. The consequence was that the wind blew itself out before the race was finished, leaving the boats for the last hour without any wind. The starters were as follows:

CLASS E—SCHOONERS.

Agnes	J. N. Winslow
Tioga	S. L. Husted, Jr.

CLASS 4—SLOOPS.

Mischief	F. T. Underhill
Anaconda	J. G. Prague

CLASS 7—SLOOPS.

Nymph	F. W. Flint
Banshee	P. S. Pearsall
Crocodile	A. L. Thorne
Baboon	C. F. Adams
Inez	J. H. Cole
Pappoose	Thayer & Simpkins

CLASS 8—SLOOPS.

Iseult	C. W. Wetmore
Wacondah	H. Doscher
Volusia	J. M. Williams

CLASS 9—SLOOPS.

Amazon	Z. E. Lewis
Fauna	M. Bulkley

CLASS 11—OPEN BOATS.

Lakshmi	Colonel Loeser
White Cap	G. C. Barnett
Brunhilde	Com. Willis

CLASS 12—OPEN BOATS.

Sirene	H. A. Doremus

CLASS 13—OPEN BOATS.

Apache	F. C. Woodbury

CLASS 16—OPEN BOATS.

Ione	S. Wainwright
Gwendolin	J. W. Curtis

Classes 5 and 4, after turning the first mark off Hempstead Harbor, ran to a mark off Stamford Light, returning over the same course. All the other classes turned the Hempstead mark in going out, then all but 13 and 16 turned a mark off Captain's Island. From here Class 7 went home by way of Hempstead mark; 8, 9, 11 and 12 went home direct; 13 and 16 turned Mattinnicock buoy, and then came straight home. Besides two cash prizes in each class special prizes were offered for yachts in Class 3 and those in Class 4, built prior to 1883, provided they did not win a club prize. The Connor cup was also offered for Class 3. The preparatory gun fired at 11:30, and 5m. later the start was given. Iseult was the first to get away, crossing the line promptly, with Nymph close by her. Both were carrying spinakers to port and balloon jibtopsails. Banshee performed some queer maneuvers above the line and was late in crossing, being handicapped. The majority of the fleet crossed in good season. Iseult and Nymph had a brush for a time, the Burgess boat going ahead, while Anaconda came up with the pair. The three were still some distance ahead of the pack when the tug Narragansett, with a string of four coal barges in tow, each with a long tow line, ran directly across the course. The captain of the tug could not have failed to see the fleet of racers, and had he slowed down in good season the tide would have held his tow and he could have cleared the fleet, but he kept his course, going very slowly. The only thing to do was to luff up, so in came the spinakers on the three leaders. Nymph made a push and ran to leeward after getting in her spinaker, crossing the bows of the tug, but Iseult and Anaconda went astern of the last coal barge. By the time that their spinakers were set again the rest of the fleet had caught them, thus taking all the advantage they had gained by an early start. Baboon was close astern of Iseult, turning the mark with her. Nymph and Anaconda, after being separated by the tow, came to the mark exactly at the same time. The times at Hempstead mark were:

Nymph	12 17 11	Volusia	12 20 30
Anaconda	12 17 31	Crocodile	12 21 15
Iseult	12 18 49	Agnes	12 22 31
Baboon	12 18 52	Banshee	12 23 22
Inez	12 19 24	Pappoose	12 23 46
Wacondah	12 19 30	Lakshmi	12 24 57
Sirene	12 23 21		

Anaconda and Mischief started sheets for the Stamford mark, while the others set small jiptopsails and trimmed in sheets for the reach across to Captain's Island mark. Nymph and Baboon led the fleet, the open sandbagger Sirene also being well up to the front. Banshee, with a balloon foresail and small jibtopsail, was still a long way astern of the two leaders, but ahead of Pappoose and Crocodile, the latter doing very poorly. Iseult had a very long lead of her class, hanging on to the bigger boats until they separated at Captain's Island. The times taken at this mark were:

Nymph	1 22 22	Agnes	1 32 05
Baboon	1 24 13	Iseult	1 32 30
Banshee	1 30 39	Pappoose	1 32 45
Sirene	1 32 05	Crocodile	1 32 52

Nymph had slightly increased her lead on Baboon, while Banshee had gained on both. They now started back over the same course to Hempstead, while Iseult and Sirene trimmed in close for the reach along shore to the finish. The wind was very light out in the Sound, with calm patches, and the race across to Hempstead was largely a matter of luck. Baboon passed Nymph when about half way across and from there out left her, the two turning the last mark at 2:29:01 and 2:31:29. The beat of three miles to the finish took over an hour, Baboon finishing at 3:42:40 and Nymph at 4:08:50. Banshee and Pappoose were a very long distance astern. Iseult won easily in her class, beating Volusia by 10m. 40s., elapsed time. The official times are as follows, the corrected times being subject to the measurement of most of the yachts:

CLASS E—SCHOONERS.

	Start.	Finish.	Elapsed.
Agnes	11 38 31	5 24 17	5 47 46
Tioga	11 40 37	Not taken.	

CLASS 4—SLOOPS.

Mischief	11 44 31	5 32 14	5 47 43
Anaconda	11 59 20	5 32 48	5 53 28

CLASS 7—SLOOPS.

Baboon	11 40 26	3 42 40	4 02 24
Nymph	11 37 52	4 08 50	4 30 58
Banshee	11 45 00	4 20 45	4 35 45
Crocodile	11 41 12	4 48 51	5 07 39
Pappoose	11 44 28	5 01 16	5 16 48
Inez	11 39 27	5 36 32	5 57 05

CLASS 8—SLOOPS.

Iseult	11 37 42	2 41 59	3 04 17
Wacondah	11 38 25	2 58 09	3 19 44
Volusia	11 38 37	2 53 34	3 14 57

CLASS 9—SLOOPS.

Amazon	11 39 52	3 04 44	3 25 01
Fanra	11 45 00	3 32 20	3 47 00

CLASS 11—OPEN BOATS.

Lakshmi	11 39 25	3 58 30	4 19 05
Brunhilde	11 44 49	4 16 00	4 31 11
White Cap	11 45 00	5 15 10	5 30 10

CLASS 12—OPEN BOATS.

Sirene	11 39 57	2 36 14	2 56 17

CLASS 13—OPEN BOATS.

Apache	11 44 29	3 25 08	3 40 39

CLASS 16—OPEN BOATS.

Ione	11 43 20	3 41 30	3 58 10
Gwendolin	11 45 00	Did not finish.	

Class E, Agnes; Class 4, Mischief or Anaconda (subject to measurement); Class 7, Baboon first, Nymph second; Class 8, Iseult; Class 9, Amazon; Class 11, Lakshmi; Class 12, Sirene; Class 16, Ione.

SPECIAL RACE, SEPT. 4.

On Monday a third race for the 40ft. class was sailed, clubtopsails being allowed. The course was from Hempstead Harbor, 12 miles to windward, turning a mark off Stamford Light, and return. The wind was moderate from N. E. The starters were Nymph, Banshee and Baboon. The start was made at 11.18, Baboon crossing first and Banshee second. In the beat to windward Nymph led, with Baboon second, the former turning with a good lead. Spinakers were carried on the way home, Nymph still leading. The times are:

	Elapsed.	Corrected.
Nymph, F. W. Flint	4 34 44	4 34 18
Baboon, C. F. Adams	4 38 00	4 38 00
Banshee, P. S. Pearsall	4 45 41	4 45 19

All three races were managed by the regatta committee, Messrs. Willard, Scott and Greacen, in whose hands everything ran smoothly, as is always the case at Larchmont.

AN ACCIDENT TO A YACHT.—On Aug. 25 the sloop Fanny, of Saybrook, Conn., with a pleasure party numbering six ladies and four gentlemen, struck a rock in Plum Gut and sank. All on board were rescued by boats from shore, but with the loss of clothing and valuables. One lady was nearly drowned by being caught under the rigging.

RHODE ISLAND Y. C. FALL REGATTA, AUG. 27.

THE second annual fall regatta of the Rhode Island Y. C. was sailed on Aug. 27, the courses being off the club house at Pawtuxet Neck, R. I., as follows:

Classes 1, 2, 3 and 4: Course No. 2.—Reverse of course No. 1, leaving turning stake on port, which is as follows:

No. 1.—Start, passing between judges' boat and signal off club house, too and around buoy off Ramstick Point, leaving same on starboard, thence around stakeboat S.E., Warwick light, leaving same on starboard, and return to starting point, 20 miles.

Classes 5 and 6: Course No. 5.—Start, passing between judges' boat and signal off club house, to and around Red Spar Buoy off Nayatt Point, leaving same on port, to and around Black Spar Buoy, between Silver Spring wharf and north end of Starve Goat Island, leaving same on starboard, back to starting point, 11 miles.

The classes and prizes were as follows:

Class 1.—Sloops 40ft. and under 54ft., no restrictions as to sails. First prize $50, second $33. A silk pennant, the gift of Messrs. Jillson & Folsom, will be presented to the yacht in this class making the fastest actual time.

Class 2.—Sloops 31ft. and under 40ft.; no restrictions as to sails. First prize $20 and a cup costing $50, presented by Vice-Com. Sands, second $25, third $15.

Class 3.—Sloops 23ft. and under 31ft.; mainsail, working gafftopsail, forestaysail and jib only shall be carried. First prize $30, second $20, third $10.

Class 4.—Catboats 23ft. and under 30ft.; mainsail only. First prize $30, second $20, third $10.

Class 5.—Catboats 19ft. and under 23ft.; mainsail only. First prize $30, second $20, third $10.

Class 6.—Catboats under 19ft.; mainsail only. First prize $20, second $10, third $5.

The entries were:

CLASS 1—SLOOPS.

	Length.
Onward	W. H. Low, Providence
Millie	F. L. Budlong, Providence
Witch	James Lawless, Bristol
Zigeuner	Max Agassiz, Newport

CLASS 2—SLOOPS.

Peri	L. P. Sands, Newport
Mignon	C. G. Bloomer, Pawtuxet
Mabel F. Swift	C. W. Anthony, Fall River
Alice	G. H. Slade, Providence

CLASS 3—SLOOPS.

Kelpie	C. F. Janes, Providence
Rhodia	W. H. Wood, Providence
Myrtle	J. Brown, Warren
Mascot	H. S. Chapron, Providence
Diamond	L. H. Tillinghast, Pawtuxet

CLASS 4—CATS.

Rowena	J. W. Sayles, Providence
Alice A.	A. E. Austin, Providence
Acme	B. Davis, Providence
Glück Auf	H. G. Nichols, Newport
Mollie	H. E. Perry, Monument Beach
Surprise	T. Codman, Monument Beach
Tramp	T. Aiken, Jr., Monument Beach

CLASS 5—CATS.

Ideal	W. E. Simmons, Dighton
Success	J. F. Perry, Monument Beach
Beatrice	C. E. Curry, Monument Beach
Edna	A. E. Nickerson, Providence
Hesper	T. Hagerty, Fall River
Thistle	T. H. Jenckes, Providence
Rarus	L. W. Shurtleff, Pawtuxet

CLASS 6—CATS.

Arnold	E. A. Rogers, Pawtucket
Cora May	F. A. Pratt, Providence
Vision	W. H. Evans, Riverside
Sunshine	J. L. Padgett, Riverside
Unknown	Elma Young, Swanzey
Mascot	W. H. Allen, Monument Beach
Glimpse	O. Taft, Providence
Bertha	P. F. Davis, Fall River
Jaunty	J. T. P. Bucklin, Providence
Nettie	W. E. Carroll, Providence
Zara	J. W. Gledhill, Providence

At 10 A. M. a thunder squall passed over the fleet, causing all to stow canvas quickly, but the weather soon cleared and a calm followed. By 1:30 P. M. there was a light N. W. wind, so the race was started. The wind shifted to S. W. with calms at times, making flukes for some of the lucky ones. The full times were:

CLASS 1.

	Finish.	Elapsed.	Corrected.

Zara	5 04 23	2 52 00	2 47 09

Unknown protested Bertha for fouling and Bertha filed a cross protest for shifting ballast. It was found, however, that Bertha did not belong to any club, so she was disqualified, Unknown taking first prize and Zara second. Millie wins the silk pennant, while Peri takes the Sands cup for the second time. The judges were Messrs. R. H. Carver, E. Howard Wright, Chas. Manchester, F. P. Eddy and Elisha Arnold.

ROCHESTER Y. C., WOLTERS CUP.—In the first of the series of five club races for the Wolters $50 prize cup only the Scotch cutter Madge, 40ft., and the new Rochester cutter Amelia, 27ft., started. The wind was fresh from S.W. and Madge won by over an hour. Although her owner refused to enter her against the Madge, the cutter Velnette, 24ft., last year's cup winner, sailed the course against Amelia, being beaten 16s. The course is a 15-mile triangle. This is the first time these two boats have met in a race, and the interest was great. The immense advantage of the Madge over yachts half her size makes her final success a matter of no question, but no doubt the races between the smaller yachts, for whom the cup was intended, will keep the interest up. The dates set for the races were Aug. 16 and 30, Sept. 13, 20 and 27. The serious injury to the yacht fleet in the storm of last month has been a great disappointment to Rochester yachtsmen who have worked very hard to make yachting popular in their city. During the storm a large lake schooner drove down on the fleet at its moorings, tearing the yachts adrift and badly injuring them, after which they drifted ashore.

ANOTHER RACE FOR THE 40-FOOTERS.—The Hull Y. C. has offered special prizes for the 47 and 40ft. classes in its open race on Sept. 8, and it is hoped to have Alga, Vixen and Fanita in the 47ft., and Baboon, Chiquita and Xara in the 40ft. class. Minerva will not enter any races this season.

LAUNCH OF A STEAM YACHT.—On August an iron steam yacht 100ft. long was launched at Roach's old yard, Chester, Pa. Her name is Clifton and she was built for Mr. C. H. Mallory, of New York.

HULL Y. C. OPEN REGATTA, SEPT. 1.

In spite of rain and bad weather the Hull Y. C. sailed a very successful race on Sept 1, its open regatta, having over 60 entries. Classes and courses: Special class, for yachts measuring 40 and less than 47ft. sailing length; first class, for centerboards and keels 31 and less than 40ft.; second class, centerboards and keels 25 and less than 31ft.; third class, centerboards and keels 21 and less than 25ft.; fourth class, all jib and mainsail yachts less than 21ft.; fifth class, cat-rigged yachts 18 and less than 21ft.; sixth class, all cat-rigged yachts less than 18ft. Course for special class—From starting line, leaving judges' yacht on starboard, out Hull gut, leaving Toddy Rock buoy on starboard, Shag rocks, whistling buoy off Graves and Egg rock on port, whistling buoy off Graves, Shag rocks on starboard, Toddy Rock buoy on port, through Hull gut across line between judges' yacht and red flag off the club house, 19 miles.

First Class—From starting line, leaving judges' steamer on starboard, thence through Hull gut, leaving Hunt's ledge and Point Allerton buoys on starboard, Harding's bell boat on port, Graves whistling buoy on port, Ram Head, Lovell's Island and Fort Warren on port, Galloupe's Island on starboard, to and across line between judges' boat and red flag off the club house—15 miles.

Second and Third Classes—From starting line, leaving judges' steamer on starboard, thence through Hull gut, leaving Hunts' ledge and Point Allerton buoys on starboard, Harding's bell boat on port, Martin's ledge buoy on port, Shag rocks on starboard, Hunt's ledge buoy on port, to and across lines between judges' boat and red flag off the club house—11 miles.

Fourth, Fifth and Sixth Classes—From starting line, leaving judge's steamer on port, H. Y. C. barrel off Princes' head on port, H. Y. C. barrel off northwest end of Bunkin Island on port, red flag at starting line on port, H. Y. C. barrel off Princes' head on port, H. Y. C. barrel off northwest end Bunkin Island on port, across line between judges' boat and red flag off the club house—7 miles.

In the special class were Vixen and Fanita; Shadow was the only notable entry in the first class, while Aglaia sailed alone in the keel class. White Fawn, Mucilage and E. W. D. promised a good race in second class centerboards, while of the keels were Marguerite, Mr. Taylor's new cutter, designed by Borden, Mr. Babson's new cutter Mignon, designed by her owner, the Burgess cutters Saracen and Prince Karl. The start was made at 12:15 for first class, the others following with 5min. interval. Both Fanita and Vixen were late, so they did not start until 1:30. The wind was light from N.W. at start. The times were:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Fanita, T. H. Shepard	45.2	3 36 04	3 03 19
Vixen, W. C. Loring	46.01	3 42 15	3 09 49

Topsy, E. D. Foss	14.04	Withdrew.	
Climax, W. E. Tucker	18 06	Withdrew.	
Eureka, E. B. Rogers	20.02	Withdrew.	
Modoc, D. W. Belcher	15.04	Withdrew.	

Tarantula, Budge, Delphine and Mavis did not start.

FIFTH CLASS.

Mabel, F. L. Dunn	19.11	1 32 41	1 09 34
Tarter, J. B. Forsyth	19.11	1 34 18	1 11 11
Peri, Frank Driscoll	18.10	1 35 31	1 11 23
Scamp, Frank Grey	18.04	1 33 00	1 11 24
Myrtle, R. C. Poor	19.00	1 37 01	1 13 03
Joker, J. C. Davis	20.02	1 37 18	1 14 24
Niobe, G. W. Keates	20.02	1 38 06	1 15 12
Jester, W. H. Besarick	19.02	1 39 28	1 15 40
Pet, J. W. McFarlane	19.06	1 40 10	1 16 40
Urchin, Puritanita	Did not start.		

SIXTH CLASS.

Rocket, H. M. Faxon	16.02	1 30 40	1 03 43
Mirage, J. E. Jordan	17.05	1 33 44	1 08 11
Wild Fire, H. A. Keith	17.02	1 35 51	1 10 01
Guenn, Perry Lawton	17.08	1 38 51	1 11 34
Mamie, H. T. Bowers	17.09	1 37 47	1 12 35
Elsie, C. F. Hardwick	16.07	1 39 46	1 13 19
Nora, G. B. Denny	16.02	Withdrew.	

Dolphin, Doctor, Mermaid, Nonpareil, Frolic, Wildcat, Mischief and Psyche did not start.

The winners are—Special class, first prize, $75, Fanita. First class, first prize, $35, Shadow; second, $20, Magic. Second class, centerboards and keels, first prize, $30, White Fawn and Mignon; second, $20, Mucilage and Marguerite: third, $10, E. W. D. and Prince Karl. Third class, centerboards and keels, first prize, $25, Hazard and Echo; second, $20, Posy and Thelga; third, $10, Good Luck and Annie Maud; fourth, $5, Sea Bird and Halcyon. Fourth class, first prize, $25, Tom Cat; second, $20, Coyote; third, $10, Diadem; fourth, $5, Flora Lee. Fifth class, first prize, $25, Mabel; second, $20, Tartar; third, $10, Peri; fourth, $5, Scamp. Sixth class, first prize, $23, Rocket; second, $20, Mirage; third, $10, Wildfire; fourth, $5, Guenn. Protests were entered by White Fawn against Mucilage, and by Prince Karl against Marguerite on account of measurement, by Maud S. against Posy for fouling her at the line. The judges were Com. H. E. Converse, J. R. Chadwick, Waldo D. Lovell, John A. Stetson, B. W. Rowell, W. A. Carey and James B. Forsyth.

SAVIN HILL Y. C.—A race for boats under 15ft. was sailed on Sept. 1. in a light wind. The times were:

	Length.	Elapsed.	Corrected.
Snag, E. Robinson	9.03	... ...	... ...

Snail, W. Scott	10.00	... ...	... ...

The judges were J. H. Stark, J. H. Odell and J. H. Shaw. Volante was ruled out for fouling a buoy. Minnie wins first prize, $15; Sprite second, $10; and Baby third, $5.

KNICKERBOCKER Y. C. FALL REGATTA, SEPT. 3.—The annual fall regatta of the Knickerbocker Y. C. was sailed on Sept. 3 in a light breeze, the course being from Port Morris around the Gangway Buoy. The start was made at 10:40 A. M., with a light N.E. wind. The starters were: Ida K, Maggie, Truant, Bubble, Mayotta, Alice, Rosetta A., Thisbe, Marvel, White Cap, Duster, Vision, Rover, Dora, Lena, Black Hawk, Wacondah, Wave, John Demarest and Adelaide. Only the first two saved a handicap. The turn was timed:

Ida K	1 22 30	White Cap	2 13 14
Truant	1 39 30	Bubble	2 13 14
Duster	1 45 00	Vision	2 15 25
Rosetta A	1 50 30	Black Hawk	2 17 50
Mayotta	1 50 30	Alice	2 19 33
Maggie	2 02 03	Gem	2 22 38
Dora	2 04 00	Wacondah	2 23 15

Spinakers and jibtopsails were set for the run home, but the wind shifted to S.W., making a beat. The times were:

CLASS 1—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Dora	11 00 00	4 15 40	5 15 40	5 15 40
Wacondah	11 00 00	4 38 45	5 38 45	5 37 32½

Nymph, C. W. Amory, B	17.09	0 47 10	0 40 04

Winners.—Class 1—Mattie first, Mollie second, A. P. E. third. Class 2—Mist first, Wildcat second, Success third. Class 3—Trump first, Daisy second, Eleanor third. Class 4—Polly first. Judges, Richard Codman, W. Lloyd Jeffries. The special class for sloops 30 to 40ft. waterline was not started, as the boats were all strangers and having to go further into the bay than other classes, were afraid of the fog. This race will be sailed with the 138th race, Sept. 15. Had the day been a clear one forty boats at least would have started. In the 134th race the protest of Polly against Wink has been decided in favor of Polly, who takes prize. In the 135th race the protests were decided as follows: Nonpareil against Dolphin not allowed; Coyote against Tom Cat withdrawn; Sara cen against Mignon, Mignon is 28.10ft. sailing length, but still takes first prize. Official measurement of Kathleen makes her 7s. behind Wraith, who takes second prize, Kathleen taking third.

NEWARK Y. C. FALL REGATTA, SEPT. 3.—On Sept. 3 the Newark Y. C. sailed its sixth annual sweepstakes regatta in a fresh S.E. wind, the course being from Ulrich's boat house, Greenville, to a stakeboat anchored off the west end of the New Jersey Central Railroad draw, thence to a stakeboat anchored off Centreville, thence to starting point; twice over the same course; 10 miles. The times were:

The winners were the Tethys, the Crawford and the Anna Winger.

GLEAM.—The steam yacht Gleam, from which Mr. T. H. Garrett was drowned, is reported as sold to a New York owner, who will rebuild her at Baltimore.

EM ELL EYE.—This fast open boat, built in 1885 by Harry Hutchins, has been sold by P. M. Bond to go to Wilmington, N. C. The price is reported at $1,000.

RAMBLER.—This old schooner, which left New York some time since with a cargo of dynamite for Aspinwall, is reported as wrecked in southern waters.

METEOR, Mr. Bateman's steam yacht, is now in Mr. A. Cary Smith's hands for a new stern, the work being done by Poillon.

New Publications.

MISS FRANCES MERLEY, by John Elliott Curran, is a novel very different in character from those which usually come under the reviewer's eye. It is the first important production of a writer already favorably known by his contributions to *Scribner's* and other magazines, and while deserving of high praise as an artistic production, it is nevertheless a work written with a purpose.

The story is that of a woman, young, attractive and governed by

her impulses, and it is told with great power and with a keen insight into the workings of the human mind, such as we seldom see revealed in a work of this character. The scene is laid for the most part in one of the old Sound towns in Connecticut, and the author shows a readiness of observation and a wholesome appreciation of the beauties of nature, which prove him to be an artist. Nothing can be more delightfully fresh, healthy and sweet than some of the descriptions, which now and then for a moment interrupt the thread of the story.

The characters are few, but well individualized and strongly drawn. Indeed in his heroine the author displays a subtle analysis of character such as is rarely attained by the masculine mind in dealing with this intricate problem. It may be said of all the persons represented in the story that what especially strikes the reader is the essential humanity of each and every character in the book. They are just such men and women as we all meet every day.

The story has in it nothing very exciting. It is a plain every-day tale of the loving and suffering which is so large a part of almost every life; but the plot is ingenious and worked out in an extremely clever way, and the story is full of interest to the very end.

The practical lesson of Miss Frances Merley's life is that although rebellion against the constraints of conventional life may argue a craving for broader freedom and greater fullness of life, it by no means follows that even the most excellent and estimable young women can follow their own impulses in everything without danger of falling into error, whether the prompting be to self-indulgence or to self-abnegation.

The author presents himself in his work as a man of intellectual breadth, moral worth and polished culture; a man with lofty ideals tempered by clear insight into the practical aspects of life. We shall expect to hear more of Mr. Curran in the future. Boston: Cupples & Hurd.

ENTOMOLOGY FOR BEGINNERS, by Dr. A. S. Packard, is written, we are told, for the use of young folks, fruit growers, farmers and gardeners. In it beginners will find directions for collecting and preserving insects, for mounting specimens for the microscope, and preparing them for study, as well as for making collections. The farmer, the fruit grower and the gardener will find in the work descriptions of the insect pests against which they are obliged to wage such constant war, and references to other more technical and larger works in which more detailed descriptions can be found. The language of the book is simple; technicalities are avoided, but if necessarily used, their meaning is made plain by means of the very copious glossary which is found at the end of the volume.

Dr. Packard's new book is an introduction to the study of entomology, and as such is a necessity to any one desiring to pursue that study, but who has no knowledge of the subject and no teacher to whom he can apply for elementary instruction. Many people, perhaps, who have longed to find out something about our insects, have purchased a copy of Dr. Packard's Guide to the Study of Insects, and have vainly endeavored, with the aid of a dictionary, to get an idea what was meant by the words employed in some description of a certain insect. The terminology of science has not yet found its way into Webster, and glossaries such as the one before us are needed in all the sciences.

Bearing in mind all the while that the language of this volume is plain English all through, a list of the chapter headings will give a very fair idea of the material contained in it. The first subject treated is naturally "The Structure of Insects;" this is followed by "The Growth and Metamorphosis of Insects;" then comes the "Classification of Insects," "Insect Architecture," "Insects Injurious and Beneficial to Agriculture," "Directions for Collecting, Preserving and Rearing Insects," "Mode of Dissecting Insects," and last a chapter on "Cutting and Mounting Microscopic Sections of Insects and Mounting them Whole, etc." Finally there is the "Entomologists' Library," which contains the most indispensable articles, memoirs and complete works on this subject works which are really necessary to the student. This is followed by the glossary and the index.

Valuable as is the text of this volume, it would be worth but little to the classes for whom it was written were it not for the excellent illustrations which it contains. Of these there are nearly three hundred and they help to make the book a most useful and admirable work. New York, Henry Holt & Co., 1888.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

I. S., Brooklyn, N. Y.—Is the pickerel a game fish? Ans. Yes.

W. A. C., Norristown, Pike county, Pa.—We cannot give the name.

O. G.—The law on partridge in Sullivan county, N. Y., was off Sept. 1.

H. E. W., Plainfield, N. J.—The breeding of quail in confinement has not been successfully prosecuted. The birds will lay and hatch, but the young cannot be reared.

WILD CHARLEY.—The game law of New York governs Staten Island, and a digest of it was given in our issue of July 5. Non-residents are required to pay a license fee of $10 to shoot on Staten Island.

A. T. B., Washington.—Will you kindly give me the address of some reliable maker or dealer of muzzleloading sporting rifles? I find no advertisements of such in the sporting papers. Ans. Wm. V. Lowe, Pittsfield, Mass.

FROG CULTURE.—Two correspondents ask for information on frog culture this week. We would again say that this alleged industry is a delusion and a snare, and would refer them to our answer, page 117, in last issue.

C. M., Greenville, R. I.—Wild rice should be sown in the late fall or in early spring, in shallow water. If the water be a bay, lake or pond, sow it along the margin; if a stream of running water with a swift current sow in a cove or bend where the seed will not be swept away.

T. B. B., New York.—Please give names of winners in the bull-terrier class over 25lbs at Newark, 1887. Ans. First and third, F. F. Doles' Maggie May and Young Count; second, J. Patterson's Judas; reserve, C. A. Steven's Earl. Very high com., M. Chase's Mark-Eyed Victor. Com., A. Bridgman's Jack.

G. J. W., St. John.—1. What advantage, if any, have tin fish tackle cases over wood? 2. Can they be had of wood? 3. Which is supposed to be the best automatic cartridge loader? 4. Is the ventilated rubber boot superior to the ordinary rubber boot for hunting and fishing purposes? Ans. 1. It is lighter and not so bulky. 2 Yes. 3. The merits of several of these tools are substantially equal. 5. The ventilation is undeniably an advantage.

Palmer's Pat. Knapsack.

This knapsack is the invention of Capt. Geo. H. Palmer, U. S. A., and has been approved by a Board of Army Officers, convened for the purpose of selecting the best knapsack. After examining a large number of knapsacks, haversacks, etc., they gave Palmer's equipment their unqualified approval. It has also been adopted by the Militia and letter carriers in different parts of the country. It is equally well adapted to the use of pedestrian tourists, mining prospector, or any one who wishes to make long or short trips on foot, and carry more or less luggage.

We are the sole manufacturers under license from the patentee for these knapsacks for all purposes except the regular army, militia outside of the State of Illinois, and the letter carrier department.

HIGH CLASS CIGARETTES.

TWO NOTABLE WORKS.

American Game Birds.

Names and Portraits of Birds which interest gunners. With Descriptions in Language Understanded of the People. By GURDON TRUMBULL. 90 illustrations and an Index 8vo., Cloth, Extra, Gilt Top, $2.50.

A book that is entirely new and curious, which possesses a very great interest for the student of ornithology, and which will be still more warmly welcomed by the gunner. . . . For many years we have received inquiries for a book containing descriptions of our game birds with figures by which they could be recognized, and we have always been obliged to say that we knew of none which answered these requirements. At last however, we have such a book in this.—*Forest and Stream, N. Y.*

A novel and genuine piece of work, made up of information not to be had elsewhere. It will not fail to take and hold its own place. . . . A very interesting book, scholarly, leisurely, smelling of the library shelves and the easy chair after the muddy boots and shooting iron have been away.—*The Nation, N. Y.*

Trees and Tree-Planting.

By Gen. JAMES S. BRISBIN, U. S. A. Portrait 12mo., Cloth, $1.50.

Of immense value. General Brisbin writes simply and in a most manly way. . . . He is a tree lover by nature and from natural conviction, and his love has borne rich practical fruit in this excellent work.—*Chicago Times.*

One of those books which contains that information which has been wanted for a long time.—*N. Y. Times.*

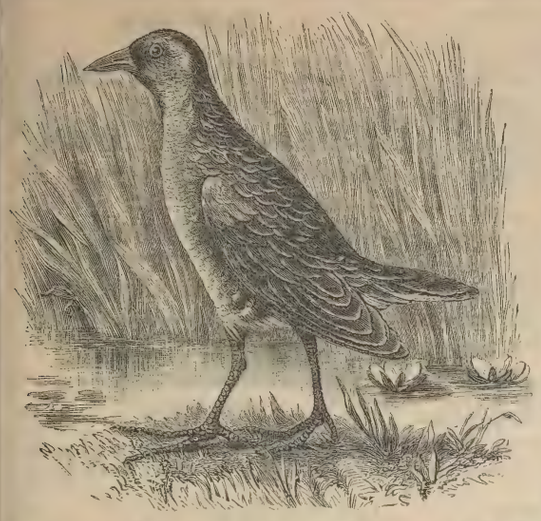
The Audubon Magazine BOUND.



Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00

ANSWERS TO CORRESPONDENTS.

DESTITUTION IN THE NORTHWEST.

IN February last we spoke of the famine which was then causing suffering and death among the Indians of the Athabaska, Peace River and Mackenzie River districts of the extreme Northwest.

Our authority for the statements made at that time was Mr. S. Cunningham, of Edmonton, a member of the Northwest Council, and the information given by him was confirmed by the Rev. Mr. Spendlove, a Protestant missionary, who for nine years has resided in the Mackenzie River region.

More recent reports, received from Father Ledoursal, a Roman Catholic priest in the northern part of the Northwest Territories, indicate that this sad state of things still continues, and that all through the winter, spring and summer, the Indians have been dying of starvation. The crops last year were a failure and yielded nothing. The hunting season was likewise a failure, and the Indians, not securing enough deer or smaller game to keep them alive, were forced to eat, first their skins and furs, and then one after another their dog harnesses and their dogs. When these were gone, they began to struggle back toward the settlements in the hope that there they might find some help, but on the road many a one dropped by the wayside and died. At the settlements they were scarcely better off, for the people were themselves too ill provided to help them, and the wretched Indians fought with the dogs for the garbage thrown out.

This summer things are no better. Up to the middle of June the weather was very cold, the temperature sometimes falling to zero. Besides, the spring and summer were very wet, with almost constant snow and rain, and much of the Athabaska region, always swampy, was overflowed, and its crops again destroyed.

A more hopeless condition of things for the Indians who inhabit this bleak region can hardly be imagined. They are beyond the reach of help from civilization, and the products of the country—scanty enough at the best of times—have failed them now for two successive years. Even those white settlers who are well to do have barely enough for their own wants and are in no position to assist their neighbors, and the provisions and cattle at the missions have nearly all been eaten up.

It almost seems as if these Indians must inevitably perish.

THE TOBIQUE RIVER TRAGEDY.

THE Tobique River, which is sixty miles long from the St. John to Nictaux, its Forks, has no railway communication but at the mouth, hence settlers are isolated. It is populated by about the same class of persons as those who occupy back settlements in Maine and New Brunswick, whose situation, circumstances and dispositions are about the same. The inhabitants of the Tobique on the whole are a peaceable, inoffensive people—farmers, trusting to the lumber business for their means of subsistence rather than to the soil. This class of people anywhere is not so orderly and well-behaved as a farming population. Those who do attend to farming are fairly prosperous. There need be no want of food among any of the settlers on the Tobique, the land on that river being eminently fertile. It is a beautiful stream of clear rapid water, running over a gravelly bottom; it has its sources on the high Crystalline Hills, which divide the waters running into the St. John from those which empty into the Bay of Chaleur.

There may be, and probably is, an ill feeling against persons leasing fishing rights on the Tobique. Such ill feeling, however, would be found among those who have been violating the fishery regulations of the Dominion of Canada, which have never been properly enforced by the Canadian Department of Fisheries. Had such been the case there would never have been any trouble, as poachers would have been taught by this time to respect the laws. Among the farming and respectable people on the river there is no ill feeling against the purchasers of fishing rights.

The parties implicated in the Tobique murder were William Day, a man who has not a good reputation even among his neighbors; he is a man of such character that when young people take his advice or associate with him they invariably get into trouble; he is an idler, who occasionally works in the woods, hunts and fishes; his age is about 40. The other two young men have been intimate associates of his, hunting with him, poaching in his company and generally ill-advised by him. Trafton may be 22 years of age; Phillipine probably about the same. The latter has been on Tobique only about two years. Had they been under better influences than those of Day, there is no doubt that they would now not be in the position they are in. Day has been the evil counselor; and these two the weak instruments by which his ill advice has been carried out. Day is an evil plotter, one who takes care to keep himself out of the results of his plots, leaving to others the carrying of them out.

There is no fear of any further trouble to fishermen and sportsmen visiting the Tobique. All the people on the river look with horror on the late terrible tragedy. It was very unfortunate that one of Major Howes' party discharged a gun to terrify the poachers the evening before the murder. This seems to have been the means of bringing out all their bad passions.

CONCERNING GUIDES.

FROM Sweetwater county, Wyoming, comes a gruesome tale that two young Eastern men who had set out from Rock Springs, on a hunting expedition, with a guide and outfit of horses and mules, have been found dead, murdered by the guide, who stripped the victims of money and valuables and fled with the horses and mules. A clue to the identity of the murdered men is alleged to have been worked out by a ranchman who found in another camp fifteen miles from where the murder occurred a letter all torn to pieces which he put together again.

While it is perfectly credible that all this happened in Sweetwater county, as reported, the probabilities are strongly against the presumption that the two men were murdered by a guide. If they were murdered, and if the murderer shall be brought to bay, in all probability he will turn out to be not a guide in any true sense of the term, but one of those hangers-on encountered in certain parts of the West, who are ever ready to play the tenderfoot for whatever he may be worth, seeking to rob him by swindling rather than by recourse to actual violence. They pose as guides, but their entire service in this capacity is a huge swindle, as they know perfectly well from the beginning, and as the tenderfoot gradually finds out for himself. These fellows have their counterpart in the popular resorts of the East, particularly in the Adirondacks, where, however, this swindling is conducted on a much smaller scale with individual tenderfeet, because the victims are more numerous, and so soon as one has been fleeced another takes his place.

This Wyoming murder (if it occurred) must not be charged to the account of the Western guides, unless it shall be shown that the murderer actually was a guide. A few years ago there was a great stir about an Adirondack case, when it was stated that a woman traveling alone with a "guide" had been subjected to indignity; but it was very quickly shown that the so-called guide was not a guide at all, but a renegade from justice who had fled to the North Woods, taken up the employment of boatman, and like sundry other North Woods boatmen had been dubbed guide, because he could pull a boat, put bait on to a hook, or hold a deer by the tail while the sportsman shot or clubbed it.

Your true guide, the man who has information about the country, knows the ways of game and fish, and on an honest basis exchanges his woodcraft for your greenbacks, is of different texture. The experience of thousands of sportsmen every year demonstrates that in camp with these men in the woods one is as safe as in his own home circle; in fact, the chances of being slugged to death by a burglar, while asleep at home in one's bed, are as ten to one of being murdered by a guide in camp.

AN "AL FRESCO" FUND.

READERS of the FOREST AND STREAM are presumably familiar with the distressing condition of Jacksonville, Fla. Unable longer to contend against the plague unaided, the city has sent up a cry for help. The wires flashed over the country last week this appeal:

To our Friends and Fellow Citizens of the United States:

We, the authorized representatives of the city of Jacksonville, recognizing the fact that the epidemic has now reached such a stage that our own funds are insufficient either to cope with the many cases of absolute necessity for the engagement of nurses or for numerous other demands upon us; and whereas, in the absence of all business, many of our able citizens are unable to furnish further funds, we now think we are justified in accepting the many willing offers of aid that have been received from you. We therefore wish our fellow citizens of the United States to know that we will gratefully receive the aid they have offered, and that any contributions will be used for the benefit of those in need, and where it will do the most good. We request tnat any such contributions may be forwarded to James M. Schumacher, President of the First National Bank and Chairman of our Finance Committee.

Neal Mitchell, President of Duval County Board of Health; D. T. Geron, Acting Mayor; P. McQuaid, Acting President of Citizens' Auxiliary Association.

One of the physicians who have stuck to their posts in Jacksonville, and are doing their duty there—and what a heroic word is that simple word duty—amid the pestilence, is the President of the City Board of Health, Dr. C. J. Kenworthy, the "Al Fresco" of the FOREST AND STREAM, whose writings in our columns have for years charmed the readers, and whose personal courtesies to sportsmen visiting Florida have been innumerable. It was once laughingly said by an angler, whom Dr. Kenworthy had directed to fishing waters, that "Al Fresco" resented the notion of any Northern man fishing in Florida unless he had first directed him where to go. One thing is sure, in the hearts of Northern sportsmen and anglers Dr. Kenworthy holds a very warm place.

We print Jacksonville's appeal as coming from "Al Fresco." Because it comes from him it ought to meet with a generous response, not only from those who have visited Jacksonville, but from all whose hearts and purses may be reached by this urgent cry for help.

It is proposed that contributions which may be made in response to this note shall be known as the AL FRESCO FUND, in Dr. Kenworthy's honor. Money may be sent in care of the FOREST AND STREAM; but better, when practicable, and so more quickly, to Chairman Schumacher. We shall be glad to receive memoranda of any sums so forwarded, in order that they may be recorded as a part of the AL FRESCO FUND.

THE LIST OF FIVE HUNDRED ENTRIES at Buffalo is a most decided victory for fair play.

The Sportsman Tourist.

WHAT SHALL BE THE OUTCOME?

LONG ago—I forget how long—I said: "The game must go." It was too true. The game has mostly gone. "'Tis true 'tis pity. Pity 'tis 'tis true."

I rise to add that the woods must go. The primal forest is disappearing as by magic. It has been slowly disappearing and receding before the advance guard of civilization for two centuries; but the clearing of the frontiersman was a necessity, and he only cleared what he needed of the most fertile portions of the land, while the lumberman cleared the white pine from the high, sterile mountain spurs, and the scattering pines were soon replaced by a dense growth of "small stuff," making better game cover than before.

The dark, dank hemlock ranges were left to nature; and we—the mossbacks of to-day—gathered around our camp-fires by the bright crystal springs in their gloomy shadows, and hugged ourselves in the belief that, come what might come, there was nothing in the sour, rocky soil, or brash, slivery timber, to tempt the cupidity of man; and the hemlock was safe for the next hundred years.

Why, it stood to reason!

Hemlock lumber, even on the banks of a navigable stream, did not pay for "getting out." Was it likely that men were going to throw money away in working and wiring their way into the forests, through stony ravines and along the sides of rocky precipices, after something on which they could only lose? Capitalists do not put up on losing game—not if they know it. We knew that the East was sadly in need of tan bark, and an "extract" mill here and there might be expected; but these were rather advantageous to the country than otherwise, and the raw bark was too bulky for transportation.

Thus we talked and so we thought, as we gathered around our camp-fires in the days gone by.

We knew that, though the mountain could not go to Mahomet, Mahomet might go to the mountain. Somehow, the analogy between Mahomet and a shipload of dry hides seemed to escape us.

It did not seem credible that a cargo of hides could be sent around Cape Horn to New York, run up into the mountains of northern Pennsylvania by rail, tanned into sole leather there and sent back to the Pacific coast at a profit. It seems wonderful to me, even at this day. But cold facts cannot be melted by theories. When it became demonstrable that there was "money in hemlock," capital came to the front and the fate of the hemlock was sealed. Even as I write the hoary centurions of the forest are going down on every side before a hurricane of axemen, and being scalped by a cyclone of "spudders." The tannery village, that unique production of modern days, springs up at a month's notice on every considerable stream where bark is available, and the long, low tannery, with its labyrinth of vats and villainous refuse, commences its vocation of poisoning and depleting the purest trout streams in the land. The horrible roar of the gong whistle is a constant quantity and a diabolical mystery to the dazed and frightened deer, that they flee from as if it were a pack of wolves, to bring up for safety—where? They do not know; neither do I. But they vanish with a rapidity that cannot be accounted for by illegitimate hunting. And they do not come back. As for the trout, the average tannery man considers it a duty he owes his family to dynamite them on every favorable opportunity. They are bound to go anyhow, and had better be stunned and eaten by poor people who need them than be killed by slow poison. As for the law—well, if you want law, pitch into the bosses, who break the law every time they turn their filthy chemicals and refuse into the stream.

The argument is specious, and not easily answered. We did pitch into the bosses, and there was no attempt to deny the plain violation of law on their part, but simply arrogant defiance. They said they would wear us out; beat us by appeals and delay; and they did. Half a million can make a couple of hundred look sick.

Less than a week ago a tannery boss said to me, "We have come to stay. We are utilizing the timber that has been quietly rotting down for a thousand years. A tree doesn't last forever. It sprouts, culminates and decays, doing no good to anybody. We are turning the hemlocks into money; when, but for us, they would go to decay as they have been doing ever since the flood. We have a village of 3,000 inhabitants, well paid, and well fed, and isn't this better than to let the timber rot on the ground?"

"From a business point of view, yes."

But the tanneries have not "come to stay." When the bark is exhausted, they will be left to rot and decay, even as the old cities are left to-day, where, a few years ago, city lots sold at fancy prices. Once the bark is used up, the tannery becomes a ruin. There is nothing to keep it up. The shammy, rough houses will be deserted, the long, low buildings of the "plant" will be relegated to the elements of disintegration, and the populous village becomes a thing of tradition.

And what of the denuded forest? What of the desecrated and poisoned streams? Well, it may be better than we think.

First of all, fire will sweep through the dry hemlock tops and debris of the "job." This will be succeeded by a dense growth of briers, fire weeds, bird cherry and poplars. These will gradually be supplanted by a more substantial growth of maple, beech, pine or oak, according to soil and location. Very much of the denuded forest will grow up to dense cover, wherein small game will find better food and cover than in the dark hemlock forests of old. The land is not worth a cent an acre for any purpose of cultivation, and must, as a matter of course, be left to the operations of nature. As for the streams, I flatter myself with the notion that, when the skinned and denuded land has grown up again with a dense, low, thick-leaved cover, the springs will gush as in olden days, and the streams will flow with pristine purity and fullness. Men will have learned something by that time, and the dynamiter and trout hog will be rated and punished as the burglar or incendiary are treated to-day.

At this present writing the pure waters of the "Susquehanna's utmost springs" are a sight to behold. Let us take, as a fair example, the stream (Pine Creek) from Ansley's to Four Mile Run.

At Ansley's there is an immense tannery, and the banks of the stream from there to Four Mile Run are piled and heaped with spent tan bark, while the water for fifteen miles looks like a decoction of logwood. Once—and not so many years ago either—"Old Moxie" and I stood at Flat Rock, twelve miles below Ansley's, and lifted out 700 trout between sunrise and sunset on a "June rise." They were small, but ran very even in size, from 7in. to 9in. It was rather a greedy thing to do, but had we left them free to run, would there be one more trout in Pine Creek to-day? You may fish Flat Rock to-day from sunrise to sunset without getting a nibble, but I think the next generation will see better sport.

The oldtime backwoods poacher is dropping out. Streams can be restocked at present with certainty and moderate cost.

The floods of a single season will sweep the streams clear of spent tan bark and poisonous chemicals. The denuded forests will be replaced with dense cover and the dried up streams will be restocked, and a wiser generation will conserve the game and fish instead of destroying. It is beyond question that the hemlocks are fated to fade and fail. But that is an inevitable conclusion. Thank Heaven, the tanneries, too, must go. NESSMUK.

PHASES OF SPORT ABROAD.—II.

ANACAPRI, Italia, Aug. 1.—*Editor Forest and Stream:* Months ago was published a letter of mine from Corfu, Greece, under the heading of "Phases of Sport Abroad," in which it was mentioned that the hunters were on the *qui vive* for quail, which were expected daily. Great was the disappointment, for those much-prized birds took other fancies or freaks into their noddles, thereby almost ignoring that Greek "isle of the sea;" sending only here and there a bird, perhaps deputies of different companies, or scouts for making notes and remarks for future wayfarers; and spoiling the writer's intention of sending another missive to "the old folks at home" by way of FOREST AND STREAM.

As the migratory birds are the sole source of hunting in this part of the world, there has been no chance until now, or that is, until last spring, of writing anything of interest.

The season of quail and wild pigeons was very good this year, therefore I'll tell a little about the fun the hunters had here. My compatriots have become such inveterate travelers that I presume it to be about useless to explain that this island of Capri is situated in the Mediterranean Sea, about seventeen miles from la bella Napoli, and seven miles from Sorrento. "Its picturesque outlines form one of the most charming points in the view of the Bay of Naples."

The first quail arrived on the 23d of April, but not in great quantities; the pigeons straying along a few days before. *Le reti* or nets were in readiness, but the birds came very straggling. Every conceivable spot on the edge of the island was occupied, giving it the appearance of being fenced in. These nets are from nine to ten meters high, the higher the better, with rings on their sides, through which good-sized cords are run. These are securely fastened on the tops of immense high poles, and when the wind is not too strong are kept continually spread, otherwise they are unfastened and run down like a sail or a curtain. These nets are contrived in such a manner as to form a kind of sack, by leaving it in folds, or having a piece added to it, so at every interval of perhaps a meter or meter and a half comes one of these bags. The poor, unwary birds come flying, wearied and fatigued from their trip over the sea, on in full force, strike against this fence (no better name can I find for these nets, encircling the island as they do), fall into the bag, become entangled, and are immediately pounced upon by the greedy islanders. Sometimes, not often, after a lucky struggle, a bird frees itself and clears the net, but only to fall a victim to one of the numerous hunters with guns standing on the other side, scattered in all directions and distances from the shore.

As this is the season for all migratory birds, one can easily imagine that all kinds are liable to be, and are caught in the nets. Some mornings one man will make a catch of three hundred, that is, in spring, for then they are never taken in such immense quantities as in autumn. One hunter whom the writer well knows, shot one morning, from 4 until 7 o'clock, thirty-six quail, another morning, in the same length of time, forty; he had with him a small dog of a race peculiar to the island, about 3 years old and untrained.

Rather tedious is the shooting in spring, for at 3 o'clock the hunter must be on the alert, capable of walking an hour, and then tramping around over rough, stony ground until he has satisfied his desire of bagging birds. In the autumn one sits quietly on the *terrazzo* of his house and brings his game down from there; or, at the most, walks out a few steps from his *alberga*. The nets are then placed on the mountainsides, no more down in *limbo*, where the principal shooting place is, from here out. From 50,000 to 60,000 quail are sent away from this island alive every year; how many are shot is more than I know. It seems that the renown of this island as a quail hunting place is very old, for I have read that somewhere about the year 1786 the quail, doves and other migratory birds were a source of increase to the revenue. The number caught varied every year, the greatest catch in one day was 12,000, and during the whole time of passage, which does not last more than fifteen days, they never caught more than 150,000 birds. Capri had a bishop who derived the most of his income from the quail, etc., and from this fact he was somewhat irreverently styled the Bishop of Quail.

In three or four weeks the sport will commence again, and then I hope that nothing will prevent my sending you prompt and full accounts of the result. There are no large hotels here, but two or three little inns, such as the Bella Vista, Massiminos and Paradiso. But if any wish to make themselves really comfortable then at the house where we are now stopping they can have two large rooms, a kitchen and a broad *terrazza* with cooking done for them, also all services, for from forty to sixty francs a month; of course they must pay for their provisions themselves; but for four lires a day—less when they shoot their own game—they can live like princes. Then when tired and desire is strong to rest they can recline at ease on their vine-covered *terrazza* and feast their eyes on the beauties of the Bay of Naples. The address of this place is Maria Giovanni alla Catena, and perhaps some day one of my country people may chance to spend a hunting season on this most charming island.

G.

Natural History.

OF SERPENTS.—II.

(*Continued from Page 123.*)

STRIPED SNAKES colonize in great numbers when they go into winter quarters. I have on four different occasions come upon a numerous group of them massed together, sunning in early spring, when they have just left their winter burrow, which is their season for mating. In one instance, I think there must have been a hundred near the roots of an upturned tree, I found myself in the midst of them, when they scattered in every direction. I passed on a short distance and halted to witness their movements. They soon began to return and I could see and hear them passing over the dry leaves to the same spot. In a short time, after this period of copulation, they separate, and wander singly around the fields until the approach of winter, and then by a mysterious instinct (if that is the name for it), they come together to pass another winter. They do not lay eggs, but as in the case of the watersnake, red adder (or copperhead) and venomous snakes generally, the young are matured in their body and are born alive. Some years ago I cut the following from a newspaper:

Jacob Rexroth, of Canton, a few days ago killed a red adder and on opening it, found twenty-six young adders. This story is beaten by a Collinsville gentleman, who relates that some years ago he saw a large striped snake opened, and forty young snakes taken out of its bowels, each 3in. long.

A gentleman in Windham county told me within a year that he saw a striped snake opened, and counted sixty-three young ones which he saw taken out of her. I have killed them several times and found that their bodies contained young ones, but never counted them. It is singular that their manner of breeding is not more generally known, but when they are heavy with young, like the watersnake, they cannot move rapidly; they seek a very retired place. The last that I recollect of capturing in that condition I caught sight of as she was crawling under an old stump, and I saw the grass was matted where she had been accustomed to lie in the sun. On another occasion I came suddenly upon her and captured her. My first observation of finding young in their bodies was in the season of harvesting rye, which is in the latter part of July, and I conclude that they give birth to their young about the first of August. They subsist on live prey; grasshoppers, crickets and bugs are doubtless devoured by them, also young birds if they can get them, and toads are especially their prey. Unlike the blacksnake, they secure their prey by the chase. I have seen them pursuing a toad, which would jump continuously until it was perfectly exhausted, and in its fright would actually shriek with fear; but the snake would follow it as true as a hound does a hare, and when he has caught it he manages to get both hindlegs into his mouth at once, and then commences the swallowing process. I was once riding in a buggy, and by the roadside were trees with branches hanging low, and the road was bordered with weeds. I heard an unusual sound coming either from the trees or weeds, it was difficult to determine which. With a 10ft. pole which I had with me I commenced poking the weeds and discovered a striped snake with a large toad drawn into its mouth up to its armpits, and in that condition the poor toad was screeching so that it arrested my attention. After inspecting the scene I tried to punch the snake with the pole when it commenced a backward wriggling movement, and the toad at the same time struggling forward, literally escaped from the jaws of death and hopped away apparently a very happy toad. I once captured one that had swallowed a small green snake, and if they will prey upon a green one, why not upon their own young? I don't think them capable of drawing the color line.

Dr. Holbrook in his Herpetology says "that a snake will swallow its prey when it is three times as thick as its own body." In that other authors concur. The joints of their jaws are dilatable and elastic, and the point of the under jaw draws back, so that when the jaws inclose the body of the toad, the mouth represents a ring around its body, except as the upper jaw retains its shape.

THE COMMON BLACKSNAKES (*Coluber constrictor*).

Of all the snakes which are common to New England, the blacksnake probably has more stories told about it, whether true or false, than all the rest put together. I think I may say that I have seen hundreds of them. In one year I enumerated twenty that I came in contact with. The longest one I ever measured was 6ft. and a trifle more, not to exceed 6ft. 1in. They, too, colonize in winter, and are sometimes found in great numbers in the same burrow. Mr. Willard Thrall of Windsor told me that he once, in excavating earth, found sixty-one in one pit. A paragraph in the Hartford *Times* of March 6, 1886, says: "Nelson Verguson of Bean Hill (Norwich) in digging into a hill the other day opened a nest of sixty-three blacksnakes in a bunch. They were smart enough to run away from Mr. Verguson, although the mercury was but 10° above zero." I cut the following from the Hartford *Globe* of April 24, 1887:

At Bakerville a few days ago George W. Jones, James Enright and Seymour Reed dug out eighty blacksnakes. The longest measured 6ft., three fourths of them measured over 5ft. in length. After the snakes had been counted a rope was bound around them and attached to a large pole and placed on two men's shoulders, and in this manner taken to the village, where they were put on exhibition. This bundle of blacksnakes will weigh over 125lbs.

I have several times heard people tell of seeing blacksnakes 12ft. long—one location was at Cedar Mountain, another was Hatchet Hill, East Granby, and another in Tolland county; but those snakes were never measured, and I have no authentic account of any one that measures more that 6ft. 1in.

Blacksnakes lay eggs with a flexible, parchment-like covering, I think from twelve to twenty at a time; and in stony sections they commonly lay them under flat stones, and, when they can, they deposit them in the sand, and that is the last they know of or care for them. The American Cyclopædia says of snakes: "When they have left their winter burrows, after the instinctive act of reproduction, they separate and become perfect strangers. Most are oviparous, leaving their eggs to be hatched by the heat of the sun, and the young when born are able to provide for themselves. No nest is made; there is no incubation of their bodies' heat; no food is stored up for the young, and no education nor parental care is necessary, and the mother knows neither the joys nor sorrows of

maternity. Sometimes (that is in some species) the young are brought to maturity in the mother's body." This snake comes out in the spring as soon as the snow is fairly off and the frost is out of the ground. Its color is then a dull brownish black, and they are not very active; they will often lie coiled and not move at the approach of man, which, I think, is partly owing to the fact that their sight is defective until after they have shed their skin. This occurs in early summer, when their color assumes a clean bluish black, and they flee instinctively from man's presence. They shed their skin in a single piece, including a scale from over their eyes, and the Cyclopædia says, "by a process of inversion and several times in a season," which statement my observations do not fully bear out. All fur-bearing animals shed their coats annually, so of all the feathered tribes; and, reasoning from analogy, my conclusion is that the habit of the snake in this respect is the same. As to the process of inversion, I have often seen the skin of a snake in the grass or in the bushes lying just as a snake would lie. If by inversion means that the skin is turned the other side out, it would seem that the skin must be loosened at the head and secured to something that would hold it, while the snake moves forward turning the skin backward, like turning a stocking off from a person's leg. I have seen a silkworm shed its skin, which was not by the process of inversion. My conclusions are solely from observation, and I would not be understood as taking issue with the authorities on that subject.

I have never seen anything to incline me to the belief that blacksnakes attack people. They always show a disposition to place distance between me and them. Mr. Thrall, before mentioned, says he has seen thousands of them, and they always flee; and that he never saw a young snake accompanying an old one. A gentleman living in Bloomfield told me that blacksnakes came annually from the plains to a sand blow in the rear of his barn to deposit their eggs, and that in one year he captured fifteen. They always flee. He never saw a young one with an old one. Several men, some of whom I can name, have told me that they have seen an old one swallow its young. My reply to them was, "Then you have seen a hungry snake taking its food, for they never swallow them for any other purpose." There is no question but that one species of snake will feed upon another species, and why not on their own young. The following is taken from the Hartford *Courant*, of Aug. 16, 1879:

L. M. Reed, while mowing on the farm of Herman Corbin in Union the other day, saw a large blacksnake, which he killed. On opening it a large striped snake was discovered, and on opening this seventy-nine small striped snakes, about 6in. in length, were brought to light. The blacksnake had swallowed eighty striped snakes at once.

Perhaps the striped snake went there for protection, for she was certainly in a very safe place. I have never met with the person who said he had seen an old snake accompanying its young except those who say they have seen them swallow them. If an accredited student of natural history will furnish an authenticated case of young serpents taking refuge in their mother's mouth I will accept it as a fact.

Blacksnakes always feed on live prey and possess a power over their prey that is truly wonderful, and I think that birds, old and young, are their main dependance for food—old birds are captured by them with ease. I captured a snake nearly 5ft. long that had a full-fledged song sparrow in its body about 6in. from its head. I have on several occasions seen birds acting strangely about some spot in the bushes and on investigation found a snake was the center of attraction, and in two instances have captured the snake. I was once in a hay field with several men, adjoining a lot where the hay had been removed, which was separated from us by a stone wall. We heard a bobolink making a peculiar chattering noise, and on looking over the wall to know the cause, we saw the bird with half spread and drooping wings, stepping right and left just in front of and facing a blacksnake, which was gently moving toward it, with its head raised and occasionally darting forward, almost striking it. One of the party sprang over the wall and tried to kill the snake, but he escaped to the wall. After a short time we heard the bird again discoursing the same music, and on looking, we saw the snake and bird going through with the same performance, when two of the party sprang over the wall and captured the snake. I have sometimes felt a regret that we did not remain passive and witness the result. They feed on any kind of live prey that is within their capacity, and have been caught with a young rabbit in their body. They also are successful hunters of birds' nests for the young birds, and will climb trees in their search. I was once near an orchard when I heard robins making a great outcry, evidently disturbed by something. I went to see the cause and discovered a large blacksnake at their nest in an apple tree about 15ft. from the ground. The tree was about 1ft. in diameter and 7 or 8ft. up to the branches. The branch on which the nest was, stood off at an angle of about forty-five degrees. When the snake saw me he glided down on the topside of the branch, and when he reached the trunk he slid off and dropped to the ground. In his mouth was a young bird partly swallowed, which proved such a clog to him that he could not run rapidly in the grass and I captured him. A Mr. Green in Tolland county tells me he witnessed just such a scene.

Many stories are told of their chasing people. I have seen persons who claim to have been chased by them, and sometimes it was by a racer, a black snake with a white ring around its neck. I never saw a snake of that description, and I know of no authority claiming the existence of such a snake. A blacksnake five or six feet long can outrun a man. Their speed I have repeatedly witnessed, when they have escaped from me. Now if they chase people, why do they not catch them? and if they should catch a person, what could they do with them? Certainly they could not use them as food. It is singular that so many persons have been chased by them and yet no instance has been reported where they have been caught.

The racer, described as a black snake with a white ring around its neck, exists only in the imagination of frightened people. It has no place in natural history, and yet I have known several persons who claim to have been chased by them, and were just as sure of the white ring as they were of being chased. I have seen, however, a small black snake with yellow belly and yellow or buff stripe across the back of the head, but this species are never more than about a foot long. I can imagine how timid persons may be startled by a snake and think they were chased by it.

I was once walking in a pasture on the eastern slope of Talcott Mountain, when I discovered a large black one coming directly toward me. The snake seems to have been traveling about his own business and did not discover me until he approached within eight or ten yards, when he stopped. I immediately started for him, and then there was a chase in another direction; but he was too smart for me; running faster than I could he made his escape. If I had been timid and retreated when I first saw it I might have supposed, and honestly supposed, that I had been chased by a snake; and as a snake moves with its head raised, being lighter color under the neck, I might have imagined that it was a racer with a white ring.

I have heard the absurd claim that a snake might be cut in two in its middle, and the parts would get together and unite, making a whole sound snake again. A gentleman of more than ordinary intelligence, and who had enjoyed rare opportunities for acquiring information, once told me that he knew a well authenticated case where a snake had been severed in the middle and was the same day seen crawling, having been united and grown together. I said to him, such a thing is not possible, a snake has intestines and a spinal column, and to sever it in the middle would be as fatal to it as to any form of animal life, and that it was probably another snake seen. He said no, it was on the highway; the snake was cut in two and one-half was thrown to each side of the road. When seen afterward it was identified by the scar where it had been united.

In the Hartford *Courant* of July 20, 1886, a correspondent from Canton says: "There is a land holder here who never molests the blacksnakes in his fields. He wishes to keep them for the purpose of destroying the mice and moles infesting his fields. He claims that they do no harm, and should be allowed to go around without interference." I should like to know the name of that land owner. I would go some distance to shake hands with him. He is the second man whom I have ever heard of who seemed to think the blacksnake had rights which should be respected. I have understood that the late Mr. R. C. Osborne, who resided in Newington, entertained the same merciful regard for them.

Singular as it may seem, blacksnakes are sometimes found crawling in winter. Many years ago a gentleman, perfectly trustworthy, told me that he captured one in Willington after a thaw in January. A Doctor Tracy, some years since, captured one in Canterbury crawling on the snow in the month of February, and carried it to a neighboring house and exhibited it to the family, who were my informants. The Hartford *Courant* published an item early in January, 1886, stating that Henry Bocks, a trustworthy resident of Morris, while passing along the highway in that town on the 2d inst., captured a blacksnake 5ft. long crawling along in the wheel rut.

Early in the spring of 1873 I was with a party in the northwest part of this town near Cottage Grove. There had been some warm days and the ground had been bare of snow. On the day previous there had been a fall of snow of several inches in depth, and that morning it was frozen quite crisp. In passing we came on a blacksnake lying on the snow; on attempting to move it we found its head for some inches was under the snow, perhaps in the ground. One of the party took it up in his hand. It would wriggle some, turn its head and scan our party, but was too stupid to crawl much. From these facts I infer that they do not all find satisfactory burrows in the fall, and sometimes in winter start out in pursuit of better quarters.

THE RATTLESNAKE.

I have never seen one, except in captivity, but have read of them, and never felt a desire to make a more intimate acquaintance. All authors with whom I am conversant, say that when they prepare for an attack they coil themselves up and jump their length, striking at their victim. If they are resting in a coil and are suddenly disturbed, they will doubtless strike as far as they can; but if they rattle and have time to place themselves in a position to attack, or to resist an attack, it occurs to me that it would be natural for them to crumple rather than coil themselves.

I have seen the watersnake, a vicious, repulsive-looking reptile (and in its proportion it very well represents the rattlesnake), captured without injury, and when teased by being poked with a stick, it would crumple itself up in zigzag folds, each fold drawn back against its fellow, and from that position it would jump, straightening itself out to strike at a stick, which was done very spitefully. It occurred to me that a rattler would naturally take that position, then the tail would furnish a natural fulcrum, so to speak, from which to spring, which a coil does not furnish. If a leather strap is wound in a coil and a person takes the ends in each hand and straightens it out, he will find just as many twists in it as there were coils. Thus the snake must possess a peculiar science, or in springing from a coil its body would become twisted. But from observation I can say nothing.

Dr. Holbrook says, "With the rattlesnake, as with all venomous serpents, the young are matured in the mother's body." In this other authors agree. In the Hartford *Courant* of Aug. 31, 1876, the following article appeared:

"NORTHFIELD.—We thought we were telling something of a snake story last summer of a rattlesnake being killed with 35 young fry inside; but not long ago another rattlesnake was killed with 27 young snakes inside, and within two weeks two very large streaked snakes have been slaughtered, the one containing 60 and the other 70 young."

In the Hartford *Courant* published in September, 1839, an article appeared from which the following is taken: "At the museum in Baltimore a rattlesnake gave birth to young in her cage, she having been captured about two months previous. The young ones were about six inches long." There also appeared an article in a paper not long since giving an account of one being captured in Vermont, and its body was found to contain more than seventy young ones.

ADDERS.

Of adders I have but little to say. They are a lazy, slow-moving snake, and are not as common as some other species. I have seen them between 4 and 5ft. in length, and if they were not snakes would be called handsome. They lay eggs like the blacksnake, about the same number and in the same way. On the 17th of August some years since I uncovered a nest of them, and on opening the eggs the young would crawl. I think, as a rule, they mature about the 1st of September.

THE GREENSNAKE.

There is a small greensnake found in the grass, from 1 to 2ft. in length. I should say that I have never seen one 2ft. long. I think they are oviparous, having found eggs supposed to be theirs. It has a peculiar head, being as round as the end of a person's finger, and their neck is nearer the size of their body than most species. If they would remain motionless in the grass they would but rarely be seen; they are very insignificant.

Another small snake is known as the groundsnake; it is of copper color, and seldom more than one foot in length. I have sometimes seen them in this city creeping on the walks. They are viviparous, as I know from my own observation, having found them with their young in July.

Of the snakes generally it has been said that they will freeze up in winter, and thaw out alive and active in the spring. That is the kind that will bear being cut in two in the middle and the next day be well whole snakes. They hibernate in winter, and perhaps do not always get below the regions of frost, but I think they possess a principle of life which to some extent will resist the frost, and doubtless some perish.

The young of the striped and groundsnakes evidently mature about a month earlier than the other species I have noticed. Perhaps they require less time.

Dr. Holbrook, whom I regard as authority on that subject, says: "The young of serpents are matured in about three months from the period or time of copulation."

HARTFORD, Conn. N. STARKWEATHER.

WHITE BUFFALO.

GARDEN CITY, Kan., Sept. 3.—*Editor Forest and Stream:* In your issue of the 30th ult., was given Mr. J. E. Hendry's description of a white buffalo killed by Indians near the Canadian line. I have seen four specimens of what I believed to be white buffalo. One was a yearling and was killed in this State on the U. P. R. R., and was mounted for the Agricultural Rooms of Topeka, Kan., where it can yet be seen, although it has become somewhat dilapidated. The other three were in No Man's Land, between Kansas and Texas. They were in a small herd of buffalo and were one, two and three years old respectively. There was a spotted Texas cow with them nearly white; they became terribly frightened when I rode over a small ridge within 500yds of them and ran as far as I could see them. I had no gun with me, and my pony was so run down I could not catch one with my rope. It was a "bitter pill" for me, as I wanted to catch one "so bad I could nearly taste it."

Now I will tell you what a white buffalo is. It is nothing more nor less than a cross between a buffalo bull and a domestic cow. To prove it I herewith send you a photograph of a half-breed ten months calf, which answers the description of all the white buffalo ever heard of. They are smoky white or silver tip; and the robe is always equal to the beautiful one Mr. Hendry described, and they will be the coming robes for our northern climate.

I have bred one hundred domestic cows to my buffalo bulls this year and expect a fine lot of calves next spring, equal in beauty and hardiness to the wonder of ages past.

C. J. JONES.

REPTILE SPECIMENS WANTED.—Zoölogical Society of Philadelphia.—*Editor Forest and Stream:* I have been busy all summer making alterations and enlargements to our reptile house, and will shortly have, I think, one of the best in the world. The house, as altered, will consist of a center 36ft. square, with two wings on opposing sides, each 28ft. x32ft., making the whole building 92ft. long. The wings have semi-circular ends and are modified conservatories, and in one of them I am going to try the experiment of keeping the Boidæ and Colubridæ—tree climbing snakes—on the natural surface of the earth, with water, mosses, ferns and shrubs, as under nature. It will require a constant flow of specimens of reptilia and batrachia of all kinds to keep up a good collection, and just now, while I am collecting, as far as possible, from everywhere, to open in a few weeks with a good representation of our native species, we particularly want them. Without doubt very many would be sent to us by lovers of zoölogy if they knew of it, and I can conceive of no better way to reach them than through FOREST AND STREAM. Can I enlist your sympathies enough to ask you to give us in your next number a brief notice of our new house and suggest our want of specimens. We, of course, would pay all expense of shipment and often purchase rare or valuable specimens.—ARTHUR ERWIN BROWN.

A CAT AND HER CHICKENS.—Dalston, near Carlisle, Eng.—*Editor Forest and Stream:* Although I am living at such a distance from New York I sometimes manage to get hold of FOREST AND STREAM, in which I have seen a good many very interesting articles. Thinking that a curious freak of nature would interest some of my Yankee friends, I give the following particulars. A gentleman living here has a favorite cat that spends a good deal of her time in a cosy old armchair. Her owner last May put four hen eggs into the chair by way of seeing what puss would do with them in order to make her bed more comfortable. Strange as it may appear, puss took kindly to the eggs and in due time hatched four fine chickens. For weeks after the chickens were hatched she licked them all over every day with her tongue, caressed and fondled with them as much as if they had been her own kittens. Whenever the chickens strayed from the nursery she carried them back in her mouth as if they had been made of the finest of glass. A photograph of puss nursing her little darlings can be seen at Mrs. Warners, 136 Wyckoff street, near Hoyt street, Brooklyn.—DALSTON BLACK REED.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Two Capromys (Capromys pilorides), one brown spider monkey (Ateles ater), two coyotes, ♂ and ♀ (Canis latrans), two gray foxes (Vulpes cinereo-argentatus), one leopard, ♂ (Felis parans), one scarlet tanager (Pyranga rubra), one Cuban parrot (Chrysotis leucocephalus), two Hutchin's geese (B. canadensis hutchinsii), two white-fronted geese (Anser cærulescens), two snow geese (Anser hyperboreus), three blue-winged teal (Querquedula discors), one crimson-eared finch (Estrelda phœnicotis), three tree boas (Epicrates angulifer), five boa constrictors (Boa constrictor), three copperheads (Ancistrodon contortrix), one anaconda (Eunectes murinus). Presented—One hare (Lepus europæus), one gray-headed love bird (Agapornis cana), one Acadian owl (Nyctale acadica), four painted terrapins (Chrysemys picta), one speckled terrapin (Chelopus muhlenbergii), one musk turtle (Aromochelys odoratus), one land tortoise (Cistudo clausa), two alligators (Alligator mississippiensis), one Gila monster (Heloderma suspectum), and five spotted salamanders (Salamandra maculosa). Born in the Garden—One Indian antelope (Antilope cervicapra), three muskrats (Fiber zibethicus), one brush-tailed kangaroo (Petrogale penicillata), and four copperheads (Ancistrodon contortrix).

Game Bag and Gun.

THE WOODCHUCK CREEK COUNTRY.

III.—SOLID—CONTINUED.

WINTER had indeed firmly inclosed all nature within his icy embrace. Old Aaron's predictions were fulfilled, and the quartette of hunters were happy. But what a transformation during the past twenty hours! From fog, rain and mud; from cheerless dripping woods, we waken to a scene of dazzling, bewildering beauty: the sun shone upon one grand expanse of snow, which sparkled and gleamed in the flood of light with the brilliancy of diamonds a hundred fold intensified. The lake was frozen for several rods from the shore, and this too had the same snowy mantle; beyond that the open water flashed in the same bright rays; the forest that skirted the lake was hung with a thousand fanciful and fairy-like festoons, while the low brush and smaller shrubbery were half hidden beneath the soft white covering. Everybody and everything in the Castle was astir at an early hour, and one glance out of the window told us plainly that the weather we had longed for, and the opportunity we had craved, had been graciously vouchsafed to us; there was nothing left to do but be grateful and get ready to enjoy both.

Aaron's shining physiognomy appeared at the door with, "Bre'fast is about ready now, gen'l'men, and ef you is, I'll hev it on de board in jes no time."

"You cannot get it there too quick for us, old Tipstaff."

It was a bountiful spread that was laid out for us, and with that keen appreciation of the efforts of our unfailing ally of the kitchen, we fell to, meanwhile formulating a plan for the day.

"Boys, it means venison to-day, and if we do not each one of us have a good fat buck on our score by nightfall, I shall forever cease to build any hopes upon appearances."

"General, as you are thoroughly posted on the country about here, suppose you give us an outline of procedure, and we'll discuss it."

"I can do that in ten minutes or less. We go with rifles only. You, Doctor, and the Chronicler, I propose, shall strike out along the west shore of the lake, keeping pretty well back in the woods; I, with Sisyphus here, will make for the creek bottoms, each taking one of the hounds. We will take a course up the stream for a couple of miles, bearing round to the north. You two leave your straight route when the little opening is reached, and gradually swing west and south, by which means we can probably meet about noon. After a luncheon and a comparison of notes, we will proceed to drive toward home in a semi-circle covering say a mile. How does that suit?"

"No drawbacks to that, apparently, from our present standpoint, but of course it is subject to changes and modification that may be necessary as the day progresses."

"It's only an outline, remember; whatever turns up to make changes necessary will be dealt with at discretion."

"What is the distance from this point to the clearing, and what do you say to skirting it to the east and north and taking in the ravine that extends from the lake back as far as Hanson's place?" the Chronicler inquired of the General and the Doctor both at once.

"The distance is a little better than two miles, and the proposed detour around the clearing to the ravine would, in my opinion, be an excellent route."

The further plans were thoroughly discussed, and so was the breakfast, at the conclusion of which we finished our preparations and were soon at the door, with the parting injunction to Aaron: "Have something hot and solid for us at 5 o'clock, sharp, old man, and see that the coffee—well, in a word, let nothing be neglected."

"Sartain, sartain, Gineral, you dun found everything in good shape"; and then as the door closed he continued the conversation with himself: "It's mighty cu'r'ous, anyhow, dat he allers has to give some sech orders—never hed anything to go wrong yit, never hearn no complaints, never seen 'em even look like anything didn't suit 'em. Wall, I s'pose it's kinder habit, mos' likely. Eunyhow I shan't take no 'fense agin them fellers; better ones neber was put down on to this yere broad yearth. I only wish dere was more like 'em, dat's what dis nigger wishes."

The quartette separated as agreed, each taking his appointed path. About four inches of snow had fallen, which fortunately had not drifted; the earth was frozen solid beneath and walking was good. The Chronicler and his companion made good time for half a mile, when the woods became more dense and the underbrush a little heavier, to some extent impeding their progress, at least causing their speed to slacken. Then the hazels and elders became less frequent, and the woods a little further on were comparatively free from both, but the growth of hickories and oak and walnut was immense, the gigantic trunks towering a hundred feet.

As we passed the last clump of hazel bushes, the Doctor called attention to numerous tracks in the snow, which were made by some small animal, probably in search of food. A little further on we saw the evidence that a flock of turkeys had roosted in the vicinity the previous night, and while we were discussing the probable direction they took in leaving the place, we heard a sound away off to our left that caused us to exchange significant glances. "Suppose we separate say eighty rods and beat down in that direction, sending old Major off on a drive. He knows the details of that business better than half the hunters, and is evidently eager to be at it."

"Right you are, Doctor, I will keep on straight ahead, and you bear sharply to the left, and we will in my opinion know what those sounds were in less than twenty minutes. It was a deer, no doubt, and as soon as Maj. strikes his trail, we'll hear music as sweet as ever saluted a hunter's ear."

Cautiously and quiet we moved on our allotted lines, the snow muffling our footsteps, and the huge trunk of oak and hickory and walnut affording excellent shelter in case the game should be driven our way. Half an hour we tramped along, each hidden from sight of the other, when the hounds gave tongue in melodious notes, almost at the same moment there was a crash in the underbrush, and a second later a sharp report from the Doctor's rifle, and a fine buck sprang into sight as I peeped from my hastily found place of concealment. The animal stopped for a moment, head erect and one foot raised, as if listening for the sounds of pursuit. It was a thrilling picture, and I was not in a mood for prolonged admiration at a distance, preferring a possible chance of a closer inspection. I raised my rifle, and with quick though steady aim, covered a spot a few inches back of his shoulder, and sped the bullet on its mission. I felt absolutely certain of my game, but the noble fellow gave a bound and darted like an arrow straight into the forest. If I felt that my aim was sure, and the shot effective, I was confirmed in my belief by the sudden lowering of the deer's flag, a never-failing sign that a fatal wound had been given. Confident that it was but a question of a short time with the bounding buck, I quickly reloaded and started on his track. I was soon upon the spot where he had stood when struck, where the bright crimson spots upon the snow doubly confirmed the tale, and then guided me along his course. Another report off on my left told me that the Doctor had had another "view," and immediately there came the pulse-stirring sounds of the long rapid jumps of another antlered monarch, accompanied by the baying of the hound. The wary game evidently scented the nearness of danger ahead, for he suddenly changed direction, and I could hear him dashing along far to the west, and soon all sounds ceased. Assuring myself that there was nothing further to wait for, I started again upon the blood-stained trail of my own victim. The tracks, which had been far apart, showing the tremendous leaps made by the desperate thing in its race against fate, now became closer together, showing slacking speed, then closer still, when, twenty rods further, in a slight hollow at the foot of a sycamore, I came upon the noble quarry stretched upon the snow.

He was not quite dead when I arrived, and remembering the experience with a deer's sharp hoofs of some three years previous, I was cautious in my movements about the "fallen foe." He was a noble specimen. I put the struggling animal out of his misery with a bullet through his heart; then with my knife "gently passed the gleaming blade athwart his neck." Bending down a young hickory sapling, which required all my strength, I secured the hindlegs to one of the lower branches, and with the recoil of the tree the deer swung clear of the ground, in which position the work of dressing him was a comparatively easy one. I now took a course south, and soon came upon the tracks of the Doctor, which were pointing in the same direction as my own. Judging from this that he had probably secured a deer, and having disposed of him, as I had done with mine, was now making the circuit, intending to effect a junction with the General and Sisyphus, I followed in his tracks, and a merry tramp he led me, too. Once I heard the baying of the hounds, but I had no expectation of seeing another deer, and in this I was not disappointed. My route took me near a large cornfield of Hanson, our farmer neighbor, and I was on the lookout for a drove of turkeys, which I knew were in the habit of going thither to feed. Sure enough, just as I reached the extreme end of the field, and gathered near a stack of unhusked corn, there were a dozen or more of the "bronze beauties." From my position, with my Scott 10-gauge, I could easily have taken down a couple of the birds, but with a rifle even I was so sure of one at that distance that I was less cautious than prudence would have dictated. I selected what I judged to be the patriarch of the company, and let the blue lips of "Joan" talk to him. The old fellow gracefully tumbled over, and the companions ungracefully beat such a hasty retreat that by the time I had another load ready they were out of sight and hearing.

I found him a sturdy gobbler enough, and "dead as Cæsar," the bullet having as neatly cut his throat as a knife could do it. I bled him again, however, and, after resting a while, swung his majesty over my shoulder and trudged along. He gained two pounds in weight every half mile, so, by the time I reached the point of rendezvous, I judged its weight to have reached somewhere about 50lbs.; this was, however, afterward found to be too high an estimate by some 32lbs. I found the two seated on a fallen tree, from which they had brushed the snow, and comfortably partaking of a very substantial luncheon, which seemed to me so sensible a course that without loss of time or words I did something in that line myself.

"What—what—you haven't been doing all that firing and making all that fuss this morning over that one solitary old gobbler, I hope?" opened up Sisyphus.

"What have you got to show that's any better, old Stick-in-the-mud?"

"My game is generally of that size that I don't carry it around on my back to any alarming extent."

"No, that's true. A very diminutive game bag will generally accommodate your score. I have in mind now some startling achievements of yours on our annual campaign."

"Doctor, let those youths go on with their controversy and tell me what you have done. Well, I do not question, both you and that gun of yours are generally able to give good account of yourselves."

"I can't complain, with any consistency, of my afternoon's success. When the Chronicler and I separated a little this side the clearing, after a signal to do so, which we considered well defined, Maj. set off on one of his well-intelligent and thoroughly successful drives to the thicket on our left, whence came the sound we thought significant. It was perhaps fifteen minutes, and the dog 500yds. away, when a tremendous crash through the underbrush was followed by the appearance in the open of a buck and doe, the former a magnificent chap, the latter of good size, and they were going at a sharp gait; and I was a little bit nervous, I will admit. But I pulled on the buck, who was a little in the lead, and missed; but the doe did not fare so well; the ball intended for her companion took her through the neck, but did not check her mad career, so I gave her the other barrel, and she stopped inside of a rod. The buck went like the wind, and, I suppose, is going yet, unless the Chronic there should have chanced to get in an accidental shot."

"Which he didn't. Not for Joe. No accidental shots in my locality to-day. But, gentlemen, if you particularly hanker after seeing the finest buck that has been killed in the Woodchuck Creek country in late years, I shall take great pleasure in gratifying your desires."

"What! do you mean to say that you really and actually got that elegant fellow that passed me?"

"I don't know whom he passed, but I can name a person whom he did not pass, if that will afford you any pleasure; after I heard your rifle I heard the chap coming like a cyclone, stepped behind a tree, and as he came abreast of me, two hundred yards away, Joan orated in her usual emphatic style and with so much eloquence that Mr. Buck finally agreed to stay with us."

"Bravo! bravissimo! bravissimo!" yelled the impulsive Sisyphus, "that's a mate to mine."

"What! all got a deer but me," solemnly and slowly uttered the General; "if that is the case it is the first instance on record."

"It's past 1 o'clock; suppose all get back to the camp; put the team in the jumper and get the game into the meat box before dinner," proposed the Doctor.

"Oh, it will be safe enough where it is to-night."

"It will be a good deal safer, though, in its proper place back of the kitchen."

"All right, old Wisdom; let's get about it at once."

The jumper was making the rounds with all four hunters, taking up first the Chronicler's, then the Doctor's and finally a very nice fat doe killed by Sisyphus. We were turning homeward when the General casually suggested: "It will be about as near home if you drive down by that old half burned oak, the big hollow tree where the Indians had their camp four years ago, and from there you know it is almost as smooth a road as a turnpike."

So by that route we proceeded. Just as we reached the big hollow tree there was a universal shout: "Great shadow of Nimrod! Look at that! What is it? An elephant!"

There, hanging from the butt of a broken limb of the ancient oak, was an object that might well have called forth the shouts that greeted it, and as Sisyphus remarked: "Now that's worth while! that is what old what's-his-name had in mind when he was warbling about the 'antlered monarch of the waste' and all that sort of thing—antlered monarch! Well I should smile!"

"General, this is too bad! Here we've been modestly and silently chuckling to ourselves this hour past, that at last the champion was outdone—whitewashed so to speak; and here he coolly walks off with all the honors. By Jove, that's tough!"

"Well, boys, I'll take it all back, and promise to do so no more; how I got this chap I'll tell you this evening."

With the party seated around the "feast of fat things," recounting the events of the day, we will leave the contented quartette, "with good digestion to wait on appetite, health on both," and Aaron on all four. KEUKA.

[TO BE CONTINUED.]

OLD MEMORIES.

Editor Forest and Stream:

Dr. R. W. Shufeldt's article on "The Woodchuck," in the FOREST AND STREAM of Aug. 23, carried me back, not in imagination, but in reality, nearly three score years, when flintlock "musquets," steel traps, figure-4 deadfalls and pigeon nets constituted about all the implements used in capturing fur and feather; and they were effective to a large extent. But the success attending their use was doubtless owing more to the then abundance of game than to the skill of the hunter. The term "sportsmen," as now understood, was not used in those days.

Many a time and many a mile has the writer tramped over the then wooded hills, fields and swamps of eastern Dutchess with his father's flintlock, a relic of the Revolutionary war. What a host of incidents does that old musket call up.

How well do I remember my first rabbit with it, and the ruse my unlucky companion played with that rabbit. If this should meet his eye, I trust he may be heard from. He borrowed my rabbit and exhibited it at his home as evidence of his prowess as a hunter. Having been duly praised, he was directed to lay the game in the back pantry; but in doing so was careful to raise the window sash, and then had business outside. The game was soon restored to its rightful owner, while the blame was laid to the cat, "who must have stolen it and carried it off through the open widow."

My first partridge (*Bonasa umbellus*) also had a history. I was trudging along through the snow with my game when a gentleman overtook me and invited me to ride, which I was very glad to do. He at once bantered me for the bird, making me several offers, which I steadily refused to accept, till at last he raised his offer to the munificent sum of twenty-five cents—or rather "two shillings," as money was then counted—for a twelve-year-old country boy to refuse such a sum was something remarkable; but it did not move me in the least; and if he had offered to throw in his horse and cutter it would not have changed the result; until the trophy had been shown to the home circle, and home it went.

About the home of my boyhood woodchucks were very numerous, very troublesome, and the source of much sport to us youngsters, and some older heads. Where is the country boy, now bald or silverheaded, who does not remember the excitement and hurry with which he responded to the call of his or a neighboring dog, which had run a woodchuck to cover in a pile of rails or into a stone wall? Work must wait until the game was killed or driven from cover, when the tussle with the dog and chuck was often a bloody one for both parties.

But my most successful and profitable sport in those days was as a trapper. Many were the foxes, woodchucks, muskrats, skunks, weasels, etc., that felt the deadly grip of my double-spring steel trap, all of which had a small market value at the country store, and provided me with ammunition for the old musket and other necessaries.

There was one old 'chuck that for a long time baffled all attempts at capture. The entrance to his burrow was nearly perpendicular for some feet, which precluded all ordinary modes of capture by trap, twitchup or deadfall. After thinking the matter over for a long time a plan of operations was hit upon, which in the end proved successful. The steel trap was carefully set, but with no bait, and turned upside down over the burrow, rods were run through the bent springs and the trap raised just high enough not to hit the margin of the hole when sprung. Having thus arranged my plan I retired to await results, which were not looked for speedily, as I knew that the disturbance about the hole would make the game suspicious and cautious. But believing there was no other opening to the burrow I felt sure that in time my plan would succeed, unless Mr. 'Chuck should dig another exit, which they will often do.

Several visits showed that nothing had been disturbed, and that the game was still in retirement. But another day, everything was changed, and there hung my 'chuck, stone dead, with the jaws of the faithful trap closed around its neck. In attempting to come out he had touched the pan with his nose, and the result was as ex-

pected. The skin, like many others, was dressed by Uncle Abram by a process which he professed to have learned from the Indians, which he never disclosed, and made into whip lashes by him, which were quite celebrated and afforded him a scanty livelihood.

The "setters" in his shop were brought fresh to mind by the interesting tales of "Uncle Lisha's Shop;" but, alas! they have no historian. J. H. D.

POUGHKEEPSIE, N. Y.

THE CONNECTICUT ASSOCIATION.

Editor Forest and Stream:

Friday afternoon, Sept. 7, the Connecticut Farmers' and Sportsmen's Association for the Protection of Game and Fish held a meeting in this city and made full arrangements for a strict enforcement of the game laws. As a great amount of illegal shooting occurs in the last two or three weeks of September the officers of the association were anxious to perfect arrangements that would interfere with this unlawful shooting. The association feels now that with its large number of officers actually interested in the work, that the result will be accomplished. The following directors were appointed:

Hartford county, Hon. Geo. P. McLean, Hartford; Middlesex county, Dr. J. W. Alsop, Middletown; Tolland county, Hon. E. O. Dimock, Rockville: New Haven county, F. W. Whitlock, Waterbury; Windham county, Geo. A. Reed, Chaplin; Litchfield county, H. A. Stannard, Norfolk; New London county, Z. R. Robbins, Norwich; Fairfield county, Hon. J. C. Chamberlain, Bridgeport.

Mr. Charles E. Parker of New Britain was elected vice-president, and an executive committee composed of Dr. N. W. Holcombe, R. S. Dennis, Allen Willey, H. E. Pratt and C. M. Brooks of Hartford, and B. A. Johnson and E. G. Babcock of New Britain, were appointed. The executive committee, acting through its chairman, Dr. Holcombe, together with the president, A. C. Collins, will take active steps to prosecute every violation of the law.

Any one knowing of any unlawful acts, contrary to the statutes relative to game, should at once notify the association through the officers mentioned. The association deserves the hearty co-operation of all farmers in the State. It is probable that the association will soon be the largest numerically of any game and fish association in the country. Whole gun and game and fish clubs are coming in bodily and the prospects of the association are very roseate. C.

HARTFORD, CONN.

GOLDEN PLOVER.

OAKDALE, Long Island, Sept. 1.—*Editor Forest and Stream:* While in my blind to-day I saw the largest flight of golden plover (greenbacks) that it has ever been my fortune to behold. The birds were moving in large flocks very high up. I must have seen eight or nine hundred, one bunch having at least four hundred in. This certainly explodes the theory that these beautiful birds have been all killed off or exterminated.

I piped down three single ones near enough to bring to bag with the left (choke) barrel; and hung them up in my blind to feast my eyes on. Several others came quite near, as I talked to them in my sweetest and most persuasive notes, but to my disgust they would change their minds and soar heavenward, and with a farewell note shut the door of a fleecy cloud behind them and enter the blue vault of heaven, far away from an unhappy sportsman, sitting in his blind up to his knees in mud trying in vain to make love to them.

The shooting was poor, and when the setting sun sank to rest in its crimson couch, I picked up my decoys, gathered in three golden plover, five meadow plover and one yellowleg, and bidding a good-night to the dreamy waters of the South Bay, bent my steps homeward, a happy and contented man, and at peace with all the world. F.

EXTRAORDINARY SHOOTING.

Editor Forest and Stream:

A guest of mine in the Laurentians inserts the following in my Camp Register. If any of your correspondents can beat it you are quite at liberty to publish their records.

G. DE MONTAUBAN.

[COPY.]

I hereby certify that the accompanying picture is a correct outline of the revolver X. L. No. 3, Hopkins & Allen Mfg. Co., pat., March 28, '71, with which, at Lake Clair in the Seigneury of Perthius, Province of Quebec, Canada, using cartridges .32-cal. center-fire metallic, short, in successive shots on the forenoon of Thursday, Aug. 22, four (4) loons, at a distance of about 80yds.; on the afternoon of the same day, seven (7) ducks, at a distance of about 55yds.; and on the afternoon of Friday, Aug. 24, three (3) partridges, at a distance of about 30ft., were missed by me, the subscriber. A NEW BOOK ON WILD FOWL SHOOTING.—There is announced for publication the last of this week a new work on Wild Fowl Shooting, by Mr. William Bruce Leffingwell of Clinton, Iowa. We have had the pleasure of looking over a part of the proof sheets of this work, and can say that it is a work which should form part of the library of every gunner. A review of the work will appear in these columns, probably next week, and we shall then be able to furnish the volume to intending purchasers. The book is illustrated, and is handsomely bound in half morocco. Price $3.50.

GALLAGER.—Fostoria, O., Sept. 1.—*Editor Forest and Stream:* In my communication, "Let her go, Gallagher," on page 66, issue of Aug. 16, the types made me call the name Galloger; it should be spelled Gallager. Give all due credit to the inventor, as his gun was one of the first of the successful ones to compete with the Sharps carbine, then used by the cavalry of the United States. It was also one of the first military guns using a metal cartridge.—W. B. HARRISON.

THE WILD RICE CROP.—Hope, Ont., Sept. 3.—*Editor Forest and Stream:* The rice is something of a failure this year. I do not expect to get so large a quantity as I have other years. It cannot be accounted for, but once in about eight years the crop is light. About eight years ago I did not get a barrel.—CHAS. GILCHRIST.

YELLOWSTONE PARK REPORT.

WE have received advance proof sheets of the Report of the Superintendent of the Yellowstone National Park to the Secretary of the Interior, for 1888.

OFFICE OF THE SUPERINTENDENT
YELLOWSTONE NATIONAL PARK,
MAMMOTH HOT SPRINGS, Wyo., Aug. 15.

SIR—I have the honor to submit for your information the following report of the operations of the office of the Superintendent of the Yellowstone National Park for the fiscal year ended June 30, 1888, and to the present date.

When my last report was rendered, Aug. 20, 1887, the hotels of the Park were filled with tourist visitors, and many camping parties, with every description of outfit, were scattered throughout the Park. All possible efforts were made to see that these numerous visitors were made acquainted with the rules and regulations established for their guidance in the Park, and that they were observed and respected. In the enforcement of these regulations several arrests were made, and in one or two instances, where the offenses were flagrant, the offenders were summarily expelled from the Park. In the exercise of the authority which is devolved upon the office of the Superintendent of this National Park great care has been taken to keep strictly within the limits sanctioned by law and to avoid all appearance of a harsh and arbitrary exercise of authority. No person has ever been expelled from the Park who had not admitted the commission of the offense for which the penalty was enforced; and whenever there has been reason to believe that the offenses were committed without intention or through thoughtlessness, or when a sincere regret was perceived, the persons have been permitted to go unmolested, after suitable instruction and admonition. This explanation is made in view of the unwarranted and unjust comments of the Montana newspapers, which, copied by Eastern exchanges, have tended to disseminate the idea that the National Park is subjected to harsh and arbitrary military rule, and that visitors are liable to humiliation and annoyance from a capricious exercise of power.

While these strictures of the press were generally expressed in vague and indefinite terms, they appeared to be founded chiefly upon the two following cases: John Noack, who was arrested at the Upper Geyser Basin, Sept. 18, 1887, for writing upon the geyser formation, in violation of the rules and regulations; and Frank Chatfield, who was arrested near Heart Lake, Oct. 2, 1887, for killing an elk. In the case of Noack, he was arrested by the soldier on duty at the Upper Geyser Basin, pursuant to his general instructions to enforce the rules of the Park, in the act of writing his name on the formation. Both he and his companion having offered the soldier money, the latter to clear himself of the suspicion of being improperly influenced, thought best to send the young man to the office of the Superintendent. For this purpose he was permitted to proceed by the regular stage, a soldier following on horseback. When Noack came to my office, he admitted his offense, stated that he had been treated by the soldiers in a courteous and considerate manner, but instead of manifesting any regret for his misconduct, professed to consider himself ill-treated in having his pleasure trip interrupted for so slight a cause, and threatened to have the affair published in the newspapers. As it was apparent, in this case, that the rules of the Park had been willfully violated, and as the young man's speech and manner evinced a contempt for authority, it was thought that the provisions of Rule X. of the rules and regulations of the Park would properly apply to his case. But as it was not desired to subject him to the unnecessary humiliation of being escorted out of the Park by a military guard, he was given twenty-four hours in which to leave the Park, and was informed that at the expiration of that time he would be liable to arrest and expulsion. He was subjected to no physical restraint at any time, and left the Park on the morning following his interview with the Superintendent by the usual stage to Cinnabar.

The case of Chatfield has been fully reported to the Department by letter, a copy of which is appended to this report (marked A). In this case there were absolutely no extenuating circumstances, and no leniency could have been shown without bringing into contempt the authority exercised by your Department over the National Park.

In my last report it was stated that the volume of travel to the Park at the date of the rendition of the report had fallen somewhat short of that of the previous year. Visitors continued to arrive, however, in considerable numbers until the last part of September, when travel became so light as to warrant the closing of the hotels of the Park Association and placing them in charge of their winter keepers. Visitors who arrived after the 1st of October were accommodated at this place at the Cottage Hotel, under the management of the lessees, Helen L. and Walter J. Henderson, and through the Park were cared for by the winter keepers of the hotels as well as their limited facilities permitted.

The efforts to discover and bring to justice the perpetrators of the stage robbery within the Park, on the evening of July 4, 1887, which were initiated immediately upon the occurrence of the robbery, and continued unremittingly, were finally successful, and I append to this report two letters, marked respectively B and C, which were addressed to your Department, reporting fully the incidents connected with the arrest and conviction of the guilty parties. Although the punishment decreed in these cases appears to be entirely inadequate to the gravity of the offense, yet in view of the uncertainty which seems to exist relative to the administration of justice by the established courts within this reservation, it is perhaps a subject for congratulation that the perpetrators of the robbery were not permitted to escape all punishment.

On the 15th of October the work on the roads, which had been diligently prosecuted during the summer months by Capt. Clinton B. Sears, Corps of Engineers, U. S. Army, was discontinued and the various working parties discharged.

Although but little snow fell in the Park during the fall and early winter the temperature was at times quite low, the climatic conditions being very dissimilar to those of the previous season, as may be seen by reference to the meteorological record which is hereto appended and marked D.

This record has been kept pursuant to army regulations, under the direction of the medical officer at Camp Sheridan, Acting Assistant Surgeon G. L. Cline, U. S. Army, and may be accepted with confidence as being accurate and correct.

The first snows of the season indicated favorable conditions for the hunters' work; and at this time scouting operations were vigorously conducted for the protection of all game within the Park limits. Fortunately the efforts of the troops were seconded and furthered by other causes. The snowfall being light, the game carried in the inaccessible mountain regions, safe from ordinary hunters, much later than usual, and the excellent law passed at the last session of the Legislature of Montana, prohibiting the killing of any of the large game animals "for the purpose of procuring the head or hide only, or for speculative purposes, or for market, or for sale," although not always strictly enforced by the local authorities, served to exercise a discouraging effect upon the class of professional hunters, so that many of them quit the business in disgust.

As a result of these several causes the game of the Park has been free from molestation, and I am confident in the belief that little if any has been killed since the arrest and expulsion of Chatfield in the month of October last.

Upon the closing of the Park hotels and cessation of tourist travel, the daily trains of the Northern Pacific Railroad from Livingston to Cinnabar were discontinued. Trains were, however, run once each week until interrupted in January of the present year by severe storms. Subsequently, upon the opening of certain coal mines in Cinnabar, Mont., a tri-weekly service was established, and continued through a large portion of the spring.

During the early part of the winter it had occurred to me as extremely desirable, if possible, to secure some accurate information concerning the winter haunts of the buffalo which are known to be in the Park. I accordingly consulted with my scout, Mr. Edward Wilson, as to the practicability of a snowshoe trip into the regions where it was believed they would be found. As Mr. Wilson felt confident that such a journey could be successfully made, I secured the willing services of Sergeant Charles Schroegler, Troop M, First Cavalry, as a companion for Mr. Wilson, and these two men left Camp Sheridan on the 13th of February, 1888, taking with them a pack of provisions and one blanket each. They proceeded the first day to Yancy's Hotel, in Pleasant Valley, and from there struck into the wilderness, scouting the whole length of Specimen Ridge; from there via Amethyst Mountain to Pelican Creek; down this stream to the lake; across the lake and down the Yellowstone, via Hayden's Valley to the Park Association Hotel at the Grand Cañon. After a day's rest at that point, the party returned to this post via Norris, on the 23d of the same month, after an absence of ten days. The hardships of an expedition of this character can only be realized by those who are acquainted with the winter aspect of the mountain solitudes into which these brave and hardy men ventured. The snow at this altitude being very soft and light, the use of sledges, such as are used in Arctic explorations, is impracticable, and the traveler is confined to such quantity of provisions and appliances for comfort as he may find it possible to carry on his person. Snowshoeing through the Park between the different hotels, where comfortable shelter can be procured every night, is comparatively easy, but where rest is forbidden by the absence of warmth and shelter, the difficulties are such as can only be overcome by hardy and resolute men.

In its principal object, that of gaining accurate information concerning the numbers and location of the buffalo in the Park, this expedition was not entirely successful. The herd of buffalo which had passed a portion of the previous winter along Specimen Ridge was not encountered, and the only buffalo found on the trip were three which were seen in Hayden Valley. Valuable information was, however, obtained relative to the winter ranges, habits and condition of the large game of the Park, so that the results could not be considered inadequate to the toil and labor expended. Immense bands of elk were encountered in every portion of the Park visited, and both men expressed themselves as being loth to make an estimate as to numbers, fearing that they might be suspected of exaggeration. From the testimony of these men and other reliable information, there can be no doubt that many thousands of elk, deer and mountain sheep winter in the Park every year, and that their numbers are constantly increasing. But few carnivorous animals were encountered on this trip, and the tracks of but two mountain lions were seen on the whole expedition, so that the fears of those who think the game animals may be exterminated by the carnivora may be considered as without present foundation. Early in April it was discovered that a band of buffalo were located in Hayden Valley and along Alum Creek. A second snowshoe trip by Mr. Wilson, accompanied by Mr. Edward Hofer, an enterprising correspondent of the FOREST AND STREAM, was fruitful in result, eliciting the fact that a herd of buffalo numbering at least one hundred had passed the winter on the divide between the waters of the Madison and Yellowstone rivers and in the adjacent valleys. Numbers of these animals have been seen during the spring along the Fire Hole River and its tributaries, and extended investigations have shown that they range in considerable numbers from Alum Creek, in Hayden Valley, across the divide between the waters of the Yellowstone and Madison rivers and the Continental Divide to Fall River Basin, in the southwestern part of the Park. From the numbers seen and from the quantity of "sign" observed over an extended area, the number of these animals that range in this portion of the Park cannot be estimated at less than two hundred. This conclusion is not in accordance with an opinion expressed in my last report, but it has been reached after careful investigation, and is believed to be correct. The large number of young calves and yearlings which have been seen leads to the belief that a natural increase is in progress, and that if proper protection is afforded the species will not, as has been feared, become extinct.

Early in May last information was received here that the Excelsior Geyser in the Midway Geyser Basin, which had been quiescent since 1882, was again active. This geyser was discovered in eruption on the 30th day of April last by one of the winter keepers of the hotel at the Upper Geyser Basin. It continued to give exhibitions of its powers with great regularity at intervals of about sixty minutes until the latter part of July, since which time its periods have been more irregular—a possible premonition of another long period of quiescence. If the accounts of the previous wonderful performances of this geyser can be relied on, its character has somewhat changed in the lapse of years. The duration of its eruptive energy this year has not been observed to exceed two minutes, and the height of its column of water has seldom reached 200ft.

The winter snowfall through the Park being lighter than usual, it was possible to travel the roads with vehicles as early as the middle of May; and by the 1st of June numbers of tourists, probably attracted by the reported activity of the Excelsior Geyser, were daily visiting the Park. Early in June the hotels of the Park Association were put in operation, and by the 15th of that month the season was fairly opened, the volume of travel showing a marked increase over that of the previous year, an increase which has been sustained up to the date of this report.

During the month of April, Capt. Clinton B. Sears, Corps of Engineers, U. S. Army, was relieved of his duties in connection with the construction of roads in the Yellowstone National Park, by Major Charles J. Allen, of the same corps. Major Allen visited the Park during the month of June, but the appropriation for the fiscal year ending June 30, 1888, having been exhausted, and the new appropriation not being available, no work, except necessary repairs, was practicable.

FOREST FIRES.

It was stated in my last report that at that date no forest fires of any magnitude had occured in the Park during the year. It is with gratification that I now add that the forests of the Park have continued to the present time safe from the destructive effects of fire. The immunity from this evil which was enjoyed during the summer of 1887 may be attributed in some degree to the abundant showers which prevailed, but it is believed also that it was in a great measure due to the care and vigilance exercised by the troops charged with the protection of the Park. This care and vigilance will be constantly exercised in the future, but it would be presumptuous to infer that it will always be effective to prevent the occurrence and spread of fires.

THE BOUNDARIES OF THE PARK.

Among the many needs and wants of the Park no more important or pressing necessity exists than that of an official and accurate survey of its boundaries.

The act setting aside and dedicating the National Park described the area reserved in loose and indefinite language, and made no provision for a survey of its lines.

I am informed that a bill is now pending in Congress, which provides for a change and an enlargement in the area of Park, and a survey of its boundaries, but nevertheless,

in view of the importance of the subject, I have deemed it proper to include in my estimate of appropriations a sufficient sum for a survey of its present limits, and for which I ask your approval.

THE PROTECTION OF THE PARK.

In my last report I expressed the opinion that the force then at my disposal was inadequate to the proper protection of the Park during the tourist season. I accordingly, at the opening of the present season, made application to the Commanding General of the Department of Dakota for an additional force of one commissioned officer and fifteen enlisted men for duty in the Park until the first of October next.

With the approval of the Secretary of War my application was favorably considered. The detachment, under the command of Second Lieut. T. M. Moody, Twenty-second Infantry, arrived at Camp Sheridan on the 22d of last month, and was immediately ordered on duty in the vicinity of the Lower and Upper Geyser Basins. This additional force gives much needed protection to various objects of interest that were previously unguarded, and the presence of a commissioned officer in this portion of the Park, before whom all complaints and controversies can be taken, will greatly facilitate the enforcement of the established rules and regulations.

During the season of travel detachments from my command cover every portion of the Park accessible to wheeled vehicles, and constant scouting operations are conducted into the more remote regions. The rules of the Park have been generally observed, and good order and a respect for the rights of property have prevailed. All obnoxious and disorderly characters have been rigorously excluded from the Park, and by this means the necessity for violent arrests has been avoided.

As stated elsewhere in this report, the volume of travel during the present season indicates a steady increase from year to year. As the number of visitors becomes larger, and new points are rendered accessible to tourist visitors by the extension of the system of roads, a much larger force than that at present employed will be required to render efficient protection. The present arrangement, however effective it may be as a temporary expedient, can not be considered as a settlement of the difficult question of Park government, or in any way to obviate the necessity of wise and well-considered legislation on this subject.

THE GAME AND ITS PROTECTION.

This subject having been dwelt upon elsewhere in this report, but little remains to be added here. During the past two years, in which the Park has been intrusted to the care of the troops under my command, but little game has been killed within its limits.

It is also believed that the protection afforded in the previous year, under the administration of my predecessor, was reasonably effective. It would seem therefore, that at this date the results of this protection should be visible through a natural increase in the numbers of game animals in the Park. The fact of such an increase is, I believe, well established by the testimony of well informed and disinterested parties, who have visited the portions of the Park remote from the ordinary lines of travel, and by the observation of the many scouting parties from my command.

Certainly, in the absence of any barriers, the elk and the deer will not be confined to the Park, and any increase will doubtless, to some extent, overflow into the surrounding country. But as long as a secure refuge and breeding place is afforded by this reservation, and the Territorial laws restricting the killing of game to certain seasons, and by sportsmanlike methods, are observed, there will be but little danger of a total extinction of the species. The buffalo or bison have so narrowly escaped extinction, and the number which now find a refuge in this Park is so limited, that they should be protected by every possible method. Hunters, stimulated by the high price offered by taxidermists for specimens, are now lying in wait beyond the borders of the Park, ready to pounce upon any unfortunate animal which may stray beyond its limits.

It is unfortunate that the legislative bodies of the surrounding Territories have not as yet provided laws for the absolute protection, at all seasons, for this now nearly extinct species.

THE GEYSER AND HOT SPRINGS.

There has been apparently considerable decrease of activity in most of the geysers in the Upper Basin during the present year. Old Faithful still maintains its reputation for regularity, but nearly all of the other large geysers have increased the length of their periods of inaction. It has been surmised that the activity of the Excelsior Geyser has had the effect of decreasing the energy of action in this adjacent basin, but long continued scientific investigation can alone determine whether such a speculation has any value.

Constant and unremitting care has been exercised to prevent the defacement of the beautiful geyser formations by the foolish and shallow-minded visitors who delight to publish their ignorance and want of appreciation of the beautiful by writing thereon their names and places of residence. This practice has been quite effectually checked, and it is hoped that the additional precaution recently adopted will serve to entirely suppress it.

THE CARE AND PRESERVATION OF THE PARK.

In my last report I requested in strenuous and urgent terms the appropriation of a small sum to be used by the acting superintendent of the Park in providing sign-boards to warn the numerous visitors of dangerous places, to display the names of the different geysers and other objects of interest, to clean up and dispose of the débris of abandoned camps, and generally to keep in order and in a decent condition this large reservation, which has been by law declared "a pleasuring ground for the benefit and enjoyment of the people."

No other public pleasuring ground, of ever so humble a character, is maintained without the expenditure of a dollar for decency's sake. Eminent men from all parts of the civilized world, scholars, law-makers, divines and soldiers, come here attracted by the fame of this land of wonders, and by the invitations implied in its dedication as a National Park, to have their senses offended and their enjoyment of nature's most wonderful and beautiful gifts destroyed by the presence of unsightly filth and rubbish.

I again include in my estimate of appropriations a modest sum for this purpose, and again appeal to you for your favorable indorsement and recommendation.

APPROPRIATIONS.

I inclose with this report my estimate of appropriations for the improvement and preservation of the Yellowstone National Park for the fiscal year ending June 30, 1890, and here summarize the items as follows, viz:

For the care and preservation of the Park and the protection of visitors from danger	$3,000
For the settlement of the Barronett Bridge claim, or so much thereof as may be awarded by a duly constituted commission	2,000
For accurately surveying and marking the boundary lines of the Park	10,000
Total	$15,000

In closing this report, it again gives me pleasure to acknowledge, with thanks, and to commend to your appreciation, the services rendered in the protection of this National Park by Mr. Ed. Wilson, scout and guide, whose energy and interest has been untiring; and by the officers and enlisted men of my command, who have discharged their duties with interest and zeal, and who have accepted cheerfully the discomforts and deprivations of an isolated and dreary station.

I am, sir, very respectfully, your obedient servant,

MOSES HARRIS, Captain First Cavalry,
Acting Superintendent Yellowstone National Park.

The Secretary of the Interior, Washington, D. C.

RULES AND REGULATIONS OF THE YELLOWSTONE NATIONAL PARK.

DEPARTMENT OF THE INTERIOR,
WASHINGTON, July 1, 1888.

1. It is forbidden to remove or injure the sediments or incrustations around the geysers, hot springs, or steam vents; or to deface the same by written inscription or otherwise; or to throw any substance into the springs or geyser vents; or to injure or disturb in any manner any of the mineral deposits, natural curiosities, or wonders within the Park.

2. It is forbidden to ride or drive upon any of the geyser or hot spring formations, or to turn loose stock to graze in their vicinity.

3. It is forbidden to cut or injure any growing timber. Camping parties will be allowed to use dead or fallen timber for fuel.

4. Fires shall be lighted only when necessary and completely extinguished when no longer required. The utmost care should be exercised at all times to avoid setting fire to the timber and grass.

5. Hunting, capturing, injuring, or killing any bird or animal within the Park is prohibited. The outfits of persons found hunting or in possession of game killed in the Park will be subject to seizure and confiscation.

6. Fishing with nets, seines, traps, or by the use of drugs or explosives, or in any other way than with hook and line is prohibited. Fishing for purposes of merchandise or profit is forbidden by law.

7. No person will be permitted to reside permanently or to engage in any business in the Park without permission, in writing, from the Department of the Interior. The Superintendent may grant authority to competent persons to act as guides and revoke the same in his discretion.

8. No drinking saloon or bar room will be permitted within the limits of the Park.

9. Private notices or advertisements shall not be posted or displayed within the Park, except such as may be necessary for the convenience and guidance of the public, upon buildings on leased ground.

10. Persons who render themselves obnoxious by disorderly conduct or bad behavior, or who violate any of the foregoing rules, will be summarily removed from the Park under authority of the statute setting apart the Park "as a pleasuring ground for the people," and providing that it "shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be to make and publish such rules and regulations as he shall deem necessary and proper," and who "generally shall be authorized to take all such measures as shall be necessary and proper to fully carry out the objects and purposes at this act."

WM. F. VILAS, Secretary of the Interior.

PROTECTOR DREW.

THE newly appointed chief game and fish protector of New York State is Fred P. Drew, of Washington Mills. In the Report of the Commissioners of Fisheries for 1887, the following statement of work done by Mr. Drew, as protector in the Eleventh District, is printed. We give it as being in part his "record," by which his fitness for the higher office of chief protector may be judged:

To the Commissioners of Fisheries:

I herewith submit my report for the year ending Nov. 30, 1887.

You are doubtless well aware, from an examination of my monthly as well as special reports, that my efforts in the discharge of official duties during the past twelve months, have been greatly embarrassed by the course pursued by some of those whose professions, no less than the honorable positions they occupy, should be a sufficient guarantee that they would be always foremost in upholding every law upon our statute books, instead of which, by openly arraying themselves on the side of the defendants, in aggravating cases of violations, they have, of necessity, encouraged those who set all law at defiance. And yet a careful review of the whole field of operations will convince even the most skeptical, that in many instances very gratifying results have crowned my efforts.

In the thirteenth district I secured evidence against thirteen persons for violations of section 23 of the general law. Before suits could be commenced several came forward and pleaded guilty, offering terms of settlement which were approved by the district attorney; two paid one penalty of $100, no costs having been made. Proceedings were commenced in Supreme Court against the others, who, with two or three exceptions, promptly acknowledged their error and made overtures for a settlement; three of these paying one penalty and costs. Against two judgment was taken by default, and executions have been issued. In the same district I brought suits in Supreme Court against two others for violations of section 21; neither defended.

One day passed on Oneida Lake, in May, with Protector Lindsey, resulted in the capture of twelve large trap nets and one first class gill-net, besides other appurtenances, the whole probably worth, at a low estimate, over $700, to say nothing of dumping loads of choice fish from the nets into the lake. The condition of these nets, literally daubed with spawn, afforded ample proof of the importance of protecting such bodies of water, especially this one, of the most valuable food-producing waters in our whole country.

By special order of one of the Commissioners I visited the Adirondacks in August, a few days before the opening of the hounding season. The section visited embraced a portion of the counties of Herkimer and Hamilton. This part of the forest preserve has, within a few years, become noted as one of the best in the whole wilderness for deer hunting, while before the organization of a well-known club, whose ample domain and watchful care cover all approaches from this side, it was considered by experienced guides and hunters quite the reverse. A notable example of what can be accomplished by a club or society of genuine sportsmen, seconded by a little protection by the State.

I found a party of four sportsmen and two guides, on the south branch of Moose River, actively engaged in hunting deer by the aid of dogs. I invited the sportsmen to accompany me to Boonville, to meet our district attorney; they accepted and paid two penalties. The guides were well known and I left their cases subject to the pleasure of the commission. My opinion, however, is that all guides should be taught that it is as unprofitable to be hired to violate the game laws as it is the revenue or other laws. I do not believe you could find one of these men so ignorant of the law as indifferent to the consequences that, if placed on the St. Lawrence River, he could be hired to row his boat for smuggling purposes. He would tell you at once he dare not take the risk. Later in the season I again visited the Adirondacks by special order and secured sufficient evidence to warrant an affirmative verdict against several others, for violations of the first section, and only await the convenience of the district attorney.

From information obtained from reliable parties, as well as from my own observation, I am convinced that there should be prompt and thorough legislation upon the subject of deer hunting. Just as long as dogs are allowed to run deer, even for a short time, it will be exceedingly difficult to prevent hounding the remainder of the season. Unless something is done to shorten the season, or lessen the number allowed to be killed by a party, they will be, like the moose, utterly exterminated.

In this district, early in the season, I found a party violating section 23. I secured three squat nets and rigging, and by advice of local friends, brought actions against four persons before the city judge for a misdemeanor. They all pleaded guilty, and were fined two dollars each, and sentence was suspended. As yet I have been unable to learn under what statute the court was acting. Proceedings were then commenced in Justices's Court for the civil penalty. They appeared with able counsel, and took the cases to the City Court. We at once withdrew the complaint. Further proceedings and intentions, with our reasons for the same, have been fully reported to the Commissioners, and should not be proclaimed at this time.

In January I commenced action in the Supreme Court in the fourth district against the parties alluded to in my last report. Acting under the repeatedly expressed wishes of well-known townsmen of the defendants, I employed counsel to conduct the case, as their district attorney was not willing to proceed against them. When the papers were served, one of the defendants remarked, "The district attorney (and naming a prominent citizen, an officer of a well-known fish and game protective association) won't allow me to pay a dollar." This, too, when it was well-known that ample evidence had been secured against every one of them for very aggravated violations.

I may add that all proceedings connected with the case referred to above were commenced and continued thus far by the request and with the full approval of one of the principal officers of this same distinguished protective organization; a well-known gentleman who has long been distinguished for his zeal in the cause of protection, rather than for consistency of late. One of my special reports covers the situation, and obviates the necessity of further allusion to the subject in this place beyond the statement that a heavy calendar has prevented the trial of these actions, but it is expected they will be reached at the next term of court.

In the tenth district I have several cases in the Supreme Court that have been put over several times; not by reason of incompetency or collusion on the part of the district attorney, but because of the large increase of crime in some counties, loading the district attorney's office to its full capacity. At a recent term of the court, the time of the district attorney was fully occupied by the Grand Jury. However, I am assured that the next court will dispose of the above cases.

In several counties vexatious delays have occurred, even when the district attorney has been notably one of the ablest and most faithful members of his profession, and has tried to exhaust every honorable means in his power to further the cause of protection. I have been told, however, that in one county overtures in the interest of both candidates for the office of district attorney were made to the parties awaiting trial for violations of the game laws. If such was the case I almost wonder both were not elected.

In a former report I alluded to the necessity of an amendment to the present law, regarding the bringing of suits. The interests of protection would be greatly advanced if a change in this respect could be effected.

In my last report reference was made to suits in the county of Otsego. Three of the defendants offered the district attorney terms, which were approved by our friends, and their cases were accordingly settled. Several others offered to plead guilty and pay a portion of the penalty demanded, but for some reason changed their minds and negotiations were broken off.

Before the next term of court Mr. Brewer became district attorney. His predecessor, Mr. Barber, had discharged the duties of the office with signal ability, and in the interests of the people, and I was assured by him, as well as by leading citizens of Cooperstown, that I would find his successor equally able and zealous in the cause of protection. For a time this opinion prevailed. About the time he took possession of the office he told the district attorney, in my presence, to keep all the game cases already commenced and finish them. Accordingly there were on the calendar of the January term of Supreme Court sixteen game and fish cases; one was tried. The protector and a disinterested witness testified to seeing the defendant taking up a net, and that subsequently the defendant admitted it, and offered to pay a portion of a penalty; all this in the presence of the witness. The defendant testified that he was present at the time and place mentioned by the prosecution, but said he was trolling and only caught one sucker. He was supported by his companion, but who said they did not catch a fish of any kind. Judge H. Boardman Smith, in his charge to the jury, said perjury had been committed, and plainly indicated by whom. The jury found for the defendant.

The court suggested that as the large number of game cases already on a heavy calender, were much in the way of other civil business, they should be transferred to the County Court. Accordingly, a stipulation transferring them to the County Court was signed by all the attorneys connected with the several cases. The course was thought to be perfectly safe, as far as the interests of the people were concerned, and I believe it was at the time.

The County Court at that time was presided over by one who, like his predecessor, was distinguished for his probity as well as legal ability. His practice had not been confined to the court of a justice of the peace, before his election to the office of judge. Before the next term, however, Providence had suddenly removed him by death, and a successor was appointed, and in March the court convened. The first case called had been noticed for trial by the ex-district attorney, in the name of the district attorney. The notice was retained. The defendant's attorney had already noticed it for trial, directing the notice to ex-district attorney, as attorney for the plaintiff. The ex-district attorney filed notes of issue, in the name of the district attorney, and indorsed them in his own name. Defendant's attorney filed a note of issue with the ex-district attorney's name as plaintiff's attorney.

A few days before the opening of the court the ex-district attorney obtained an order for the examination of one of the witnesses before trial, and defendant's attorney, pursuant to notice thereof upon him, attended and cross-examined. This was on the 5th. On the 7th, the first day of the term, without prior notice of such intentions, and before the case was moved for trial, the defendant's attorney asked the court to strike it from the calendar. The witnesses for both sides were in court, and the district attorney stated that he had authorized the ex-district attorney to prosecute the actions, and wished him to do so. The court, notwithstanding these facts, ordered all the game cases struck from the calendar. The ex-district attorney appealed from the order to the General Term, where, as I understand the matter, the question was not decided, but simply dismissed the appeal. At the next term (October) the cases were noticed for trial by the district attorney, who also informed the ex-district attorney that he could proceed with the case; but as soon as he failed in one all the others would be withdrawn by himself. On the trial of the first case, the court refused to rule that proofs of violations in June would sustain the allegations of on or about September, and also refused an amendment to the complaint. The ex-district attorney having thus failed in one case, the district attorney at once withdrew all the others, never at any time having consulted me concerning them in any way.

There were several indictments connected with the October term, that had at least the charm of novelty about them. Nearly every member of the bar took particular pains to manifest their sentiments on the side of the defense. The ex-district attorney stood alone, while the defendant's attorneys were constantly aided and coached by the others, and but for the fact that the sheriff showed the same allegiance to the game laws that he did to all the others upon our statute books, it would have been exceedingly difficult for the prosecution to have kept a witness in the court house during the proceedings. They seemed to go about the village when and where they pleased with perfect impunity.

It was well understood that Sheriff McCredy would not violate his oath of office on the plea of expediency of any sort, but instead, when approached more than a year ago with the hint that he too might have a string of nice fish placed at his back door on fishing nights, declined the offer with the same firmness that he manifested in refusing a late offer to exchange one of the large nets I had placed in his hands for a barrel of choice fish carefully salted for future use. Said he: "I don't want fish taken in that way. I prefer to buy mine or go without."

The judge remarked in open court: "I don't think there is anything more dangerous to the right of the people than a game protector commencing indiscriminately actions, with regard to the evidence being worked up upon which the actions were based. The game protector who neglects to do this, comes far short of doing his duty, and is a dangerous man in the community." The ex-district attorney replied that he was doing me injustice; that out of a very large number of cases I had in that county, he had never been asked to commence an action until he was fully satisfied we had ample evidence to support the case, and that in every instance we had from two to six competent witnesses. The judge then remarked that he did not refer to me.

Just before the district attorney withdrew the several cases, the ex-district attorney stated in open court that he was authorized by the protector to offer to take all of these cases out of this court, and try them before any justice of the peace in the county, first giving security for costs. The offer was not accepted.

The result of all this was soon apparent. Netting in Otsego Lake thus far had been done only by stealth, and the fish thus caught quietly sent to other markets, except perhaps a portion "placed where they would do the most good," but almost before the adjournment of court, boldness took the place of craft, and soon all restraint was thrown off. Nets were used by daylight, spawning beds were raked, and the fish were peddled about the county.

Then even the indifferent became alarmed, appeals for aid were sent even to the Executive chamber as well as to subordinates, and their board of supervisors was appealed to. Indeed, such was the condition of affairs, that one of the village papers, which in January referred to the "unpopular fish suits," in November complained of the situation, particularly of the wholesale robbery of spawning beds.

Fortunately their local legislature believed in heroic treatment for the comp aint, and I am informed nobly performed their duty, repealing the former pot fisherman's law, and enacting one in its place. This, I believe, will render a conviction possible, even in Cooperstown.

I have a number of other cases of violation, some of them in other sections of the county—ready to prosecute—but I think it inexpedient to proceed until I have exhausted further efforts to have the old cases reinstated.

In conclusion, permit me to avail myself of this opportunity to express most sincere thanks to a number of well-tried friends in the several counties I have visited since my last report; nor would I forget in this connection the officers and members of some of the protective clubs in the interior of the State, some of whom have taken a more active interest in our work during the past season than ever before, thereby greatly promoting the efficiency of the service, and encouraging the hope of still better results in the near future along the whole line. FRED P. DREW.

Game and Fish Protector, Eleventh District.

WASHINGTON MILLS, N. Y., Dec. 1, 1887.

MR. LEGGETT'S QUAIL.—Princeton, N. J., Sept. 7.—*Editor Forest and Stream:* My experiment with the young quail breeding in captivity has been fine and far above my expectations. Out of the ten hatched seven are living: three died by accident. They require much skill and attention. The mother and father are wonderfully proud of them. I have the parent wild birds in a large wire cage, but the little ones I now let run out on the lawn. The weather has become so rapidly cold I am afraid further experimenting this year will be of no avail. They are very tame, but the hatching was late, and I have to be very careful with them.—WM. H. LEGGETT.

PRAIRIE CHICKENS.—Callaway, Neb., Sept. 4.—Chickens are more numerous this fall than they have been for years, although large numbers were killed before Sept. 1, which is the legal period in this State.—H. M. B.

CANDIA, N. H., Sept. 5.—Henry A. Wilson, of Candia, N. H., was fined to-day $50 and costs for killing a deer Aug. 27. The complaint was made by Commissioner E. B. Hodge of Plymouth.—AUREOLUS.

ADIRONDACK DEER.—Charles Ayling, of Syracuse, has scored a 215lb. buck, killed on the Beaver River stillwater: and William Poppler, of Jefferson county, has killed one weighing 211lbs.

THE FISH AND GAME LAWS OF NEW YORK have been compiled by George E. Kent, Esq., under the direction of the Commissioners of Fisheries, by whom they are published.

WILLIMANTIC, Conn.—Ruffed grouse, woodcock and quail prospects are promising now for the coming season.—E. S. G.

PLYMOUTH, N. H., Sept. 10.—Ruffed grouse are reported plenty in this vicinity; gray squirrels scarce.—H.

Sea and River Fishing.

IN THE NORTH BAY.

THE August trout fishing in the Maine waters was really something after all, if we are to take some of the accounts of catches as the real facts in the case. The record from Lake Mooselucmaguntic was remarkable for the number of fish caught, though perhaps not for the size of the fish. I have not yet heard an account that appeared to be authentic of any trout caught up to 10lbs., or even 9lbs. Perhaps Capt. Fred C. Barker has a record of some large fish taken this season. If so he will doubtless give it to us through the FOREST AND STREAM. At Moosehead the fishing was very dull all the first of August. In fact nothing was being done when Mr. Walter Hill, in company with Judge Wilson of Washington, and his law partner Mr. Shellebarger, reached the Kineo House, on their way to Alligator Lake.

The FOREST AND STREAM has already had an account of the departure of the gentlemen on this fishing trip, which proved to be rather famous, although it was in the month of August. Mr. Hill was full of misgivings through fear that the Judge was not to catch a trout on this his special trip to Maine. He had left Washington completely worn down with work, no small part of which had been the engineering of the pure lard measure, now before the House, and in which Mr. Hill, an active individual in the service of John P. Squire & Co., the celebrated pork packing firm of Boston, is very deeply interested. The measure had at last been reported to the House, and the Judge and Mr. Hill felt that they could go a fishing. Where should they go? The tardy action of the committee had drawn the pure lard measure well out into the hot weather, and the trout had all probably sought the deep waters, cool enough to keep lard from melting. They decided to start for Alligator Lake, and stop on their way at Moosehead. Arrived at the Kineo, Mr. Hill learned from the clerk that the sportsmen were doing next to nothing. But lacking nothing in courage and less in enthusiasm, they secured a guide and decided to try. The guide was instructed by Mr. Hill that Mr. Hill cared very little for the success of Mr. Hill, but that no pains was to be spared in order that Judge Wilson should catch a trout. The next morning they were off for the North Bay. They rowed and rowed till the Judge, an old hand at trout fishing, by the way, noticed some rocks on the shore, which indicated deep water. He directed the guide to row toward them, till all at once he ordered him to cease rowing, remarking that, "If I can't catch a trout here, I can't anywhere." They began fishing and in less than a very short time the Judge had a trout on, which proved to be a fine one. This was soon followed by another, then another, till when they stopped fishing at night they had 27 handsome fish. Not a bad day's work for August trout fishing. The Judge was delighted. But when he came to get up on to his feet after his long pull at the trout, he was so cramped that his legs would hardly do service. He had so enjoyed that trout that he was completely oblivious to the discomforts of a small boat on Moosehead in August. They took their trout home to the hotel. The string was the wonder of every guest. "Where in the world did you get them?" was asked of Mr. Hill on every hand. He had nothing to conceal, and readily answered, "Round in the North Bay."

The answer was unfortunate, even if it was generous; for they decided to try the same spot the next day, but when they came in sight of the fishing grounds they were alive with boats. They soon put up their tackle in disgust, and returning to the hotel they took the first opportunity for a start toward Alligator Lake. They reached that "Happy Hunting Ground" in due season, only to again meet the salutation, "No trout!" But they were not to be discouraged. They had really good fishing, till last of all the worthy Judge capped the climax by catching a monster, for that lake. In the boat with his guide an enormous thud was felt at one of the rods. The fish was hooked, but it took all the force of the Judge and the strength of the rod to bring him alongside of the boat in ten minutes time. Even when almost brought to the net the big fellow would turn again, and taking line, would rush away for a hundred feet, then sulk till the pliant rod, skillfully handled by the Judge, again brought him up to the boat. This was several times repeated. Mr. Hill says that the face of the Judge was a study. Was he handling a most difficult case before the jury, or was he engineering a very difficult bill into the favor of one of the House committees? Either might have given his face something of the same expression, but just then he was mastering the great trout of his lifetime. At last the big fellow was brought up to the net, but that instrument proved not to be broad enough and it had to be brought up under him in such a way that he could be slid in head foremost. Once the guide failed in this performance, and again the Judge's face was a study. The trout took line again, but fortunately the hook held a moment longer. Again he was brought up to the net, and this time he slid in head downward, and the magnificent fish was in the boat: not one moment too quick, for the hook had torn out in the landing. The Judge leaned forward and looked with admiring eyes for full three minutes without uttering a word. The trout was a magnificent male specimen, a little over 24 inches in length, over 14 inches in girth, and with an enormous tail, measuring 6½ inches across the fin. He had the white margin to the fins and the bright carmine spots, so characteristic of the true *Salmo fontinalis*. The Judge was pleased. He will never forget his trip to Alligator, and that trout. It weighed over seven pounds. They caught other fish during their stay, but the grand object of the excursion was achieved when the Judge landed that big trout. SPECIAL.

BOSTON, Mass.

LAKE EDWARD.

CAMP TRUTHFUL, Lake Edward, Sept. 10.—*Editor Forest and Stream:* In my last communication I fear I did injustice to the trout of Lake Edward. I said they would not take the fly in a manner proper to all well regulated trout. Since then my friend and I have explored the lake fully and thoroughly, have coasted its entire shores, and given our minds and time to the question of fly-fishing, and victory has rewarded us at last. We found that they would take the fly greedily and savagely, and showed their mettle as fighters to a degree that surprised us; they proved as gamy a fish as a fisherman could desire. We could not take them in the deep waters, but at the points and outlying rocks, fishing from the shores with a fly we made ourselves, we had great success.

We tried all manner of flies that our well-supplied books afforded, but at last hit on the killing fly, namely, red body with plenty of bright tinsel, red hackle wings. We tried the red-ibis, but it was too much red, but we invaded the work basket of our landlady, and foraging on the hen roost of the master-mechanic, Mr. Rathwell, we captured his big chanticleer, defrauded him of some of his plumage, and having fortunately some gold tinsel in our effects, we made a fly that seemed to suit the fancy of these fastidious gentlemen, and thereafter had glorious fly-fishing. We stood in one spot and took eighty-four fine fish, not very large it is true, but such fish as a fisherman would exhibit with pride as his catch in any of our home waters. They ran from a half to a pound, the largest [2lbs. But in trolling with a small-sized salmon fly, we took larger ones 3 to 3½lbs. In running water we took two, one 5 and one 5½lbs., and could have loaded ourselves down with smaller fish, but in the lake proper the average was, as I say, from one-half to one pound—good enough fishing for any one. I am happy to make the *amende honorable*, and take back what I formerly stated, that the lake afforded but indifferent fly-fishing.

But the lake is so extensive that a fisherman cannot strike the best spots to order, nor in a day. If he has but a day to tarry, and is ambitious to take a few large fish to carry back home, he had better go at it with bait in deep water. If the wind is west or southerly just sufficient to ripple the surface, he is pretty sure to get a goodly lot of fine ones embracing some two, three and four-pounders.

The guides are now pretty well posted as to the best points for this style of fishing. There are some noble streams in the vicinity, where the fly-fishing is something wonderful, but on the principle that the early birds get the best worms, most of these streams have been leased from the Dominion Government within the past few months by small clubs, and hence are unavailable. We were fortunate enough to secure two very nice rivers and the lake forming their sources, with a view to forming a small club of acceptable gentlemen, and will announce our programme soon through the advertising columns of FOREST AND STREAM. The Dominion Government seems disposed to encourage the formation of clubs, and evinces a liberal spirit in its consideration of applications for leases to American fishermen inland, however much it may stick for its considered principles on the coast fishing question, and if Mr. Cleveland proposes to be belligerent and carries retaliation to extremes, we fly-fishermen will get out a treaty of our own and won't ask the Senate to confirm it either. It is stated that President Cleveland is a worm-fisherman; can a conscientious fly-fisherman vote for a man to rule this great nation that fishes with worms? We have not as yet ascertained the facts in regard to the opposing candidate's skill as a fisherman, but if he is a wormer too, there is danger—there can be no stability in a government with such a man at its head. If we are to have war with our neighbors and capture it, as a matter of course, the undersigned wishes hereby to claim Lake Edward by right of capture, for we have planted the first American flag over its waters. Exploration of our fishing bag in search of a missing dishcloth for camp use revealed the fragments of a small Fourth of July flag that we had intended to donate to a wicked small boy of our acquaintance. In a spirit of proper patriotism we hoisted it over our camp with three cheers, and it waved all night; but next morning patriotism had to give way to practical necessities and we hauled it down to do duty as a dishrag, saying with Shakespeare, "To what base uses do we come at last." But it filled its mission, and we file our claim to Lake Edward "with all its dips, spurs and angles." (Please don't read it angleworms).

Finding it rather laborious to row down the lake mornings ten or fifteen miles, and to be obliged to start back just at the hour when the fish bite best, we concluded to go into camp. Accordingly we procured tent and camp equipage from Mr. W. E. Hoolihan, the young gentleman in charge of this department, and making up a list of small wants procurable from the grocery store, we dispatched our guide ahead, instructing him as to location in our best French and worst English. We took another boat and pulled down leisurely, stopping to fish *en route*, arriving at the destination named about sundown. But there was no white tent nor blazing camp-fire to cheer us. There was evidently some mistake, and all we had to do was to continue on down the lake. We pulled and pulled, three miles, four, five, six, at about the seventh, as we rounded a point, we came upon our camp; a big fire blazed out cheerfully and across the waters the breeze wafted a most inviting odor of fried bacon and trout, and with such appetites jockey club or sweet violets would be as naught compared.

We were at the extreme lower end of the lake, 32 miles. Where that Frenchman would have continued on to no one could tell, to Quebec most likely if the lake had extended so far. If we had not been so hungry we would have perhaps objurgated but those fried trout and the steaming coffee mollified us. We fell too heartily. How many trout we disposed of we took no account of, but at some future day some scientist will discover a pile of bones and write a learned paper on antediluvian man and extinct fishes. He would be correct as to the fish; we extincted a couple of dozen each. What a glorious bed our Frenchman had provided, two feet deep of soft ferns and moss with blankets spread over. In better times we have "put up" at $5 a day taverns, but we never got such a supper nor such a bed, "They don't got 'em."

Our Frenchman proved a prize. There are people who wonder what Frenchmen were made for and what they are good for. Cooks, nothing else in the world. To the Canadian Frenchman's accomplishments you can add paddling a canoe and camp work; beyond that there is a blank demnition void. PODGERS.

A GIANT TROUT.

Editor Forest and Stream:

In a late copy of my home paper—that is, published at my old home in Manchester, England—the Hampshire *Chronicle*, of July 28, I find this record of the capture of "a big one":

"The monarch of the Itchen, probably the largest trout ever caught in this county, if we except one or two in Arlesford Pond, was caught in the river, between Mr. Dance's and Mr. Crate's mill, during Thursday night, by a man named Turpin. Turpin states that he secured the monster with a minnow, on a gut cast, a small hook and a hazel rod, and it was not brought to bank till two hours and a half after being hooked. This fish has for a very long time excited the envy of anglers, many of whom have for two years past from time to time seen it in its native element. It had many narrow escapes during its career, but had always hitherto succeeded in escaping before being landed. As it lay on the slab at Mr. Z. Z. Butcher's shop yesterday morning, the cast with which it was killed being placed on the fish, it was eagerly viewed by hundreds of persons. The fish was in capital condition, and, like most old trout, its lower jaw was crooked, but not to the extent seen in most cases with aged trout. It measured 32½in. in length, 21in. in girth, was 9in. wide in the largest part, and weighed no less than 16lbs. 2oz. We understand that Mr. Dance has become the possessor of the fish, and has since handed it over to our local taxidermist, Mr. W. Chalkley, with a view to preservation. Cutlets have, we believe, been presented to several of our most ardent local anglers, who will, no doubt, pronounce them excellent eating. We trust that when stuffed the fish, which was yesterday photographed by Mr. Rider, may find a final resting place in our City Museum."

This Itchen is a famous trout water. Here at Manchester it is protected all along, which prevents the poaching net, and there is much vegetable growth, which forbids fly-fishing in many parts. The trout find plenty to eat, for they have among other supplies the kitchen refuse from a school of boys. There have always been big fish here. I remember distinctly the taking of an 11-pounder, in the year 1860 or 1861. We boys had often seen him, and fed him, too; but spite of all wiles and devices he could not be taken fairly. Finally one day a Volunteer shot him with a military rifle; the ball entering the back and coming out from one side. Y.

NEW YORK.

A FISH EXHIBITION.—The board of managers of the coming annual exhibition of the American Institute have set apart a portion of the main exhibition hall to be used for a display of live fish in tanks and the operation of fish hatching, etc., so far as can be done at this season of the year. This part of the exhibition will be conducted by the management under the advice, direction and supervision of Mr. Eugene G. Blackford, of this city, president of the New York Fishery Commission, under whose auspices it is expected to be a novel and interesting feature. In connection with and akin to this feature of the exhibition the management desire to have added a display of fishing rods, reels, and all things used in the catching, handling and keeping of fish, both in its industrial and sporting relations, also a display of fish in cans and products made from fish.

BLACK BASS IN THE DELAWARE.—The bass fishing in the upper Delaware has been very good this season and the fish have been of fair size. A gentleman from Philadelphia took four in one day whose aggregate weight was 18¾lbs., the smallest weighing 4lbs. and the two largest 5½ each. Last week two New Yorkers fishing near Port Jervice captured twelve bass in two days that weighed 37lbs., besides several smaller ones.

ONONDAGA LAKE, N. Y.—State Game Protector H. C. Carr, of Union Springs, recently visited this lake, captured a large number of nets and sunk many others. Vast quantities of fish, principally black bass and whitefish, were liberated from captivity. Protector Carr was invited to visit the lake by the Onondaga County Sportsmen's Club.

LIBRARIAN GRISWOLD'S BASS SCORE.—Albany, Aug. 29.—Mr. Griswold, who is the Librarian of the State Law Library in Albany, claims that he has made the highest figures on bass fishing in Lake George this summer. Here is the series: 3, 3½, 3¾, 4, 4½, 5, 6¼lbs. Can anybody beat this record?—G.

ILLEGAL SALMON FISHING.

IN June, 1887, the Legislature of New York passed a law prohibiting the capture of salmon within the State with any device, or in any manner, except that of angling with line or rod held in the hand, and then only from March 1 to Aug. 15. Furthermore the law required all persons using nets in that part of the Hudson River, within the jurisdiction of the State, to restore to the water without injury any salmon taken in their nets. Now that the United States Fishery Commission has been stocking the Hudson with this valuable fish for the past five years, and the salmon are in the river in more or less numbers, it is pertinent to ask why this law is not enforced. The fish have been taken from Gravesend Bay to the trout streams of Warren and Essex counties, and have been sold in New York and other markets. It is estimated that over three hundred adult fish, weighing from 8 to 20lbs., have been killed and sold by the shad fishermen, and the only cases which have come to our knowledge where any have been returned to the water uninjured are a few about the city of Hudson, which is under the immediate eye of one of the game protectors.

On a recent Adirondack trip we learned that the young fish in the trout streams above North Creek are captured in large numbers by trout fishermen when the fry are from six to seven inches in length, and are eaten. This is especially true of Balm of Gilead, and Raymond brooks, which enter the Hudson between the villages of North Creek and North River, on the western side of the Hudson. We heard a guide say that he knew of over a hundred young salmon being taken from one stream. As these fish were legally captured with rod and line there is no cause of action, but it is evident that the law should protect these fish. The guides consider them to be lake trout, which they miscall "salmon," for they do not know what a true salmon is. In the lower river the fish were taken by the shad netters, in violation of law and, with the exception of those taken in that portion of the river over which New Jersey has jurisdiction, every man who takes a salmon in a net is liable to a fine of $100, or one day's imprisonment for each dollar of fine, one-half of said fine to go to the informer.

That the fishermen are generally ignorant of this law, especially on the lower portion of the river, is no legal excuse. The Commissioners of Fisheries should cause them to be informed of the law before another season, and then see that it is rigidly enforced. The fishway at the Troy dam is now completed and at the last meeting of the Commissoners one of the Board, Mr. Burden, was authorized to post notices forbidding fishing within 80 rods of it, as required by law. If the breeding salmon are to be taken while on their way to the spawning grounds the history of the restocking of the Connecticut River will be repeated in the Hudson.

"FISH FIN."—Newport, Ky.—*Editor Forest and Stream:* For the benefit of the angling readers of your paper I send you a receipt for fish fin, as given me by a chief of a roving band of Indians in the West some years ago. I have never seen it in print, consequently it may benefit some one. One spoonful each of common salt and gunpowder and the white of an egg, mixed into a paste and applied to the wound; bandage as in other wounds. As mixture becomes dry apply fresh until all poison is extracted. Keep the paste moist by covering with damp cloth. I would like to hear from other sportson the same subject. A solution of permanganate of potash applied I find beneficial.—WAU-KAU-MAH.

A BIG ONE.—Dr. H. L. Hammond, of Killingly, Conn., was fishing off Race Rock for sea bass and flounders, the other day, when he was heard to call for help. The captain exclaimed, "He has got hold of a shark!" The fight was long and desperate, but at last the monster, who had become exhausted, was brought to the surface. Clubs and boat hooks were used, and at last he was pronounced dead and ready to be put on board. The shark measured 8ft. 5in., and on their arrival home he was found to weigh exactly 389½lbs.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent Milwaukee, Wis.—*Adv.*

Fishculture.

CO-OPERATION IN FISHCULTURE.

BY JOHN H. BISSELL.

[Read before the American Fisheries Society.]

WITHIN the limits properly allowed for a paper in a meeting like this it is scarcely possible to do more than sketch or outline a subject such as I have chosen. I am consoled, however, with the reflection that the manner and style will be passed with indulgence if only there be some merits in the subjects presented for consideration, or at least good faith on the part of the reader.

I think it is generally agreed that fishculture has passed its purely experimental stage. It is in fact fast becoming recognized as a practical art, and an established department of civil government; its definitely ascertained results, which are now unquestioned, fully warranting the recognition it has received from the States and the United States. Having so attained to the period when it is capable of being made a useful factor in the economy of every civilized State, the persons charged with the public duty of administering its affairs and evoking useful results from its prosecution ought ever to be looking for reasonable and practical ways to secure it the highest degree of efficiency. The United States Commission, with a new and broader organic law recently adopted and put in operation, with its departments of work newly recast and systematized, and under most zealous and competent guidance, is prepared now to apply in the solution of some economic problems the many lessons of experiment and scientific observation, gathered and stored up in the past. The States which have been dealing practically with the fishery question in the last ten years have made good progress toward reliable and permanent methods of fishculture, and now at length are able to bring forward some definite and tangible proof concerning its results.

Fishculture, when appreciated and invoked in both its branches, artificial propagation and legal regulation, has demonstrated its ability to restore exhausted fisheries. Of that there is no need of citing evidence to this audience. The next forward movement toward the realization of the great promises of the practical Art of Fishculture, in this country is, I believe, to be the working out of a just and comprehensive system of regulation of fishing as an industry and as a recreation. A notable feature of this movement will be the attainment of more substantial co-operation among the organized bodies existing for its prosecution under the State and Federal Government.

I have in mind two principal topics: 1. Co-operation between the United States Commission of Fish and Fisheries and the several State Fish Commissions; and, 2. The limited co-operation possible between the Commissions of neighboring States, or between States having similar fishery interests. I am not unaware of the fact that the United States Fish Commission has heretofore co-operated with the State Commissions. But I wish to call attention to my conviction that such co-operation can be carried on broader lines with advantage to all concerned.

You are all as familiar—perhaps many of you more so, than I—with organizations employed in prosecuting fishcultural work in this country, so that no detailed account of them is necessary. Here is the United States Fish Commission, with men, with means, with appliances and with scientific knowledge, and while doing the same kinds of work that various State Commissions are doing, yet doing much more than any single State organization. Here are the State Commissions each prosecuting the particular kinds of work required by local conditions under which in the different States fishculture is being carried on. At the points where these different organizations have work common to each, why may there not be cordial and effective co-operation? Not merely the negative, of not interfering with each other, but the positive working together to economize expenditures and efforts, and thus increase general and permanent results.

Bordering the Great Lakes are six States having a population of about fourteen millions of people. The fisheries of these Great Lakes, as their product enters into the general commerce of the country, cannot be regarded as the concern of the six States—they are of national importance. If the fish captured in these lakes were consumed along their shores I grant that the States would have no special claim upon the general Government for taking part in maintaining such fisheries, or helping in any way to their re-establishment. This was the condition of affairs once; but with the modern facilities of rapid communication and improved methods of transportation, their product is marketed all over the country, and for that reason the States bordering the Great Lakes have, in my judgment, as good a right to assistance from the general Government, in the directions I shall presently mention, as the fisheries of the Atlantic and Pacific oceans. Our lake fisheries are not to be compared in extent and value to those of the seas, but it is a difference in degree, not in kind. The United States is doing a most necessary work in the investigation and promotion of the Atlantic fisheries, is preparing to investigate more thoroughly, and help develop the industries of the Pacific; it has done the country an invaluable service in examining and illustrating the seal and other fisheries in connection with the last general census; for all of which it has earned the confidence and commendation of the country. Why should not a similar service be performed by it in co-operation with the States bordering the Great Lakes in making an exhaustive survey and examination of the fisheries from Duluth to the St. Lawrence River? "The reward of having wrought well is to have more work to do." If the Commission has not the equipment in steamers, the work already in hand probably requiring them all, why not borrow one or more of the revenue cutters that are lounging up and down the lakes? I may be doing that branch of the service an injustice, but I never have heard within ten years of those vessels doing anything more useful than cruise on a sort of dress parade between Buffalo and Chicago.

If a revenue cutter could not be spared, then why not borrow from the Navy Department a dispatch boat, or some of the many steamers not suitable for modern naval warfare, and have her fitted out for this service. To do what? To be manned with the necessary crew, under command of an officer not above such service, placed under the direction of the United States Fish Commission, supplied by him with one or more naturalists, and one or more men competent to study and report upon the conditions, capacities and needs of the industrial fisheries, supplied with drags, sounding appliances, proper thermometers, duplicate charts of the lakes, and complete fishing apparatus. Upon the charts could be marked spawning beds, seining grounds, the lines of inshore and outside fishing, abandoned fishing grounds, the lines where certain kinds of fish are most plentiful or scarce, the pound-net fishing stations and the like. With such an equipment it would be practicable to make a complete survey of the fishing, feeding and spawning grounds of the great lakes; exhaustive scientific observations and collections of the fauna; a census of the fishing industry, its methods, its product, its habits; in fact, a history that would, by its manifold and exact observations of the present condition and requirements of the industry and its possibilities, lead conclusively to a knowledge of the causes of its decadence, and what is necessary to be done for its restoration and permanent maintenance. Is it worth the expenditure? I think I can answer without hesitation for Michigan waters. I had occasion in 1886 to examine the history of Michigan fisheries, and was led to the conclusion, after careful examinations and comparisons of such statistics as are obtainable, that if our waters had been as productive in 1885 as they were in 1859, with the effectiveness of apparatus and extent of operations in the former year, the money value of the products of Michigan waters in 1885 would have been not less than fifteen millions of dollars, instead of about one and one-half millions. In 1887 I compared the product of the Michigan fisheries for the year 1885 with those of the Province of Ontario, and found that the money value of the former, if computed upon the same basis as that employed by the Canadian Department of Marine and Fisheries, exceeded that of the province by more than one hundred thousand dollars.

The States bordering the Great Lakes having an immediate interest to be subserved by such an examination, as the work is being prosecuted in their waters, should co-operate by furnishing a crew of three or four men to assist in gathering statistics and other information, which would be of great value to the State Fish Commissions in illustrating to the Legislatures the kinds of regulations required to restrain wasteful fishing, which has gone so far toward depleting the waters, as well as the kind and extent of operations to restore productiveness of the waters. They might also direct or assist in the fishing operations of the expedition. Such an examination would also demonstrate the exact extent to which artificial propagation of whitefish benefited the fisheries, and indicate what points along the lakes required attention in order to the more even distribution of future supplies. The information so gathered would help, by furnishing the required data, toward another and most important feature in the regulation of the fisheries of the Great Lakes, namely, the licensing of fishing as an industry. In alluding thus briefly to this subject there is not time to more than call attention to the fact that a fair system of licensing would in time defray all or the larger part of the expenses of keeping up the supplies of fish when the waters were once well stocked, as well as such part of the cost of enforcing the laws as the State would be called on to pay. There are several minor ways in which co-operation can be advantageously adopted, but not of sufficient importance to be enumerated here. They are being employed more or less, and are familiar to you all.

For many years the U. S. Commission has thus co-operated with two or three of the New England States in procuring salmon and Schoodic salmon eggs, on terms, I believe, equitable and satisfactory to all parties, and with most excellent results.

[TO BE CONTINUED.]

THE AMERICAN FISHERIES SOCIETY.—The report of the meeting at Detroit, in May, 1888, has just been issued by the American Fisheries Society. As we have published a synopsis of the proceedings and are now printing the papers read, further notice is not necessary. We note that the Society has 144 active members, divided as follows: New York, 60; Washington, D. C., 28; Michigan, 10; Pennsylvania, 8; Ohio, 6; Massachusetts, 6; Connecticut, 4; Illinois, 4; New Jersey, 3; New Hampshire, 3; Wisconsin, 3; Nebraska, 2; Vermont, 2; and Canada, Georgia, Maine, Minnesota, and Holland, each 1. The Society should have a larger membership in order to increase its usefulness.

THE NEW YORK FISHERY COMMISSION.—At the last meeting of the Board of Commissioners, in New York, it was decided not to apportion the appropriation among the hatcheries until after the beginning of the fiscal year, Oct. 1. Mr. Monroe A. Green was appointed to be superintendent of the hatchery at Caledonia, in place of his late brother Seth. The selection is a good one, for he has practically had the charge of it during a number of years past. The report of the Shellfish Commissioner has just been issued, as has a synopsis of the game laws.

FIXTURES.

DOG SHOWS.

Sept. 11 to 14.—First Dog Show of the Buffalo International Fair Association, at Buffalo, N. Y. Entries close Sept. 1. C. W. Robinson, Secretary.

Sept. 18 to 21.—Dog Show of the Westmoreland County Agricultural Society, at Greensburg, Pa. John S. Sell, Secretary. Entries close Sept. 15.

Sept. 18 to 21.—Third Annual Dog Show of the Westmoreland County Agricultural Society at Greensburg, Pa. H. S. Branot, President.

Sept. 18 to 21.—First Annual Dog Show of the Syracuse Kennel Club, at Syracuse, N. Y. Howard B. Rathbone, Secretary.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 2 to 5.—National Exposition Dog Show, Kansas City, Mo. C. R. Evans, Manager, Room 16, New England Building, Kansas City, Mo.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6512.**

THE AMERICAN PET DOG CLUB.

NEW YORK, Sept. 8.—*Editor Forest and Stream:* A largely attended and enthusiastic meeting of the American Pet Dog Club was held on the 6th inst. at the residence of the second vice-president, Mrs. Eugene Clarke. Dr. Surles, first vice-president, occupied the chair. Nine new members were admitted and eleven proposed for admission at the next meeting of the club. Mr. Eugene Clarke was unanimously elected treasurer, vice Mr. W. J. Fryer. Two of the newly admitted members, Mr. Walter Goodenough, of horse shoe fame, and Mr. T. J. Dannis, were elected members of the executive committee.

Among the important subjects discussed and considered at length by the club was that of holding a bench show in New York next May. While nearly all favored it, a few hesitated on the ground that the club was not yet a year old and therefore not financially prepared for such an undertaking. This objection was promptly met by three members who pledged themselves to be responsible for any loss the club might incur in the giving of such a show. The subject was postponed for final action at a future meeting, when a full attendance is expected, many of the members being now absent from the city. The annual meeting and election of officers will take place in October. Those desiring to become members of the club for the ensuing year may address American Pet Dog Club, Box 1569, New York P. O. A copy of the constitution, rules and by-laws will be mailed upon application as above. C. ORMSBY, Secretary.

BUFFALO.

[Special to Forest and Stream.]

INTERNATIONAL FAIR GROUNDS, Buffalo, N. Y., Sept. 11.—The show opened this morning, and is a grand victory for Buffalo. Instead of 400 entries, as stated last week, there are over 500, with very many of the leading kennels well represented. Thirty-five entries have been returned, and the exhibition has probably been equalled only by Boston and New York. Prominent in the catalogue are the names of Thayer, Hopf, Whitney, Willey, Oldham, Moore, Huntington, Cryer, Nelles, Bell, Davey, Windholz, Laidlaw, Naylor, McEwen, Gibson, Dunlop, Curtis, Associated Fanciers, Phillips, Mrs. Carl White, and the Hornell-Harmony and Meadow Thorp Kennels, etc. Judging will commence in the morning. The dogs are comfortably benched under canvas, and the place is packed with visitors.

THN TWO DOG CLUBS.

BOSTON, Mass., Sept. 10, 1888.—*Editor Forest and Stream:* I inclose the correspondence between Jas. L. Anthony and myself. I had no thought of further humiliating him by publishing it, but as he seems anxious to make public the unenviable position of "cat's-paw," in which he has been placed, I will aid him in doing so. J. FRANK PERRY.

AUG. 22, 1888.—*Dr. J. Frank Perry:* SIR: I received your telegram and answered same. I thought I made it plain in my letter that I should *make it public.* I regret that the occasion should have arisen to have any difference with you, but, as a breeder, I cannot sit idly by and see what I believe to be an attempt to disrupt the A. K. C. without saying how I feel, and *I know most* if not all the prominent breeders *feel as I do.* You know *full well* that had you started off with *show rules* and *occupied the position you do now,* you never would have a *corporal's guard* for members. The only *sure* thing I see the club can do is to *withdraw* from the *field of shows,* join the A. K. C., and make its influence felt there, *as it surely would be,* otherwise the day of the National Dog Club is very near its end. Very truly yours, JAS. L. ANTHONY.

BOSTON, Mass., Aug. 23, 1888.—*James L. Anthony, Esq.:* DEAR SIR: Your favor of the 22d inst. to hand. You can scarcely as much as I regret this personal controversy. A newspaper discussion is extremely distasteful to me, in fact, utterly abhorrent. Had your letter been a private communication I would gladly have told you much which under existing circumstances I now feel I must withhold. I do not think you need the assurance that I have had from the first the best interest of breeders at heart. If in error I have at least acted up to my convictions. The Buffalo matter has been an extremely unfortunate one. As to what has been done by the A. K. C. to engender a feeling of bitterness you cannot know. The plain facts, however, are in my possession in a form which cannot be mistaken. Still I do not propose to use them. What think you, would you feel kindlier toward the A. K. C. if you knew that its president had openly declared that he would expend $5,000 to ruin the National Dog Club? And do you imagine for a moment that such a threat would excite alarm? You think that the end of "the National Dog Club is near" You have no conception of its strength. You well know that opposition is often a stimulant on which will thrive that against which it is exerted. The National Dog Club may die, *but it never will be killed.* As you are disinterested you will acknowledge that some good has been accomplished by that club. At least it has aroused the A. K. C. from its apathy. Now, as to the future. I fear much harm will result from this personal discussion between you and I—it will add feelings of bitterness which must still further complicate matters and make it more difficult to bring order out of chaos. And yet such an end is not impossible. I do not advise, but I honestly think that if you and other prominent breeders who feel as you do, instead of attempting to whip the National Dog Club into line, which I tell you frankly you *can never do,* would either hold aloof, or content yourselves for a time with an effort peacefully to solve the apparently intricate problem, you would, I am sure, be successful, and a more healthy tone to "doggy" affairs in America be the only lasting result of the existing disorder.
(PERSONAL.) Very truly yours, J. FRANK PERRY.

NEW YORK, Aug. 25, 1888.—*Dr. J. Frank Perry:* SIR: I have yours of Aug. 23d, replying to mine of the 22d, which I hardly *thought required an answer.* I sent it as a *matter of courtesy that you might understand my position in brief.* It was not intended as an answer to your published answer to me, *nor shall I at this writing* formally answer your published letter, though *it is very easy to do so.* You say "had your letter been a *private* communication (you) I would gladly have told you much which under existing circumstances I now feel I must withhold." I cannot see *any force to this remark,* if valid as a defense for the action of your club on entering in competition with the A. K. C., I think that if you wish *your club to succeed,* you had better give not *only to me* but *to the public* the facts you *withhold.* The remark, however, in your letter I must ask you to explain. Do I understand YOU to assert that Mr. Belmont has "openly declared he would expend $5,000 to ruin the National Dog Club?" I want a *categorial* answer, *Yes* or *No.* If *Yes* I want over *full signature the authority.* Since the receipt of your letter I have not seen any of the A. K. C. people, nor shall *I till I hear from you.* I propose to test the truth of this statement among the many *flying around* as to Mr. Belmont. If false, and you cannot prove it, I will *publicly drive the knife into the very vitals of the National Dog Club and its officers.* If true, I shall be greatly disappointed in my opinion of the president of the A. K. C. I give you every opportunity to prove your statement. I will give him every opportunity of disproving it; and I hope, if it is false, he will make you publicly *retract it.* The A. K. C. has for the last year done well. It declined to be insulted by Watson, and it was right; it expelled the Hornellsville Club properly, *and the National Dog Club is not very high-toned* when it takes such men as members, asks one of them to frame its rules, allows him to *manipulate* the meeting at the Metropolitan Hotel, in conjunction with the representative of the FOREST AND STREAM—vide published reports. I have said I disliked personal discussion in the papers, but I have *no fear* but what I can take *care of my end and give facts* quite *lucidly* for the public. You and your club now stand committed before the public as posing, 1st, as in favor of the A. K. C., while those who were behind the scenes were "working" you and the decent part of the club to *suit their own purposes.* As long ago as the Boston show I was approached by Richards, formerly of the *Turf, Field and Farm,* and the *whole plan,* as it has now *turned out,* was *delineated to me.* He frankly said the club was got up in opposition to the A. K. C., *but it would not do to say so at that juncture.* Very truly, JAS. L. ANTHONY.

NEW YORK, Sept. 1, 1888.—*Dr. J. Frank Perry:* SIR: I am waiting your reply to my questions concerning Mr. Belmont. May I ask you to answer same at your earliest convenience? I am entirely unwilling you should attempt to bind me to silence, should make the assertions you do without proof. You must either substantiate them or I will publish the whole correspondence, and leave you to flounder out of the mire as best you may.
I am, etc., JAS. L. ANTHONY.

BOSTON, Mass., Sept. 3, 1888.—*Jas. L. Anthony, Esq.:* SIR: In reply to yours I refer you to Mr. Dawson, the Kennel Editor of the *Turf, Field and Farm.* The information came from him, and reached me through a perfectly reliable channel. Naturally, I do not care to involve others in this controversy, and unless Mr. Dawson denies having made the statement I shall be saved that unpleasant duty. J. FRANK PERRY.

NEW YORK, Sept. 5, 1888.—*Dr. J. Frank Perry:* SIR: In answer to yours of the 3d, beg to say that I yesterday sent to Mr. Dawson a letter, as follows: "In my correspondence with Dr. Perry, the following statement was made by him: 'What think you? Would you feel kindlier toward the A. K. C. if you knew its president had openly declared that he would expend $5,000 to *ruin* the National Dog Club?' I replied, demanding the authority for said statement *and the proof.* Not hearing from him I again demanded the proof to this. He writes: 'I refer you to Mr. Dawson.' * * * the information came from him, and reached me through a perfectly reliable channel.' I now demand of you a *written* statement either *admitting,* explaining or denying the above. *I do not believe* you ever *made any such statement,* but I propose to hunt the author *into his hole,* no matter who he may be." To this Mr. Dawson replied: "I am much obliged for your letter, and in reply have only *this to say, that there is not one word of truth in the statement of Dr. Perry.*" I now demand the name or names of those who gave you the information and that you consider "a perfectly reliable channel." Further I would *again* suggest that the present is a most *opportune* time for you to give me *in addition* the facts you think "under the existing circumstances (you) must withhold." If you are honest in your present position you have nothing to hide; *full publicity* can do you or the club *you represent* no harm, I think.
JAS. L. ANTHONY.

BOSTON, Mass., Sept. 6, 1888.—*Jas. L. Anthony, Esq.:* SIR: Your letter of 3d ultimo at hand. I note with surprise what Mr. Dawson says. I have telegraphed my informant to substantiate his statement. Some delay may ensue before the necessary proof can be obtained. Of the result of my inquiries I will immediately inform you. Unless sufficient evidence is offered me I shall do what I consider my duty to myself and Mr. Belmont, and I will here state that on that point I shall not need your advice. In bringing our correspondence to a close, I will now say what would have defeated my purposes to have said at first. I recognized in the beginning the methods for which you are noted, and in pursuance of my fixed policy in this affair I allowed your arrogance to pass unnoticed. Had I received letters such as you have written me from you on any other subject they would have been treated with the contempt which they merited. Your eagerness to rush into print with private correspondence is, considering the circumstances, quite natural. Pray, you understand the fact, what from your past conduct, I think, you must be ignorant of. It is customary among gentlemen who seek to gain a point by printing a discussion by letter, to give the correspondence on both sides. From any other course only one conclusion can be drawn. In order to facilitate what appears to be your object, I now give my full consent to use absolutely, as you see fit, the letters which have passed between us. I assume the right to do the same. It is well for you to understand, once for all, that I deem myself eminently capable of judging what is right and what is proper for me to do as regards any facts now in my possession, to which allusion has been made in our correspondence. You ought to be able to understand now that you have not the slightest influence on me.
J. FRANK PERRY.

BOSTON, Mass., Sept. 7.—*Augustus Belmont, Jr.:* SIR: Some months since I was informed that you had openly declared to Mr. Dawson of the T. F. & F. that you would expend $5,000 to ruin the N. D. C. I considered my informant and his informant both reliable men, and, therefore, believed the statement to be true, yet I did not circulate it. In a private communication to two personal friends and to Mr. Anthony I repeated it, but in no other instance. Mr. Anthony wrote me for my authority for the statement in question. I replied to him that it came to me from Mr. Dawson of the T. F. & F., through a perfectly reliable channel. Then I was informed by Mr Anthony that Mr. Dawson denied its truth. At once I wired my informant for evidence. He in turn sought his informant, and wrote me the result. He found that the party who made to him the derogatory statement which I repeated, would not only not sustain it but he then denied ever making it. He acknowledged a modified statement from Mr. Dawson, which, however, in no way reflected upon you. My informant still contends that he told me the truth, but in absence of any other evidence than his mere assertion, there remains only one course for me. To you Sir, and to Mr. Dawson I owe an apology, which I take this opportunity of tendering. A copy of this letter will be sent to Mr. Dawson and each of the three persons to whom I made the statement in question. J. FRANK PERRY.

SEPT. 8, 1888.—*Dr. J. Frank Perry:* SIR: I have your letter, at which I am much amused. It states exactly what I have suspected all along, but have not said, viz., that you *were the one that was using* "cowardly methods" *sub rosa* and not the A. K. C. I have not the slightest interest in the matter under discussion, except the one *any honest breeder* might have to see the true state of affairs exposed. "The methods for which I am noted," as you are pleased to term them, are "well known," they are to expose fraud wherever I find it, and to aid honest endeavors to bring matters to a proper "high level" in the doggy world. *I notified you in my first letter that I should* "say publicly what I said privately." I further *telegraphed* you *the names of the papers in which I would publish my letter.* I only regret that as a matter of policy I did not forward your answer as well, and not leave it to you. It was the weakest effort I have ever seen as an answer, and the public could judge of its force as well as I. If you have "caught a tartar," and you have been shown in your own admissions to have been posing for *what you are not,* and aiding and abetting men known for their shadowy methods, you have only yourself to blame.

I have *waited* for you as the public will see to correct a most *cowardly statement* made to me privately to influence me. I have given you every opportunity to correct it. I have, so far as at present appears, driven the falsehood home to *your own door.* I admit this is not pleasant for you, and I admit that I never make a statement I am not prepared to prove by absolute evidence.

Funny, is it not, Doctor, that the very first official act of the N. D. C. should be the appointment of Dr. Cryer and James Watson to draw its "rules"? The printer's error also was very funny. I have the reputation of generally holding my own in a discussion when I begin one, and I am of the opinion it is solely because I have no axes of any kind to grind and merely act *on what I believe to be right.*

What you are pleased to call my "arrogance" amuses me. By position, age, occupation and everything else I am certainly *your equal,* and I had a perfect right *to expose you* and *your methods,* which I have done. I am glad you recognize the *inequality* of the contest on *your* side by bringing the correspondence to a close. I shall certainly furnish the whole of it to the press, and you can answer then your "cowardly attack" on Mr. Belmont, to whom I have never even mentioned the matter so far.

I allow you the right to judge as to what *you* shall do, and I shall arrogate *to myself the same right.* I also thoroughly understand that you are exhausted by the controversy. A man who will influence men to join the N. D. C. as you did and then act as you have done, *I* do not expect *certainly to influence.* I therefore make my bow to you, and leave you, as I have said, to "flounder out of the mire" as best you may. I am, etc. JAS. L. ANTHONY.

COCKER SPANIELS.

Editor Forest and Stream:

Please oblige me by publishing the inclosed "by permission." W. WADE.

BEVERLEY, East Yorks, England, July 23.—*Wm. Wade, Esq.:* MY DEAR SIR—You are most heartily welcome to publish as you please and where you please any printed communication from my pen as sent to the *Field* or *Stock-Keeper.* In those communications I have developed my views as to the essential characteristics, points and qualities of the cocker spaniel and am willing to stand by them always.

I am old enough to remember the grand old sportsmen of former days, who knew what real sport meant, who knew where and when to find their quarry, and who also knew by practical experience the priceless value of well-broken and high-bred cocker spaniels. These men knew that to secure a concentration of power and endurance they must have a short back with immense loin for the weight of the dog: that his legs must be straight and well-boned and not too short, and that the feet must be firm and catlike, not "splay," loose and flabby, as we too often see them nowadays.

The fact is, our present generation of sportsmen (?) "know not Jacob," *i. e.*, they do not know, because they never saw, the perfect little sporting dog of our forefathers that you and I call the cocker spaniel.

I believe a few of the old sort may still be found in Wales, and I have put Mr. Comber, of the firm of Brydent Comber, on their track.

The present long-backed so-called cocker spaniel has been produced to meet the fashion of the day on the show bench, but already I see evidence that an influence is at work to undo the evil this fashion has worked, and to encourage a more really correct type of dog.

What a grand and plucky man Mr. Fellows must be! I am truly grieved to hear of his afflictions, while I admire his splendid pluck and indomitable energy and spirit. Like the British bulldog and cocker spaniel, he evidently cannot be crushed in spirit or in courage while life remains. All honor to such a man, worthy indeed the name of man.
Faithfully yours, W. W. BOULTON.

GREYHOUND IMPORTATION.—Brooklyn, Sept. 6.—*Editor Forest and Stream:* Highland Chief (formerly Glen Cary), the great quartered son of Cartoise and Rechobite, arrived in New York, Aug. 31, after a very pleasant trip across the Atlantic. He is one of the most important acquisitions I have ever made to my kennel of greyhounds, and I will omit further remarks, preferring to read the criticisms of both the judges and the sporting press.—H. W. HUNTINGTON (Master McGrath Kennels).

THE RICHMOND SHOW.

GREAT preparations are making for the Richmond show. President Wise says: "The time is propitious, for the open season begins Oct. 15, and by placing the show Oct. 9, 10, 11 and 12, we thereby bring our friends and their dogs to Richmond during the most beautiful season of autumn. We devote three or four days to generous rivalry in exhibiting our animals against theirs, and meanwhile we are forming their acquaintance and arranging to take them home with us and shoot when the season opens. To the Virginian sportsman the opportunity of meeting congenial spirits, becoming acquainted with them, taking them to his country home and extending its hospitalities is a delight, and to the Northern sportsman, who has long desired just such acquaintance, it solves the vexed problem which has so long puzzled him as to where he can get good shooting near home. It is the opportunity of a lifetime to both, and one that no real lover of field sports ought to neglect. The place is fitting in every way.

"Besides the ordinary attractions of bench shows we have added a novel attraction for the success of which we have made most elaborate preparation, and in securing which we have stopped at no expense. We first advertised for live foxes and have secured between thirty and forty well grown red foxes, which we are caring for most sedulously. We then offered premiums for hounds, not only on the bench but for their field performances. The foxhound prizes are: For the best dog or bitch in the show, $10; for the best kennel of foxhounds in the show, $25; for the best specimen of old blue mottled hound, a type nearly extinct and which we desire to preserve, $10; for the best pack of hounds in the field, $150; for the second best pack in the field, $75.

"The general interest in our great hunts has brought us the promise of the following hounds, and many others will doubtless be present: Mr. Edmund Winston's Hanover pack, 20; Mr. John Haws's New Kent pack, 10; the Chesterfield pack, 30; the Henrico pack, 30; Prince George pack, 20; Amelia pack, 15; Prince Edward pack, 15; Coles pack, Albemarle, 15; Garth pack, Albemarle, 15; Byron pack from North Carolina, 10; Senator Ramson's dogs, North Carolina, 10; Wale pack, Louisa, 6; Culpeper pack, 10; Orange pack, 10; total, 216. There are no better dogs afoot than the above. Besides these there will doubtless be others not yet heard from, and we expect to run at least 150 dogs in every run. Mr. William S. Archer, one of our best known fox hunters, has consented to act as master of the hounds, assisted by another well-known fox hunter, Capt. Joseph Hobson, of Powhatan, one of Jeb. Stuart's best and roughest riding cavalrymen, and Mr. Roane Ruffin, of Chesterfield.

The rules governing these hunts are necessarily few, but such as we have been able to formulate are hereto attached. The meet will be near the Exposition Buildings, and the course of the hunt for the first three or four miles will be laid by a live drag. It will lead across a beautiful hunting country, undulating and with plenty of ditches and fence. Starting on the barrens west of the Exposition grounds it will run westwardly and southerly to the James River bottoms, where the drag will be taken up and a fresh fox started. Thence the course will lie in whatever direction he may go until we come to a kill. Probably one hundred riders will take part in each hunt, and as many will be in pink, we will have such fox hunting as has not been seen since Colonial days. We have also ordered one hundred live hares, in order to run the beagles, which will furnish sport for such as do not care for the more violent exercise of fox hunting. If the number of greyhounds exhibited justifies it we also expect to have some coursing.

"Having made these elaborate and expensive preparations for sports on a scale not heretofore known, we confidently call upon our sportsmen friends everywhere to come to our meeting. If they fail to do so we will have to try to amuse ourselves, but do not hope to overcome or conceal our distress and mortification at their absence when we have sought so earnestly and at such great outlay to make our gathering attractive and to enjoy the pleasure of their presence."

EASTERN FIELD TRIALS CLUB.

THE regular meeting of the Eastern Field Trials Club was held at the St. James Hotel, New York, on Tuesday evening of this week. Vice-president Donner, in the absence of Mr. Wilson, occupied the chair. The treasurer reported a cash balance on hand of $3,400, with no indebtedness. The resignations of Dr. R. I. Hampton and Mr. H. E. Hamilton were accepted, Mr. D. S. Gregory's request to be excused from serving on the board of governors while in Europe was laid on the table. Mr. E. R. Wharton of New York was proposed for membership. A letter was read from Mr. J. R. Henrichs, of Pittsburgh, Pa., accepting his appointment as judge at the coming trials. The secretary was instructed to write to Major J. W. Murnan, of Keeling, Tenn., requesting him to act as one of the judges for the All-Aged Pointer Stakes. A general discussion was then held relative to the advisability of adopting a time limit for the running of the heats at the trials, and it was voted that it be added to Rule 21 that each brace shall be run 45 minutes, and if a decision is not then possible the heat shall be continued for 30 minutes, and if not then decided it shall be continued in intervals of 30 minutes until a decision is made. It was also voted that when but three dogs were left in a stake at the beginning of the day the bye dog shall run a side heat at and during the time that the dog with which he will compete is running. The judge of the side heat to be appointed by the regular judges.

DOG AND SKUNK.

Editor Forest and Stream:

I think the case of his dogs Rover and Nero quoted by "J. G. L." in your paper of August 30, hardly bears out the inference he draws that a dog given to killing skunks is thereby impaired as a coon hunting dog. It is probable that the skunk dog does not confine himself to fox or coon trails, and thus wastes time on skunk and other trails that Nero devotes to coons. In our part of the country, hounds run nearly all kinds of game from rabbits to deer, but in nearly every "collection" of hounds (I do not mean "pack") there will be some hounds that can be depended on not to open on anything but a fox or deer trail, and such dogs will naturally strike more fox trails than those who go off on every rabbit, skunk, possum or other trail they may run across. I have known plenty of hounds who would not run rabbit, skunk, otter, possum or wildcat trails, but I never knew one who would not run deer, except in the case of some very old dogs who had learned by experience what a severe experience was the result of going off "after a deer," which has been the death note of many and many a good dog. Cats and otter are nasty customers for hounds to strike, the former generally managing to be the death of some of the leading dogs in the chase, while otters cut them up very badly. However, I have not heard of otters being found near here for several years, and "cats" are much scarcer than they used to be in my younger days. BULGER.

FAYETTE COUNTY, Pa.

SYRACUSE DOG SHOW.—*Editor Forest and Stream:* The following classes have been added to those published in our premium list: The greyhound championship class will be divided by sex. A champion class for foxhounds (dogs and bitches), a class for foxhound puppies, a champion class for bull-terrier dogs, the same for bitches, and a puppy class for King Charles spaniels.—E. O. WARD, Secretary.

AMERICAN-ENGLISH BEAGLE CLUB.

To the Members of the A. E. B. C.:

It is customary for the president to issue an annual report, but the interests of our members make this one now (indorsed by the Execucive Committee) advisable. Our club this year applied for membership to and was accepted by the American Kennel Club; this gives us a ruling voice in the A. K. C. and in the conducting of dog interests, and makes us practically part owners of the A. K. C. While such members, it is our duty to support the A. K. C. by not supporting any shows antagonistic or conflicting to it. The mere fact of a club not being a member of the A. K. C. does not necessarily make it antagonistic. The members are advised as above, so they will use their own judgment as to what shows they should support and what not—by exhibiting. The members are requested to read my official letter in the FOREST AND STREAM of Aug. 2, 1888; they will then see why the A. P. D. Club should not be supported by our members. Our club has reached such importance, that its dignity requires that managers of shows select our members for judges, otherwise our members are requested not to support any such shows, as by so doing it will give our club power to enforce the respect due us, and have our standard used. Our club is certainly due the respect and loyalty from its members to not support any judge not a member of our club; loyalty to our interests and welfare demand it.

The Executive Committee have voted to have a club sweepstakes, held at one of the prominent spring shows of 1889, for beagles owned by members and whelped on and after Jan. 1, 1888. Entries to close Jan. 1, 1889, with our secretary. Entrance fee to be $2; 45 per cent. to go to the winner; 20 per cent. to breeder of same; 35 per cent. to second best, and 10 per cent. to third best.

HERMAN F. SCHELLHASS, President.

Editor Forest and Stream:

Please state that the A. E. B. C. will donate two special prizes at the Richmond, Va., dog show, one for best beagle dog and one for best bitch, owned by a member of our club. One of our members has been asked to judge beagles at the show, and that should insure a good showing from those interested in beagles. Rabbits will be provided, so those who wish can have a hunt. W. H. ASHBURNER, Sec'y.

THE INDIANA FIELD TRIALS.

Editor Forest and Stream:

Mr. James L. Anthony has printed this note, announcing that he is not to judge at our trials:

"Permit me to say that I shall not judge at said trials, my services having been dispensed with by the club. I have been waiting for them to make the announcement, in justice to the public who made entries on the strength of my name, but I feel I have no right longer to keep silence. I shall allow the Indiana club to give all the correspondence between us to the public; if they don't I will furnish it, and allow the public to come to their own conclusions."

In answer to this, let me say our club informed Mr. Anthony July 24, that his services as judge of our coming trials would not be required. In Mr. Anthony's answer, dated July 26, he says, "I am glad that I can now publicly announce the reason why I am not to judge." At the time Mr. Anthony was thus notified the club decided not to make the announcement public, through respect for his feelings. Since receiving his letter of July 26 we have been patiently awaiting his announcement as promised. We can assure Mr. Anthony that he has our consent to publish everything connected with the case. P. T. MADISON, Secretary.

By order of the Board of Control.

INDIANAPOLIS, Sept. 8.

Entries for the All-Aged Stake of the Indiana Kennel Club close Oct. 1. The stake is open for all pointers and setters with $5 forfeit and $10 additional to fill. The purse and entrance money less the expense will be divided, fifty per cent to first, twenty-five per cent to second and twelve and one half per cent to two equal thirds. The address of the secretary is P. T. Madison, Indianapolis, Ind.

LONDON DOG SHOW.

LONDON, Ont., Sept. 7.—*Editor Forest and Stream:* The London Kennel Club's new bench show building is about finished, and it is the most complete and only one built purposely for bench shows on the continent.

There is every indication that the show will be a grand success. The directors are leaving nothing undone. The dogs will be fed with Spratts Patent. New specials are being donated all the time. Among the latest are: A handsome gold medal valued at $50, donated by the Western Fair Association, of London, Ont., for the best kennel of collies, four or more. A silver cup valued at $40, to be known as the Tecumseh cup, donated by Messrs. McGaw and Winnett, proprietors of the Tecumseh House, for the best pair of English setters owned in the Dominion. The London Kennel Club offer an oil painting valued at $25 and $10 in cash for the best kennel of foxhounds, four or more. There will be special prizes offered in all the classes. Mr. John Davidson, Monroe, Mich., will judge setters, pointers, foxhounds, greyhounds and deerhounds. Mr. J. F. Kirk, of Toronto, Ont., will judge the spaniel classes, and Mr. James Mortimer, of New York, the remaining classes. Entries close Sept. 15, and if necessary dogs will be received Saturday, Sept. 22. Rough St. Bernards will be divided into champion dog or bitch, $10; open dogs, $10 and $5 and diploma, bitches the same; puppies, $7 and $3 and diploma.

C. A. STONE, Manager.

DOG TALK.

WHAT shall we do with the cur dog? For one thing, they are out o' nights on the rampage, and destroy valuable live stock. A note in a late number of the Spring field (Mass.) *Homestead* reports from Belchertown: "Dogs have of late become unusually aggressive and destructive. A fine flock of high-grade Southdowns belonging to Daniel Wilson was raided last week, and all but one, an old buck, destroyed. Calves in pasture near the Dwight Fuller farm belonging to a Mr. Nutting, of South Amherst, were set upon by the same dogs, it is supposed, and either killed outright or injured yast recovery. It is hoped that these dogs may be identified and put where they can do no further damage to our flock and herd. In the meantime, let those who will keep these worse than useless curs, which are only too common and a nuisance to farmers and the public generally, see that they do not stray off their premises.

The *Stock-Keeper* "whispers" of a lady exhibitor as the "dog-loving daughter of a dogly father," and in another column speaks of her as "inheriting evidently the canine inclinings of her father." "Inclinings" is very neat, but we are a bit "dubersome" regarding "dogly."

It is reported that there will be a dog show at Pittsburgh, Pa., this fall. The date is not yet decided upon.

There will be a dog show at Rockford, Ill., Dec. 3 to 8, in connection with the third annual exhibition of the Northern Illinois Poultry and Pet Stock Association. The address of the secretary is A. H. Currier, Rockford, Ill.

By a note printed elsewhere it will be learned that Mr. J. L. Anthony will not judge at the Indiana trials. We are not advised as to why his services have been dispensed with, but it is a mystery to us that a person so intensely incompetent should have been appointed to fill the very responsible position of field trial judge. A person selected to determine the merits of competing dogs in a field trial must be a sportsman, a judge able to see field work and to know it to be good or bad when he does see it, and a gentleman. Mr. Anthony has not these qualifications. He is not a sportsman. We have seen him, when following his expensive imported dogs in the field, shoot at a quail in a tree—the only redeeming feature on this occasion being that he missed his bird. Mr. Anthony's eyesight is so defective that he cannot distinguish one dog from another at a much less distance that a field trial judge is often called upon to see. For this we have only his word, although we have a distinct recollection of strong corroborative proof of it in the many questions and remarks that he bothered us with at the field trials at High Point three years ago. Moreover, even could he see it, he does not know what constitutes good field work. This he fully demonstrated to us upon the occasion referred to, by repeatedly commending the stealing of points and in one instance a break shot, capping the whole by praising one of his dogs for most decidedly quitting his work. Mr. Anthony's claim to the third qualification rests mainly upon his own repeated asseverations—spoken, written and printed—that he is a gentleman. If his own personal testimony to this effect needs any corroboration, it must be sought for in the style of letters he writes; and if further evidence is demanded perhaps it could be had from the stenographer he is said to conceal behind a screen in his office, to take down the conversation when persons call upon him, or from the judge at the last New York show, whose decision Mr. Anthony cursed so loudly and profanely in the ring. On the whole, the Indiana Kennel Club is to be congratulated that they have "dispensed with his services."

The gist of the correspondence between Dr. Perry and Jas. L. Anthony appears to be this: Dr. Perry in a personal letter to Anthony said that President Belmont, of the A. K. C., had expressed a willingness to spend $5,000 to ruin the N. D. C. Called on for his proof, Dr. Perry referred Anthony to Mr. Dawson, from whom he supposed the assertion of this had come. Mr. Dawson denied having made such a statement. Thereupon Dr. Perry did what any gentleman would have done, namely, he wrote to Messrs. Anthony, Belmont, Dawson and the only two other persons to whom the assertion had been repeated by him, withdrawing it in a frank and manly fashion which did him credit. There the whole matter, correction having been fully made, might well enough have been dropped, but the man who conceals stenographers behind a screen in his office to take down what is said when gentlemen call on him, insisted on making public the entire correspondence, the letter marked "personal" and all; Dr. Perry sends it to us and we print it.

We are free to confess that all the fuss about whether Mr. August Belmont, Jr., did or did not say he would give $5,000 to ruin the National Dog Club is superfluous. Mr. Belmont, in support of his attempt to ruin the Buffalo show having made a false statement about the FOREST AND STREAM, and having been content to have the exposure of his falsehood pinned to him all these weeks, is presumably not over squeamish about a little thing like the $5,000 rumor.

In our last issue we reported on insufficient information that Buffalo had over 400 entries. It now appears that there are over 500. Mr. August Belmont, Jr.'s, falsehood about the FOREST AND STREAM, therefore, appears to have been even more futile than we reported it. Now that the Buffalo show has demonstrated that threatening bluster and boycotting and plottings in the dark, backed up by falsehood, are not potent instruments for attaining desired ends in kennel affairs, why can we not have something better? Why is it not time for a clearer atmosphere? Why may the A. K. C. manipulators not judiciously abandon their unseemly tricks and devices and try fair play? In short, why is it not practicable from this time forth for them to work in a square and manly fashion, as the National Dog Club promoters appear to have done from the first?

Entries for the All-Aged Pointer, All-Aged Setter and Champion Stakes of the Eastern Field Trial Club close Oct. 1. The trials will begin at High Point, Nov. 15 with the Members' Stake, entries for which close the night before the running. We are advised that quail are very abundant on the grounds of the club and that they are well grown, so there will be no delay from lack of birds. We have no doubt that each stake will be well filled, in fact for the past few years there have been too many starters and both Derby and All-Aged Stakes will soon become unwieldly if something is not done to limit the number of entries. The Members' Stake, as we have often said, should be the most important event of the meeting and we hope to see each member come to the post this year with his best dog and show the outsiders that they are lucky in having their dogs in the other stakes.

DISTEMPER.—I.

ALTHOUGH the term "distemper," or its equivalent in other languages, is used to denote a somewhat complicated disorder to which dogs are subject, it is occasionally applied to maladies of other domesticated animals, when the disease in question is prevalent and marked by a certain series of symptoms which are easily recognized; in fact, the word may be used as synonymous with "disease," on condition that the reference is limited to characteristic and general disorders.

Canine distemper (*la maladie* of the French) is popularly considered to be one of the ills to which the whole race is heir. Like measles or whooping-cough in the human subject, the disease is essentially a peril of the earlier life, although age does not confer absolute immunity. All dogs are presumed to have distemper some time in their existence, and one attack is looked upon as a guarantee—at least to some extent—that the creature is safe for the future. Probably most dogs do escape with a single attack, but the instances of a second or even a third appearance of the disease in the same animal are numerous enough, as all practical men are aware.

No doubt can be entertained that distemper is a contagicus disorder, and it is also certain that its communicability is not limited to the animals of the same family. Carnivorous creatures are its special victims, and the affection may be transmitted from dogs to cats, and *vice versa*. Ferrets also suffer very severely.

In regard to the fatality of distemper, it may be remarked that different breeds of dogs and varying conditions of management are among the modifying circumstances which materially affect the results. Dogs which are kept in a natural state—the street dog, for example—seem to take distemper as an incident in their lives which causes very little disturbance in their habits. The other extreme—the toy spaniel—exhibits the affection in its most exaggerated form, and only escapes with its life at the cost of much suffering, and often the establishment of some chronic malady, which it carries with it to the end. Newfoundland dogs, especially in their period of puppyhood, always have distemper in a severe form, and the mortality among them is great, even under the most favorable circumstances.

Assuming that distemper is a purely contagious affection, which is a reasonable conclusion from the facts in the history of the disease, no question can arise as to the causes which produce it. Spontaneous origin or development, as the consequence of unsanitary conditions, are excluded altogether from consideration, and every case must be referred to infection from a previous case.

Objections to the view of the contagious origin of distemper are urged by some observers, and they possess a certain force. For instance, it is asked, How did the first case arise? What evidence of the present infection can be adduced in the majority of animals attacked? These questions are equally pertinent in respect to contagious diseases generally. Outbreaks of cattle plague, foot-and-mouth disease, pleuropneumonia and swine fever occur under conditions which seem to exclude the idea of contagion; nevertheless, no well informed persons doubt the fact of contagion existing, even when it cannot be traced.

SYMPTOMS OF DISTEMPER.—At the commencement of the attack distemper is not to be distinguished from an ordinary cold or a slight degree of indigestion. The dog is dull and listless, the appetite is lost, thirst is present, the eyes are watery and very sensitive to light, sneezing is frequent, and sometimes sickness is a marked symptom; a dry cough is sometimes present in many cases; but there is nothing in the early signs of the disease which are absolutely definite, and the owner of the sick animal will generally look upon the disorder as an ordinary cold, and his conclusion will be correct in most cases.

Sometimes an attack of distemper ceases after the development of the early signs, and it may be doubtful whether the affection was the specific malady or a simple catarrh; but in the majority of instances the progress of the affection will soon place the matter beyond all question. The discharges from the eyes and nose become more profuse and thicker, emaciation proceeds rapidly, often diarrhœa sets in, and the dog is soon reduced to a pitiful plight.

In the last stage of the common cattarrh form of distemper, an apparently serious complication occurs in some cases. The eyes become opaque, the cornea is ulcerated, and the contents of the anterior chamber flows out, giving rise to the impression that the sight is entirely destroyed. These cases are more alarming in their general aspect than actually dangerous, and long experience has proved that no notice need be taken of the local disease, nor should any kind of treatment be adopted in regard to the affected organs. As the animal improves in condition under a proper regimen, the eyes gradually recover their healthy state, and finally show no sign of having suffered.

Treatment of the common form of distemper may be commenced by giving an emetic. This is an old-fashioned system of proceeding, dating back to the days of Youatt and Blaine, who probably derived it from the rougher practice of the dog fanciers of their period, among whom a dose of the black sulphuret of mercury or a spoonful of salt was the remedy for all forms of indisposition.

Dogs are very susceptible to the action of emetics, and the agents which are used—tartar emetic and calomel—exercise an alterative and laxative influence at the same time, without causing any irritation of the digestive organs. In all cases the dose of the emetic should be small, but obviously the range must be rather extensive, having regard to the great difference in the size of the smallest and largest of the canine race. From half a grain to four or five grains of the agents will be sufficient to produce the desired effect. Calomel and tartar emetic may be mixed together in equal parts, as the effects are more certain than when either agent is given alone.

After an emetic has acted, a mild alterative and sedative powder may be given once or twice a day, as the state of the case requires. Dover's powder, a compound of sulphate of potash, opium and ipecacuanha, or Dr. James's antimonial, will be useful in doses of two to five grains, and if a purgative should be required, a teaspoonful to half an ounce of castor oil is the safest and most effective agent which can be used.

Dietetic treatment is always an important feature in canine medical practice, and, joined with good nursing, will effect much which would be unattainable by the aid of medicine alone. In a disease which causes debility of a pronounced kind as distemper does, the food should be nutritious and at the same time concentrated, and nothing can be better adapted to meet these requirements than the preparations which are constantly used in medical practice, as meat extracts, peptonized foods and pancreatic emulsions. These remedies give to the veterinary practitioner immense advantages in treating the diseases of dogs which cannot be extended to the larger patients. Stimulants are sometimes useful in the debilitative stage of distemper, and brandy or port wine may conveniently be combined with the prepared foods before named when the animal's flagging powers require to be roused into activity. As the appetite improves, with returning strength, solid food may be given in small quantities, and it is well to recollect that the digestive system of the dog is better adapted to the digestion of meat than vegetable food; but the sick dog is often as fanciful as his owner in regard to the selection of his diet, and as convalescence advances, it is desirable to consult the animal's taste as far as possible.—*London Field.*

THE OVERMASTERING PASSION.—Chester, S. C., Sept. 8.—*Editor Forest and Stream:* I am requested to send you the inclosed note from the *Bulletin* of this town. The two fox hunters named are known to me, and I can also vouch for the incident of the old fox hunter being stirred by the preacher's mention of foxes. The *Bulletin* says: "Messrs. John McIver and B. J. Randall, of this town, left for the lower part of Lancaster nearly four weeks ago with their fine pack of hounds, to indulge in the sport of fox hunting. They carried eleven dogs, all young, and with little training. With these they caught thirteen foxes and put three in their holes. This is a most wonderful performance, and establishes the reputation of this young pack as being the finest in the country. Mr. McIver thinks that a young Tennessee dog, called Bellman, is the best dog of his years he ever saw. Surely fox hunting is the most absorbing of all sports. Here are two gentlemn, not by any means young, throwing down business and giving themselves up to the excitement of the chase for three weeks with all the enthusiasm of boys, while the thermometer was ranging in the neighborhood of 100 degrees. We knew a gentleman living not far from this county, who was a most devoted fox hunter. He was one Sunday night at church and the preacher read about foxes making their dens in the ruins of Nineveh and Babylon. At this the fox hunter took his hat and left the church. As the last stroke of 12 was sounded on the clocks, his horn was heard high in the still night air calling his dogs to the field. Of such stuff are our two nimrods of Chester made."—S. P. H.

ITHACA DOG SHOW.—Ithaca, N. Y., Sept. 7.—*Editor Forest and Stream:*—At the annual fair of the Tompkins County Agricultural Society held in this city, the present week, a not particularly robust exhibition of canines was made on the second day. Although the affair was hastily devised, the exhibit was, for a first one, very creditable. A handsome litter of mastiff puppies, two months old, was shown. A litter of well bred beagles also attracted much attention. A number of choice appearing St. Bernards were sandwiched in among the mild-mannered mastiffs and beagles, the whole forming an attractive feature of the society's forty-fifth entertainment. Perhaps this small beginning will lead up to greater things. Who knows?—M. C. HILLICK.

EDITORIAL HONOR.—*Editor Forest and Stream: Turf, Field and Farm* of Aug. 24 has a communication on Dr. Perry, and an editorial referring to the same. In both Mr. J. Otis Fellows is described in a manner that, to put it mildly, is very disparaging. I do not know that Mr. Fellows' reputation will suffer thereby, but it is well to point out that Mr. Fellows is very nearly, if not quite, the oldest breeder and exhibitor in the country. When a man has been before the doggy public as long as Mr. Fellows has he can afford to laugh at attempts of newcomers and brash editors to damage his reputation, which has stood unchallenged so long. But in the very same number of that paper is an extract from a letter from Dr. W. W. Boulton, which letter was written to me. As I was then without Dr. Boulton's permission to publish this letter, I was extremely indignant at its appearance, and immediately wrote Mr. Fellows inquiring how it happened, and he replied that he told the editor that the letter was not to be published until I had permission. I may say that I sent Dr. Boulton's letter to Mr. Fellows, as it strongly indorsed the position Mr. Fellows has always held as to cocker spaniels, and was a reply to a letter of Mr. Fellows to me, which I had sent Dr. Boulton. Now mark you, the very same issue that contains the letter of Dr. Boulton, given the editor in confidence, which confidence was shamefully violated, contained an attack on Mr. Fellows in terms that I need not characterize, as every acquaintance of Uncle Dick's will do that mentally to his heart's content.—W. WADE (Hulton, Pa., Sept. 1).

A CONNECTICUT KENNEL CLUB.—Bridgeport, Conn., Sept. 10.—*Editor Forest and Stream:* Will you please state that there will be a meeting held at the Atlantic Hotel, Bridgeport, Conn., on Tuesday, Sept. 18, at 8 P. M., for the purpose of organizing a Connecticut State Kennel Club. We would like to see as many present at the meeting as possible, and should be pleased to receive the names of all parties interested and desirous of becoming members who cannot attend. We might also state that it is the intention of those now interested in the club to join the A. K. C. as soon as organized. Address communications to A. R. KYLE, South Norwalk, or DR. JAS. E. HAIR, Bridgeport, Conn.

OMAHA SHOW.—Omaha, Neb., Sept. 6.—The dog exhibit at the fair is a small one but attracts considerable attention. It consists mainly of bulldogs and everybody, of course, considers his own the finest in the lot. Arthur Rothery has two water spaniels and one hairless Mexican dog. A. J. Wells also has a water spaniel. All the rest are bulldogs. Two of these are owned by Ed Rothery, five by William A. Nightingale, two by Charles Stokes and one each by the following named gentlemen: Bob Clancey, William Carlin, Doc Tanner, John Prince, John Christensen, Colonel W. H. Beck, Otto Lund, H. J. Wells.

CANADIAN KENNEL CLUB.—London, Ont., Sept. 8.—*Editor Forest and Stream:* All Canadian dog owners and those who are interested in the subject are requested to attend a meeting to be held Wednesday, Sept. 26, at 3.30 P. M., in the beach show building of the Western Fair Grounds, to consider the advisability of forming a Canadian Kennel Association and getting out a kennel register for the Dominion.—C. A. STONE, Manager London Kennel Club.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Bessie King. By A. W. Smith, Buffalo, N. Y., for black and tan terrier bitch, whelped April 24, 1888, by King (A.K.R. 6358) out of Gipsey Queen (A.K.R. 5028).

Lillian Buckellew, Rod's Ruby and Countess Buckellew. By F. G. Taylor and G. G. Davis, Philadelphia, Pa., for black, white and tan, orange and white and lemon and white English setter bitches, whelped July 6, 1888, by Buckellew (Druid—Ruby) out of Rodreka (Roderigo—Gem).

Village Bell. By Warner & Hamilton, Canaan Four Corners, N. Y., for fawn, black marks, pug bitch, whelped Aug. 7, 1888, by Cricket (Tuck—Toodles) out of Trinket (Dandy—Pansy Blossom).

Buttercup and Smarty. By Warner & Hamilton, Canaan Four Corners, N. Y., for sable and black, white and tan collie bitches, whelped July 13, 1888, by champion Clipper (Eclipse—Nesta) out of Nellie McGregor (champion Rex—Juno).

Rialto Hustler, Rialto Laddie and Rialto Lassie. By W. J. Middleton, Somerville, Mass., for greyhounds, two dogs and one bitch, whelped May 2, 1888, by Waldo out of Spice.

Teddy, Ben, Shy and Bijou. By W. H. Murphy, Ogdensburg, N. Y., for white, black and tan fox-terriers, two dogs and two bitches, whelped June 6, 1888, by Sport out of Shy (Keen—imported Nettles).

NAMES CHANGED.

Neva B. to Rural Neva. By Rural Kennels, Wakefield, Mass., for lemon and white English setter bitch, by Pride of Dixie (champion Gladstone—Countess Druid) out of Fairy Belle (champion Plantagenet—Fairy III.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Dot—Red Rover. Curry & Parks's (Beason, Ill.) collie bitch Dot (A.K.R. 2709) to their Red Rover (Red Gauntlet—Bredna), Aug. 25.

Rhea—Rebel, Jr. Dr. W. A. Strother's (Lynchburg, Va.) English setter bitch Rhea (Dashing Rover—Leah) to A. Dill's Rebel, Jr. (Roderigo—Bo Peep), Sept. 1.

Jill—Jockey. W. J. Middleton's (Somerville, Mass.) Clumber spaniel bitch Jill (Spot—Eyrie's Judy) to H. W. Windram's imported Jockey, July 8.

Bess I.—Jockey. W. J. Middleton's (Somerville, Mass.) Clumber spaniel bitch Bess I. (Jockey—Romp) to H. W. Windram's imported Jockey, July 2.

Tough—Nero. C. E. Living's (Ottawa, Can.) cocker spaniel bitch Tough (Wildair—Belle) to D. Holbrook's Nero (Jet—Rita), Aug. 20.

Dot—Robin. H. F. Gordon's (Woodstock, Ont.) cocker spaniel bitch Dell (Master Shina—Muggins) to A. Laidlaw's Robin (champion Obo II.—Woodstock Dinah), Sept. 5.

Devon Beauty—Robin. A. Laidlaw's (Woodstock, Ont.) cocker spaniel bitch Devon Beauty (Lad o' Devon—Woodstock Dinah) to his Robin (champion Obo II.—Woodstock Dinah), Aug. 13.

Woodstock Ada—Robin. A. Laidlaw's (Woodstock, Ont.) cocker spaniel bitch Woodstock Ada (champion Obo II.—Woodstock Dinah) to his Robin (champion Obo II.—Woodstock Dinah), July 16.

Yarrow—Robin. B. J. Rae's (Woodstock, Ont.) cocker spaniel bitch Yarrow (Master Shina—Woodstock Nellie) to A. Laidlaw's Robin (champion Obo II.—Woodstock Dinah), July 21.

Woodstock Nellie—Robin. B. J. Rae's (Woodstock, Ont.) cocker spaniel bitch Woodstock Nellie (Obo, Jr.—Laidlaw's Belle) to A. Laidlaw's Robin (champion Obo II.—Woodstock Dinah), July 5.

Nell Bright—Sensation. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Nell Bright (Bendigo—Daisy) to his Sensation (Bulrush—Fancy), Aug. 2.

Bertha—Sensation. John Whitaker's (Philadelphia, Pa.) bull-terrier bitch Bertha (Dutch, Jr.—Young Venom) to F. F. Dole's Sensation (Bulrush—Fancy), June 22.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Nightshade. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Nightshade (Joff—imported Lulu), July 6, five (three dogs), by their Jupiter (champion Lee—Saad).

Cloud. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Cloud (champion Lee—Countess), July 4, six (three dogs), by their Jupiter (champion Lee—Saad).

Blossom. Harry S. Gilbert's (Millersburg, Pa.) beagle bitch Blossom (A.K.R. 5711), Sept. 2, six (five dogs), by A. C. Krueger's champion Bannerman (A.K.R. 1709); all white, black and tan.

Shultz. Chas. A. Paetzel's (Hope, Ind.) pointer bitch Shultz (Clipper—Bow Queen), May 20, eight (six dogs), by Ed Shultz's Fowler (Osborn Ale—Vanity).

Rural Neva. Rural Kennels' (Wakefield, Mass.) English setter bitch Rural Neva (Pride of Dixie—Fairy Belle), Sept. 3, nine (five dogs), by F. A. Patch's Leigh Belton (Yale Belton—Princess Lilly).

Roxie. H. F. Smith's (Philadelphia, Pa.) Gordon setter bitch Roxie (Turk—Nixie), Aug. 27, eleven (seven dogs), by S. G. Dixon's Little Boy (Pilot—Elv).

Muggins. J. A. Spracklin's (Woodstock, Ont.) cocker spaniel bitch Muggins (champion Brahmin—Gipsy), Aug. 11, five (three dogs), by A. Laidlaw's Master Shina (Young Obo—champion Shina).

Shy. Wm. H. Murphy's (Ogdensburg, N. Y.) fox-terrier bitch Shy (Keen—imported Nettles), June 6, four (two dogs), by Hugh Morrison's Sport.

Bowstring. Beaverwyck Kennels' (Albany, N. Y.) fox-terrier bitch Bowstring (Resolute—Blemton Arrow), Aug. 30, one dog, by Blemton Kennels' Bacchanal.

Moonshine. Beaverwyck Kennels' (Albany, N. Y.) fox-terrier bitch Moonshine (The Moonstone—Media), Aug. 24, six (one dog), by Blemton Kennels' Dusky Trap.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Ben Lomond (A.K.R. 3701)—Dot (A.K.R. 2709) whelps. Collies, age not given, by Curry & Parks, Beason, Ill., a dog each to J. Crayton, Lacon, Ill.; E. S. Hobart, Hedrick, Ind.; and a bitch each to A. Weber, Hickory Withe, Tenn.; J. Morris, Chillicothe, Mo., and W. S. Powers, St. Louis, Mo.

Ben Lomond (A.K.R. 3701)—Belle Clifton (A.K.R. 1564) whelps. Collies, age not given, by Curry & Parks, Beason, Ill., a dog each to John Morris, Chillicothe, Mo.; E. Hounsfield, Louisville, Ky.; S. C. Gilbert, Plymouth; Ill.; J. P. Marshall, Vermont, Ill.; G. B. Hippee, Des Moines, Ia.; C. Shafer, Waynesville, Ill., and a bitch to W. S. Powers, St. Louis, Mo.

Dr. Cloud (A.K.R. 5599)—Fanny whelp. Collie dog, age not given, by Curry & Parks, Beason, Ill., to D. Morris, Lanark, Ill.

Lackie. Collie bitch, age not given, by Ben Lomond out of Dot, by Curry & Parks, Beason, Ill., to S. W. Blue, Spring Grove, Ky.

Maud. Collie bitch, age not given, by Ben Lomond out of Dot, by Curry & Parks, Beason, Ill., to T. G. Huston, Morganfield, Ky.

Rialto Hunter. Greyhound dog, whelped May 20, 1888, by Waldo out of Spice, by W. J. Middleton, Somerville, Mass., to G. A. Willard, same place.

Rialto Lassie. Greyhound bitch, whelped May 20, 1888, by Waldo out of Spice, by W. J. Middleton, Somerville, Mass., to W. H. Ranlett, Rockland, Me.

Leo. Fawn, black points, mastiff dog, whelped January, 1886, by Nevison out of McMurray's Bess, by A. Laidlaw, Woodstock, Ont., to John Mitchell, Brantford, Ont.

Ashmont Lioness. Fawn, black points, mastiff bitch, age not given, by champion Hero II. out of Delph Viva, by A. Laidlaw, Woodstock, Ont., to John Mitchell, Brantford, Ont.

Rusche. Light fawn mastiff dog, whelped Jan. 2, 1888, by Beech Grove Toby out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to Orton Gifford, Wahpeton, Dak.

King Dan. Liver, white markings, pointer dog, whelped Jan. 29, 1885, by Jimmie out of Temptation, by I. N. Cochran, Philadelphia, Pa., to M. L. Fisher, Danville, Pa.

Limonis. Lemon, white and ticked pointer bitch, age not given, by Jake out of May, by G. A. Avery, Franklin, Mass., to W. J. Middleton, Somerville, Mass.

Cricket—Trinket whelp. Fawn, black marks, pug bitch, whelped Aug. 7, 1888, by Warner & Hamilton, Canaan Four Corners, N.Y., to Henry A. Allen, jr., Albany, N. Y.

Fancy. Tawny and white St. Bernard bitch, whelped May 20, 1888, by Brunswick out of Mariam, by Elmwood Kennels, South Framingham, Mass., to W. P. Clark, same place.

Nona. Brindle and white St. Bernard bitch, whelped May 27, 1888, by Monte Rosa out of Kron, by J. R. Teague, South Framingham, Mass., to Chas. Messenger, Natick, Mass.

Spot. Tawny and white St. Bernard bitch, whelped May 20, 1888, by Brunswick out of Mariam, by Elmwood Kennels, South Framingham, Mass., to Adolphus Cole, Grand Rapids, Mich.

Brunswick—Mariam whelp. Tawny and white St. Bernard bitch, whelped May 20, 1888, by J. R. Teague, South Framingham, Mass., to Chas. Heim, New York.

Rachael. Tawny and white St. Bernard bitch, whelped May 20, 1888, by Brunswick out of Mariam, by J. R. Teague, South Framingham, Mass., to S. L. Knight, South Royalston, Mass.

Reka of Graystone. St. Bernard bitch, whelped March 10, 1888, by Jupiter of Clover Patch out of Reka, by Hospice Kennels, Arlington, N. J., to Geo. J. Geer, Summit, N. J., and resold by him to H. Willets, Graystone, Irvington, N. Y.

Rod's Ruby. Orange and white English setter bitch, whelped July 6, 1888, by Buckellew out of Rodreka, by F. G. Taylor and G. G. Davis, Philadelphia, Pa., to Adolfo Munoz, same place.

Gun (A.K.R. 1533)—Dora Gladstone whelps. Black, white and tan English setter dogs, whelped June 4, 1888, by Chas. York, Bangor, Me., one each to W. A. Dilks, Hammonton, N. J., and Dr. F. D. Brown, Mt. Morris, N. Y.

Distract. Black and tan Gordon setter, whelped Dec. 18, 1883, by Argus (A.K.R. 230) out of Belle, by A. Laidlaw, Woodstock, Ont., to Dr. J. B. Enos, Pittsburgh, Pa.

Elcho's Tilly. Red Irish setter bitch, age not given, by Lance out of Music, by A. P. Knight, Wakefield, Mass., to W. J. Middleton, Somerville, Mass.

Bess II. Red and white Clumber spaniel bitch, age not given, by Johnny out of Bess I., by H. W. Windram, Boston, Mass., to W. J. Middleton, Somerville, Mass.

Bess I. Red and white Clumber spaniel bitch, age not given, by Jockey out of Romp, by H. W. Windram, Boston, Mass., to W. J. Middleton, Somerville, Mass.

Jill. Red and white Clumber spaniel bitch, age not given, by Spot out of Judy, by H. W. Windram, Boston, Mass., to W. J. Middleton, Somerville, Mass.

Robin—Frisk whelp. Black cocker spaniel dog, whelped June 10, 1888, by A. Laidlaw, Woodstock, Ont., to Fred C. Laird, Chicago, Ill.

King—Gipsey Queen whelp. Black and tan terrier dog, whelped April 24, 1888, by A. W. Smith, Buffalo, N. Y., to T. S. Gill, same place.

Teddy. White, black and tan marks, fox-terrier dog, whelped June 6, 1888, by Sport out of Shy, by Wm. H. Murphy, Ogdensburg, N. Y., to John McRoberts, same place.

Sly. White, black and tan marks, fox-terrier bitch, whelped June 6, 1888, by Sport out of Shy, by Wm. H. Murphy, Ogdensburg, N. Y., to Jos. Wellett, St. Albans, Vt.

Dauntless. White and tan markings fox-terrier dog, whelped Sept. 4, 1887, by Resolute out of Blemton Arrow, by Beverwyck Kennels, Albany, N. Y., to E. G. Curtis, Schenectady, N. Y.

Statistics show, says a London paper, that Austria is still the finest sporting country in Europe. The number of preserves in Austria alone, not counting those in Hungary, is stated at 15,764, and on these there were shot in 1887 32 bears, 113 wolves, 24 lynxes, 9,490 stags, 60,252 roebucks, 7,709 chamois, 2,998 wild boars, 26,411 foxes, 9,729 polecats, 1,055 otters, 2,672 badgers, 333 marmots, and no less than 1,439,134 hares. Wild rabbits are scarce in this country, and are not counted in the general record, but 27,797 were shot in Bohemia, where there are most warrens. The totals for feathered game are: 4,498 grouse, 1,300 wild geese, 102,748 pheasants, 1,336,934 partridges, 34,448 quails, 12,652 woodcock, 7,614 snipe, and 28,914 wild ducks. The birds of prey shot were 561 eagles, 38,610, owls, 1,365 horned owls, and 106,353 hawks, kestrels, kites, and vultures. The value of the game shot is reckoned at 1,080,000 fl., or about £86,800.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

WASHINGTON, D. C., Aug. 24, 1888.—*The U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I have used about 10,000 of your Climax paper shells this year, and not a single bursted head. As long as you keep them up to their present high standard I will continue to use them in preference to all other makes. Very respectfully (Signed) JAMES M. GREEN, of Green & Cunningham.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CANADIAN WIMBLEDON.

OTTAWA, Sept. 3.—A better day for the opening matches of the Canadian Wimbledon meet could not have been desired—a clear sky, a light wind, which only occasionally was inclined to be tricky, but which tempered the sun's rays, a total absence of smoke from bush fires and every detail of the meet. The number of competitors is somewhat smaller than last year, numbering 318, as against 363, but the number of entries is slightly in excess. Some old faces are missing, but to compensate therefor there are quite a number of new ones.

Every province is represented at the matches. British Columbia sends a team of five, Manitoba ten, Prince Edward's Island ten, Nova Scotia and New Brunswick about thirty each, and the rest, forming the great bulk of the competitors, come from Ontario and Quebec. The three hundred men compete for cash prizes amounting to $7,200, trophies in the shape of challenge cups, valued at nearly $3,000, also a number of handsome medals and badges. There are fifteen individual matches on the programme including the "extra series," or those in which a competitor is allowed as many trials as he chooses to pay for. The prizes average about 60 to each match.

The goal for which every rifleman strives is a place on the Wimbledon team, this being the reward which falls to the twenty having the highest aggregate in certain specified matches.

The arrangements with regard to the camp ground and ranges are much the same as last year. A large number of competitors are under canvas.

Thirty-eight targets have been prepared for the meeting, and as the firing is done by pairs at each, accommodation is thus afforded for 76 men to proceed with their shooting at the same time.

Lieut.-Col. Mattice, of Montreal, is chief range officer, and is assisted by Capt. McNachton, of the Cobourg Garrison Artillery, Capt. Atkinson, Montreal, and Capt. Hodgins, Capt. Aumond, Lieut. Winter and Lieut. Shannon, of Ottawa.

Col. Bacon, the energetic secretary, is constantly on the ground and in great demand. He is assisted by Mr. L. S. Burpee, Capt. Hubbell, Lieut. Todd and Mr. Phillips. Major Walsh, of the 43d, is statistical officer, his assistants being Messrs. C. C. Rogers and F. A. Jackson.

Three matches were finished to-day, for there was an uninterrupted pop of the rifles from 8:30 to 6 o'clock.

Bankers' match, 5 shots, 200yds., for non-prize winners:

Pvt Buchanan, 22d	23	Dr Hutchinson, O R C	20
Sergt Macklin, 90th	22	Sergt Sylvester, 45th	20
Pvt Henderson, 13th	21	Pvt Longuenil, 63d	20
Lieut Vermillyea, 15th	21	Pvt Lough, 43d	20
Sergt Hanna, 50th	20	Mr Slade, O R C	20

Eleven 14's counted out.

Macdougall Challenge Cup.—The cup presented by Lady Macdougall. The cup to be the property of the member winning it twice consecutively. Ranges 400 and 600yds., five rounds at each range, Snider rifles:

Lieut Brown, 12th Batt	44	Sergt-Major Crean, Q O R	41
Capt Cox, retired list	44	Pvt Sutherland, Foot Guards	40
Pvt McVittie, R G	44	Staff-Sergt Jamieson, 43rd	40
Sergt Keddy, 68th	43	Capt Whitman, 60th	40
Lieut Dover, 78th	43	Staff-Sergt Lewis, Q O R	40
Capt Bruce, R G	43	Pvt Bartlett, 47th	40
Pvt McNeill, Q O R	43	Lieut Spearing, 53rd	40
Col-Sergt Dalrymple, 5th R S	43	Lieut Stewart, P E I G A	40
Lieut McIntyre, 91st	41	Staff-Sergt Curzon, R G	40
Lieut Wagmore, 74th	41	Pvt Beach, 45th	40
Staff-Sergt Wynne, R S	41	Paymaster Russel, 45th	40
Major Thomas, 54th	41		

The Rideau Match, open to members of the association, range 600yds., seven rounds, Martini rifle, any position:

Pvt Buchanan, 22nd	33	Pvt Gillies, 90th	30
Mr Rolph, Ottawa R C	33	Staff-Sergt Carbin, 63rd	30
Major Wilson, retired list	32	Capt Hartt, St John Rifles	30
Gunner Loggie, Newcastle	31	Corp Crow, Wellington, F B	30
Sergt-Major Gray, 74th	31	Major Weston, 56th	30
Pvt Taylor, 43rd	30	Mr Slade, Ottawa R C	30
Lieut McFarlane, 50th	30	Capt Thompson, 62nd	30

One 26 counted out.

Sept. 4.—Fine, clear weather again favored the competitors at the D. R. A. matches to-day. A boisterous wind, which blew in gusts sometimes right down the range, and often from the right rear, prevented any tall scoring. The opening match to-day was the manufacturers'. A score of 33 won the first prize both last year and this. To-day's shooting, however, on the whole was better throughout the match, as is evidenced by the figures, the lowest score being 24 last year, with 19 24's counted out, while to-day 28 was the lowest, with 8 28's counted out. The shooting in the Ouimet match was a little better than last year, Staff-Sergt. Clarke, 53d, winning with 34 out of a possible 35, whereas the winning score last year was 33. Last year there were 18 24's counted out, while this year some 23's came in.

The Manufacturers' match, value $585, open to members of the association, range 500yds., 7 rounds, Snider rifles:

Capt Corbin, 63	33	Corp McAvity, St John Rifles	31
Pvt Smith, 6th	33	Pvt Higgison, 43d	31
Major Anderson, 43d	32	Pvt Lavers, 60th	31
Capt Brown, 54th	32	Lieut Desbarats, 3d V R	31
Trump Booth, 8th Cav	32	Sergt-Maj Creap, Q O R	31
Capt Weeks, Charl'tn Eng'rs	32	Maj Garrison, H G A	31
Sergt Huntington, 56th	31	Piper Sergt Clarke, 5th Royals	31
Pvt Waters, 6th	31	Sergt Harp, Q O R	31
Sergt Crooks, Q O R	31	Sergt Kennedy, Q O R	31
Lieut Healy, 54th	31		

Eight 28 s counted out.

The Ouimet Match.—Value $515, open, $100 contributed by Col. Ouimet, M.P., and $415 by the D.R.A., range 600yds., Martini-Henri rifles:

Staff-Sergt Clarke, 53d	34	Lieut Stewart, P E I G A	29
Lance-Corp Hawkens, 8th	31	Strff-Sergt King, 45th	29
Lieut Smith, 32d	30	Col-Sergt McCrae, P W R	29
Pvt Armstrong, G G F G	30	Capt Hartt, St. John Rifle	29
Pvt Wilson, 31st	30	Staff-Sergt Mitchell, R G	28

Seventeen 23's counted out.

The Gzowski Match.—There were 12 entries for the Gzowski match, and the greatest interest was taken even by competitors in the result. Montrealers were very proud of the victory of the Royal Scots. The Queen's Own Rifles took the last prize, while the Royal Grenadiers, who did so well at Toronto, were tenth on the list.

Gzowski Military Match—For the Gzowski challenge cup and $200 added by the D.R.A.; open to one section of five men, non-commissioned officers and rank and file, either or both from any one regiment or troop of cavalry, battery or brigade of artillery, battalion or independent company of the active militia of Canada, schools of cavalry, gunnery and infantry and cadets of the Royal Military College, Kingston, 20 rounds, volley firing, 5 rounds, independent firing, 5 skirmishing.

5th Royal Scots	338	3d Victoria Rifles	312
Gov.-Gen.'s Foot Guards	315	43d Battalion	306
8th Royal Rifles	312	Queen's Own Rifles	303

The 10th Royal Grenadiers made 266 points and were tenth on the list.

British challenge shield, presented by auxiliary forces of Great Britain to active militia of Canada and $25 added by Sir Fred. Middletonand $75 by the D.R.A.; open to teams of four men in the Gzowski military match, 20 rounds per man, fired advancing and retiring: Governor-General's Foot guards (first team) 240, 5th Royal Scots 231, Queen's Own Rifles 224, 43d Batalion (first team) 208. There were 13 entries in this match.

In the evening there was a competitors meeting, at which Lieut.-Col. Wm. White, of the 43d Battalion, presided. The feature of the meeting was that there were no complaints in regard to Snider ammunition as in former years. Quite contrary, a resolution was moved conveying thanks to Sir Adolphe Caron, Minister of Militia, who had heeded the complaints of the riflemen of the Dominion, and had moreover succeeded in removing their cause.

Sergt. Doyle, of Halifax, was anxious that the two sighting shots which were formerly allowed should be revived, but his proposal did not meet with much favor.

Capt. Sherwood secured the unanimous support of the meeting for a motion that matches should not be arranged for both Snider and Martini-Henry rifles, and that matches should be so grouped that only one rifle would be required each day.

Sept. 5.—The ranges in the Minister of Militia's match having been changed from 500 to 600yds. to 400 and 500, the scoring was consequently much higher than last year. Capt. Sherwood of the Guards, topped the list in the individual competition with a score of 66 points, which is fifteen points better than the highest score last year.

The weather on the ranges was uncomfortably cool, and the

wind was exceedingly difficult to judge. In consequence the less experienced marksmen made discouragingly low scores.

Minister of Militia's Match, challenge cup, presented by Sir A. P. Caron, with $618 added by the D. R. A., six teams and sixty-two individual prizes; range 400 and 500yds. Seven shots at each:

33d R A	175	Sherbrooke R A	170
Queen's Own	172	G R A	169
43d	171	R G	168

Individual prizes:

Capt Sherwood, 43d	66	Lieut Conboy, 30th	60
Gunner Loggie, N F B	64	Pvt Macfarlane, 3d Vics	60
Lieut McFarlane, 50th	63	Lieut Wilson, 53d	60
Sergt Mitchel, R G	63	Capt McMicking, 44th	60
Capt Macdonald, Q O R	61	Pvt Kambay, 5th R S	60
Pvt Gamble, 40th	61	Pvt Armstrong, G G F G	60
Major Sparham, 42d	61	Pvt Grigg, 31st	60
Staff-Sergt. Clarke, 53d	61		

Seventeen 55's counted out.

Standing Match, open to members of the association, 200yds., seven rounds:

Staff-Sergt Mitchell, 10th RG	32	Sergt Ralston, 20th	30
Major Weston, 6th	31	Col-Sergt Donnell, Q O R	30
Staff-Sergt Chamberlain 95th	31	Pvt Ellis, 43d	30
Lieut Maning, 62d	31	Staff-Sergt Ashall, Q O R	30
Capt Robson, 26th	30		

Sept. 6.—The marksmen in the Dominion of Canada match beat the record. The winning score of 96 in individual competition beats anything done in that match since it was established. The weather was simply perfection, and as the change has been made substituting the Martini-Henry for the Snider at 600yds., the scoring was high. Being the last match that counts in the grand aggregate, tremendous interest was taken by all the competitors in the result. Some close tie shooting took place among those who were at the foot of the list for a place on the first 60.

Following is the result in Lansdowne aggregates, made up from the Rideau, Manufacturers, Ouimet, Minister of Militias and standing matches:

New Brunswick Prov. team	789	10th Royal Grenadiers	781
Sherbrooke Rifle Association	787	5th Batt Royal Scots	769
Queens' Own Rifles	783		

Dominion of Canada match, for teams of 5 members from active militia, etc., and for individual competition. The team prizes to be awarded to the five highest aggregate scores made by any five previously named; ranges 200, 500 and 600, 7 shots at each. Badge to each member of team:

10th Royal Grenadiers	415	Lieut Wilson, 33d Batt	95
63d Batt	406	Capt McMicking, 44th Batt	93
45th Batt	405	Sergt Short, G G F G	91
Gov-Gen's Foot Guards	403	Capt Hartt, St John Rifles	91
78th Batt	402	Lieut Rogers, 43d Batt	91
Sergt Rolston, 20th Batt	96		

Three 80's were counted out.

Bankers' prizes. Grand aggregates in Manufacturers', Ouimet, Minister of Militia, Standing, and Dominion matches:

N R A, medal badge, and $50	305	Staff-Sergt. Mitchell, R G	295
O R A, medal, badge and $40	298	Pvt Armstrong, G G F G	298
Badge and $30	295	Capt McMicking, 44th Batt	295
Badge and $20	295	Capt Hartt, St. John's Rifles	295
Badge and $15	294	Staff-Sergt Clarke, 53rd Batt	294
Major Wilson, R L	293		
Pvt McVittie, 10th R G	291		
Sergt Short, G G F G	289		
Lieut Wison, 33rd Batt	287		

Sept. 7.—The great shooting week is over, and to-night the white tents overlooking the Rideau are deserted. It has been a great week for the marksmen, and this year's meet will go down to posterity as the best the Dominion Rifle Association has thus far had. In point of weather and attendance the record of the past has been greatly exceeded, while the shooting has excelled anything ever previously witnessed here. With a number of marksmen, the 60 fortunate ones, it was the day of the meet. The securing a place on the Wimbledon team is the goal for which all rifle shots strive, but which only 20 can attain. Considerable interest, attached to the competition for the governor-general's prize, and this match subsequently turned out to be the most exciting one of the week. The first prize is a special badge and $250, and the second a badge and $150. Then comes a badge and $100, and a badge each for the next seven men. As will be seen by the score given below, there are no fewer than four sets of ties among the first eleven men. Capt. Hartt, of the St. John N. B., Rifles, and Private McVittie; of the Grenadiers, Toronto, tied at 89 each for first prize; Sergt. Tom Mitchell, of the Gren.'s, and Sergt. Pink, of the 43rd, tied at 87 for third, while the other men had to fight for their positions and the badges.

The shoot off between Hartt and McVittie created intense excitement. They fired with Martinis at 600yds. range, 5 shots each. McVittie was the first to fire, scoring an inner, 4, while Hartt made a bullseye, 5. McVittie followed with a bull, and Hartt dropped to an outer—2. McVittie in his next two shots made an inner and an outer, while Hartt did the same reversed. McVittie's score was now 15 and Hartt's 13, both having one shot to fire. McVittie again elongated himself on the butt, while the spectators held their breath with suspense. The stalwart Scotchman braced himself up, took careful aim and fired. Every eye was directed to the target, but instead of a white, red or even a black disc appearing, no signal came from the marker, and the register keeper chalked on the blackboard a big cipher, indicating a miss, and totalled up McVittie's score at 15. The excitement was now intense. Hartt had three points to make to give him first prize. Would he make them? The strain on Hartt's nerves must have been enormous, but they did not fail him. The bullet was duly sent on its errand, and when the white disc appeared in front of the target, signalling a bullseye, 5 points, a tremendous hurrah from the assembled hundreds proclaimed the plucky little New Brunswicker the Governor-General's prize man. Similarly there was a good tie contest between Pink and Mitchell, but less excitement, the latter leading from the start. Mitchell's score was 5, 3, 5, 4, 5, total 22; Pink's, 2, 3, 3, 5, 4, total 17.

Value $500, to be competed for by the 60 winners of prizes in the grand aggregate match, provided they are members of the active militia force of Canada, members of the staff or officers who have retired from the active militia retaining their rank; ranges 200, 500 and 600yds., 7 rounds at each range, Martini rifles:

Special badge and $250	Capt Hartt, St. John Rifles		89
Second prize badge and $150	Pvt McVittie, Grenadiers		89
Third prize badge and $100	Staff-Sergt Mitchell, Grenadiers		87

Seven badges to the following:

Sergt Pink, 43d Batt	87	Staff-Sergt Corbin, 63d Batt	84
Lieut Conroy, 90th Batt	85	Lieut Rogers, 43d Batt	83
Sergt Ashall Q O R	84	Pvt Horsey, 45th Batt	83
Staff-Sergt Williamson, 45th	84		

The following are the names of the first thirty in the grand aggregate. The first twenty have the opportunity of going to Wimbledon, but as it invariably happens that some don't accept, the other ten names are given of those who would be chosen in order of excellence to fill such vacancies:

Staff Sergt Mitchell, 10th R G	392	Lieut J A Wilson 33d Batt	357
Capt Hartt, St John Rifles	334	Staff-Sergt Corbin, 63d Batt	356
Pvt McVittie, 10th R G	380	Pvt C Burns 62d Batt	356
Pvt J Armstrong, G G F G	377	Capt J G Corbin, 63d Batt	355
Staff-Sergt C H Clarke, 53d	376	Q M-Sergt Ogg, W F B	355
Capt McMicking, 44th	375	Lieut Conboy, 30th Batt	354
Sergt W Short, G G F G	369	Major B A Weston	354
Sergt J Rolston, 20th	362	Major T J Egan, 63d Batt	353
Lieut S M Roger, 43d	362	Lieut Dimock, 78th Batt	353
Staff-Sergt Curzon, 10th R G	360	Lieut Blackmore, 63d Batt	352
Sergt Jamieson, 43d	360	Capt Crowe, W F B	351
Major C Wilson, retired list	360	Staff-Sergt Ashall, Q O R	350
Staff-Sergt A Pink, 43d	358	Pvt Horsey 45th Batt	350
Capt Sherwood, 43d	358	Sergt Mumford, 63d Batt	350
Paymaster W S Russell 45th	357	Staff-Sergt Lordly, 62d Batt	350

London Merchants' match, open to teams of 8 members of any affiliated provincial association. Ranges 200, 500, and 600yds., 7 rounds at each range, Martini-Henri rifle:

Cup and $100	Ontario	679	$80, Quebec 658

Nova Scotia scored 654, Manitoba 649, Prince Edward Island 626, and New Brunswick 623.

Ontario's team was Pvt. McVittie, Sergt. Kimmerly, Capt. McMicking, Sergt. Short, Staff-Sergt. Mitchell, Pvt. Sutherland, Maj. Wilson and Pvt. Armstrong.

Sir John McDonald, Premier, distributed the prizes, and the meeting concluded with cheers for the Queen and Sir John.

ZETTLER RIFLE CLUB.—The fifteenth annual shoot of the Zettler Rifle Club, Bernard Walther, president, will take place at Morrisania Schuetzen Park, on Monday, Sept. 24. Ring Target, open to all comers. Tickets 3 shots for $1. Tickets unlimited, but only one prize obtainable by any one shooter: $155 in 20 prizes: $18 in 3 prizes for 5 best tickets on ring target. Bullseye Target, open to all comers, 10 shots for $1; the best bullseye to count by measurement; $60 in 12 prizes; $18 in 3 prizes for most bullseyes; for first and last bullseye, $1 each. Target of Honor, 3 shots, open only to members of the club, for all the prizes presented by the judges and members. Judges' Target, 3 shots, open to judges or invited guests. A shoot for the ladies will be held at 3 o'clock.

WESTERN RIFLE ASSOCIATION.

THE eighth annual tournament of the Western Rifle Association will be held at the Fort Snelling Range, Minnesota, on Sept. 18 to 21. The programme provides:

First Day.

Opening of All Comers Continuous Short Range Match, 200yds., off-hand, any rifle within the rules. American target; entries unlimited at 50c. per ticket; scores, five shots each, best four scores to count; ties settled by fewest low counts in total score; if still a tie, by firing one more score. Twenty cash prizes—$20, 15, 12, 10, 8, 6, 5, three of 4, three of 3, three of 2.50 and four of $2 each.

Opening of Military All Comers Continuous Match, for Springfield rifles only; best four scores of five shots each to count. Entries unlimited at 50c. per ticket; 75 per cent. of entrance divided into 14 cash prizes—18, 15, 12, 10, 8, 6, two of 5, three of 4 and three of 3 per cent.

Opening of Bullseye Match, unlimited and continuing the four days: 200yds. off-hand, any rifle; 4in. bull to count, 8in. black; 10c. per shot or 12 for $1; 60 per cent. divided each day among bullseye ticket holders.

Match No. 1, Milwaukee match, short range team, teams of six men each; 200yds. off-hand. Prizes, conditions and management of the match by the Milwaukee Rifle Club,

Match No. 2. Chicago match, fifteen shots at 300 and 500yds. each; no cleaning except between ranges; open only to .32-calibers (the caliber may be changed if it will increase the entries). Prizes and conduct of the match, and changes (if any) by the Chicago Rifle Club.

Match No. 3. Pistol match, open to all comers; pistols or revolvers; 6in. barrels or under, including cylinder. Standard American target; ten shots each; entrance 50c.; eight cash prizes: 25, 20, 15, 12, 10, 8, 6 and 4 per cent of entrance.

Second Day.

Match No. 4. Minneapolis *Tribune* Match.—Short and mid-range, 15 shots at 200yds., on American target, and 15 shots each at 500 and 600yds. on the Creedmoor target with 18in. cartoon in center of bull, counting 6, one sighter at 200 and 500yds. only, aggregate score to count; entrance $1. First prize, Minneapolis *Tribune* all-comers champion gold badge, donated by the Minneapolis *Tribune* Company for individual competition, valued at $100, and must be won three times at the tournaments of the association to become the personal property of the winner.

Match No. 5. Seabury Match.—A handicap long range match, in which military and specials will be admitted with a generous handicap. A valuable prize, by Geo. J. Seabury, of New York, will form the chief attraction in this match. Conditions of match and all details to be made by Mr. Seabury and carried out by the Minneapolis Rifle Club.

Match No. 6. Police Match.—Revolvers, open to all-comers, .38-calibers and upward, 50yds., standard American target, 20 shots, 2 sighting shots; eight cash prizes, same as in match No. 4.

Third Day.

Match No. 7. Minneapolis Match.—Mid-range, 15 shots each, at 500 and 600yds., on Minneapolis decimal mid-range target, 2 sighters, at 500yds., open to all-comers, only .40-calibers and under will be admitted, .40-calibers limited to 330grs. of lead; entrance $2. Fifteen prizes from the Minneapolis Rifle Club, winner's choice; value of prizes guaranteed to be worth $100 or upward.

Match No. 8. Wapello Match.—Individual, long range, 10 shots each, at 800, 900, and 1,000yds. Prizes furnished, conditions named, and match conducted by the Wapello Rifle Club.

Match No. 9. Washington Match.—Individual military; 10 shots each at 200 and 500yds. Prizes furnished, conditions named, and match conducted by the Washington Rifle Club, Iowa.

Fourth Day.

Match No. 10. Champion Long Range Team Match.—Distances, 800, 900 and 1,000yds; 15 shots each distance; 2 sighting shots at 800yds. only. Teams of six men each; Creedmoor rules; entrance, $15 per team. First prize, Long Range Champion Team Badge and 50 per cent. of entrance. Second prize, 30, and third prize 20 per cent. Badge must be won four times before becoming the property of the club; won in 1885 by the Minneapolis Rifle Club, in 1886 and 1887 by the Wapello Rifle Club, of Wapello, Iowa.

Match No. 11. Military Team.—Six men each; 7 shots each at 200, 500 and 600yds.; no sighting shots; no cleaning except between ranges. Open to Springfield rifles only; entrance, $6 per team. First prize, Champion Military Team Tribune Badge, presented by the Minneapolis *Tribune*. Each team must be members of one company. Open to the National Guard or regular army. Three other prizes.

All matches are open to the world. Creedmoor targets will be used, and N. R. A. rules will govern where nothing is stated to the contrary.

A new departure has been made this year in making up the matches and prizes. Different clubs have consented to make a match, furnish all the prizes and conduct the match, thus making it a matter of pride between the various clubs to put up an interesting match. (See programme).

Targets are so arranged that firing can be going on at all distances at the same moment. If regular matches do not occupy all the time, then the continuous match and bullseye or pool target will furnish opportunity to shoot to the heart's content. More provisions have been made for short and middle range shooting to accommodate the great bulk of marksmen who do not own a long-range match rifle.

At 200yds. there will be room and opportunity for all comers.

The tournament of the Minnesota National Guard Rifle Association following the week after will probably draw together the largest body of military marksmen that has ever assembled at the fort. Owing to this fact, the military continuous match has been provided, and the company team match will probably have more entries than ever before.

Plenty 200yd. targets will be provided on separate frames, so that no time will be lost in the three distance matches by changing targets.

A part of the programme may be changed by the directors of the Association, if necessity requires it, and due notice will be given to all concerned. The clubs who provide matches and prizes will take full charge of the match and announce every detail of the competition, and make changes if found necessary. The Minneapolis Exposition being in progress, reduced rates can be had on all railroads centering in the "Twin Cities," and an attempt will be made by the local club to make the tournament a pleasant spot in the memory of all who attend it.

Address all correspondence to W. H. Chenoweth, 76 W. Monroe street, Chicago, Ill., or C. M. Skinner, Minneapolis, Minn.

NATIONAL RIFLE CLUB.

VERNON, Vt., Sept. 4.—The following persons are the winners of the various strings. The length of the string is the corrected length, making allowance of ⅛in. per pound on each string of 10 shots for each pound gun weighs under 20lbs. First match:

C H Remer, 12lb. gun, allowance 1in	$10^{1}/_{16}$
R C Cressy, 19lb. gun, allowance ⅛in	$11^{1}/_{16}$
N S Brockway, 19lb. gun, allowance ⅛in	$12^{1}/_{16}$

Second match:

C H Remer, 12lb. gun, allowance 1in	$8^{2}/_{16}$
J N Gardner, 19lb. gun, allowance ⅛in	$9^{2}/_{16}$
L Park, 20lb. gun, no allowance	$9^{10}/_{16}$

Third match:

L Park, 20lb. gun, no allowance	$12^{2}/_{16}$
R C Cressy, 19lb. gun, allowance ⅛in	$12^{3}/_{16}$
N S Brockway, 19lb. gun, allowance ⅛in	$13^{4}/_{16}$

Fourth match:

N S Brockway, 19lb. gun, allowance ⅛in	$12^{13}/_{16}$
D A Brown, 18lb. gun, allowance ⅛in	$13^{3}/_{16}$
Wm V Lowe, 20lb. gun, no allowance	$16^{1}/_{16}$

Fifth match:

Wm V Lowe, 20lb. gun, no allowance	$9^{2}/_{16}$
C H Remer, 12lb. gun, allowance 1in	$10^{3}/_{16}$
J N Gardner, 19lb. gun, allowance ⅛in	$12^{4}/_{16}$

The medal for the shortest aggregate of 50 shots was won by Wm. V. Lowe with a string of 62⅛in.

There were a larger number of riflemen present at this meeting than for several seasons previous. One of the special features connected with the shooting was the fine work done by Mr. C. H. Remer with a .32 cal. rifle. This rifle had a barrel made by Warner & Lowe and used a bullet much longer, heavier and better proportioned than the factory rifles. The special feature about this rifle was the fact of the bullets not appearing to drift any more in the wind than the bullets shot from the .38, .45 and even .48 and .50 cal. rifles used by the other contestants. This fact, which was observed and commented upon by all present, goes to substantiate the theory that a properly proportioned .32 cal. will in all kinds of weather equal or surpass a larger calibre of the proportions adopted in the regular rifles now upon the market. Had Mr. Remer not been so unfortunate as to in one or two instances shoot through his flags, thus causing a very wild shot, he could have easily won the medal,

WILLIAM V. LOWE.

BOSTON, Sept. 8.—The Walnut Hill weather conditions were very poor at the range to-day, and though a good number of shooters were on hand only a few scores were finished. Following are the scores made to-day:

Rest Match, 200yds.

J Francis	11	10	10	11	12	11	12	11	11	11	—110
D L Chase	11	10	12	11	11	9	11	12	11	12	—110

600yds.

J P Nowell	4	4	5	5	5	4	4	5	4	4—44

The directors of the Massachusetts Rifle Association have voted to help a fall meeting of three days, on Oct. 4, 5, and 6, when a large list of valuable prizes will be offered to the shooters at rest, off-hand, revolver and pistol.

LAWRENCE, Mass., Sept. 8.—Following are the scores of the Lawrence Rifle Club shoot to-day:

Off-Hand, Standard Target, 200yds.

O M Jewell	8	8	10	8	10	9	7	9	8	8—85
C M Hill	9	8	9	10	9	9	6	8	8	9—84
J W Bean	8	7	8	6	7	10	9	9	6	8—78
A A Philbrick	7	6	9	10	10	7	4	10	7	7—77
M Be	4	4	7	8	8	8	7	7	10	7—70

WILMINGTON, Del., Sept. 4.—The first general competitive shoot among the State troops of Delaware was held on the Healdmoor Range to-day, and proved a very interesting and successful event. The events and scores were as follows: At 200yds, standard target, possible 100—J. Francis, 70; H. D. Missimer, 64; J. Morris, 60; H. Doane, 49; D. McBride, 49. Champion target—J. Francis 111, H. Simpson 79. Military badge match, 200yds., possible 50, Creedmoor target—Lieut. Floyd 38, Col. Wood 37, Sergt. Booth 37, Pvt. Williams 36, Pvt. Matthews 32, Pvt. Padberg 32, Pvt. Hammers 32, Sergt. Engle 27, Pvt. Martin 22. Pvt. Whitelock 21, Capt. Mitchell 20, Pvt. Doherty 17, Sergt. Aldred 13. Beginners' badge match, 100yds., standard target—G. S. Jeffris 74, T. Bradford 72, J. D. Chalfant 64, W. Chester 60, J. P. Flynn 58, G. Rice, Jr., 57, J. A. Chapman 56, F. Kane 54, H. W. McIntyre 53, A. W. Cummings 53, H. F. Schneff 52, B. P. Duffield 50. Under 50—L. Stroud, D. S. Lofman, J. Shipley, C. B. Woodward, C. B. Palmer, F. Howard, I. Sylvester, J. Kew, G. T. Gibson, J. T. Jones. The Wilmington Rifle Club tried the 500yds. range. H. B. Seeds with his .32cal. Farrow rifle made a big score of 49 out of a possible 50. He also won the gold badge from S. J. Newman, scoring 106 against Newman's 105 on American champion target:

Score—500yds.

H B Seeds	5555555555—49	S J Newman	0445444545—39

Mr. H. Simpson, manager of the Healdmoor Range, is stirring up great interest in rifle shooting.

THE ARMY TEAM.—Fort Niagara, Sept. 11.—The United States army team, selected from the three divisions, Atlantic, Pacific, and Missouri, has had preliminary practice, and to-day the grand army competition commences. The following programme has been arranged: Tuesday, Sept. 11.—Morning, army competition, known distance; afternoon, pool shooting. Wednesday, Sept. 12.—Army competition, skirmishing morning and afternoon. Thursday, Sept. 13.—Morning, army competition, known distance. The officer in charge is Col. Stanhope E. Blunt, A. D. C. and I. R. P., U. S. A. The executive range officer is Capt. Frank P. Hamilton, 2d Art. Range officers—Capt. G. S. Grimes, Lieuts. W. P. Edgerton, L. Niles, R. Q. M., and C. D. Wilcox, 2d Art.; Lieuts. W. H. Coffin and G. Adams, 5th Art., and Lieut. C. R. Edwards, 23d Inf. The army team is composed of the following: First Lieut. J. Garrard, Troop F, 9th Cav., Fort Robinson, Neb., distinguished marksman in Division of the Missouri; First Lieut. M. W. Day, Troop I, 9th Cav., Fort Robinson, Neb., Division of the Missouri; First Lieut. I. Hall, Corps of Engineers, Willet's Point, near New York Harbor, Division of the Atlantic; Second Lieut. R. Stewart, Troop A, 3d Cav., camp at Eagle Pass, Texas, Division of the Missouri; Sergt. G. N. King, Co. F, 20th Inf., Fort Assiniboine, Montana Territory, distinguished marksman of the Division of the Missouri; Sergt. C. Palmer, Co. E, 3d Inf., Fort Snelling, Minn., Division of the Missouri; Sergt. L. Seal, Co. B, 14th Inf., Vancouver Barracks, Washington Territory, Division of the Pacific; Sergt. G. E. Miller, Troop H, 2d Cav., Fort Spokane, Washington Territory, Division of the Pacific; Corp. A. Dell, Troop F, 2d Cav., Fort Walla Walla, Washington Territory, Division of the Pacific; Corp. J. Nihill, Troop B, 4th Cav., Fort Meyer, Va., distinguished marksman of the Division of the Atlantic; Farrier J. P. Hughes, Troop K, 1st Cav., Fort Custer, Montana Territory, Division of the Missouri; Pvt. J. Foley, Troop C, 2d Cav., Fort Bidwell, Cal., Division of the Pacific. Alternates—First Lieut. A. C. Macomb, Troop B, 5th Cav., Fort Reno, Indian Territory, distinguished marksman of the Division of the Missouri; Second Lieut. D. E. Holley, Co. H, 1st Inf., Presidio of San Francisco, Cal., Division of the Pacific; Corp. M. Hamburg, Co. I, 23d Inf., Fort Wayne, Mich., Division of the Atlantic.

NEWARK, N. J., Sept. 6.—The annual "King shoot" of the Newark Shooting Society took place at the Shooting Park to-day, and 32 members shot on the "Honor" target. The highest score, 70, was made by Geo. D. Weigman, but as he had previously won a king's medal, this year's went to Frank Watts, who made 69. One-half of the shooters made 60 or over. Th. J. Beck was high on the "Point" target, with Dr. J. A. Boyken, president of the Barry Rifle Club, of New York, second. Among the top men on the "Honor" target were: W. Hayes 64, Aug. Begerow 63, John L. Kuser 63, John Huegei 62, Th. J. Beck 61, J. Coppersmith 61. At the semi-monthly meeting of the Our Own Rifle Club on Thursday evening the following officers were elected: F. Laute, President; J. W. Gill, Vice-President; T. Thornton, Recording Secretary; F. C. Knothe, Financial Secretary; W. Drexler, Treasurer; M. Beck, Sergeant-at-Arms; F. A. Freiensehner, Captain; Ferd. Freiensehner, Assistant Captain; Otto Krauss, Rifle Inspector and Referee; J. Hunziker, Scorer; M. Beck and W. Ambey, Judges. The club has been divided into three classes of shots, and at the end of the season the high man in each class will receive a medal.

SAN FRANCISCO, Sept. 2.—The San Francisco Schuetzen Verein held the twenty-ninth anniversary of their organization at Shell Mound Park to-day. The organization now comprises 145 members. The shooting at the public targets was at 200yds., for an amount divided into thirty prizes, ranging from $25 downward, four shots to $1. Following is the score: Dr. L. O. Rogers 92, A. Johnson 82, Geo. Helms 82, F. A. Freese 80, R. H. Aiken 80, Philo Jacoby 80, J. Utschig 80, F. E. Klein 88, F. Poulter 88, C. Meyer 87, W. Ehrenfort 87. The club shooting was on 25-ring targets, for members only. J. Kurlfinke 67, W. Wertheimer 66, S. Waller 65, J. Mangel 63, W. Ehrenfort 63, P. Jacoby 62, W. Brandt 59, Dr. Gerlach 58, F. Freese 58, W. Hupper 57.

CREEDMOOR.—The annual fall meeting of the N. R. A. opened on Monday last to fine weather and the prospect of a good week's sport. Tuesday brought a mizzling rain with dark skies but good shooting conditions. The matches will occupy the entire week, and the FOREST AND STREAM of next week will contain a full report with scores in detail.

A NEW CARTRIDGE LOADER.—Messrs. Bailey, Farrell & Co., of Pittsburgh, Pa., whose advertisement appears in another column, have just perfected and placed on the market a cartridge loading machine, which is one of the best we have seen for rapidity, accuracy and simplicity. It is designed especially for the shooter who desires to load his own shells. A particular feature is the saving of labor, five moves being sufficient to place the shell in the machine and load completely. It can be packed in a space of 10×7×9in., by removing the lever and feeders, and thus can be made a part of the regular outfit. This is an important point, as it will enable a gunner to carry it with him in his tramp wherever he goes, and to vary his loads as he pleases.—*Adv.*

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Full report of the Cleveland Tournament in our next issue.

AL BANDLE'S TOURNAMENT.

[From our own Staff Correspondent].

THE fourth annual tournament, given under the management of Al Bandle, J. C. Whetstone and W. E. Limberg, took place at Cincinnati, O., Sept. 4, 5, 6 and 7, on the grounds of the Independent Gun Club, a few miles from the city, and very easy of access by the C. C. C. & I. R. R., whose trains stop right at the gate. The location is a good one and the grounds are well adapted to the purpose. The surrounding scenery, with the exception of the railroad at the front of grounds, is beautiful and pleasing to the eye.

These annual shoots have been well attended and supported by the shooting fraternity, and the present one was no exception to the rule. The shooting comprised matches of eight different kinds of inanimate targets, with sweepstakes at live birds and the shoot for the American field championship cup at 25 live birds. The live birds were many of them poor flyers and occasioned much vexatious delay in putting them up, and were the cause of some dissatisfaction. However, among the lot were many strong flyers, which went out of the trap as if sent for, and numbers of them succeeded in carrying a load of shot just outside the boundary, where they fell dead. All live bird shooting was under London Gun Club rules, except that the boundary was 80yds. The first race was shot from regular ground traps, but the others, except the cup match, were shot from a so-called "scoop trap," which, while not exactly a "plunge," still has its most objectionable feature, that of throwing a bird into the air, where he falls an easy prey to the shooter without an opportunity to spread his wings. Such traps should never be used.

As a result of the easy birds, the ties in each match were unusually large and necessitated frequent shoot-offs. This was also the case in many of the inanimate matches, and the decision of the ties occupied so much time that part of each day's work was put off till the following day, and some programme events were entirely left out. However, there was more than enough to keep the contestants busy, and all the guaranteed events, in which the averages counted, were run off.

With the exception of Friday, when it rained lightly at times and the air was heavy, the weather was exceptionally fine, with just wind enough to carry the smoke away, although we noticed one instance where a shooter was somewhat puzzled as to the location of his bird, looking away to the right for it with second barrel when it had almost reached the boundary on the left—due to a slight "mistake" in using black powder in first barrel.

On Friday there were so many programme events to be run off that the cup race was not reached till late in the afternoon, and it was then thought advisable to postpone it till Saturday. Few, if any, of the shooters who remained had left for home, and on Saturday 27 men faced the score. In the early part of the match the birds were poor flyers, but toward the close the quality improved, and the excitement increased, culminating as L. S. Carter, of Hammond, Ill., C. W. McPhee, of Bulletsville, Ky., and Q. A. McClure, of McKeesport, tied for first money and the cup, with 25 killed each. It was then nearly dark, and after some discussion it was decided to shoot the tie off on the same grounds on Monday, Sept. 10, at 50 birds each. The other moneys were divided. The winner of this cup is subject to a challenge once in three months, and must protect it with a 12-gauge gun.

Below are the scores in full:

Match No. 1, at 9 single bluerocks, entrance $2: B. R. Hubbard 7, H. McMurchy 9, C. E. Verges 8, J. A. Early 7, West 7, C. S. Banscotten 8, R. Heikes 9, T. Goldrick 9, Al. Bandle 9, A. Holzapfel 6, Chump 1, Garett 8, C. W. Budd 7, E. D. Miller 8, Wm. Siegler 8, J. C. Penrose 7, H. Brientnall 9, Emmerson 5, E. Kling 8, Bob White 9, J. A. McClure 9, J. Stice 9, J. P. Hickey 9, L. S. Carter 7, H. B. Whitney 9, Barnes 7, Warder 9, H. F. Summerson 8, C. Bargamon 8, C. E. Strawn 7, J. Girton 5, E. F. Wayman 8, J. E. Miller 9, E. A. Peck 5, J. E. Semple 8, C. W. McPhee 9, Mustin 8, Murphy 9, Wadell 9. McMurchy, Goldrick, Bandle, Brientnall, McClure, Stice, Whitney, Warder, Miller, Murphy and Wadell divided first money, breaking 3 straight. Benscotten, Miller, Siegler, Summerson and Semple divided second money, after scoring 3 each. Budd, Carter, Barnes and Strawn divided third, with 3 broken.

Extra match, at 9 single bluerocks, $2 entrance: H. A. Penrose 8, Bargamon 8, Hickey 7, Shott 7, Heikes 9, E. D Miller 8, C. W. Budd 8, Bandle 0, Early 8, S. Vincent 8, Summerson 9, T. Goldrick 8, Benscotten 9, Verges 8, Murphy 8, Hubbard 7, Barnes 7, McClure 8, H. Brientnall 8, W. Seigler 7, Garrett 7, Whitney 9, E. C. Bargaman 0, J. R. Stice 9, E. Taylor 9, Warder 8, West 5, Dam 5, Carter 9, E. A. Peck 5, J. E. Semple 8, C. W. McPhee 9. Mustin 8, Murphy 9, Wadell 9. McMurchy, Goldrick, Bandle, Brientnall, McClure, Stice, Whitney, Warder, Miller, Murphy and Wadell divided first money, breaking 3 straight. Benscotten, Miller, Siegler, Summerson and Semple divided second money, after scoring 3 each. Budd, Carter, Barnes and Strawn divided third, with 3 broken.

Extra match, at 9 single bluerocks, $2 entrance: H. A. Penrose 8, Bargamon 8, Hickey 7, Shott 7, Heikes 9, E. D Miller 8, C. W. Budd 8, Bandle 0, Early 8, S. Vincent 8, Summerson 9, T. Goldrick 8, Benscotten 9, Verges 8, Murphy 8, Hubbard 7, Barnes 7, McClure 8, H. Brientnall 8, W. Seigler 7, Garrett 7, Whitney 9, E. C. Bargaman 0, J. R. Stice 9, E. Taylor 9, Warder 8, West 5, Dam 5, Carter 9, E. A. Peck 5, J. E. Semple 8, C. W. McPhee 9. Mustin 8, Murphy 9, Wadell 9. McMurchy 9, A. G. Courtney 7, Semple 8, Girton 6, James 6, Roxy 8, G. Smith 5, Wadell 6, J. E. Miller 8, Bob White 9, L. C. S. 9, Holzapfel 9, C. E. Strawn 8. Ties on 9 and 7 divided. Ties on 8 after shoot off divided by Vincent, McClure, Brientnall, Warder, Carter, Semple and J. E. Miller.

Match No. 2, at 9 single Peoria blackbirds, entrance $2: Bandle 8, Heikes 8, Budd 9, Hickey 6, Penrose 9, Verges 7, Ed. Miller 8, West 6, Whitney 9, Seigler 8, Chump 0, Jones 6, J. E. Miller 6, Wardon 9. T. Gastright 9, A. E. Spangler 9, Bob White 9, Wayman 4. Early 6, Benscotten 6, Brientnall 7, McMurchy 9, Carter 7, Barnes 7, Stice 7, Shott 8, Strawn 7, Bargamon 8, Summerson 8, Garrett 8, McClure 8, Waddell 7, Girton 8, Murphy 7, Semple 8, Holzapfel 9. Ties on 9 divided. Ties on 8: Bandle 3, Heikes 3, Ed. Miller 3, Seigler 3, Shott 0, Bargamon 3, Summerson 2, Garrett 2, McClure 3, Girton 1, Semple 1. Second ties on 3 divided. The figure 2 indicates second barrel kills, and the o dead out of bounds.

The surplus money in all the guaranteed event was divided among the shooters making the best average, and was awarded as follows, to those scoring out of 95: H. B. Whitney, first, 89. C. W. Budd, second, 88. J. E. Stice, third, 87. H. Brientnall, L. S. Carter and E. D. Miller, fourth, 86. C. W. McPhee, Warden and Murphy, fifth, 85. H. McMurchy and R. Heikes, sixth, 83. S. Vincent and Al Baudle, seventh, 82. E. S. Benscotten, eighth, 81. There were only six divisions of money, but as seventh and eighth prizes, W. B. Leffingwell, of Clinton, Iowas, donated two copies of his work on "Wild Fowl Shooting."

According to the record, the Smith gun wins both the average and the cup, as Whitney, and those who tied for the cup, all shoot 10-gauge Smith guns about 10lbs. in weight.

As is usual in pigeon matches, the element of luck had considerable to do with the result, as with Hickey on his eighth bird; when the trap was pulled the first time the bird refused to fly, and when put up proved to be an easy one, but was right in a line with the boy, so that a shot would have been dangerous. The next bird was a hot one, and though hard hit managed to get out of bounds. Jack Winston started to gather him, as there was a doubt of his position, and created quite a laugh by bringing in a bird which had been dead for days. The referee was inclined to object until assured that it was a joke.

The cup match ended the tournament, and on Sunday most of the crowd started for Cleveland to take part in the Chamberlin shoot. As will be seen by the scores there were many good records made, notably that of J. E. Miller, of Peters cartridge fame, who on Wednesday shot in every match without losing a bird, thus proving the "get there" qualities of his ammunition.

J. A. Hickey, of Galesburg, Ill., is a very enthusiastic trap shot. He is afflicted with lameness and obliged to use two crutches in walking, but is always to be found at tournaments in his State or near by. When shooting he usually sits on a low box, if one is handy, but if not the ground is good enough for him, and he rarely fails to nail his bird.

Special dispatch to Forest and Stream.

CINCINNATI, O., Sept. 10.—L. S. Carter in the tie shoot off won, as follows:

L S Carter	2221121212111101102—18
C W McPhee	2111111121111101001—17
Q A McClure	2211111111111120011—17

W. E. LIMBERG.

THE KEYSTONE TOURNAMENT.

THE Keystone Manufacturing Co. Tournament, to be held at Corry, Pa., Sept. 18 to 21, contains some novel features in its programme which will interest shooters. The total amount of guaranteed money for the four days is $1,000, with $250 guaranteed each day. In addition to this, each day's work includes a trophy shoot, one of which is a diamond ring, given by the Keystone Manufacturing Co., which becomes the property of the shooter winning it. The other trophies are a cup, given by L. C. Smith, of Smith gun fame, and a cup offered by the Peters Cartridge Co., of Cincinnati. The cups are to be held by the winner for one year and then returned to the donor, to be contested for at the next Keystone Manufacturing Co. Tournament. In addition to the trophy, the entrance money of the contest is to be divided into four moneys, 40, 30, 20 and 10 per cent.

For the best averages in guaranteed matches and trophy shoots the surplus moneys will be divided, 35 per cent. to first, 25 per cent. to second, 17 per cent. to third, 13 per cent. to fourth, and 10 per cent. to fifth, but shooters must compete in all guaranteed matches and shoots, including the championship contest, to establish an average. All shoots are to be under Keystone Manufacturing Co. rules, which include some new points, one of which, in rule 6, bids fair to do away with the vexatious delays caused by shooters being absent from the score. All matches are shot from three or five traps. Shooting from three traps, four shooters step to the score, one facing each trap according to his number. No. 4 steps to No. 1 score after No. 1 shoots, No. 1 steps to No. 2 score after No. 2 shoots, etc., until all have shot, when No. 3 steps behind No. 1 score, and so on. In this way shooting will be continuous. With five traps the rotation is the same.

For full programme address the Company at Corry, Pa.

THE TUCKER POOL SYSTEM.

THE Chamberlin Cartridge Co.'s fourth annual tournament, at Cleveland, is now in progress. It began Sept. 10 and will continue during the week. There are $3,000 in cash prizes. The shooters are all classified according to their ability into separate classes, so that amateurs have as good a chance as experts.

There will be a match each day shot under the S. A. Tucker Pool System, which provides a means whereby every shoot shall be decided by the scores made, to avoid shooting off ties, and to provide against experts dropping into lower places to deprive less skillful shooters of any chance to win. Shooters are placed by the entire score, while the last 5 birds in a 12-bird race, or 4 in a 10-bird race, or 3 in a 9-bird race, as may be agreed upon before the shooting begins, decides the winners in the divisions of the purse. The crack of the last gun in the match decides the matter, without any tie-shooting; all who break 12 straight in a 12-bird match divide first money. All who break the last five birds, but miss one bird earlier in the match, divide second money, but should all miss one in the last five, the shooter who makes the greatest final run, counting from the twelfth bird back, is the winner. The same principle applies all through. The theory is, that of any number of shooters making the same score, the best is the one who holds out best to the last and proves his staying qualities.

Inferior shooters are protected against any of superior ability purposely dropping birds at the end to get a lower place, for birds dropped at the end throw such a one entirely out of the race. This system was tried in a match at Cleveland two weeks ago, and the shooters were unanimously in favor of it. The Chamberlin tournament will do much to familiarize shooters with the system, and we hope soon to see it universally adopted, and it is the fairest plan for all yet suggested. Every man has a fair show for his money, shoots can be run off in much less time, and associations would be gainers by using the system. Next week we shall be able to present scores made in this way, and our readers can then judge of its efficacy.

WALNUT HILL, Sept. 5.—A fair number of shotgun men met at the range to-day to compete in the gold coin match and the regular sweepstake matches. A strong wind prevented high scores being made. The next shoot will be held Sept. 19, when, in addition to the gold coin match and the regular sweepstake matches, the fourth contest for the Climax diamond badge, now held by H. G. Wheeler, will occur. Following is a summary of to-day's shooting:

Gold Coin Match, 10 clay-pigeons from 5 traps, and 10 standard targets from three traps:

	Clays.	Standard.
Bert	1111110111—9	1110110111—8—17
Stanton	0110101111—7	1010111111—8—15
Chase	1001111011—7	1111010111—8—15
Webster	1111011111—9	1010111100—6—15
Snow	1111110011—8	1101110110—7—15
Swift	1111111110—9	1010010110—5—14
Nichols	1110101000—5	1111010110—7—12
Crown	0111001011—6	1110010101—6—12
Rule	1110011100—6	1001001111—6—12
Bowker	1001010101—5	0010111111—7—12
Neal	1110000111—6	0010010111—5—11
Perham	1001000111—5	0111001110—6—11
Knowles	1111100101—7	0011100010—4—11

Following are the winners in the sweepstakes matches:

First event, 5 clay-pigeons from 5 traps: Webster first with 4; Chase and Snow second, with 3; Rule third, with 2.

Second event, 6 standard targets: Chase, Bowker and Knowles first, with 6; Snow second, with 5; Bert third, with 4.

Third event, 5 clay-pigeons from 5 traps: Knowles first, with 5; Webster and Bert second, with 4; Chase and Nichols third, with 3.

Fourth event, 6 standard targets: Knowles first, with 4; Webster, Bert and Snow second, with 4; Rule and Perham third, with 3.

Fifth event, 3 pair clay pigeons: Chase and Perham first, with 5; Nichols second, with 4; Bert third, with 3.

Sixth event, 6 standard targets: Stanton, Bowker and Nichols first, with 5; Swift and Snow second, with 4; Bert third, with 3; Webster fourth, with 2.

Seventh event, 6 clay-pigeons straightaway: Neale, Bert and Webster first, with 6; Stanton, Knowles and Perham second, with 5; Snow and Crown third, with 4; Rule and Nichols fourth, with 3.

Eighth event, 6 bats: Chase and Crown first, with 6; Swift, Knowles and Perham second, with 5; Bert third, with 4; Neale fourth, with 3.

Ninth event, 10 clay-pigeons from 5 traps: Bert, Webster and Swift first, with 9; Snow second, with 8; Knowles third, with 7; Rule fourth, with 6.

Tenth event, 10 standard targets: Stanton, Chase and Bert first, with 8; Nichols, Snow and Bowker second, with 7; Perham third, with 6; Swow and Neale fourth, with 5.

Eleventh event, 3 pair standard targets: Stanton and Snow first, with 5; Swift and Perham second, with 4; Knowles third, with 3; Nichols fourth, with 2.

Twelfth event, 5 clay-pigeons from 5 traps: Swift and Stanton first, with 5; Chase and Bowker second, with 4; Bert third, with 3; Neale fourth, with 2.

Thirteenth event, 7 bats: Bert first, with 7; Stanton, Rule and Nichols second, with 6; Snow and Savage third, with 5; Bowker fourth, with 4.

Fourteenth event, 6 standard targets: Stanton, Bowker and Knowles first, with 6; Savage second, with 5; Perham, Rule and Neale third, with 4; Swifth fourth, with 3.

Fifteenth event, 6 clay-pigeons, walk-up match: Swift first, with 6; Knowles and Nichols second, with 5; Snow third, with 4.

Sixteenth event, 6 blackbirds: Stanton first, with 6; Perham second, with 5; Chase and Nichols third, with 4.

Seventeenth event, 5 clay-pigeons from 5 traps: Stanton and Swift first, with 5; Snow second, with 4; Rule and Perham third, with 3.

Eighteenth event, 6 standard targets: Snow first, with 6; Swift, Knowles and Rule second, with 5; Chase and Stanton third, with 4.

Nineteenth event, 5 clay-pigeons from 5 traps: Swift, Knowles and Rule first, with 5; Stanton and Nichols second, with 4; Snow, Bowker and Perham third with 3.

MOUNTVILLE, Pa., Sept. 7.—On Aug. 30 we shot a friendly match with the Lancaster Gun Club, of Lancaster. It was a fine day, the shooters seemed to enjoy it, every one was pleased very much and was loth to leave when the time came for taking up traps to go home.

E H Seehusen (16)	1111101110101101011—15

Aug. Schmitt wins the gold medal. Ties on silver medal, Ellis 5 straight, Seehusen 0.

Sweepstakes at 20 bluerocks:

Capt Boulsir (18)	1101010000101101111—12
E H Seehusen (28)	0001111011111100111—14
A Schmitt (28)	0011111100001111010—12
D Ellis (28)	1011111101101101001—15
Capt Mattair (20)	1000000111111010101—11

BROOKLYN, Aug. 27.—The members of the New York German Gun Club held their postponed shoot at Dexter Park, L. I., to-day. The attendance was not so large as on previous meetings. After the shoot a match was shot off with seven on a side. P. Smith was captain for one, and P. Hassinger led the other team. Capt. Smith's team won by one bird. H. Bowdan supplied good birds and fast flyers. The full score of the shoot was as follows:

M Bondan (21yds.)	0000100101—3	P Hassinger (21)	1111111111—10
H Greitaur (25)	0111111001—7	H Sautter (25)	1000000111— 4
P Smith (30)	0000111101—5	H Garner, Sr (21)	1001011100— 6
J Schlicht (25)	1111100011—7	H Garner, Jr (30)	0110000001— 3
G Bosenecker (25)	1000010000—2	J Klein (25)	1010110010— 5
J Lucas (21)	1010000111—5	A Donnafeller (21)	0110010111— 6

NEWARK, N. J., Sept. 3.—The East Side Gun Club had its second monthly shooting for the gold and silver medals to-day, at 20 bluerocks each. The score was: Ch. Weeks 20, H. Langstaff 17, H. Kogel 15, Fr. Perment 15, Thos. Rickard 15, Fr. Hilfer 14, Thos. Schork 13, Ch. Fahrer 14, W. Hassinger 13, Ch. Walter 11, H. Heinrich 11, Ch. Laubenstein 11, H. Reinhardt 9, Ph. Schilling 14, T. Schilling 9, M. Barufke 6, P. Ulrich 6. Sept. 7.—There were two matches at Erb's this afternoon. The first was between C. Reinhardt and John Adelman, at 30yds. rise, one barrel and American rules, 25 birds each. Reinhardt shot out his opponent in the nineteenth round, having killed 11 against his 5 birds. The second match was a novelty. Mr. Chas. Heath challenged C. M. Hedden to shoot an ounce of shot at 25yds. rise, and the match was made at 25 birds each, Heath shooting a 16-gauge gun and Hedden a 12-bore. Hedden killed 19 and Heath killed 15.

NEW YORK C. C. CHALLENGE CUP RACE.

Editor Forest and Stream:

As a result of the recent trial races the regatta committee of the New York C. C. have selected the canoe Eclipse, sailed by Mr. Reginald Blake, of the Brooklyn C. C., to defend the International Challenge Cup. They have also selected the canoe Vagabond, sailed by Mr. C. B. Vaux, of the New York C. C., as substitute.

The date of the International race is fixed for Saturday, Oct. 13.

In order to attract the many canoemen who would rather participate in than witness races, the committee has arranged a general sailing race, open to members of all recognized canoe clubs, which will be started fifteen minutes after the International race. In this contest only the first five boats of the morning race will be allowed to compete in the afternoon, and the prizes, which will be handsome cups, will be awarded to the boats coming in first and second in the afternoon race.

Entries for this cup race must be made to the secretary of the club, Chas. J. Stevens, 7 Bowling Green, New York city, not later than Oct. 10. No entries will be received after that date.

Weather permitting, the International races will be started promptly at 10 o'clock A. M. and 2 o'clock P. M., and the open races fifteen minutes later in each case.

KIRK MUNROE,
H. INGALLS DRAKE,
B. H. NADAL,
} Regatta Committee.

TORONTO C. C. FALL REGATTA.

THE fall regatta of the Toronto C. C. was held on Sept. 8 on Toronto Bay, the events and winners being as follows:

1. Decked canoes, class 4, half mile with a turn:

W. G. McKendrick, canoe Mac	1
W. A. Cooke, canoe Waniska	2
W. H. P. Weston, canoe Wanda	0

2. Open canoes, class 3, half mile with a turn:

Colin Fraser, canoe Una	1
A. Shaw, canoe Bervie	2
E. Leigh, canoe Ah Mie	3

A close struggle took place for second place between Secretary Shaw and his veteran competitor, Major Leigh.

3. Tandem, one mile straightaway, open to all Canadian amateurs; prizes, two gold medals:

W. A. Leys and Henry Wright, T. C. C.	1
Jas. O. Ross and G. D. Lowe, Valois club	2
T. F. Paton and J. A. Taylor, Montreal	3
M. F. Johnston, T. C. C., and Mr. Wyatt, Argonaut R. C.	4
Messrs. Stewart and Muntz, Argonaut	5

4. Open canoes, classes 4 and 5, half mile with a turn:

J. D. Kelly, canoe Irene	1
Dr. Powell, canoe Prudence	2

6. Four in a canoe; half mile with a turn; open to all Canadian amateurs:

Dr. R. Jacques, W. A. Cooke, Wm. Sparr, W. T. C. C., and W. F. Stewart, Argonaut	1
M. F. Johnson, Arthur Mason, William Wright and W. G. McKendrick, T. C. C.	2
Colin Fraser, J. D. Kelly, W. H. P. Weston, Cal. Shaw, T.C.C.	3
T. F. Paton, G. D. Low, J. A. Taylor and J. G. Ross, Montreal	0

7. Tug of war, two men in a canoe:

Cook and Sparrow	1
Fraser and Weir	0

8. Handicap tandem, half-mile, straightaway:

Arthur Mason and W. Wright	1
D. B. Jacques and A. M. Rice	2
W. G. McKendrick and Mr. Weir	3
Colin Fraser and W. C. Jephcott	4
J. D. Kelly and J. Jephcott	5

9. Tournament. Open canoes:

Sparrow, lancer; Cooke, paddler	1
Peterson, lancer; Tilley, paddler	2
W. C. Jephcott, lancer; Tom Elgie, paddler	3
W. G. McKendrick, lancer; A. M. Rice, paddler	0

5. Upset race, about a quarter of a mile:

Geo. Sparrow	1
M. F. Johnston	0
W. A. Cooke	0

Com.-elect Col. H. C. Rogers was present and awarded the prizes

A MOOSEHEAD INCIDENT.—A young woman, an enthusiastic canoeist, passed safely through a dangerous experience at Moosehead Lake last week. She was out in her canoe with an Indian guide, when the boat entered the swift current running through the sluice at the west outlet. The Indian lost control of his boat, and taking the young woman under one arm jumped into the water. They passed safely to the waters of the Kennebeck below in this manner, and some Indians working near by on the Canadian Pacific road rescued them.

THE A. C. A. MEET OF 1888.

REGATTA COMMITTEE'S REPORT.

THE following is the record of prize winners at the A. C. A. meet, Lake George, 1888, together with a list of clubs and individual donating cash, flags, etc., for prizes, showing to whom such prizes were awarded:

EVENT.	WINNERS.	CLUB.	PRIZE PRESENTED BY
No. 1. Class II.—Paddling	A. B. Pattou	Yonkers	Vesper C. C. ($5.00).
Second	Grant E. Edgar, Jr.	Newburgh	Association.
No. 2. Class III.—Paddling	Dr. H. E. Rice	Springfield	Toronto C. C., Flag.
Second	Emil C. Knappe	Springfield	Association.
No. 3. Class IV.—Paddling	M. V. Brokaw	Brooklyn	Deseronto C. C. ($5.00).
Second	W. A. Leys	Toronto	Association.
No. 4. Combined	M. V. Brokaw	Brooklyn	Rondout C. C. ($5.00).
Second	Emil C. Knappe	Springfield	Association.
No. 5. Classes A and B—Sailing	M. V. Brokaw	Brooklyn	Ianthe C. C. ($5.00).
Second	R. W. Bailey	Pittsburgh	Association.
☞The above five races constitute the Record events.			
Record—First Prize	M. V. Brokaw	Brooklyn	Association Bunting Flag.
Second Prize	Emil C. Knappe	Springfield	New York C. C. ($5.00).
Third Prize	W. A. Leys	Toronto	Pittsburgh C. C. ($5.00).
Fourth Prize	A. B. Pattou	Yonkers	Pittsburgh C. C. ($5.00).
Fifth Prize	H. L. Quick	Yonkers	Shattemuc C. C. ($5.00).
No. 6. Trophy—Sailing	M. V. Brokaw	Brooklyn	$300 Cup, Bunting Flag, Association.
Second	Paul Butler	Lowell	Newburgh C. C. ($5.00).
No. 7. Trophy—Paddling	Dr. H. E. Rice	Springfield	Association Bunting Flag.
Second	M. F. Johnson	Toronto	Shuh-shuh-gah C. C. ($5.00).
No. 8. Class I.—Paddling	H. Torrance	Brockville	Mohican C. C. ($5.00).
Second	Dr. H. E. Rice	Springfield	Association.
No. 9. Open—Paddling	H. Torrance	Brockville	Brooklyn C. C. ($5.00).
Second	Arthur Amory, Jr.	Harvard	Association.
No. 10. Tandem—Classes A, B	Rice and Knappe	Springfield	Harvard C. C. ($5.00). Quaker City C. C., Flag.
Second	Brokaw and Schuyler	Brooklyn	Two Flags—Association.
No. 11. Tandem—Open	H. Torrance	Brockville	Essex C. C. ($5.00).
	W. A. Leys	Toronto	Lawrence C. C. ($5.00).
Second	J. R. Robertson	Lawrence	Buffalo Flag.
	F. S. Kimball	Newton	Association.
No. 12. Upset—Paddling	L. B. Palmer	Ianthe	J. O. Shiras, Flag.
Second	A. B. Pattou	Yonkers	J. O. Shiras, Flag.
No. 13. Hurry-Scurry	L. B. Palmer	Ianthe	Yonkers C. C. ($5.00).
Second	H. LaMotte	Philadelphia	Association.
No. 14. 75ft. Sailing	Ford Jones	Brockville	Oakland C. C., Flag.
Second	M. V. Brokaw	Brooklyn	
No. 15. Novice—Sailing	J. A. Gage	Lowell	Rome C. C. ($5.00).
Second	F. T. Walsh	Lowell	Association.
No. 16. Consolation—Sailing	Wm. Whitlock	Brooklyn	Rochester C. C. ($5.00).
Second	Geo. A. Warder	Jabberwock	Association.
No. 17. Upset—Sailing	Geo. A. Warder	Jabberwock	Pequot C. C. ($5.00).
Second	A. S. Putnam		Association.
No. 18. Maneuvering	Ford Jones	Brockville	Springfield C. C. ($5.00).
Second	M. V. Brokaw	Brooklyn	Association.
No. 19. Class C	W. L. Palmer	Mohican	Philadelphia C. C. ($5.00).
Second	W. M. Paxton, Jr.		Association.
No. 20. Unlimited Sailing, abandoned.	Race called—no boats.		
No. 21. Club Race	Lowell Club		Mohawk ($2.50); Shiras ($1.00).
First Prize	Paul Butler	Lowell	J. H. T. E. Burr, Silk Sail.
No. 22. Gymnastics	Geo. A. Warder	Jabberwock	Mrs. H. L. Thomas, Flag.

EXTRA EVENTS AND PRIZES.

Torchlight prize canoe—Townsend and Amory ($5) Com. Gibson.

Tournament, four crews, won by Kimball and Robertson, Asso. Tug of War, four crews of four each. Two winning crews were Robertson, Brazer, Kimball and Schuyler—Townsend, Amory, Foster and French. Eight flags on Association account.

Two beautiful red cedar single blade paddles presented by Com. Edwards of Peterborough were given as follows: George A. Warder—2d, Barney cup race. Walter Stewart, the English contestant, for pluck and sixth place on Record.

The Hartford and Knickerbocker C. C. each sent $5 which went on second prize account.

Bunting flags were also given to each of the Record winners in former years, '84 Weller, '85 Gibson, '86 Bousfield and '87 Knappe; and to the trophy winner of '86 and '87, Com. Gibson.

22 first prize double silk flags ($5 each), 28 second prize single silk flags ($1.50 each) and 10 large bunting Record, trophy and club prizes ($5.50 each) were purchased by the committee. Seven flags were presented to the committee for prizes, two cedar paddles and a silk embroidered Mohican model sail. Cash subscribed by the clubs, $123.59

Regatta Committe { PAUL BUTLER, W. A. LEYS, C. BOWYER VAUX, Chairman.

The log, compass and lance wads are good for all time, other expenses apply to this meet only.

Some of the flags given were for previous years.

Regatta Committee { PAUL BUTLER, W. A. LEYS, C. BOWYER VAUX, Chairman.

A CRUISE OF CANOE YAWLS IN HOLLAND.—Five canoe yawls of Hull, Eng., made a very pleasant cruise in Holland last month, going by steamer from Hull to Harlingen, and finally returning by steamer from Amsterdam. The fleet included the Iris, Mr. Geo. Holmes, whose lines we lately published, Manx Queen, 18×6×2ft. 9in.; Jessie, 22×6×3; Viking, 18×4ft. 9in.×2ft. 4in., with a punt 9×3ft.; and White Wings, 16×4it. 9in.×1ft. 2in.

ARLINGTON C. C. FALL REGATTA, SEPT. 1.

THE Arlington C. C., of Arlington, N. J., held a regatta on Sept. 1. There being no wind to speak of, the sailing races had to be abandoned.

First event, paddling, Class 4. Entries: Messrs. G. P. Douglass, Ianthe C. C.; W. J. Stewart, Orange C. C.; I. V. Dorland, C. V. Schuyler, F. Place, Jr., D. H. Miller and W. B. Dailey, Arlington C. C., who finished in the following order, with Schuyler well in the lead:

Nipsic, C. V. Schuyler	1	Jessie, F. Place, Jr.	5
Kisco, W. B. Dailey	2	Emanon, W. J. Stewart	6
Ignace, I. V. Dorland	3	Vera, D. H. Miller	7
Juniata, G. P. Douglass	4		

Schuyler had an advantage over the others, as he stood up while paddling, but as no protest was made the judge declared him winner.

Second event, standing paddling, Class 4:

Nipsic	1	Emanon	4
Ignace	2	Vera	5
Jessie	3		

The time made was very fast, considering the tide; but as the distance was in this, as in all the others, estimated, not measured, the figures are useless for publication and therefore not given.

Third event, upset race, any canoe; same crew in canoe except Dorland in the Redante:

Nipsic	1	Kisco	3
Jessie	2		

Redante did not finish, having taken in too much water to manage easily. The remarkable feature about this race was, that although the Nipsic was the heaviest canoe in it she won the race with ease, her crew having to make two attempts before upsetting her, the light little Rob Roy Redante being nowhere, which may encourage some fair-hearted canoeist, (if such there be) to "go in" and win and not be backward because he has not a feather-weight craft.

Fourth event, paddling, single blade, crew to paddle on either side of canoe, but no change from one side to the other allowed:

Nipsic	1	Juniata	3
Kisco	2		

Redante made a dead heat with Kisco, but was disqualified for changing paddles from one side to the other, as was also Vera. Nipsic's crew gained at the turning point, by going forward and getting her bow around in a jiffy, which gave him a long lead over the rest, which he kept to the finish.

Fifth event, tug of war, three trials, best two in three. Nipsic, Schuyler, Dalley and Dorland. Ignace, Place, Stewart and Miller. "Let the good work go on" was the shout, and it did, until the stern line threatened to part with the strain as the spray flew from the paddles. After a hotly contested struggle Nipsic was declared the winner.

There is some talk of having a regatta on a larger scale before the season closes.

THE USE AND ABUSE OF CANOES.

LAST week we published an account of the drowning of two canoeists in an attempt to run a swollen mountain stream. The following from the Boston *Journal* tells of an equally sad disaster in which a conoe was concerned:

"KNOWLTON'S LANDING, LAKE MEMPHREMAGOG, Aug. 24.—The saddest tragedy witnessed in this peaceful region for many a day was the drowning of William L. Hilton and his affianced wife, Miss Nellie Archibald, of Montreal. For the second summer they were spending their vacation at Mr. Tuck's house, and were enjoying every moment of the outing. The party consisted of five young people, Mr. Hilton, Miss Archibald and her sister, Miss Graham and a young brother of the Misses Archibald. Mr. Hilton was a medical student in Magill University, and was an unusually promising, bright, interesting young gentleman. He was an athlete and intensely fond of canoeing, spending nearly all his time on the lake with his fiancée. His canoe was built in Montreal. It was about 15ft. long and had a small iron centerboard, Mr. Hilton was an enthusiast on the subject of canoeing, and prided himself on his ability to handle his little craft in a high wind under pressure of canvas large enough for a much larger boat. He had been repeatedly urged by Mr. Tuck to either abandon his sail or use a much smaller one, but with improved appliances for shortening sail, which he himself had attached to the canoe, the young man felt entire confidence in his ability to safely navigate her, notwithstanding the treacherous squalls so common to small lakes surrounded by mountains and bold headlands.

"Wednesday morning, the 22d, was cold and rainy. A strong northeasterly wind had stirred up an ugly sea. A dense mist had settled down over the mountains. It was not at all inviting out of doors, but the young people wanted to make the most of their brief stay in the country, and they started for the lake. Young Archibald, his youngest sister and Miss Graham went out in a rowboat, and Mr. Hilton and Nellie Archibald took the canoe. Not ten minutes elapsed from the moment they shoved off from the shore before Hilton and his lady were drowned. The strong off-shore wind carried them quickly half way across the little bay. The party in the rowboat had anxiously watched their friends in the canoe, fearing disaster. Suddenly the sail was seen to swerve from side to side, and in an instant the cockleshell capsized, and before aid could reach them both sank to the bottom of the lake. An agonized shriek from the sister attracted the attention of Mr. Frank H. Foote, of St. Albans, the only other person on the water in that vicinity. Mr. Foote immediately pulled rapidly to where the canoe had capsized, but he was too late, for the empty canoe was drifting rapidly toward the western shore. Mr. Tuck and others joined in the search, but it was unavailing, and the sad news was brought back to the agonized sister and brother that their fears were realized. Kind men from both shores immediately rigged grappling hooks and began the sad search for the bodies. Two days the search was prosecuted, and, finally, to-day dynamite cartridges were obtained from Sherbrooke and exploded, but without effect. Mr. Hilton's father and Miss Archibald's uncle came to the lake as soon as possible, and took steps to secure the bodies. The water where they sank is from 75 to 125ft. deep, and it is not likely that they will come to the surface soon, if at all. Mr. Hilton was about 22 years old, and had spent one year in college."

As the number of canoes in use increases, we may reasonably expect to hear of many more disasters like these two unless it can be made plain to all that very small boats, whatever proportions or model, are necessarily dangerous in very rough waters and high winds; and further, that only under the most favorable conditions should ladies and children, and even men who cannot swim and are not expert boatmen, be allowed in them. In the case quoted last week the river was, from all accounts, at a stage when no small boat should have ventured on it save in a case of utmost necessity. A very severe storm had raged for several days, the rainfall had been unusually heavy, bridges were partly or wholly submerged and some were washed away, while the railroads along the banks were submerged, stopping all traffic. We have not the dimensions of the folding canoe from which the two canoeists lost their lives, but as a rule craft of this kind, while possessing certain advantages, are by no means equal to the wooden Canadian canoe for rapids and swift streams. The immediate cause of the mishap was a collision with a wire bridge rope beneath the water, which capsized the canoe, a mishap that might occur with any boat, but the attempt to run such a river was in itself nothing less than suicidal, and the result was only what might naturally have been expected.

There are many who enjoy the dangers of rapids and swift rivers, and such sport is in itself the most exciting and exhilarating form of canoeing, but it must always be more or less dangerous. For those who would follow it a clear head, a strong hand, a good canoe and long experience are necessary. With these aids the danger is minimized, but without them such feats are foolhardy to a degree.

In the case quoted above there seems no one to blame but the canoeist, whose reckless daring resulted in the loss of two lives. The sailing of a small boat with a very limited range of stability, in a mountain lake, is a very dangerous matter at best. Even in an open sailboat of good model there is need of skill and experience in the frequent and violent squalls that rush from the hills, and a canoe is even more dangerous than the larger craft. All reefing gears, even the best, fail in the event of such squalls as are common, and if a man must use large sails he must go prepared to swim. With a reasonable sail area and ordinary skill canoe sailing is not a specially dangerous sport, even in such localities, for a man who can swim and take care of himself if capsized, but it is no sport for a lady unless she is very much more expert as a sailor and swimmer than is common, and even then she had far better stay at home in such weather as is described in the extract quoted above. To take a lady in a canoe with large, or even with small sails, under such conditious of weather, was to invite the fatal result which followed. Canoe sailing is in no way a sport for ladies, nor is paddling either, unless under proper restrictions.

Only a month since a fatal capsize of a canoe at Bar Harbor resulted in the loss of two lives. In this case a lady and gentleman started out at night in a birch bark canoe, the model of which is generally recognized as cranky, dangerous, and to be used only by experts. How they were capsized will never be known, they may have been run down in the dark by some vessel, as they carried no light, or they may have been capsized by a steamer's swell or a large wave, the canoe being picked up at sea next morning, bottom up.

There is now a canoe club near New York where young girls of 12 to 16 years are permitted to take the canoes out without an escort, two of them going at a time in one canoe. Probably not one of them could swim if thrown into the water with shoes and street dress on, nor are they competent to do more than paddle a little in smooth water. It is only a matter of time before a fatal accident puts an end to all this, but in the meantime it would be interesting to know whether the parents of these children are aware of the danger they are running. When a child or lady goes in a canoe there should be no sails set, unless under the most favorable conditions, and better, not even then; the canoe should be in charge of an experienced canoeist, who can not only keep the canoe from capsizing, but can take care of himself and his companion in the event of a capsize, and the boat and all its appliances should be of the best model and in perfect order.

COMING CANOE RACES.—On Saturday next the fifth and last trial race for the Springfield Cup will be sailed at Calla Shasta, the sail-off being on Oct. 6. Mr. Vaux will take the Vagabond to Springfield for the trial race. The Ianthe C. C. will hold its 4th annual regatta on Sept. 15, off the club house, foot of Grafton avenue, Woodside, Newark, N. J. The programme includes 12 events: Paddling, Class 1, for Commodore's cup; sailing record; sailing, juniors, "man overboard;" tandem paddling; standing on deck, paddling; Classes 3 and 4, paddling; for both juniors and record; hurry-scurry, upset and tournament. The races will be open to all canoeists and under A. C. A. rules, the first being called at 2 P.M. The fall regatta of the Brooklyn C. C. was not sailed on last Saturday, owing to the rain, but was postponed to Sept. 22. A number of canoeists were present and spent the afternoon in the club house, talking over the late Meet at Lake George. Mr. Blake of the Brooklyn C. C. has been selected by the New York C. C. to defend the cup against Mr. Stewart, on Oct. 13. The Yonkers C. C. will hold its fall regatta on Sept. 22.

PHOTOS OE THE A. C. A. MEET.—Mr. R. W. Anderson, of Toronto, has taken the following views of the A. C. A. meet: 1. At Long Island, Lake George. 2. The Champion Paddlers. 3. The Veterans of '80, '81 and '82. 4. Ditto, with Canoe Islands. 5. Headquarters, with the Officers. 6. Trial Race—The Start. 7. Race for the Barney Cup. 8. Rome and Lowell Camps. 9. Springfield Camp. 10. Harvard Camp. 11. A Canoeist's Home. 12. The Tournament, No. 1. 13. The Tournament, No. 2. 14. The Tug of War. 15. The Departure. These views can be had until Oct. 1 at 112 West Twenty-second street.

15. Savin Rill, Club.
18. Chelsea, Dorchester Bay.
20. New York Fall, New York.
20. Savin Hill, Moonlight Sail.
—. Miramichi, Cup, Final.
22. West Lynn, Cham. Sail-off.
25. Cedar Point Pennant.
29. Quaker City Cruise, Review.
29. Toronto, 2d and 3d Classes.

WHITE WINGS.

THE record of this sloop for the past two seasons is not only such as to give her a clear claim to the title of the champion of the lakes, but is worthy of special notice from the large number of wins, and from the fact that she has not raced in one locality only, but has met in their own waters the best boats of Lake Erie and Lake Ontario. Under her present owners White Wings has started in 18 races in 1887-88, winning 16 firsts and 2 seconds.

She was built at Trenton, Ont., by Capt. Alex. Cuthbert (Canada's first designer) in the summer of 1886 for Mr. P. J. Cooley, of that place, and was by him put into a few races before she was finished (her decks were all open and her seams had not been payed) with, of course, the result of defeat, though she showed considerable speed notwithstanding. In the early part of 1887 she was purchased by Messrs. Emilius Jarvis and A. G. Osborne, of Hamilton, Ont., in whose hands she has been wound up to the highest racing pitch. Her leading dimensions are as follow:

Length over all	59ft.
L.W.L.	43ft.
Beam	14ft. 7in.
Depth of hold	6ft. 6in.
Draft	5ft.
Displacement about	16 tons.
Sail area	2,496sq. ft.
Corrected length (L. Y. R. A. rule)	46.6ft.

Her midship section shows perfectly straight from garboard to round of bilge, with considerably more dead rise than is usually given by Capt. Cuthbert. Forward she is very fine on the load line, her midship section being placed very far aft. She is rather full aft under water, while above she fines away to a moderately long counter. She presents a rather pleasing sheer plan, with perhaps hardly as much freeboard as modern ideas dictate. Her stem laterally is a peculiar piece of designing, it has an overhang of about 3ft. under the bowsprit, from which point it follows

a graceful curve down to about the bobstay plate, when it curves out instead of under as usual, giving her a "hungry" look (as it has been described).

In her races she has proved herself a splendid all-round boat; she has met and defeated all types of yachts and in all kinds of weather and conditions of water, and she has undoubtedly proved herself not only the fastest Cuthbert boat, but the fastest craft on fresh water under 50ft. l.w.l. On several occasions when she has met the Atalanta (of America Cup fame) she has saved her time from her, and made a close race even. So also the schooners Oriole, Speranza and Wasp. Her best point of sailing is to windward, which is said to be due to the peculiar construction of her centerboard case, which is larger at the fore than at the after end, thus giving the centerboard considerable play at its forward end; and as it naturally cleaves to the windward side of the case it thus tends to eat her to windward. Another distinctive feature is her great lack of wave making, for even when driven at a high rate of speed she does not appear to carry either a bow or a quarter wave, but only a long, following swell. This peculiarity has been noted and discussed by many. Her record is as follows:

1887—9 Starts—7 Firsts, 2 Seconds.

July 28.—Toronto Y. C. regatta, L. Y. R. A. cruise. Wind, light to moderate. Starters: White Wings, Cygnet, Ethel, Verve. Finished in following order, corrected time: White Wings, 4.50.07; Cygnet, 5.22.20; Ethel, 5.39.55; Verve, 5.44.13. In this race she saved her time from the entire class above her, which comprised Atalanta, Oriole, Aileen and Ariadne. Her elapsed time was less than either of the latter three.

July 29.—Toronto, Royal Canadian regatta, L. Y. R. A. cruise. Wind, fresh to strong; good lump of a sea. Same starters as the previous day. Corrected time: White Wings, 5.01.09; Cygnet, 6.13.00; Verve, 6.31.42; Ethel not timed. She again saved her time from Atalanta and Oriole, and defeated the Aileen and Ariadne even.

Aug. 2.—Charlotte, N. Y., Rochester Y. C., L. Y. R. A. cruise. Wind fresh; good sea. Starters: White Wings, Garfield, Ethel, Verve. Corrected time: White Wings, 4.22.35; Garfield, 4.44.03; Ethel, 5.03.04; Verve, 5.12.38. She again at this regatta saved her time from Atalanta and Oriole, and beat Aileen and Ariadne even. Her elapsed time for the first round was less than either Atalanta or Oriole.

Aug. 5.—Oswego, O. Y. C., L. Y. R. A. cruise. Wind strong; heavy sea. Starters: White Wings, Garfield, Ethel, Verve. In this race she sprung her bowsprit and was kept under short sail all day, with the result that the Garfield was inside her time. Finish, corrected time: Garfield, 4.54.52; White Wings, 4.56.16; Ethel, 5.15.09. Verve carried away her gaff and retired.

Aug. 9.—Kingston Y. C., L. Y. R. A. cruise. Wind light. Starters: White Wings and Garfield. Ethel and Verve both not having repaired damages sustained at Oswego did not start. White Wings started, however, with a sprung bowsprit, with the result that before long it carried away, and she had to lay to for over twenty minutes repairing. She caught Garfield, but was unable to save her time. Finish, corrected time: Garfield, 7.47.22; White Wings, 7.50.00.

Aug. 8.—Belleville, Bay of Quinte Y. C., L. Y. R. A. Cruise. Wind strong, puffy, smooth sea. Starters, Garfield and White Wings. Finish, White Wings, 4.05.30; Garfield, 4.27.06, corrected time.

Her other three races during this season were Toronto Y. C. club races, her competitors being Cygnet, Condor, Whistlewing, Verve, Cyprus and Escape, over all of which she secured an easy victory on every occasion.

1888—9 Starts—9 Firsts.

July 4.—Buffalo annual, Buffalo Y. C. Starters, Alarm, Cyprus, Vera, Emma, White Wings, Viking, Gannet, Sylvia; Schooners May Belle, West Wind and Dandy. The wind was fresh and with a good sea running down the lake. In this race she walked away from all in a wonderful way, and would have finished much sooner had she not met with difficulty in picking up the outer buoy, and before this was accomplished the rest of the fleet were upon her. The finish, corrected time, was: White Wings, 2.16.55; Cyprus, 2.11.35; Emma, 2.13.51; Sylvia, 2.14.37; others not timed.

July 11.—Put-in-Bay Island, Onio, Inter-Lake Yachting Association Meet. Open race for all single stickers. Wind half a gale S. W., heavy sea. Starters, Cyclone, Reynolds, Unique, Iris, Eole, Alice Enright, Lulu B., Fanchon, Scud, Oberon, White Wings, Cora, Cyprus and Vera. This was the closest race White Wings ever sailed. Her chief competitor was Cora, of Detroit, a much larger vessel, and as the greater part of the course was reaching it kept her busy. It seemed to be a case of who would carry cotton the longest, and this White Wings was best. The finish was as follows, times not corrected: White Wings, 2.37.09; Cora, 2.37.54; Alice Enright, 2.45.45; Cyprus, 2.48.32; Lulu B., 2.53; Fanchon, 2.53.10; Scud, 2.56.02; Vera, 3.4.57; the rest not timed. Over the same course at the same time she had a private match with Alice Enright, champion of Lake Erie, the finish being: White Wings, 2.37.09; Enright, 2.45; 45, corrected time.

July 12.—Match race with Cora of Detroit, to be settled with the schooner race, in which Wasp and Speranza were competing. The White Wings and Cora lost considerable time (after the schooners had started) maneuvering for weather berth, in which the former was successful. Wasp carried away both topmasts and lost much time thereby. The finish was: White Wings, 2.42.10; Cora, 2.47.38. White Wings caught and passed the Speranza. Wind N.E. strong. The race finished in a heavy gale.

July 20.—Oswego Y. C., Lake Y. R. A. cruise. Wind strong, sea heavy. Starters: White Wings, Cygnet, Madge. Finish, corrected time: White Wings, 3.04.15; Cygnet, 3.40.20; Madge gave up, sprung her topmast. In the first 5 mile beat to windward Madge was 8m. 30s. astern, so it was not likely she could have won. In this race Atalanta (which was sailing over the course for first prize, first class) and White Wings had a desperate race, first one would lead then the other. On the second round the smaller yacht led, but the finish was made by Atalanta; actual time, 3.07.30, 3m. and 15s. ahead; her allowance to White Wings being 17m. 12s.

July 23.—Charlotte, Rochester Y. C., L. Y. R. A. cruise. Finish: White Wings, 5.00.50; Cygnet, 5.25; Madge retired, having carried away her topmast. She, however, was some 12m. astern at the time.

July 28.—Hamilton, H. Y. C., L. Y. R. A. cruise. Starters: White Wings, Aggie, Cygnet, Verve, Condor. The wind died away in the afternoon and left all becalmed, so they were towed in and the race postponed. White Wings was 58m. ahead at the outer buoy on the second round, the last point at which they were timed.

July 30.—Toronto Y. C., L. Y. R. A. cruise. Wind light. Starters: White Wings, Cygnet, Verve, Aggie. At the finish of the race White Wings was becalmed, and the rest of the fleet, bringing in a lake breeze, ran right on top of her; however, she managed to score by a slight margin. Corrected time of finish: White Wings, 7.34.30; Cygnet, 7.35.13; Verve, 7.54.28; Aggie, 7.54.11.

July 13.—Toronto, Royal Canadian Y. C., L. Y. R. A. cruise. Wind and sea heavy, with rain squalls. Starters: White Wings, Aggie, Verve, Cygnet. Corrected time at finish: 4.48.20, 5.35.41, 6.11.17, respectively. Cygnet not timed.

Aug. 3.—Hamilton, H. Y. C., postponed race. Wind fresh; smooth sea. Only Aggie and White Wings turned up at the starting line, the others having been becalmed on their way up from Toronto. Finish, corrected times: White Wings, 2.50.19; Aggie, 3.15.39.

TORONTO Y. C. HANDICAP, Sept. 1.—A handicap race for classes 2, 3, 4 and 5 was sailed on Sept. 1 at Toronto, the wind being light S. W. The times were:

CLASSES 2 AND 3.

	Elapsed.	Corrected.
Rivet	5 10 30	4 58 00
Condor	5 09 20	4 59 20
Cygnet	5 06 30	5 06 30
Whistlewing	Not timed.	
Escape	Not timed.	

Condor and Rivet were ruled out for fouling a buoy, so Cygnet wins, with Escape second.

CLASSES 4 AND 5.

Caprice	5 02 20	5 02 20
Mischief	5 01 40	5 00 40
Puritan	5 06 45	5 01 45
Finette	5 07 30	5 01 30
Alert	5 07 40	5 00 40
Alvaretta	5 10 50	5 10 50
Tam O'Shanter	5 11 20	5 05 20
Mollie	5 17 30	5 05 30

Mischief and Alert tied for first place.

CAPE ANN Y. C.—On Sept. 3 the race for the Tappan Cup was finally sailed off Gloucester, Black Cloud winning for the second time and taking the cup. The times were:

	Length.	Elapsed.	Corrected.
Black Cloud	23.10	1 45 53	1 19 13
Alpine	16.04	2 08 06	1 32 26
Climax	18.06	2 08 32	1 35 52
Maud S.	22.03	2 04 58	1 36 42
Silver Cloud	Withdrew.		

The cup is a very handsome trophy, of silver lined with gold, the outside ornamented with clusters of grapes,

ST. LAWRENCE CLUB CUP RACES.

THE sixth and last schedule race of the St. Lawrence Yachting Association for the commodore's and vice-commodore's cups took place over the usual course on Lake St. Louis on the afternoon of Sept. 1. The wind was very light and variable throughout the race, and it was to a very great extent a drifting match. When the boats went over the line it was from the southwest, making a reach to the lighthouse buoy, and a run to the north buoy. The start was as follows:

Ishkoodah	3 31 00	Lulu	3 31 40
Madge	3 31 15	Osprey	3 32 00
Scud	3 31 35	Wanda	3 32 30

The Lulu, the big barndoor "cat" from Lake Champlain had a tremendously big jib set when she crossed the line, but she had to take it in, a minute or two afterward, and lost time in doing so. The Valois lighthouse was rounded in the following order:

Madge	3 49	Osprey	3 57
Ishkoodah	3 51	Wanda	4 01
Lulu	3 55	Scud	4 05

The wind dropped on the run, and before the north buoy was rounded the yachts had nothing but little puffs from the south and southwest to carry them on. The Lulu kept her third place, but was doing badly, comparatively speaking. The north buoy was passed in the following order:

Madge	5 05 00	Wanda	5 19 00
Ishkoodah	5 06 30	Osprey	5 24 00
Lulu	5 14 00	Scud	5 35 00

The close-hauled work to the southern buoy took a long time and was a wearisome piece of business. The Osprey crept up to third place, and the Scud dropped out of it before the buoy was reached. At the turn the order was:

Madge	6 20 00	Wanda	6 37 00
Ishkoodah	6 30 00	Lulu	6 40 00
Osprey	6 34 00		

The Madge had the race well in hand at this point, but she only had an hour and ten minutes to finish before the time limit of four hours expired, and as minute after minute crept by and she made no appreciable progress, it looked as if the race would be a fizzle. A puff of wind came just in time, however, and she came across the line with just three minutes to spare. The time at the finish was:

Madge	7 27 00	Lulu	7 39 00
Ishkoodah	7 34 00	Wanda	7 40 00
Osprey	7 38 00		

The Ishkoodah allows the Osprey 8m. 40s., so that the latter gets second place. This is the third win for the Madge this season, and as the Lulu has also scored three wins these two boats will have to sail off for the cup.

The canoe yawl race was another processiou, the Tara, Wallace's fine craft, leading from the start. The Tara has made an unbroken record during the season, having won the six races for the vice-commodore's cup, and every race she has entered for. She is Sauvé's, of Brockville, latest and greatest production in the shape of a canoe yawl.

CORINTHIAN Y. C., MARBLEHEAD, SEPT. 3.

THE third and last pennant championship race of the Corinthian Y. C. was sailed on Sept. 3, off Marblehead, in a light S.E. wind. The courses were: For first class, from judges' line to Half-way Rock, leaving it on starboard, Can Buoy on outer breaker off Pig Rocks on starboard, Tom Moore's Rocks on port, to judges' line; 10 miles. Second and third classes, from judges' line to buoy on Chappell's Ledge, leaving it on starboard, buoy on Gooseberry Ledge on starboard, stakeboat anchored 200yds. southeast of Tom Moore's Rocks on starboard, to judges' line; 6 miles.

The leading boats in first class were Mignon, designed by her owner, Mr. Horatio Babson, of Gloucester; Saracen, a new Burgess cutter, and Elf, also a new boat. Atalanta, the fast centerboard boat, also started in the same class, but for a separate prize, the keels and centerboards not being raced together. Mignon beat her rivals easily both to windward and reaching. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS—KEELS.			
Mignon, H. Babson	28.10	2 32 48	2 04 33
Saracen, W. P. Fowle	30.10	2 39 41	2 13 09
Elf, W. H. Wilkinson	29.02	2 45 12	2 17 15
Agnes, W. E. Cummings	26.00	Withdrew.	
FIRST CLASS—CENTERBOARDS.			
Atalanta, I. R. Thomas	28.01	2 57 07	2 27 56
SECOND CLASS—KEELS.			
Swordfish, J. B. Paine	24.04	2 42 32	2 09 43
Witch, B. B. & F. B. Crowninshield	23.04	2 51 52	2 17 53
Marguerite, F. Skinner, Jr.	23.11	Withdrew.	
SECOND CLASS—CENTERBOARDS.			
Sprite, H. M. & P. S. Sears	22.07	2 56 32	2 21 31
THIRD CLASS—KEELS.			
Mosca, C. H. W. Foster	19.11	1 47 35	1 24 24
Wraith, H. P. Benson	19.02	1 59 52	1 36 01
Sachem, R. D. Floyd	20.02	2 02 31	1 39 41
Kathleen, R. S. Peabody	20.06	2 07 13	1 45 36
Vaga, H. W. Friend	17.11	2 11 59	1 47 52
Nixie, A. L. Cochrane	20.04	Withdrew.	
Caprice, F. V. Parker	19.02	Withdrew.	
THIRD CLASS—CENTERBOARDS.			
Corsair, C. H. Millet	18.10	2 04 12	1 40 05
Josephine, D. H. Follett, Jr.	18.08	2 11 05	1 46 49
Dolphin, R. Robbins	17.02	2 16 33	1 50 44
Greta, S. G. Allen	19.06	Withdrew.	
Nerena, R. Saltonstall	20.11	Withdrew.	
Pixy, F. W. Chandler	20.09	Withdrew.	

The judges were C. S. Eaton, W. H. Clothey, C. H. Taylor, Jr., and W. W. Whitcomb.

The winners were: First class keels—Mignon first, $10; Saracen second, $5. First class centerboards—Atalanta leg for pennant. Second class keels—Swordfish first, $10; Witch second $5; Swordfish leg for pennant. Second class centerboards—Sprite leg for pennant—Third class keels—Mosca first, $10, and leg for pennant; Wraith second, $5. Third class centerboards—Corsair first, $10, and leg for pennant; Josephine second, $5.

Swordfish is the new boat designed by Mr. John B. Paine. It is noticeable that in each class the keels beat the centerboards, sailing the same courses.

Atalanta has won two races, Saracen two, Expert two. Witch, Swordfish and Carmita have each one leg in second class and Coyote, Corsair and Myrtle each hold one leg. The sail-off was set for Sept. 12. The 25th regatta will be sailed on Sept. 15, for silver prizes.

THE VOYAGE OF THE MINERVA.

IT was considered quite a feat when Clara, 53ft.×9ft. 1in., crossed the Atlantic three years since, but her passage has been far outdone by another Fife cutter of still smaller dimensions, which not only came over safely but made a very quick passage, crossing from Fairlie, Scotland, to Boston, in 28 days. Minerva, the latest addition to the 40ft. class, was designed by young Will Fife and built at the Fairlie yard. She is just under 40ft. l.w.l., 5ft. beam, with clipper stem of course, 11ft. 4in. beam, and 9ft. draft, with 12½ tons of lead on keel. She is built of wood, with planking of elm and yellow pine, and fittings of teak and mahogany. In general appearance she resembles Thistle, owing to the long overhang on each end. She is owned by Mr. Chas. H. Tweed, of Beverly, and is commanded by Capt. Chas. Barr, formerly in command of Mr. Tweed's Shona. Capt. Barr, with three other seamen, brought her safely across under her racing mast but with no topmast, a mainsail of Shona's, with a cloth added, being used, together with two jibs, two staysails and a spinaker, the pole of the latter being 30ft. She carried a small boat lashed on deck. The following is an abstract from her log:

Left Fairlie, Scot., July 25, at 2 P. M. Wind light from S. W., dead ahead, holding light and variable all day.

July 26, at 9:30 A. M., passed Malin Head. At 11 A. M. sighted the channel fleet off Loch Swilly. Wind still light, but southeast. Sank Tory Island off the north coast of Ireland during the forenoon, and steered our course across the ocean, west one-half north.

Friday, light but shifting winds. Ran 149 miles by the log.

Saturday, carried away the gooseneck of spinaker boom at 2 P. M. At 4 P. M. rain squall, accompanied by nasty sea. Log showed 144 miles.

July 30.—Fresher winds; forced to double reef mainsail. Short cross seas made the compass bob about so as to be practically useless. Held on a course west by south, one-quarter south, and ran 179 miles.

Monday the blow moderated; set light sails. During the night heavy rain shower, with baffling airs. Log recorded 109 miles as the work of the day.

Tuesday, dead calm for the greater part of the day. Long rolling swell that made things uncomfortable. Ran 75 miles, noon to noon.

Wednesday, Aug. 1.—Wind freshened, but held dead ahead. Ran 115 miles.

Aug. 2.—Heavy cross seas prevailed all day, wind hauling to southwest. Covered 105 miles.

Aug. 3.—Heavy head winds and head seas all day. Log showed 103 miles.

Aug. 4.—Heavy rain, heavy seas and head winds. Course, west by south three-quarters south. Sailed 100 miles by log.

Aug. 5.—Wind stronger, veering from northwest to southwest. Under three-reefed mainsail for four hours. Plunged heavily; 86 miles.

Monday, Aug. 6.—Blowing fresh from northwest; 132 miles.

Aug. 7.—At 2:30 P. M. was passed by the National Line steamer Egypt, bound for New York. Spoke her and received Liverpool papers of date Aug. 2. At 4 P. M., in N. lat. 43° 51', W. long. 38° 39', sighted and sailed around derelict schooner W. L. White, of Rockland, Me. She had stumps of main and mizenmasts standing and decks burst out. Log showed 153 miles.

Aug. 8.—Wind shifting from southeast to northeast, and light all day; 81 miles.

Aug. 9.—Wind stronger. Weather fair. Ran 166 miles.

Aug. 10.—On edge of the Banks. Thick and hazy during afternoon. Light rains and fine sailing breeze at night and during the morning; 147 miles. Hove lead at midnight and found bottom in 45 fathoms.

Aug. 11.—Sailed through French fishing fleet. Winds light ahead. Course S.W. ½ S. Covered 87 miles.

Aug. 12.—Light and baffling winds. Foggy at times. Many whales sighted. Log recorded 95 miles.

Monday, Aug. 13.—Fine N.E. breeze; 154 miles.

Aug. 14.—Wind light; 80 miles.

Aug. 15.—Thick fog all the morning; 86 miles.

Aug. 16.—Wind very light; 54 miles.

Aug. 17.—Foggy, head winds; 98 miles.

Aug. 18.—At noon sounded in 55 fathoms; 82 miles.

Aug. 19.—Wind still holding light and ahead. In N. lat. 42° 53', W. long. 64° 53', passed Gloucester fishing schooner Lorna Doone at anchor, fishing. She gave us plenty of fresh fish, and we stood on our course; 104 miles.

Aug. 20.—Light winds; carried spinaker and all jibs; 63 miles.

Aug. 21.—About 4 o'clock A. M. a gale sprang up from the southeast and backed around to the north. It blew with hurricane force, accompanied by frightful seas. We kept topsail behind mast, and the boat behaved splendidly. Kept her under the staysail for about four hours. At daylight we passed a large schooner hove to under foresail and trysail. At 9:20 A. M. we sighted Cape Cod, bearing W.N.W. The wind took off at 9:45, and we began to drift down the beach toward Nausett, which at noon bore west by south. At 3 P. M. the wind lessened, and we stood around the Cape. At 7 P. M. Cape Cod was abeam, bearing south-southwest, and two hours later Race Point was abeam, bearing south-southwest.

At 3 A. M. Thursday we were abeam of the Gurnet. At 7 A. M. tacked in front of Minot's, passed Boston light at 8:30 and came to anchor at 9:30 A. M.

Total length of voyage 28 days, land to land 26 days.

Minerva will probably not race this year, but next season she will be in the 40ft. class with Baboon, Nymph, Xara, Banshee, Chiquita and Pappoose. Her performance with them cannot fail of being very instructive, as she, while far from being a narrow cutter, has less beam than any of the others, only 11ft. 4in. compared with 13 or 14ft. of Baboon, Banshee and Nymph. She has already made a reputation for herself by her remarkable voyage, and if she does as well in racing her designer will have no reason to be ashamed of her.

GALATEA'S KEEL.

A DECISION has lately been rendered in the suit of Lieut. Henn against J. Reid & Co., the builders of Galatea, for £1,000 damages on account of faulty construction of the lead keel. Lord McLaren, before whom the case was tried, has decided against Lieut. Henn, the main points of the case, as reported in the Glasgow *Herald*, being as follows, in addition to which the decision goes at length into the legal and technical features of the case:

"In November, 1884, defenders agreed to build the steel cutter yacht Galatea for the pursuer at a price of £4,524. The specification required that 85 tons of lead should be run into the spaces amidships been the floors, and the vessel was to be built according to the style of a first-class yacht. The Galatea was handed over to the pursuer in April, 1885, and she was raced at various regattas and sailing matches during the ensuing racing season. Pursuer, however, discovered that the vessel had neither the stability nor the speed which a first class yacht of her size ought to have had. In consequence of her instability and want of power to carry sail, the pursuer found it necessary to have the vessel's spars cut down and reduced. She thus proved a great failure during the sailing season of 1885. At the close of the season the yacht still becoming deeper in the water, pursuer began to suspect that the lead ballast had not been properly run into the spaces and he had some of it cut out, when it was discovered that it had not been run in properly. Instead of being solid and filling up the whole of the spaces into which it was run, the lead, he said, was solid only at the upper part of the spaces. Below, the spaces had been left empty, so that the water getting in afterwards filled up the vacancies under the lead. Some tons of water had thus been collected in the yacht's bilges below the lead, at a place where it could not be reached by the pumps. Pursuer had the lead taken out and run in again at a cost of £580 16s. 7d., and he was put to other expense. He founded his claim on breach of contract by the defenders in maintaining that the cause of

SOUTH BOSTON Y. C.—The postponed regatta of the South Boston Y. C. was sailed off City Point on Sept. 3, the courses being: For first and second classes, from starting point, leaving Thompson's Island on starboard, Spectacle and Long Islands on port, Rainsford's Island and Wilson's Rock Buoy on starboard, Buoy 7 on port; returning through the "Narrows," leaving George's and Galloup Islands and Nix's Mate Black Buoy No. 9 on port, Lovell's Island and Red Buoy No. 8 on starboard, Long, Spectacle and Buoy 7 on port, to finishing point; 10 miles. Third class, from starting point, leaving Cow Pasture, Red Spar Buoy No. 4 on port; Black Can Buoy No 7 off Fort Independence on starboard, Spectacle Island, Sculpin Ledge Buoy, Red Can Buoy No. 6, lower middle on port, back to starting point; 7 miles. The wind was moderate, falling to a calm at finish. The times were:

DORCHESTER Y. C.—105th regatta, Aug. 28.—Club course, 7 miles. Weather, clear. Wind, north-northwest. Tide, flood:

FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Mabel, F. L. Dunne	21.5½	1 10 10	00 44 50

FIFTH CLASS.

Mirage, J. Dearborn	18.8½	1 13 33	0 45 16
Scamp, F. Gray	19.5½	1 13 19	0 45 52
Nora, G. B. Dennie		1 17 05	

Winners of prizes—Class Four (special prize), Mabel. Class Five, first, Mirage; second, Scamp. Mabel having no competitor in the fourth class, the judges decided to let her start with the fifth class and sail for a special price. There was a double-reef breeze. Judges, H. B. Callender, L. M. Clark, E. R. Tilton.

BUFFALO Y. C.—Many new additions are to be made to the local fleet, and Buffalo is likely to figure more actively in the Lake Y. R. A. circuit next season. The keel of the new cutter Louise has been got out by Hingston & Son, and Mr. Kunhardt has sent plans No. 24 for another and larger cutter. She is 34ft. over all, 24ft. loadline, 7ft. 6in. beam, and 5ft. draft. The iron keel weighs 4,800lbs., and the lower sail area is 700sq. ft. Flush deck with small cockpit. Mr. Kunhardt is also getting out the plans for a 30ft. compromise, and several other yachts are in prospect, so that Buffalo will contribute a full quota of new craft next season.

CATBOATS AT NEWPORT.—The race of the Newport catboats was sailed on Sept. 6 in a strong N. wind, the course being 18 miles. The times were:

FIRST CLASS.

	Start.	Finish.	Elapsed.
E. O. Mathews	10 35 00	1 55 25	3 20 25
Marion	10 35 35	1 52 45	3 17 10

NEW YORK Y. C.—The fall regatta of the New York Y. C. will be sailed on Sept. 20 over a new course, starting on a line drawn from the flagship Electra, anchored about one-quarter of a mile south of Buoy No. 10, thence to Buoy 8½, passing south of it, and north of Buoy 5, off the point of Sandy Hook, to and around the Sandy Hook Lightship, turning it from the north and east, thence to and around a stakeboat anchored one-quarter of a mile southeast from the buoy on Shrewsbury Rocks, turning it from the west and south, and returning over the same course to starting point. The time limit will be 8 hours.

TORONTO—PRINCE OF WALES CUP.—One of the most absurd races on record is that of Friday last at Toronto, where the entries for the Prince of Wales cup included the 70ft. schooner Oriole, the 5-ton cutter Molly, the small sloop Caprice and the open boat Alvacta, the latter 19ft. over all. The course was over a 15-mile triangle on the open lake, two rounds, with half a gale blowing and a heavy sea. Oriole sailed the course twice while the others were sailing it once, Alvacta sailed but one round.

DEATH OF LORD ALFRED PAGET.—This well-known yachtsman died lately on board of his yacht Violet. His yachting career dates back over 40 years, beginning with various sailing yachts, the most famous of which was the Xantha cutter, built in 1865 by Mr. John Harvey, and ending in steam. He has probably built more steam yachts than any other yachtsman, some of the best known being the Xantha, Santa, Cecilia, Santa Maria and a number of Violets.

EASTERN Y. C.—The fall regatta of the Eastern Y. C. will be sailed on Sept. 14. There will be but few entries in the larger classes, Sachem, Puritan and Marguerite not being entered, while no New York yachts will go round. Good entries are looked for in the 40ft. class, and the boats are now getting ready. Nara has had a new bowsprit 3ft. longer. Col. Cochrane's new schooner, Œnone, will sail her first race.

HARLEM Y. C. FALL REGATTA.—The fall regatta of the Harlem Y. C. was sailed on Sept. 9 from College Point around the Sands Point buoy, for all but two yachts, these turning the Gangway Buoy. The wind was strong N.W. The winners were: Class B, Peerless; Class C, Bessie B.; Class D, Sophia Emma; Class F, Gussie (a walkover); Class H, Vitesse. Bessie B. wins for the third time the commodore's cup, and holds it. The judges were: J. C. Summers, P. Grace and H. B. McAllister.

SAILORS' HANDBOOK.—Under the tittle of "Seglers Handbuch," the publishers of *Wassersport* are now issuing in parts a new work on yachting by Lieut. von Muchall-Viebrook. The work is divided into three parts—design and construction in theory and practice; yacht sailing; and miscellaneous craft, such as canoes, ice yachts and model yachts. When completed it will make a handsome octavo volume.

NEW ROCHELLE Y. C.—A special sweepstakes regatta has been arranged by the New Rochelle Y. C. for Sept. 15, open to all kinds of small craft—duck boats, sneakboxes, open skiffs, etc. It would be interesting to see some of the best canoes entered, but several club races, together with the New York cup races, are apt to keep all the canoes about the Upper Bay for the next two weeks.

CRUISE OF THE SEA FOX.—The flagship of the Seawanhaka C. Y. C. was at Marblehead on Saturday, on her way to New York, after a cruise as far East as Campobello, having left New Bedford on Aug. 22. She met a heavy S.E. gale on the first night out, when off Cape Cod, being hove to all night, part of the time under single-reefed trysail.

HAMILTON Y. C.—Commodore Kilvert has been in New York recently and had a look aboard some of the yachts in harbor. He reports the Hamilton Y. C. in a very flourishing condition, a fine club house fully paid for, $700 in the treasury and popular interest increasing. The club burgee is a blue pennant with white triangle, base on the luff.

GLEAM.—The new owner of the steam yacht Gleam, lately sunk at Baltimore, is H. M. Flagler, of the Standard Oil Co., owner of the schooner Columbia. She will be repaired by Woodall & Co., of Baltimore, her name being changed.

LARCHMONT Y. C.—The special race for open boats that was set for Saturday last was postponed one week, as there was a very heavy blow all the afternoon.

LLOYD'S YACHT REGISTER.—We have received the supplement to this valuable work, containing additions and alterations to July 1 of this year.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

New Publications.

PRACTICAL CARP CULTURE.

"PRACTICAL CARP CULTURE," by L. B. Logan, may be safely accepted as the standard guide for the new industry of water farming.

In the infancy of any industry there is, as the author tells us, much misdirection of thought, effort and means. Tens of thousands of people have made ponds and received carp for planting from the U. S. Fish Commission within the past ten years, and very few of them have had any difficulty in raising the fish, although a great many have experienced considerable difficulty in bringing them to table. They have made no arrangements for draining their ponds, and although carp can be trapped or taken with an angle, special measures are necessary for taking them by these means. It is no less difficult to take them with a seine, but there should be little difficulty in imagining the state of mind of the fisheulturist who, having raised thousands of fine fish fit for the market, is unable to land one of them.

Carp culture, like any other industry, requires some special knowledge of the subject to insure the desired results; indeed, Mr. Logan's work suggests a great many subjects on which it is very desirable to have the experience of others before engaging in the enterprise; for clever, bright-witted men this is especially essential, for in their efforts to secure exceptional success they are by no means unlikely to adopt the measures best calculated to defeat their ends. The introduction of minnows and insect larvæ into carp ponds might readily suggest itself as a measure for providing a natural food supply, and so it is for the minnows, frogs, crustacean and numerous insect larvæ, which prey greedily on the carp fry. Still more remarkable is it because less known that although certain species of water plants are very favorable to the propagation of carp, firstly because they support a supply of insect food, and secondly because they favor propagation by becoming points of attachment to the spawn, there are other native water plants that swallow and assimilate the young fry greedily, and although these plants, within certain limits, may perform useful functions, even in a carp pond, by fertilizing it both for insect and vegetable life, it is obvious that it may be propagated to such as an extent as to exterminate all the fry as fast as they would be hatched.

On these and other kindred subjects the intending carp farmer should have full information before he engages in the industry; he should have the generalized results of the collective experience of those already engaged in the industry, and the conclusions of fish commissioners, scientists and others who have been engaged in investigation and experiment. In fact, before a man spends a hundred dollars on a carp pond, he should spend a dollar in securing the information necessary to render his investment a success.

Water farming, as supplementary to tilling the soil, may be made both pleasant and profitable, and even conducive to health, by varying the everlasting diet of salt pork with a ration of fresh fish, at once wholesome, nutritive and palatable. That an acre or two of water on a farm would be a great convenience and conducive to the pleasure of the farmer's family goes without saying, and the extent to which carp culture is prosecuted in Germany and Austria as an economic pursuit leaves no room to doubt that it may be pursued with profit in this country.

The carp is not a sportsman's fish. It does not rise to the fly, it is not predatory in any but a limited sense, and although it might be taken with a snaggot, its mouth is so delicate that the hook tears through as soon as the fish begins to struggle. The carp is, nevertheless, a very voracious feeder, and under favorable conditions grows with a rapidity unapproached by any of our game fishes, and this, conjoined with the fact that its flesh is very palatable, renders it preëminently suited for domestication.

It stands no chance with our native fish if exposed with them to the struggle for existence; it preys on none and is preyed on by all, and the only object to be gained by introducing them into our partially depleted lakes and rivers would be to secure a food supply for our game fish. In fact, the raising of carp fry for periodical introduction into trout streams is one worthy of careful consideration. Of course, the principal object in raising carp is to secure a good supply of food for the table, and the carp lends itself as readily to the arrangement as if it had undergone a process of special adaptation to it. It can subsist and thrive on so little water, that the fish is always taken to market alive in Germany, and in this country we read of pits being dug in the cellar and stocked with the winter's supply of carp, the water being led in through a small gas pipe.

The usual system of carp culture involves the construction of three separate ponds; one for hatching, one for raising stock, and one for the big fish; and to keep these apart and secure facilities for subjecting each class to its proper treatment, it is necessary to provide facilities for draining the ponds, which is generally done twice a year, before and after the breeding season, when the stock is selected for market, and admirably harmonizing with this necessity is the additional necessity of freeing the carp from the intrusion of minnows and other fish, frogs, etc., whose spawn is constantly being introduced into the pond.

With a suitable clayey or loamy bottom, or even a sandy bottom which will hold water, the floor of the ponds is being constantly enriched with humus and nitrogeneous matter, and many German farmers construct their carp ponds in duplicate, and after emptying them take a couple of crops off the bottom before restocking them with fish, thus making carp culture fit into a system of rotation of crops, taking the part of peas in a dry land rotation. The subject is one of great interest to farmers all over the country, a subject which may fairly be characterized as one of national importance. It is a subject which, within limited circles, is thoroughly well understood in all its details, and in L. B. Logan's "Practical Carp Culture" we have the results of the experience of carp culturists down to date. To the ordinary citizen who likes to keep himself posted on all the live questions of the day, this treatise is full of interest; to the carp culturist it is indispensable.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. H. F., Columbia, Pa.—For deer and bear in North Carolina go to Belvidere.

S. D. D., New York.—The Bay Shore *Journal*, Suffolk *Democrat*, Patchogue; Sag Harbor *Express*.

N. Y. C., Newark, N. J.—The lines of Pappoose can only be had of Mr. Burgess, who will not permit their publication.

F. L. R., New York.—Choose a 12g. gun. Deer are now in season in the Adirondacks. You cannot find good shooting near New York.

H.—For wild rice write to Mr. Chas. Gilchrist of Port Hope, Ont., whose advertisement is given elsewhere. Sow in shallow water in the autumn.

LEX.—1. The combined rifle and shotgun is made by L. C. Smith, Syracuse, N. Y. 2. Some of the laws in the compilation are up to date and some are not.

WILD CHARLEY.—The powder has been described at great length in this paper; you can find out much about it by repairing to the agents, whose names are given in our advertising columns.

R. C. L., New York.—When does the close season on deer begin in New York city or State? I expect to go on a deer hunt in North Carolina in November. Up to what date can I send my game here? Ans. The close season for possession of venison will close Dec. 15.

J. J., Malden, Mass.—Can you put me on the track of some parties who can shoot for me some owls and hawks this winter in Maine or any place else? Ans. As your State offers a bounty on these birds there ought to be no difficulty in securing all you want if you will pay for them more than the bounty. We cannot give you names of any one who would supply them.

H. F., New York.—How are salmon marked by the U. S. Fish Commission when captured and released? Ans: A thin platinum tag has a number stamped on it and it is attached to the hinder portion of the main dorsal fin by a platinum wire. The number is recorded together with date of capture, sex, length and weight. By this means the rate rate of growth is known.

M. S. N.—What is best way to stock a lake with black bass? It lies in the Adirondacks, rocky bottom and shore, in some parts is 175 feet deep. It is three miles long by nearly a mile wide, and three years ago 75 six-inch black bass were put in and one of 2lbs. was taken this year. Ans. If the waters are suitable for the fish, they have bred there, and there is not much use in further stocking. If, however, you wish to put in more it is best to put in large fish from the nearest water and to plant them either this fall or before next May.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

WILL SELL A FEW VERY CHOICE black cocker dog and bitch pups at greatly reduced prices; full pedigree and the best of blood. Address FLEETFOOT KENNELS, Delhi, Del. Co., N. Y. sept6,tf

DOGS FOR SALE.
Newfoundlands, St. Bernards, Mastiffs, Setters, Pointers, Fox, Bull, Skye, Scotch, and Black and Tan Terriers, Beagle and Fox Hounds, Dogs and Pups at low prices.
Write before purchasing.
F. Hope, 464 N. 9th, PHILAD'A., PA.

WANTED.—A PAIR OF SPANIELS, THOROughly broken to hunt woodcock and grouse. Pedigree no object; market value; no fancy price. Room 15, Morris Building, Pottsville, Pa. sep6,3t

SMOOTH-COATED ST. BERNARDS.

(The Typical St. Bernard.)

Young stock for sale, sired by champions Apollo, Hector, Victor Joseph and other noted prize winners. Address
LORENZO DANIELS,
P. O. Box 1,991, New York.

Dogs Trained

In the most satisfactory manner. Parties wishing to place their dogs in the hands of a trainer should correspond with E. F. CARVER, P. O. Box 173, Bridgewater, Mass. Also dogs boarded, $1 per week. Best of care guaranteed.

FOR SALE.—POINTERS AND SETTERS; field trained stock and puppies from imported and home strains. Prices always reasonable and stock as represented. GEORGE W. LOVELL, Middleboro, Mass.

FOXHOUNDS.

100 pups for sale, also 17 old dogs that are well trained, and will warrant them to please, from imported stock. Also breeder of game fowls. Send for circular. F. H. HAYES, Dexter, Me. aug2,3mo

CHAMPION (X) (3) CHAMPION STILLhunting coon dogs, (3) champion track barkers, (3) gray squirrel dogs, (1) rabbit dog. Lap-ear rabbits, ferrets; also English pugs, adult dogs and puppies. Game chickens, Jersey cattle, Poland China swine. All are earth's best.
H. C. GRAFF,
Kensington, Ohio.

FINE IRISH SETTER PUPPIES FOR SALE, from imported Sarsfield (Garry Owen—Currer Bell II.) and Nino (champion Elcho—champion Noreen). They will make bench and field winners. For further information address F. H. PERRY, Des Moines, Iowa. sep13 4t

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville Mass. sept22,tf

DO YOU WANT A DOG?
DOG BUYERS' GUIDE,
Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them. Mailed for 15 Cents.
ASSOCIATED FANCIERS,
237 S. Eighth St. Philadelphia, Pa.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 20, 1888.

VOL. XXXI.—No. 9. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opéra, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

AN INTERNATIONAL RIFLE MATCH.

SHALL we have another international match? This is the query which is put to us a dozen times each week, and the only answer is that there is no reason why such a contest should not take place other than the apathy of the marksmen. It is hardly likely that there will be another small-bore match with fine rifles, simply because there is no one to take hold of the match and push it through. Just now the supremacy in the form of shooting rests with the American shooters. They hold the Palma trophy, and it remains with our English cousins to come over and take it. There is very little long-range work going on in America, and a great deal of it in England, but the makers of the match rifle in Great Britain would profit little by the bringing home of this international emblem, and it is after all the manufacturers who create the sentiment in favor of a public match of this sort, who back the enterprise and who see it through to a finish. No doubt if a challenge came an American team could be put in the field very soon, and it would be a good team too. The Walnut Hill men could very soon step from their usual short-range work back to the longer ranges where already several have made creditable records. The next international match, however, should be a military one with military weapons, fought out between the Militia here and the Volunteers of Great Britain. The Volunteers have twice beaten us, once on our own ground and once abroad, and we have quietly taken the beatings, and have allowed season after season to slip by without making the least effort to reverse the record.

It would be a comparatively easy matter to arrange the conditions of a match which should bring these teams again together. It is absurd to say that we have not makes of special military rifles which would be the proper weapon in such a match, every whit equal to the fine arms used in their matches at Wimbledon. If we have not the arms then the sooner that fact is demonstrated the better. We have the men. New York State has now a good, efficient system of rifle practice for her troops, and Massachusetts as well. Other States come forward with a few marksmen, and many have none at all. Either of these two States could put an American team forward, which, so far as the men went, would be fully up to a British team. Having the men and the machines, all that remains is for some one with intelligent enthusiasm to take up the matter and push it through, to arouse the laggard pride of our marksmen, to let the public at large know that it has a duty to perform in properly supporting their representatives, and then we would find the Britishers more than ready to give us another brush.

To be sure, it is no easy matter to carry through such an enterprise. It is no small bit of work to get just the right men for the team, and then to get just the right work out of them; but it can be done, and some clever, energetic inspector of rifle practice on one of our State staffs is the man to head the scheme, to consummate it, and to get full credit for the victory which ought to be the outcome.

FRANKLIN SATTERTHWAITE.

IT is our melancholy task to record the death of an old friend and shooting companion. After an illness extending over six months, Franklin Satterthwaite died last Friday at his home in Newark, New Jersey, aged forty-six years. Mr. Satterthwaite was born in New York city. His father was John Blackwood Satterthwaite, and his mother was Ellen Duane, a great-granddaughter of Benjamin Franklin. James S. and John Fisher Satterthwaite, of Franklin township, N. J., were his cousins. Mr. Satterthwaite in his youth was employed by the Pacific Mail Steamship Company, and later in life devoted himself to literary work for the magazines and daily papers. His death resulted from a complication of diseases, ending in heart failure. Six or eight months ago he was prostrated with throat trouble, after which came neuralgia, rheumatism, lung trouble, and finally paralysis of the spine. Mr. Satterthwaite leaves a wife, the daughter of the late Jabez Pennington, and two children, a boy and a girl. The funeral took place last Monday.

Franklin Satterthwaite was essentially a sportsman, and one of the best type. As a boy he was familiar with the haunts of game on Long Island and in New Jersey, and under the guidance of older sportsmen like Colonel Depeyster and Robert B. Roosevelt, he tramped the stubbles and the woodcock covers, and laid the foundation of the ardent love for dog and gun that he always cherished.

Early in life, soon after his marriage, he had shot over much of England and Scotland, and in many of the countries of continental Europe, and after his return to this country he searched its length and breadth in his efforts to find the best shooting grounds. Probably no man in this country had given so much attention to this subject as he, and certainly no one had so accurate a knowledge of the best localities for small game east of the Missouri River. He kept himself constantly informed by means of correspondence with gunners in all sections of the country as to the movements of birds, and each season found him well equipped with information for his autumn outing. Mr. Satterthwaite was a remarkably fine shot, and this fact, combined with his knowledge of game resorts, made him singularly successful in all his excursions.

Although his favorite sport was with dog and gun, he was also successful in more athletic sports. He was an enthusiastic cricketer, and besides being a most skillful player, he had an historical and theoretical knowledge of the game which was very unusual. This knowledge was such that at various times he held the position of cricket editor on various periodicals in this city and in Philadelphia.

His great experience in the field, and with sporting dogs, especially qualified him for the position of kennel editor of FOREST AND STREAM, and for a number of years he filled this chair with credit to himself and to the paper. He had seen too much of good field work to be imposed upon by the tricks which might have deceived a man of less experience, and his honesty was too unswerving to permit him to wink at crooked work. It is not strange therefore that his unsparing and fearless denunciation of jockeying at field trials, while it won for him the respect and admiration of all honest men, gained for him also the hatred of the rogues among dog men. As a reporter he was fearless, acute, untiring, and he rarely made a mistake. As a judge of field trial work, or of bench show form, in sporting classes, he was competent and unswayed by any consideration save the merits of the animal on which he was to pass.

As a writer in the field of sport Mr. Satterthwaite made his mark. He had a rich fancy, good powers of description and a keen sense of the ludicrous, and his sketches were always entertaining. His contributions have appeared in many of the periodicals of the day, among which may be especially mentioned FOREST AND STREAM, *Harper's Magazine* and the London *Field*. But Mr. Satterthwaite was by nature a journalist rather than a literary man. He had a keen appreciation of what was news, and a rare faculty for getting at it, and putting it in attractive shape.

As a companion in the field Mr. Satterthwaite was a charming associate. He had a rich fund of anecdote, and his humorous stories were always full of point. During long years of association with him, it was our good fortune more than once to make extended shooting trips in his company, and these days spent with him on the snipe marsh, the quail stubble, or along the seashore are days always looked back to with pleasure—days never to be forgotten.

Franklin Satterthwaite, though still comparatively a young man, was yet old enough to have known intimately that older generation of sportsmen whom many of us can remember, but which is now rapidly passing away. He formed, as it were, a link between them and the younger generation, now in the full pride and strength of their manhood. Less than a year ago he was a picture of rugged health and strength. Now the strong arm that so unerringly poised the ready gun is nerveless, the quick, keen eye is dimmed forever. A genial sportsman, a warm-hearted friend has passed away. His untimely death will carry sorrow to many hearts.

THE ZOOLOGICAL GARDEN.

AS foreshadowed in our editorial remarks in our issue of September 6, the Zoölogical Park bill was defeated Sept. 12, in the House of Representatives. We indicated in the editorial referred to the probable ground on which this amendment to the Sundry Civil Service Bill would fail to pass, and the event has proved the accuracy of our prophecy. One political party was trying to make campaign capital out of the size of the appropriations passed by Congress, and the dominant party declined to furnish political ammunition for its opponents, and so for the year the project goes over. It is interesting and encouraging to observe that the debate in the House developed the fact that there is very little opposition to the establishment of this park, and that the bill was defeated by its friends rather than its enemies, and solely to gain a political point. The friends of the bill have no cause to be discouraged by its fate at this session, and there seems good reason to hope that when the measure comes up next year, as it certainly will, the result of the vote may be very different. Sooner or later the Zoölogical Park must be established.

THERE SHOULD BE no disagreement between farmers and sportsmen in Connecticut over the law which forbids the exportation of game. Whatever may be said for or against the law, it cannot truthfully be urged that it favors any one class at the expense of another. Its intent is not to abridge the rights and privileges of the farmers nor of the farmers' boys in order that "city sportsmen" may be given sport. The law is directed against the professional market hunters, who by wholesale snaring destroy the game with profit only to themselves. Neither farmer nor sportsman receives any benefit from the work of the market hunter; it is to the interest of both to discourage market hunting. The Legislature had this in view when it adopted the non-export law. In its application, as now enforced and as likely to be enforced, the statute does not interfere with the farmer's boy who wants to snare a few grouse. The farmer's boy traps today and will keep on trapping with impunity.

IN the official compilation of the New York game laws just published by the Commissioners of Fisheries, the galli mule persists in being defined as a protected game bird, as indeed it must persist in any official copy of the law. No one has any authority to change galli mule into gallinule until it shall be done by act of Legislature. Mistakes like this in a State game law are trivial in comparison with such a one as that in the River and Harbor Bill which appropriates for Back Cove in Portland Harbor, Me., not $25,000 as was intended but $25,000,000.

The Sportsman Tourist.

AN OWL HUNT.

BY A COUNTRY PARSON.

I NEVER had any experience in hunting owls, until the somewhat peculiar and quite enjoyable luck which befel me and several companions this last summer during a few weeks of recreation among the mountains of eastern Pennsylvania. There were four of us in the party—Sam, Joe, Rob and myself. It don't matter what our last names are. One name is enough for a man at any time in the woods, and especially on vacation. We had purposely taken our vacation early this year, in order to avail ourselves of the last days of the trouting season, which, according to Pennsylvania law, closes July 15, and alas! the 15th fell on a Sunday this year.

Of our luck at fishing I will not now speak, further than to say that one day as the season was drawing very uncomfortably near its close, we were all up on "The Still-waters," in the neighborhood of what our local fishermen call "The Duck Puddle," a wild, desolate-looking marsh, bordered by pine and oak-covered ridges. One afternoon I was sitting on the bank of the stream, all alone and half asleep, and all the fish more than half asleep, too, it seemed to me, the rest of the boys having gone up the creek to try their luck at "The Duck Puddle." After an absence of several hours they returned, reporting no other luck than that they had heard the hoot of a big owl.

"I tell you, boys," exclaimed Sam, "he was a big one. He made the woods ring."

"Yes," said I, "I heard him, but I thought it was you fellows calling."

"There's two of them," continued Sam, "and they were calling to each other. I tell you what, boys—when the jig is up with the fishing, let's come up here and hunt these owls. It'll be fun, I'd like to have one stuffed for my book case, like that great brown fellow under the glass case in the hotel parlor. Isn't he a beauty? I'd give a bran new five dollar bill for such an owl any day."

So, when the fishing season was over, and we had taken our split bamboos apart, and reeled up our lines and arranged our fly-books against the next season, we began to talk of hunting those owls up on the Still-waters. For certain reasons which will in due time become clear, Joe and I declined being of the party. We had another hunt in view, which like a wheel within a wheel, was simply to hunt for the owl hunters, and have a little fun at their expense—perhaps also at our own.

We thought if we could only somehow get the start of them, and get into the woods before they arrived on the ground, we might see some fun. But in the first place, it would be necessary to make some preparations. We would need a stuffed owl or two. But where to get them was a question we could not answer. It was not to be thought of that our worthy host would lend us his magnificent specimen under the glass case, just to be riddled with bird shot on a lark in the woods. In the absence, therefore, of any dummy or decoy of this kind, we could think of nothing better than to learn to imitate the hoot of an owl as near to the natural thing as possible. Fortunately I had in my trunk a copy of the *Century* for May containing an interesting article on "Bird Music—Partridges and Owls," wherein I remembered to have seen the hoot of the large brown owl reproduced by the assistance of musical notation. Now, though neither Joe nor myself is much of a musician, still we know enough about music to read the notes, and by careful practicing for several days out in the woods away from Sam and Rob, we both became proficient in the science of hooting. Whether this was due so much to the accuracy of the article in the *Century*, or, as seemed more likely to us, to our own remarkable powers of imitation, needs not here be discussed. Of myself I may modestly say that I am no slouch at mimicry, and Sam says I can bark a squirrel better than any other man he ever saw, and Sam is a good hand at squirrel shooting. At all events, we got it down fine on the owl hoot, so fine indeed that the very afternoon before the day set by Sam and Rob for the expedition up to "The Duck Puddle," Joe and I had an unexpectedly successful rehearsal in the woods about a mile from the house. We had stationed ourselves down in a dark rhododendron swamp, and were calling at intervals of several minutes, *Hoo-hoo-hoo! Hoo-hoo hoo!*

All of a sudden we became conscious of the soft fluttering of owl wings near us, as two brown owls settled on the lower limbs of a tree a rod or so away. To knock them over with a stick was easy work. An owl is a tender bird, and you don't have to hit him hard to kill him.

"What 'll we do with them?" asked Joe. "Give them to Sam and Rob and abandon the hunt?"

"Not a bit of it," said I. "We've had entirely too much trouble with this business and have gone quite too far to back out in that way. I tell you what we'll do. We'll skin our owls right off, stuff them with dry grass and take them with us to-morrow to keep on the fun. We can take good care of them and have them nicely stuffed after they have served our purpose. We shall have a heap of fun with them, or I am a little mistaken."

Sam and Rob were not to start for "The Duck Puddle" until after dinner. They arranged it so of their own accord, and to our convenience. They said that "owls come out more toward evening than earlier in the day." We thought so too.

Joe and I started for the scene of operations about the middle of the forenoon, excusing ourselves to our host on some plausible pretext or other. We secured a good lunch, took our rudely stuffed owls in hand nicely packed in parcels, and disappeared at a time when our two companions were not about the house.

We walked several miles, then got a lift on a wagon going our way, and about noon sat down under a broad hemlock to eat our lunch and perfect our plans.

We knew very nearly the part of the woods they would make for, because it was likely they would hunt for the owls where we had heard them hooting when we were fishing, and if they wandered away any distance, we could easily lure them back by hoo-hooing. We therefore determined to station ourselves about a fourth of a mile apart and try to bewilder the hunters by hooting them first to one point and then to another. Each was to take along his stuffed owl and to make such use of it as opportunity might offer.

After a long search we were so fortunate as to find two large hollow trees, a little further apart than we desired indeed, but otherwise very convenient for our purpose. The tree in which I stationed myself was the better of the two, as besides being large enough to allow me to enter it bodily, it afforded me a good place of concealment in the hollow part of a large limb which ran out from the trunk at a height of about nine or ten feet from the ground. Into this, being of slender build, I could easily scramble by placing my knees against the opposite sides of the trunk. I found also when up in my roost, which was a snug fit, that a knot hole afforded me a good breathing place and a comfortable point of observation. The hole had been enlarged by some bird or animal, so that I could easily put my head through if I wished. Besides, it would give me a fine opportunity to push out my stuffed bird so that it could be seen by the hunters.

It had taken me a good while to get all in readiness. As my perch in the hollow limb was rather cramped and uncomfortable, I spent some time in enlarging it by tearing off the decayed portions, and also made myself a kind of rude stairway by which to reach it easily and quickly.

I now thought that by this time my companion must be fixed in his station, and that we might soon begin operations. I was on the point to try how well I could imitate an owl in these dark and gloomy forests, when there came a long-drawn *Hoo-hoo-hoo!* mournfully resounding through the woods. For a moment I was sure it was a real owl, so natural was the sound, but on reflection concluded it must be Joe in his hollow tree. Putting my mouth to the hole in the limb I replied to my very best ability. Though I laughed at the thing, it really had an ominous sound.

After having made thorough trial of our hooting powers, we silently awaited the approach of our game—the owl hunters. I passed away an hour smoking my cigar and watching the dark and sombre forest through my window and door of observation. At length deeming that, as it was now somewhat past 3 o'clock, the party must be in the woods somewhere, I wakened the echoes with a long, solemn, and well-executed *Hoo-hoo-hoo!* repeating my call at brief intervals and then relapsing into a profoundly philosophical silence—just like an owl in a hollow tree always does.

I waited a long while and was about to try it over again, when I heard the snapping of twigs at a distance, and could plainly see Sam and Rob approaching, guns in hand. Quickly I gave two short calls, *Hoo-hoo!* which was the signal to Joe to call them over his way.

They had come almost up to my tree. I laughed till I shook at the alert but quizzical expression on their faces as they scanned the surrounding trees looking for the philosophical bird.

"He is here somewhere, Rob," said Sam. "It sounded about here."

"I think it was more to the left," was the half-whispered reply.

Hoo-hoo-hoo! rang out now, a full quarter of a mile in another direction.

"I told you we'd got too far to the right," said Rob; and away they dashed in Joe's direction. Joe kept hoo-hooing until he got them nearly up to him, and then he gave me the signal to call them off my way.

The fun was now beginning in earnest. Sam and Rob became excited over the chase. They would come tearing down toward me, then they would race up in Joe's direction, then down my way again, from pillar to post, and from Dan to Beersheba, until they were quite overheated and out of breath.

"Confound it," I heard one of them exclaim, "I never imagined an owl hunt such exciting work. When we are over here, then we hear him over there, and when we get over there, then he's over here. I believe there are two of them."

I now decided that it was about time to give them some small reward for all this racing up and down. So, after having for the fourth time hooted them down to my station, I pushed my stuffed owl out of the hole, and awaited events.

I had to wait some time. Our hunters were losing relish for the game. Sam was lying on the ground and Rob was sitting on a log, both looking around among the trees. All of a sudden Sam sprang to his feet and began, cat-like, to advance in my direction. I held my owl as steady as I could for laughing until he fired, and then I let her drop.

I heard them both running, Rob saying, "Well, you did get one, didn't you?"

"Yes," replied Sam, as he picked up the bird, "I did. But—blame it!—it appears to me there is something wrong with this bird. It's the queerest looking owl ever I see. It must have been hard up for something to eat. Just see! It's all full of grass!" And he began pulling the dried grass out of it.

Rob now began to laugh, saying he had never heard of a Nebuchadnezzar among the owls in all his life before; and he laughed so long and poked so much fun at Sam's bird, rolling on the ground and he-he-he-ing till he was as red in the face as a boiled lobster; so that Sam began to suspect that Rob had played a trick on him!

"Where on earth could a stuffed owl come from away out here in these woods, if you didn't do it, I'd like to know? Why, there ain't a living soul within five miles of this spot."

Bob protested his innocence, but Sam would listen to no denial. The more Rob denied it, the more Sam believed it. Things were getting quite serious when to my great relief (for I was nearly dying of laughter) I heard Joe hoo-hoo-ing again up in his corner of the woods.

"There he is again," said Rob. "Come on, let's go after him, Sam."

But Sam was a little sulky now, and said he'd "had enough of shooting owls stuffed with grass, and that if his companion had any more of that kind of game, why, he could just shoot it himself for all he cared, blamed if he couldn't."

Rob went his way, and after a while Sam followed, kicking the insides out of my bird as he went.

What happened while they were gone I must leave Joe to narrate, as I was not an eye witness to the amusing colloquy.

"I had no way of pushing my bird out through a hole in the tree as you had," said he, "and therefore I had to wait till they had gone over to you before I could plant my bird. Then I crawled out of my hiding place and set my bird up on the dead limb of a fallen tree, and made it look as natural as I could. When Sam and Rob came back from your quarter they were arguing, I didn't then know about what, when Bob spied my owl on the tree.

"Hist, Sam! there's another right there on that dead tree right ahead of you."

"Yes, a dead owl on a dead tree. Another of your blamed old grass-eatin' kind. You don't stuff that sort down me any more, I can tell you that."

Rob declared and declared that it was not any trick of his, that it was a genuine owl, he saw it move its head, insisted on Sam shooting it before it flew away, but all to no purpose. Sam was no go, and declared that unless Rob shot that bird as a proof of good faith, he'd never believe anthing else than that he had set up that job on him. So Rob fired at short range, knocking the feathers and grass out of the owl in such a way as somewhat restored Sam's good nature, now that the joke was about equally divided and honors were easy.

"The dogs take it! Let's go home!" said Rob, as he picked up his bird and tossed it away in disgust. "I believe these woods are bewitched. I could take an oath, Sam, and will any day, that I know nothing of how these confounded stuffed owls got here, any more than you do."

Just then two began again to *hoo-hoo-hoo!* The two were so long coming this time that I really began to believe they had left for home, and, as they told me afterward, they would not have paid any attention at all to my call had they not been obliged to pass near my station on their way out of the woods.

And now we had a little more fun. (I was sorry Joe wasn't with me to enjoy it). For just before the two owl hunters appeared on the scene, a large brown owl, attracted no doubt by my long and persistent hooting, came and settled on a limb of my tree not more than a foot from the hole out of which I was looking! He was so near me that I could have seized him with my hand, and I would have done so, had I not been more anxious to hear what Sam and Rob would say now that a real live owl was before them than I was to possess the bird itself. I heard them coming.

They were not long in spying the game. They both sat down on a log and looked at him. Neither said a word for a few minutes. Then Sam began:

"The woods are full of 'em."

"Yes, and how natural they do look!"

"Blamed grasshopper owls!"

"It's your turn to shoot, Sam."

"If you wait till I shoot that bird, you'll spend a good many nights in this neck o' woods, that's all."

"Well, I believe I've had enough of this kind of gunning, and I'm for going home. I don't know how these dummy owls got here, but that bird yonder can sit on the tree till doomsday before I'll shoot at him. Come on, let's be moving."

They were actually on the point of leaving when, thinking it a pity to lose so fine a bird, I reached out my hand and grabbed him firmly by both legs and pulled him in. I then scrambled down and out of my tree.

When I appeared on the scene, laughing and fighting with my owl as he attacked my hand savagely with his hooked beak, giving me several severe wounds, which I did not mind much amid the excitement of the occasion, Sam and Rob were a sight to behold. Such a variety of sentiments as were depicted on their countenance one does not often see. The sudden and energetic disappearance of a stuffed owl, its sudden reappearance in company with myself, flapping its wings and biting at my hand, together with all the strange experience of the last few hours, led them to feel that the woods were haunted, and that they had best get away as fast as their legs would carry them. The first surprise over, and when they saw that it was actually myself and not some hobgoblin, they saw through the whole mystery in a moment, but evidently were so chagrined at their mutual refusal to shoot so fine a bird as I held by the legs, and were so overcome by a variety of emotions that they could hardly speak.

As for myself, I laughed long and loud. As soon as I could control myself I hoo-hooed for Joe, and after he had come up and enjoyed a good laugh, we all started for home, as it was now full 7 o'clock in the evening.

Sam and Rob forgave us the trick we had played them, the more readily as I gave Sam the real live owl they had both refused to shoot. Sam is going to have him stuffed—but not by me he says, "nor with dried grass neither"—and will put him up on his bookcase in his library. When I go round to Sam's house to make a call on him, as I do once in a while of a winter evening, I shall never see that bird without a smile so broad that I shall wish my countenance were broad enough to take it all in.

A MIDNIGHT SCENE.

[From "Two Hundred Miles in a Birch."]

AFTER supper, feeling quite tired, I wrapped myself in my blanket, preparatory to going to sleep. I lay for some time but was unable to close my eyes. At length I arose, and pulling aside the curtain of the tent, looked out. It was midnight. The moon had just risen, peering over yonder mountain top, and its light, reflected on the waters of the lake, lit up the forest around as if a thousand torches were blazing within it.

All was still, save the occasional hoot of an owl and the cry of a loon, which broke in upon the stillness of the night like an intruder. In the distant mountain glade could be heard the moose calling for his mate, in the swamp the cry of the whippoorwill. The camp-fire had nearly gone out, and only a few embers were still smoking. It was then that nature seemed most grand and beautiful.

Giving up all idea of again seeking sleep, I woke one of the guides and bade him paddle me out upon the lake. Never shall I forget that night if I live to be a hundred years old. Words cannot describe it. It was grand, and that seems but a tame word to apply to it. I sat in the bow of the canoe gazing in wonder and admiration on the scene before me. The light birch glided silently over the water, the paddle being wielded by the skillful hands of the Indian.

Not a word had been spoken by either of us since we left the shore, each being occupied with his own thoughts. Indeed there seemed to be a solemnity about the scene that made one abstain from speaking lest all should vanish like a dream.

Looking toward the further shore, I beheld a picture, the equal of which I have never seen in art gallery or studio. There, directly in the rays of the moon, stood a

deer, drinking from the lake, his slender figure standing out plainly from the dark forest behind. I tried to raise my rifle, but could not lift it; it seemed as if it had become an immense weight that could not be moved. Thus I gazed upon the picture before me, hardly knowing whether I was awake or in a dream.

The flight of time was unheeded. Suddenly the spell was broken by the cry of a loon. One by one the stars had disappeared from the sky. The east was already aglow with gold and purple clouds. The moon had sunk in the west, just as the sun made his appearance, announcing the approach of another day. Silently we paddled back to camp.

As I sat down to breakfast, I could hardly believe that I had not wakened from a dream. A mist seemed before my eyes, beyond which was the picture of that beautiful night. W. H. C.

BANGOR, Me.

A VISIT TO THE PARK.

IT was my fortune, during the month of August, to have been traveling and sojourning in the Territories and States lying west of the Continental Divide. I saw many places where sage hens, willow grouse, curlew, ducks and sandhill cranes were abundant; and on my trip from Beaver Cañon, Idaho, to the National Park, a distance of a hundred miles, I had the opportunity to show my skill—and the want of it—on several of these birds, especially the sage hens. At this season the younger ones are very palatable, and when possible I shot at no other. They made quite an agreeable addition to the table at the places where we stopped. These wayside inns afforded shelter and food enough to prevent starvation, but were far below what a dollar a meal and a dollar for lodging should have afforded. At Snake River, a beautiful stream, there is most excellent fishing for salmon trout, and I am sorry to say that spearmen are more abundant than anglers. Thousands are killed at night, for the market, and I fear that the host himself is setting a very bad example. I did not like the fish—but attributed my dislike rather to the grease used in cooking than to the quality of the trout.

Our party saw the wonders of the Park—for a large part of it is "fearfully and wonderfully made." The atmosphere is charged with the fumes of sulphur, thrown out by boiling springs of water and mud, and through small holes, from which nothing comes but vapor. I should think that somewhere below there is a veritable lake, hot enough to satisfy any devil who desires a physical hell. I am glad that the Government has dedicated this tract of land to a park. It is fit for little else. If it shall be so unwise as to allow railroads to be built in it, then the tax on the visitors will be far more than now, while the monopolies would become the owners of the dominant estate. As it is the Northern Pacific Railroad Company, which have a branch road to Cinnabar, nine miles from the Mammoth Springs, have almost practical control of the Park, by owning all the hotels in it and charging fabulous prices for the accommodations which they furnish. Besides this, they give all advantages to those who visit the Park by that route. When our party reached the hotel and offered to register, we were asked if we did not come from Beaver Cañon. Upon our affirmative answer, we were told that we could not get rooms and had better apply to the Cottage Hotel, a smaller house, about 200yds. off. We had sent a telephone communication that we were coming. After we left and were quartered at the Cottage Hotel, many persons arrived and found accommodations at the railroad hostelry. Some one who seemed to speak advisedly said in the presence of our party that the hotel "felt bound to take care of their own people." Such conduct is simply outrageous, and those who have legal charge of the Park should see to it that the injustice be stopped. Some of these gentlemen ought to have been able to see how this thing is managed. It is certain that if I ever visit the Park again I shall be prepared to camp and thus be independent of the exactions of a close and remorseless corporation. We had better quarters and better treatment at the Cottage Hotel than we probably would have had at the Northern Pacific establishment.

I saw several antelope on the plain between Snake River and Beaver Cañon, and quite a band of Shoshone Indians, of nearly all grades, on their way to get meat. Some of the "bucks" were then in the mountains. One old fellow had strapped behind him a fawn antelope. They were a hard looking set, but not so much so as some Piutes whom—or which—I saw in that very populous State called Nevada. The women did not use side saddles, but bestrode their horses just like the ungentler sex.

What a great upheaval of molten rock the whole of Idaho once witnessed. The whole land is underlaid with lava. It looks to me that after Nature's huge furnaces had covered the country with a fluid mass and had become exhausted then they either sunk or that the higher mountains were upheaved. But I leave all that to scientists, or those whose business it is to guess, as to the means which the Almighty used to produce His wonders.

I heard that far in the recesses of the mountains, where the timber is dense, there are deer and elk. The labors and deprivations necessary to the successful pursuit of these animals are far greater than I am willing or even able to undergo. It would be no sport to me. If I had a few select companions, and some good dogs, as well as a gentle horse, I could enjoy hunting sage hens and other variety of grouse, and diversifying the pastime by indulging in the "gentle art" which old Izaak Walton has canonized in his "Complete Angler."

Railroad travel during the summer in that dry land has no comforts in it. At least it has none to me. I prefer "a boundless contiguity of shade" to a "boundless contiguity" of sunshine. I like the green grass, *sub tegmine fagi*, where I see and hear the sparkling waters as they glitter in the straggling sunbeams.

Natural History.

THE "FANTAIL" DEER.

Editor Forest and Stream:

In my FOREST AND STREAM for Aug. 6 I see a letter from "Gazelle," asking: "Who knows the fantail deer?" As I have had some experience with this deer, I will tell your readers what I know.

The first I saw of them was in southern Oregon. They were there known as the "flagtail." In northern California they were generally called "chemeche," from the Indian, and were very rare in that part. The next place I came upon the "fantail" was in Wyoming Territory, in the Laramie plains and hill country. Here he was masquerading under the title of "towhead." This deer is considered by all hunters who are acquainted with it to be a distinct species, and is never confounded with the whitetail, which is much larger. The true "fantail" will seldom dress over 50 or 60lbs. The tail is very long and wide. I think I have seen some which would measure 12in. if not 14in. in width. The horns of a full-grown buck are very small, a 6-point not being much larger than the two hands laid together at the wrist with the fingers turned in. Many of them have a mass of long towlike hair on the forehead, which gave them the name in Wyoming. They are the most cunning of all deer, and the hunter who gets a "towhead" must get up very early early in the morning, as the saying is.

I will relate a little incident of a "fantail's" cunning which I happened to be an eye witness of. I was on a hunt in the Little Wolf Mountains, in the northeastern part of Wyoming, in the spring of 1882. The country slopes down to Tongue River, and was a paradise for game at that time, with amper valleys, long, amper, parklike ridges, pine groves, and thickets of wild kern and plum brush, with grass everywhere, rich, sweet, green grass, which made one think of a field of growing wheat. The Little Wolfs were a choice range for wild game. In the spring, elk, mountain sheep, buffalo and antelope could all be found in this range of hills.

One morning early my two chums and myself saddled up our ponies and rode up the little gulch until we came out upon the main ridge. Here we separated, and each took a point or side ridge. It was a beautiful morning, just cool enough to be pleasant. I might have been riding a couple of hours when the sharp crack of a rifle away off to my right awakened me from my dream and brought my pony to a halt. We could see across the valley to the ridge top a mile away. I knew the shot came from beyond it. Thinking game might come my way I dismounted, turning my pony loose, knowing he would not leave me. Then I took a seat on a fallen log to watch the valley below me. I had not long to wait. A small deer bounced up on the ridge and came sailing across the valley almost directly to me. I saw it was a "towhead," and he was making direct for a little knoll or mot of timber, which lay some 300yds. below me. He was but a short time in reaching it, when, springing up the side, he dropped his flag and sneaked into a little patch of kern bush, and lay down so quickly that I thought he was shot. Just then came another shot from over the valley, when up sprang my deer like a jack-in-the-box. Running to the edge of the little hill he gazed long and earnestly over the valley. Apparently satisfied that the shot was not for him, back he came and dropped like a shot in the kern brush. Now was my time. I started to crawl down the kill, keeping a big pine between me and his deership. I had got nearly to the bottom and was congratulating myself on how I had fooled him, when on looking up what was my disgust to see him standing on my edge of the hill gazing down upon me with what seemed like a grin on his frowsy little head, a sort of a no-you-don't-my-friend look. What was I to do? My head was down hill; I had to sit up to shoot; but at the first glint of the sunlight on my rifle barrel he was off, putting the hill between me and him. When next I saw him he was a full half mile away, flag up and scratching the gravel in fine style for a brushy little creek about a mile off.

Why this little deer should be becoming rare I don't know, as regular hunters seldom trouble them. I have seen but few of them killed. The venison of this deer is very fine, much more so than the blacktail or white.

NEVADA. J. J. FULTON.

Editor Forest and Stream:

The statements of "Gazelle" in regard to the "fantail" deer, together with the editor's request for specimens, prompt me to contribute my mite to the sum of general information. I will confess at the start that I am skeptical in regard to the existence of the "fantail."

"Gazelle" does not appear to have made any measurements or to have saved any specimens. Until a specimen is produced it seems to me that the subject can safely be dismissed with the Scotch verdict, "not proven."

Since coming to this Territory I have heard many statements made by local hunters in regard to the "fantail" or "flagtail" deer, said to be found in these mountains, and some years since I began collecting specimens of deer tails to satisfy myself how much they really did vary from the true type. The result surprised me and taught me that the tails of the *Cervus virginianus* vary much more in appearance than all the rest of the parts of the animal.

Antlers also take funtastic shapes. One deer's head I remember to have found on the mountain side while hunting, which, though badly torn by wolves, still held the antlers. The deer had evidently been killed at the latter end of the velvet period of horn growth, and the antlers were two slender tines without prong or spur, more than a foot in length, curving beautifully, with the points less than 2in. apart. Palmated horns are occasionally found here: and in fact antlers seem to be more irregular here than in the prairie States.

Inclosed I send to the editor of FOREST AND STREAM five deer tails, four of which were selected from among the 106 deer killed by me with the rifle since coming to this Territory. I mention the number killed, that the reader may know that I have had at least fair opportunities for observation. The fifth is from a deer killed by my son. Four where whitetails, one a mule deer, and all were killed "in the red." No. 1 is that of a buck of medium size, apparently about four years old, killed June 25. This is a perfect specimen of the tail of the white-tailed deer, the hair of which shows but two colors, red (in early summer) on top of the tail when it is held horizontally, and white beneath, with the last inch of the tip white.

No. 2 is that of a buck killed June 10, which in size, build and shape of antlers might have been the twin brother of the first, yet the tails are utterly unlike. The red in No. 2 extends less than half the length of the tail, while all the rest is white above and below. Again, while both were killed in the red (which fact proved that the hair was of new growth) and both were killed the same month and year, the hair on No. 2, killed 15 days earlier than No. 1, is fully twice as long.

No. 3 was killed by my son May 15, and is remarkable from the fact that the red is tipped by two or three inches of dark brown—almost black.

No. 4, killed June 21, shows four colors. White beneath, while on the top nearest the body appear two inches of red hair, next six inches of buff color, then two inches of brown, tipped finally with two inches of white.

No 5 is the tail of a mule deer buck killed June 25, and which weighed as much as one and a half of the others.

But what, asks the reader, has all this to do with the subject? These were not "fantail" deer nor claimed to be. True enough. All that is intended here is the probability that No. 2 is as near a "fantail" as will be produced for some time to come, and that the finding of an odd specimen like it first gave birth to the notion of a new deer.

"Gazelle" says that in February, 1879, Henry Fancher killed five "fantails," three of which were bucks with horns, at the foot of Crazy Mountains. In all my hunting in this Territory I have never seen but one whitetail deer carrying horns in February, and our winter climate is said to be much milder than that of the mountain country east of us. Still, if the true "fantail" exists, he may be a hardier animal, and may carry antlers later than the whitetail. If a deer can be shown with a tail eight inches wide I would very much like to see it, but the burden of proof is upon "Gazelle" and his friends. Gentlemen, please show us a specimen. ORIN BELKNAP.

WASHINGTON TERRITORY.

INDIAN ANTIDOTES FOR SNAKE BITE.

Editor Forest and Stream:

In your number of August 19, Horace Caruthers, M.D., asks for an antidote to snake bite. I refer him to the plant *Lycopus virginicus*, or bugle weed. It resembles somewhat *Lycopus sinuatus*, or water hoarhound. Both belong to and resemble the mint tribe, but are wanting in fragrance. A description of *Lycopus virginicus*, or bugle weed, may be interesting and useful.

Smooth; stem obtusely four-angled with concave sides, sending out runners from the base; leaves ovate-lanceolate (egg-shaped and long like leaf of peach) or oblong, coarsely toothed, tapering and entire toward the base, on short leaf stalks: flowers small, purplish white, in few flowered axillary whorls; calyx-teeth (cup or leaves that hold the flower) four, ovate-obtuse. Stem ten to fifteen inches high. Found in low ground in July and August.

The Cherokee Indians chew large quantities of bugle weed and swallow the juice to counteract the poison of snake bite, and also that of the bite of the tarantula. For further information see Dr. Briggs' paper before the Texas State Medical Society, on information from Dr. W. H. Cooke, Bonham, Texas.

Another item I gathered from a lieutenant it the regular army several years ago. Briefly, the Indians, when engaged in the severe and very exhausting dance called the snake dance, handle without fear the most venomous snakes. They are bitten many times during the dance. Immediately they swallow something to produce vomiting, all the while keeping in constant motion in order to sweat freely. The result, no Indian dies of snake bite.

DAYTON, O. SAM J. HENDERSON.

Editor Forest and Stream:

I add my quota of knowledge picked up in this section of the country, where more or less venomous snakes, and especially rattlers, abound.

The most common method employed in the case of snake bite is to administer a potion of snake weed and milk—the former boiled in sweet milk—in large quantities. I am not aware of the scientific name of this weed, though as "snake weed" it is well known by the natives.

From two pretty well authenticated cases, I am led to believe that there may be some virtue attached to the following so-called antidote. Several years ago a boy, living not far from here, was bitten by a rattlesnake, and it was some time before he obtained help, by which time he was suffering agonies, and the bitten part was greatly swollen and discolored. He was given a strong mixture of alum dissolved in boiling milk, and the bitten part was washed several times with the mixture. In a comparatively short time he had so far recovered as to be entirely out of danger, and in a day or so was as well as ever.

The other instance was the case of a dog bitten by a rattler. A number of remedies had been tried without apparent effect, when the alum and milk treatment was resorted to, and although the dog was seemingly past help, it was but a short time before he showed signs of recovery, and soon was all right again.

I am aware that there are a vast number of so-called antidotes for snake bite, and have given these for what they are worth. I do not think the above instances can be accepted as sufficient proof of the efficacy of the apparent remedy. WM. F. MORRIS.

ARKANSAS.

WILD BIRDS' EGGS.—A novel point arose at the Newcastle (England) County Court recently, when the lessee of the Farne Islands sued a Sunderland fisherman for taking a seagull's eggs from a nest on his land. The only question in dispute was whether there could be any property in a wild bird's egg. The magistrate ruled that a man had a possessory right to any wild bird which was on or over his land, and the same applied to the eggs. Judgment for the plaintiff for £1 and costs.

HABITS OF THE COON.—Central Lake, Mich., Sept. 7. —"A Subscriber," in your paper of Aug. 30, expresses a doubt as to the alleged habit attributed to the coon, of washing his food before eating it. I had thought this peculiarity of the creature to be pretty well established. To be sure, I have never myself observed it, but then a man can't see everything for himself, and must consequently take somewhat on trust. I have little doubt that among your readers are many whose fortune in this regard has been better than mine.—KELPIE.

THE SPORTSMAN-NATURALIST.

AUTUMN is here. Not with brush and palette to touch forest and field; nor yet in the snow flurries and bitter, whistling winds with which he announces himself in the mountains of the far West. There is naught here but the mellow year. The sky assumes a neutral gray; stubble fields change from bright yellow to dull brown, corn sections from vivid green to lifeless saffron, and the giant sunflower by the wayside or the blazing star of the prairie alone dare disregard the soothing spell, and flaunt themselves with the bravado of life in death.

Out of the osiers and bracken, off from the carex-covered islands of the tawny Platte, away from the now bare bottom lands come the prairie chickens to seek a home and food amid the oat, wheat and corn lands of the upper country. Back from the icy regions of the north, from the great bend of the Missouri, from the frosty fens of the Dominion comes the anserine chorus, and already woodduck, butterball and green-winged teal are taking possession of the river country now vacated by the grouse. Gray snipe, too, are to be found in the lowlands, and the plover's name adorns the menu of every well-regulated hotel. Chickens are unusually abundant this year. I wonder how they survive! For the past month they have been served daily on the hotel table, and daily large parties have left town in every way properly equipped for a war of extermination. Just as regularly do they return with well-laden hampers, proudly exhibiting their murdered victims to an approving community.

No one regards the game laws, which apparently are made but to be broken. Pot-hunters! We look in vain for the sportsman-naturalist of the East, for the courteous, though roughly clad hunter of the mountains. Here every man is a little Ishmael, and the proverbial jolly fellowship is unknown. These things ought not so to be. On these plains the ardent sportsman should also be a refined gentleman and a studious naturalist. Flora and fauna are constantly changing. Genera, species, types indigenous, pass away with the buffalo grass to be succeeded by the accompaniments of advancing civilization.

To-day we travel fifty miles to the north to find a deer, two hundred miles to the west to find an antelope. Who is to keep pace with these changes? Who is the natural protector of the game that is left; who the most reliable authority upon the vast herds that are traveling toward the happy hunting grounds? Not the professor of zoölogy in his study, nor yet the butcher who brings prairie chickens to market in July, but the man who finds a greater pleasure in the study of animal life than in its destruction; the man who stops when he has satisfied his first sportsmanlike ecstacy, whose word is to be relied upon under all circumstances, who looks for a cause for each effect, the man we need west of the Missouri River—the sportsman naturalist. SHOSHONE.

KEARNEY, Neb., Sept. 8.

SNAKES SWALLOWING YOUNG.

Editor Forest and Stream:

In the name of the Prophet, snakes! In FOREST AND STREAM of Sept. 6 an article appears, in which the writer contends strenuously against "that foolish old notion of snakes swallowing their young for protection * * * which they never do." He says: "Some species of snakes lay eggs, and many people suppose they all do, whereas with some the young are matured in the mother's body; and when persons not informed in this regard have captured a snake, and found its body to contain young ones, the presumption with them was that the mother had swallowed them for protection." The writer says he has been a surveyor for nearly half a century, has surveyed in every county in the State, and thinks he has had rare opportunities for making snakes a study. He gives Miss Wolcott's "true story," and believes it, so far as the young snakes were seen to leave the mother's body in a very lively condition. As to the boys seeing the young snakes running down the mother's throat, "that is only heresay, but their presence evidently led them to believe that they had done so."

Yes, it was hearsay to Miss Wolcott, and her story is only "hearsay" to Mr. Starkweather. What could there be about the simple fact of finding young snakes inside the mother to make the boys believe they had seen the young enter her mouth? Had they opened a mother rabbit and found young inside of her, would they run away with the hallucination that they had seen young rabbits enter her mouth? If Mr. S. is ever fortunate enough to find another female serpent with its young inside of it, let him carefully dissect it from mouth to stomach, and he will see the young escape—if they escape at all—by way of the mouth, and those who do not attempt it will be found in the stomach, just where a recently swallowed mouse or frog would be found. Are the organs of gestation then situated in the stomach? And do the unborn young of viviparous reptiles always—or ever—emerge by way of the mouth?

This by way of argument, as though I were pleading a doubtful case, which I am not, for with me there is no doubt about it.

I have, on at least four occasions, stood by and witnessed a family of young snakes disappear down the throat of the mother. She did not swallow them; she just lay straight with open mouth and allowed the youngsters to go down her gullet with wonderful rapidity.

On such occasions the mother snake evinces the fearlessness and tenacity of most wild things when trying to save their young. She will remain quiet at the risk of her life until the last little wriggler has been taken in, and then do her best to escape. And it always seems to be the case that at such times she happens to be mighty handy to a good hiding place, such as a ledge of rocks, a hole among old roots, or if a watersnake, where she can flop into the water in an instant. Premising that I was taught from my earliest recollection to regard serpents as not only harmless and useful, but beautiful as well (all save the rattler), I will briefly narrate the incidents above alluded to.

In the first case I was called by a sensible mother, who admired rather than feared serpents, "to come and see the little snakes hide." I hurried to the spot, and this is what I saw. A large gartersnake stretched to its full length, and a lot of tiny snakes rapidly disappearing down her throat. My mother meantime had untied her apron, and, as the last little snake disappeared, she quickly grabbed the old snake and enveloped it in the apron. It was taken to the house and placed in an old lumber chest, where it was found the next day with twenty odd little ones around it, and again they took refuge in the mother's stomach. As our curiosity was satisfied, the old snake was turned out in the garden to catch bugs. Take note, that the gartersnake is oviparous.

Although snakes were very numerous in the region where my boyhood was spent, and though most of my leisure time was passed in outing by flood and field, it was long before I saw a second incident of the kind, and this time the actors were watersnakes, supposed to be viviparous. (I say, supposed, for I am by no means certain of it.) The mother snake was about the largest I ever saw, and I came upon her suddenly as I was fishing down a trout stream, very cautiously, of course. It was evidently a surprise, but she straightened herself, gave a short, low hiss, and lay still with open mouth. In much less time than it takes to tell it, a lot of little snakelings were rushing into her mouth and disappearing with marvelous quickness. At that time I was accustomed to handling serpents—even rattlers, without fear, and, with some vague idea that she would be a prize, I made a dash to capture her alive. It was rather a failure. Instead of attempting to dart overboard as I expected, she faced me savagely, and, as I grabbed her with one hand around the body, she whisked her tail about my arm, turned, and gave me a vicious bite on the back of the hand. Although I knew the bite was perfectly harmless, it somehow looked so wicked and dangerous that I lost my grip and allowed her to escape. It may be worthy of mention that the slight wound did not swell or become inflamed, and healed quickly.

The years passed, and I had grown to manhood with a decided penchant for reptology, before meeting with the third incident of this nature. It happened in a tamarack swamp, some fourteen miles south of Brockport, N. Y., and the snake was a massasauga, the only one, by the way, I ever saw in that State. It was discovered by a hunting chum, who called me to the spot in time to see four or five of the young disappear in the snake's mouth, as with the others. We tied a string about the neck of the old snake, slung her at the end of a ramrod, and carried her to the little hamlet known at that time as "Muttonville," where I dissected her in the presence of a dozen loungers, who all evinced dense ignorance in matters pertaining to natural history. To them such trifles were beneath the notice of an able-bodied man. We found seventeen young serpents in the stomach of the mother, and they were dead, owing probably to the string tied tightly around her neck.

Although my summers were mainly spent in the open air, it was more than a decade before I met with another incident of the kind, and this time it was in Michigan, at the foot of a little lake in Lenawee county. Again the snake was a massasauga, and, as before, I saw the young entering her mouth. Thinking to settle a vexed question, I tried to catch her alive, and got snake bitten for my pains; an account of which, with the remedies that proved effectual, was published in FOREST AND STREAM some years ago, and those who choose may read.

This happened more than thirty years ago, and since then I have only seen one serpent with young inside of it. This was a large rattler killed by "Uncle Bill" Dimick on the waters of Pine Creek, and though I did not see the young running down the throat of the mother Uncle Bill did, and he was not likely to be excited or mistaken about it, having lived in a rattlesnake region all his life, and being accustomed to killing a dozen or more every "hayin' time."

The snake was turned over to me before she had done squirming, and I opened her on the spot, finding over twenty young in her, but just how many I can't say, as they were very lively and some got away in the stubble. It was wonderful to see how naturally and viciously the little imps took to coiling and darting at anything that moved near them, and it is worth noting that they were found in the stomach with a newly swallowed trout, on which the red spots were still bright.

It ought not to be difficult to procure a gartersnake, or watersnake with young inside of it, and with such a specimen in his hands any competent anatomist can quickly decide how and by what means they got there.

NESSMUK.

Editor Forest and Stream:

Mr. Starkweather contributes a very interesting article on serpents. While I agree with him that the general public is disposed to treat "snakes" in a needlessly cruel manner, I take issue with him on some other matters.

In the first place Mr. Starkweather is one of that far too common a class who are ever ready to say this or that cannot be the other because I never saw it. No matter how many witnesses might be produced to testify to the facts, such a one boldly says, "I do not necessarily believe they lie, but simply say they are mistaken." And after all can only give as his reason, his own experience, or lack of experience, or refer to its "impossibility," reasoning from his views of the natural laws of the universe. Unfortunately for others the so oft quoted "natural laws" are so little understood that a mere reference to them acts quite as effectually as a sandbag or bludgeon.

Mr. Starkweather objects to the needless cruelty, or cruelty of any kind to serpents, yet he takes up an article from the pen of a young woman who has attempted to aid science, in her innocence, not imagining that some wiseacre would fly in her face with flouts and jeers as to the possibility of what she thinks she has seen—he takes this little article up, jibes at it as a "true story," tells the young lady she was mistaken as to its having been a copperhead that she saw, as he never saw any in that county; and when she speaks of having seen the little snakes running out of the big snake's mouth, assures her that such a thing was impossible, for there were no rooms to rent for lodging in that quarter, and says she probably mistook the first floor rear for the second story front; and finally when the young lady speaks of having counted twenty-five of the little ones running "hissing" around, he claims that only big snakes hiss, and that very seldom, and would apparently infer that the little ones keep still. Everybody knows that an infant of *genus homo* makes more noise than an adult, why not the same way with "snakes!" The young lady writes it clearly and distinctly, that she saw little snakes running out of the big snake's mouth; but does not, as Mr. S. would lead us to infer, state that she saw them run in; Mr. Starkweather's fight is not with the fellow who saw them run out, but with the fact of their getting in. As to the "hissing" I see nothing to indicate its being so loud as to have been heard in the next county, but should judge from the context that this referred to the actions of the little "sarpints" as it was seen, not heard. Taken all in all it's quite curious that so tender-hearted a person as this Mr. Starkweather pretends to be, should have handled a young lady so uncannily, and all because she saw something which he with his experience of "a thousand snakes" has failed to see.

If every one meets with a like reception when they have a little story to tell about some fact bearing upon the habits of nature's children, I am afraid few would venture to make public their experience. Let Mr. Starkweather tell his true stories, drawn from his own experience, we will all believe him, even giving him the benefit of the doubt when he talks about thousands of snakes; but let him handle the little tales of others as gently as he desires us to handle the tails of his ophidian friends, and let him take good advice and refrain in the future from trying to make his "'tain't so, for I didn't see it;" as weighty as the eye witnesses "it is so, for I saw it." If he will promise to do this, it's quite possible some one can give him some facts, which although not conclusively proving that "big snakes let the little snakes run down their throats," may throw a little light upon the matter, and finally after one after the other has had his say, science and observation may make up their minds as to the truth. A SUBSCRIBER.

PHILADELPHIA, Pa.

Game Bag and Gun.

THE WOODCHUCK CREEK COUNTRY.

IV.—SKINNER AND THE BEAR.

"HAVING told you how I got the big buck, to-day, and apropos to the talk about deer stalking generally, I must tell you that, as another has often said, and a mighty hunter, too, he was, 'I consider my life in constant danger every time I go hunting with a companion, be he never so careful and circumspect; if he does not meet some narrow escapes himself, or put others' lives or limbs in jeopardy he will be very fortunate.'

"Some eight or nine years ago four of us were camping for a fortnight, and on the day when the incident I relate occurred, we had all gone out early, and had hunted until past noon without success. On our trip homeward, we agreed to separate, two and two as we have done to-day, spread out widely, and surround an immense marsh, whose brushy borders were wont to be a favorite resort for the game we were in search of, and we accordingly departed on our respective routes. I had nearly reached the lower end of the marsh, which by the way was entirely open, when my companion, who was slightly in advance, beckoned to me, and on my coming up, told me that he had seen a large deer slowly feeding along a strip of alders which reached to a tongue of high ground running out into the marsh, and that if I would wait for a few minutes, he would go around to the further end, and thus one of us would be sure to get a shot. A moment after my companion had left me, our separated friends, one of whom was accompanied by his dog, crossed a narrow lagoon in the marsh about a mile distant, giving no indication of having seen me; soon after I approached the place where the deer had been seen by my friend, and as nothing had occurred to disturb it, I counted confidently on getting a good shot. A low, brushy point covered me until I was within 150yds. of the mound, which was covered with scrub oaks of a very dense growth, with here and there open spots, where an animal in motion would have to show itself in ascending the ridge. I had approached very slowly and cautiously and waited for some minutes for sound or motion, but in vain, and had about concluded that the deer had either escaped or laid down, when a slight rustling on top of the hill attracted my attention, and the next moment I saw faintly through the foliage the unmistakable whisk af a deer's tail; again, a little further on, it was repeated, the same quivering shake of the flag, so familiar to every deer stalker, and catching a quick sight where I supposed the body was, I fired. My shot was answered by a yell of agony that told too truly its own story, and upon hurrying to the spot I found the dog of my friend lying dead at the feet of his master. His hand at the moment the fatal shot was fired had rested upon the animal's head, whose joyful response to the caress of his master had been the cause of his death. It was the wag of the dog's tail, and not the deer's, that I saw. I was thunderstruck, not at the death of the dog, but at the thought of the consequences had my aim been ten inches further to the left!

"At another time I was out on the first snow of the season, and as the brush was quite thick I had taken my shotgun. I was standing in a straight path in a poplar thicket, along which I could see some sixty yards, when a large doe crossed the further end, but so quickly that I had not time to fire; a moment after a fawn crossed, and of course I let it go. As it was early in the season, I concluded that another fawn would be along presently, and if so, thought I would try to wound it and capture it alive, if possible. To be quite ready and to strike it where I wished, I brought my gun to shoulder, ready to fire at the proper moment. Sure enough, a slight rustling of the brush, the path darkened, my finger pressed the trigger to the verge of its resisting power—and a man stepped into the path, hurrying along on the track of the flying deer, unconscious of the danger which we had both escaped, and but for a caution which with me has become instinctive, it horrifies me to think of what the result would have been. The deer stalker, in my opinion, should never, under any circumstances, fire until he is able to clearly distinguish his game. But for this invariable rule of mine, I am certain that more than one painful, if not fatal, accident would have happened, and if Sisyphus there knew how narrowly he escaped to-day he would have a nervous chill this minute."

"A miss is as good as a mile, General, and if you'll only keep on missing, I don't care how often you draw a bead on me."

Aaron had been an interested and awe-stricken listener, but he recovered sufficiently during a slight pause in the conversation to inform us of the following piece of news: "Dat dere ornery Pete of Hanson's was ober here dis fo'noon, an' he 'lowed as w'at dey hed ben a b'ar seen ober beyand de westest wheatfiel'—a big black b'ar he sed—an' dat old Hanson 'lowed it was dat b'ar w'at lugged

off dat young Poling Chiny pig dat dey was keepin' fur Thanksgivin' day. Bently seen it an' he went home arter his gun, and when he got back Mr. Bear was done gone, cleared out."

"Boys, we must fix bruin's hash before we leave. A few juicy steaks and the pelt to take along home as one of the trophies will fit us all right, won't it?"

"And when we get it—of course we will get it—we'll let Mr. Whist decide who takes it, regardless of who the slayer may be," said Sysiphus.

"That won't go; no sir; that's far and away the cheekiest yet. You are a lucky whist player, we admit, but there isn't much danger of you getting any bear meat with your gun."

"I was not aware that there were any bears to be found about here nowadays, but I remember the time when it wasn't considered much of a week's hunt that did not score a bear or two; and sometimes there was a scrimmage. I call to mind one now that came very near resulting in the death of a farmer sportsman," said the Doctor, dropping into a reminiscent vein. "I remember an accident that happened to a man by the name of Skinner, a noted fox hunter, some years ago."

"Skinner! Why that was the party that I have in mind."

"Well, let's have the circumstance, Doc, if it's worth repeating."

"I doubt if Skinner thought it worth repeating. The story is that he shouldered his gun one morning, and followed by his dog started out in pursuit of game. During the forenoon he came in sight of a huge bear, which he shot and mortally wounded, the ball taking effect near the spinal column and practically breaking the animal's back and rendering the hind limbs entirely useless. Skinner then reloaded his rifle, and, through excitement, it was accidentally discharged, consequently without effect. Again he reloaded, with the same result, except that the dog made a narrower escape than the bear. The dog had closed with the brute and was getting about all he could stand. Skinner, taking advantage of the situation, approached the monster and attempted to dispatch him with his knife, without success. The spot where the conflict took place was on a steep hillside immediately above the decayed trunk of a fallen tree. No sooner had Skinner mounted this log in rear of the bear than he was tripped by some vine or branch, falling prostrate with his head down the hill, his legs resting on the log. The bear caught his leg, drew him up and commenced biting and gnawing at a fearful rate. Skinner realized his precarious predicament and that 'something had got to be did.' Raising himself partially to a sitting posture, his right hand still grasping his knife, with which he aimed at the bear several effective blows; one, however, missing its mark, inflicted a deep horizontal gash in his right leg above the knee. So soon as the bear, eager for revenge, discovered the mistake, he caught the wound in his jaws, tearing it horribly. Finally, by herculean efforts and the aid given by the savage attacks of the dog on the enemy, Skinner released himself, while the bear, well-nigh exhausted, retreated some yards, and from the effects of his numerous and severe wounds soon died.

"Skinner feeling his helpless condition, and fast growing weak from loss of blood, resolved in his weak state to prove more than conqueror, re-loaded his rifle for the fourth time, dragged himself to where the bear lay and shot his antagonist again, although he was already dead! (making assurance thus doubly sure) and with nothing more to fear from that quarter, Skinner began to turn over in his mind the possibilities of escape from the present perilous circumstance—four miles from home or any house that he knew of, almost dying, beyond the reach of human aid—his chances looked slim indeed; but he was a plucky chap, an old '49-er, who had crossed the plains amid hardships and dangers, and saw plenty of them after he reached the El Dorado. A thought suddenly occurred to him, which he immediately acted upon. Tearing off a portion of his shirt front containing the buttons, he stained this with his blood, bound it round the neck of his dog and endeavored through gentle means to persuade him to leave him and go home, and thus give the alarm. The dog advanced a short distance, but returned to his master, licking his wounds and howling piteously. Skinner then took a piece of his hunting shirt, attached that also to the neck of the dog and struck him with a branch several times, ordering him home, as the only resort left. This time he was successful. Skinner now dragged himself to a point on the hillside where he could watch the movements of the dog, and in case he did not go directly home he would be in a position to make his shouts heard more easily. The dog, however, was faithful, and by the mute appeals of the stained fragments of clothing gave the alarm. A party was at once formed to look for the wounded or, as then supposed possible, dead man; following the dog in almost a direct line to the spot where the suffering Skinner lay, now almost unconscious from loss of blood. He was carried home on a litter made of boughs, and came very near dying, but finally pulled through. They returned and secured the carcass of the bear also, which was a monster, and Skinner always related that adventure with a good deal of pride and satisfaction—notwithstanding a very perceptible limp in his left leg told that he had something more than the bear's skin to remind him of the conflict."

"Skinner was very fond of telling how his black mare once treed a bear and saved its colt."

"What are you giving us? A bear treed by a horse! That's good enough for the rankest greenhorn; but you—you ain't going to tell us here that a horse treed a bear!"

"Skinner, the veracious, is my authority; he said his mare was in the pasture with her colt by her side, when there appeared on the scene three bears; these animals were very plenty and very bold that fall, frequently coming into the fields for food, and doing considerable damage in one way and another. This trio consisted of the dam and two cubs, the latter were then half grown. Alarmed for the safety of her colt, the mare forgot the usual fear of the horse for these animals and attacked them with such vigor that they were forced to retreat, and were pursued so fiercely that one of them was forced to take refuge in a tree, and there remained while the cubs pranced around in the bushes. Meanwhile, Skinner says, he saw the close of the game, rushed into the house for his rifle, and accompanied by the hired man similarly armed, they captured all three of the brutes.

"Skinner, by the way, always claimed that the wildcat was the biggest coward of the animal kingdom, and in support of this related an experience of his own. He said he was going along through the woods one day with his gun, and followed by a little whiffet dog, was brought to a standstill by the animal barking violently at something up a tree. It being nearly dark, Skinner could discover nothing but the shapeless mass of some wild animal lying far out on a dead limb. He fired at this object, and, by the scream which followed the discharge, he knew it to be a wildcat. The animal dropped to the ground, and tore away for dear life, the whiffet boldly rushing after it and keeping up a continual barking. At length the cat took to a tree again, and while the dog watched, Skinner reloaded his gun and gave the creature another dose, when he came to grass, dead as a door nail."

"This Skinner of yours seems to have been a remarkable sort of man," was the comment of the General.

"He was an odd stick, certainly, but as well posted in the science of woodcraft as any that profess far more, and in hunting large game so successful that his services were always sought for by hunting parties from far and near. It was with him that I learned what I know about the habits and best methods of hunting bears and 'sich'."

KEUKA.

NOTES FROM QUEBEC.

QUEBEC, Can., Sept. 11.—*Editor Forest and Stream:* Our nimrods are now bent on an outing. It were premature to anticipate their game bags. The Sorel Islands, I have no doubt, will furnish their usual quota of black and gray ducks and snipe. There has been a decided falling off in game at Crane Island since the removal of the alder bushes on the swampy shores, which afforded a cover to snipe against easterly gales. Night shooting has scared away the ducks, and the dastardly persecution inflicted by boys and dogs on the young birds before they can fly is beginning to tell severely. Governor de Montmagny, if recalled to this planet, would scarcely recognize his marvelous game preserve of 1646, conceded from the French Crown. The Chenail and Reinseau des Sarcelles, to use their vernacular names, seem at times even shunned by their old inmates the gray duck and teal.

The August high tide, as of yore, calls forth from their northern nesting places clouds of small beach birds, the sanderling, ring plover, jack snipe, curlews and godwits, and the island for a couple of weeks in August continues to be famous for this small game.

This year unusual congregations of golden plover have invaded the fields and beaches of Crane Island, as well as those of the adjacent islands of Ste. Marguerite, Madame and Orleans, rolling in fat, delicious morsels for our gourmets. The flat rocks (Batture Plattes) of St. Joachim, thirty miles lower than Quebec, on the north shore of the St. Lawrence, will of course be, as formerly, a favorite resort of the Canada goose and white goose. This preserve, owned by the Quebec Seminary, is under lease to an old sportsman, Mr. Etienne Michon, of Montmagny.

Woodcock, once so abundant, are getting scarce in the environs of the ancient capital of Canada. Ruffed grouse (partridge, to use a popular misnomer) are likely to afford good sport. The hatching month (June) was dry and sunny, no heavy rain to kill the young birds on leaving the egg, and plenty of ants' eggs, their usual provender in infancy.

I may, with your permission, forward a second bulletin on game matters later on. J. M. LE MOINE.

NORTH WOODS INCIDENTS.

Editor Forest and Stream:

I have a very important problem to submit to you as judge. It is said that the too free use of fresh venison, without the proper admixture of vegetables, such as onions and tomatoes, causes loss of memory. I cannot vouch for the truth of the theory, but the probabilities are strong in its favor. At all events, I will state a few facts to be considered. Our party at Camp Le Roy lived pretty much on venison. The huntsmen and guides put it away twice a day at a rate unknown to civilization. By the way, don't forget that there is nothing like a blue shirt and a parti-colored cravat for an appetizer. It is amazing how much provender disappeared under one of those blue shirts, and not even a gray one will do, though it holds its own pretty well.

The three sportsmen and two guides, who left the camp, had been feasting on broiled, roasted and stewed venison. They were also supplied with a splendid saddle to take with them on their projected trip across country to Lake George. One of the party was to take up his good lady and little fairy daughter. After spending the night in those uncomfortable things called beds, they made an early start in two wagons with guides, etc. When they reached the first resting place our friend took the landlord aside and informed him that they had a fine saddle of venison with them, and would be glad to have some cooked for dinner. Then they repaired to the wagons and began a search among gun cases, bandboxes and the like, until things began to be serious, ending in not finding the saddle. Could they have dropped it on the road? Or had the memory of that whole party failed, and the much-coveted venison been forgotten?

If it was a loss of memory from the injudicious indulgence in the tempting edible, there could be no help. But can there be any other plea offered by the true sportsman for leaving that fine saddle of venison in the ice-box at the hotel? There were five men (the ladies, of course, are out of the question), and yet they tell me memory is very faint about that brace of partridge, too. All had lived on the delicious diet until you might expect to see the horns begin to sprout.

But before your decision let me relate a circumstance. You know that new waters disagree with one at first, one is apt to become snow blind, and there is a peculiar effect produced on any one at the first sight of a deer. I knew a parson who was asked by an indignant guide, why he let that fine buck pass him without a shot. The parson declared he was mistaken, no deer had passed him, "but the devil had with a stolen kitchen chair on his head, and the old lady's dish-rag sticking out behind. You don't suppose I would trust a shot at him." "Yes, but I would. You lost the best chance man ever had to get rid of the old thieving reptile. I'm afraid you made a great mistake." But to the circumstance.

One of our party was renowned as a sportsman; his bag of birds was the envy of his comrades, and he had won prizes at Creedmoor, but he had never killed his deer in the woods. Some days before breaking camp he had a wild encounter with a wounded buck, which may have been too much for him. The guide who witnessed the scene said he never would forget it. It seems that our friend was waiting for a deer, which he judged could not be far away from the clear voice of the hounds, and then the near crack of the rifle, and behold the noble animal appeared, alas! on three legs, the guide having broken one badly. Our friend fired and wounded the fated creature again, and still again; but the plucky fellow fought for his freedom and for life. The hunter followed and the deer led him up a wild ledge of rock, slippery with moss, among great boulders, and finally into a burnt slash, where the exhausted animal stood at bay. Our nimrod, thoroughly in earnest, had thrown off his coat and vest, and when he got among the burnt and charred limbs in the windfall, he lost some of his nethers; his hat was off; and when the guide, who had wounded the deer, came up, he said he could not tell whether he was talking to a white or a black man; that he was standing near the dying deer, and the perspiration had run down and around his face and hands, making him look like an Indian in his war paint. Streaked with charcoal, our handsome athlete could hardly be recognized. The guide cried out, "Diabolo! What has come over you?" In answer he received a short, incoherent speech that could not be understood. He said it might be Greek or Choctaw, for all he could make out of it. The hunter pointed to the deer, as uncanny looking as himself, and asked, "How the mischief are we to get that thing out of that snarl?" The guide told me privately afterward that our friend did not act natural; and when he heard the affair about the neglect to take the venison, "There," he said, "I knew they all had too much venison, something was bound to happen; they were all a little off, and did not act the same as when they came in." The guide sticks to it that the meat was too stimulating for their constitutions; and when they come again we will feed them on frogs, fish and feathers.

TARRYTOWN, N. Y.

BAY SNIPE.

NORFOLK, Va., Sept. 12.—*Editor Forest and Stream:* It might not be uninteresting to your readers to know something about the bay snipe shooting near Norfolk, or in the vicinity of the Virginia Beach Hotel. At Virginia Beach, Virginia, and below will be some bags of birds killed this season.

Early in August, O. M. Etheridge and myself shot near the hotel, in one forenoon, ninety-one bay snipe. This bag was principally of graybacks and yellowlegs, with a few grass plover.

Later Capt. Geo. W. Taylor, Mr. Wm. Camp and myself, all of Norfolk, made another large bag of the same kind of birds on the same grounds. I have not heard of any parties who went down bagging less than 35 snipe in one day.

Monday last, Sept. 10, Capt. Geo. W. Taylor and myself killed on our club grounds, the Currituck Inlet Club, 325 bay snipe in the forenoon. They were as follows: 200 yellowlegs, 100 grass plover and 25 golden plover, doe birds and curlew. We have a fine property there and I have often made big bags on the grounds, but never succeeded in bagging 325 with two guns in one day before; and I would be glad if you would tell me if you ever heard of a larger bag. These were all shot over decoys, made by Herman Stroter & Sons, of Boston, Mass., and I think they are the best bird decoys made. The above is no exaggeration but my actual experience this season.

J. B. WHITE.

A NEW GEORGIA ASSOCIATION.

SAVANNAH, Ga., Sept. 12.—The Game Protective Association met last night and effected a permanent organization by electing the following officers: President, T. P. Bond; Secretary, James H. Hunter; Treasurer, R. R. Dancy; Directors, J. N. Johnson, H. W. Palmer, D. Y. Dancy, J. S. Schley, J. P. White.

The association starts off with the following membership: R. R. Dancy, J. C. Manning, Arthur Schaaff, J. A. Hirschbach, G. Noble, M. W. Low, J. N. Johnson, W. G. Miller, F. F. Sweet, T. P. Ravenel, T. P. Bond, W. A. Friend, E. R. Middleton, W. H. Connerat, B. S. Wells, J. S. Schley, J. J. Hearn, D. Y. Dancy, W. R. Curtis, J. S. F. Barbour, J. P. White, H. W. Palmer, George S. McAlpin, C. B. Westcott, James H. Hunter, J. F. Glatigny and H. B. Lemcke.

A constitution and by-laws governing the association were drafted and were adopted. The object of the association, as set forth in the preamble, is as follows:

Resolved, That this association is formed for the benefit of all honorable sportsmen, both of the gun and rod, and we feel it our duty and will, as law-abiding citizens and lovers of true sport, to do all in our power by legal means to enforce all existing laws and all laws and ordinances that may hereafter be passed for the protection of game and fish, and will generally guard such matters and interests as may be to the advantage of sportsmen.

It was also resolved that all members coming in possession of knowledge of any violation of the game law, as killing game out of season, or catching fish contrary to law, it shall be their duty to report the same to the secretary and he will take the necessary steps toward enforcing the law.

It was further resolved that if any member should violate the law such member should be excluded from the association and will also be liable to prosecution by the society. The directors elected last night were instructed to frame game laws which the representatives from Chatham county will endeavor to have passed by the next Legislature. They will also request the "in season" and "out of season" for shooting game, and the matter will be submitted to the president and members of the association at their next meeting, Oct. 2.

BARNEGAT BAY.—Mantoloking, Ocean County, N. J., Sept. 17.—The bay snipe shooting at this end of Barnegat Bay has not been a success this year. There was only one day when any number of large birds were killed. That was Aug. 22, when there was a flight of yellowlegs and willets. A number of the latter were killed along the surf. A wild pigeon was shot here on Saturday on a telegraph wire near the Life Saving Station. A few English snipe have come on. I killed three Sept. 5, one Sept. 10, and four Sept. 15. Ducks have not begun to come yet.—H.

TOMPKINS COUNTY GAME.

TOMPKINS COUNTY, N. Y., Sept. 4.—The number of woodcock thus far killed, while not exceedingly large, is fully up to that of former years. The first few days of the season witnessed an enormous lot of gunners in the field. The big bags at first reported dwindled down terribly when the truth was scattered abroad. In one instance that came to my knowledge a well-known local sport, accompanied by a more or less conspicuous member of the medical profession of Gotham town, was reported as bagging 13 woodcock on Aug. 1. The hard, cold facts of the matter, as related by the farmer at whose place the gunners found shelter were, in effect, that the day's work resulted in the shooting of 3 woodcock, 2 robins and 1 partridge (shot out of season by professed sportsman!) Partridges are reported plenty, but my own experience in finding them is not flattering. A short drive from the county seat brings the lover of quail shooting to a locality where the birds are found more numerous than formerly. Rabbits are scarce enough to keep the festive beagle busy finding them. Coon hunters are happy because there are coons without number, and the votaries of fox chasing, in view of the number of broods of red racers coming to maturity in near by glens and gorges, are serenely content. M. C. H.

DROP OF STOCK.

Editor Forest and Stream:

I see that quite a number of sportsmen are advocating gun stocks of very little drop, alleging that when the binocular style of shooting is adopted better success is had. My experience does not teach it. What a man wants is a bend in the stock, such that when he throws his gun to the face his right eye looks down the rib without the necessity of crooking his neck. Such a gun will "fit" him, and with that it is reasonable to suppose he can do the best shooting. He should keep both eyes open, if his right eye controls the line of vision, as it does with most men. When his left eye does, he must close that or shoot from the left shoulder. One can practice with a differently shaped stock and acquire much expertness. But why should he need that when the length of his neck and his arms suggest what is natural? Of course the stock may be so much crooked that under shooting will result in snap shooting. So if the stock is too straight the shooting will be too high. Avoid the extremes is the doctrine of wisdom.

For smaller game I am the advocate of light guns. They are quite as effective when weighing from 6 to 7lbs. as when they lift the beam at 9 and 10lbs., and then after a long tramp how nicely they feel. A 14 or 16-bore with 2¼ to 2⅜drs. of good gunpowder and ⅞ to 1oz. of shot is good enough, and if properly held will bring down the game. For larger game a heavier gun and heavier charges are wanted. But I protest against the necessity of educating ourselves to the use of any gun with a stock of less drop than 2⅜in. My opinion is that from 3 to 3½in. will suit a very large majority of men. WELLS.

ROCKINGHAM, N. C.

THE CONNECTICUT ASSOCIATION.

Editor Forest and Stream:

The new Connecticut Farmers and Sportsmen's Association for the Protection of Game and Fish is at all events stirring up some discussion, out of which it is hoped good may come. Here are some of the editorial opinions expressed:

A chap from Westchester, this State, has written an anonymous screed to FOREST AND STREAM, in which he pays his disrespects to the new game and fish protective association. The writer shows himself to be a fellow who is unwilling to abide by the laws of the State, and we doubt not that he is a snarer and pot-hunter, just the kind of a chap the new association is anxious to light on with "both feet." Westchester is the most lawless and unprincipled section of the State as regards the observance of game laws, and probably the anonymous writer to FOREST AND STREAM is one of the ilk who do so much to destroy game out of season as well as in season.—*Hartford Globe.*

For shame, Brother Willey, of the *Globe.* Don't let your zeal get the better of common sense. The item given above is a base, unfounded slur on the residents of the western part of our town. In the name of reason and justice the *Advocate* requests a retraction of the wholesale condemnation of the place. So far as the article or "chap" is concerned, we should be pleased to let him speak for himself in a communication.—*Colchester Advocate.*

The Colchester *Advocate* takes up the cudgel for the anonymous fellow who wrote to the FOREST AND STREAM condemning the new game and fish association. All we have to say to Brother Bigelow is, that we come very near knowing what we are talking about, and simply refer him to President Collins's article in the last issue of the FOREST AND STREAM. Editor Bigelow, if he is a sporting man, will spend no time in defense of any man who is so unwilling to abide by the game laws of the State, which are as fair for one man as for another—*Hartford Globe.*

SPORTSMAN.

HARTFORD, Conn.

Editor Forest and Stream:

Mr. A. C. Collins has not got us Westchester farmers nailed so tight but that we are out again. Mr. Collins does not deny he was the leader in organizing this valuable(?) association, and if he would think real hard perhaps he would remember some selected gentlemen who assisted him in conceiving this movement.

It is supposed that the farmers did not come forward with many dollars to increase the fund, so now we all can become members by only investing a two-cent stamp, though we can in a measure repay this debt by letting "our city friends" hunt and scare all the game on our farms to death this fall, or by leasing our land to him for a small compensation. A two-cent stamp was raised, but it was put on this letter to a fair dealing and true sportsman's paper. Mr. Collins thinks the non-export law is a "very wise law in his opinion." Farmers have opinions as well as "city gentlemen." We do not consider it our business to prevent city sportsmen from other States carrying game out, but we know of three parties from Providence, R. I., carrying about one hundred birds from this place to that city three different times last season; we have laws that might prohibit it, but they will never be enforced in "Farmer's" opinion. Oh, yes, I do shoot, and also do not think it high crime to snare a bird. I have done that awful deed, but not for several years, not since I could shoot on the wing. I can remember when a small boy how rich I used to feel after selling a snared bird for twenty-five or thirty cents. My father was not well to do and this was about my only chance for "spending money" in those by-gone days. Farmers' boys of today are not allowed this privilege. I am well aware that snaring has been made a business by certain grown men, that is not right; but give the little fellows a chance. The Algers spoken of by the worthy editor of the *Globe* are not akin to our family, and are several miles removed from our "stamping ground," and as the *Globe* is not our family paper we were not aware that they had caught so many or any in fact. Who took them to market?

Secretary Willey won't win the esteem of the farmers by insulting them. Secretary Willey can find me by coming to Westchester, but he better leave his "feet" in Hartford. One would think to hear this gentleman talk that Westchester was full of a very desperate class of people; but with a residence of twenty-six years in this quiet little hamlet I have failed to find more law-breaking sportsmen here than in other places. The farmers have a law against tresspass on their land and can protect their own land, be their own gamekeepers, let their neighbors and friends shoot or not as they wish, and do not require any "detectives" to assist them. If any member of the F. and S. G. P. Association cares to take the trouble to visit some of our gentlemen farmers, he will find that beds of roses are not prepared for city sportsmen here unless they are invited. THE SAME FARMER.

WESTCHESTER, Conn., Sept. 8.

CONNECTICUT GAME.

ESSEX, Conn., Sept. 14.—Thus far this season the rail shooting at Essex, as well as other noted resorts along the Connecticut River, has been very poor. Hardly any flight birds have arrived, those shot being birds that are bred in the coves here. The largest bag so far reported was made by an out of town party on the opening day, Sept. 1, he bagging fifty birds. There is an abundance of feed, and the birds should have been here after the recent cold wave, had they been coming at all.

Some ducks (mostly teal) are beginning to arrive, and the outlook for wildfowl shooting this fall is very good. Most of the quail seem to have outlived the blizzard, and there is prospect for good shooting on Oct. 1.

This place is noted for being one of the best English snipe localities in the State. All that is lacking to bring on these birds is Jack Frost. Last spring one party shot nineteen in one morning, on what is known as the Great Meadows here, which is the largest bag reported. There are three good hotels here, and sportsmen can find good accommodations here in the way of boats, guides and other requisites. A. W. J.

WILD RICE.—Janesville, Wis., Sept. 11.—*Editor Forest and Stream:* In your last week's issue, in "Answers to Correspondents" column, you reply to C. M. of Greenville, R. I., as follows: "Wild rice should be sown in the late fall or in early spring, etc." I have handled wild rice seed for several years, in fact was the first person to advocate planting it in waters where it did not grow naturally. I have never known it to grow well when planted in the spring, and the sooner it is planted after it is harvested in the fall, the better. After the seed has been gathered for some weeks, the enamel on the outside of the kernel seems to crack, and this I believe accounts for failure in spring planting. It should be planted on a mud bottom; where there is little if any current, and if possible where there is no other vegetation. As it grows only in the water, it should not be planted on ground that goes dry in midsummer. It will grow in water from a few inches to four feet in depth, but does best in shallow water. Before sowing I always soak the seed for an hour or so, in order that it will sink at once. I also think it best to sow very thickly, rather than to scatter a small amount of seed over a large space.—RICHARD VALENTINE.

WEST VIRGINIA.—Lewisburg, Aug. 29.—We have the best prospect for partridge shooting here this fall that we have had for years. Pheasant (grouse) are also plentiful. We have a few wild turkey and some Virginia deer. For the benefit of some of your readers, who frequently visit this section in the fall for the purpose of having a little sport, I send you the bird and deer law. The law prohibits the killing of partridge (quail) from Dec. 1 to Oct. 10, pheasant (grouse) from Jan. 1 to Oct. 1, and wild turkeys from Jan. 1 to Sept. 15. It is unlawful to chase deer with dogs in West Virginia for four years, and they are only to be still-hunted from Sept. 15 to Jan. 15.—P. C. O.

MARYLAND RAIL.—Elkton, Md.—The rail bird season opened here Sept. 5. There was only a fair tide and not a great many birds were killed, 73 birds being the highest reported, 53 the next, and all the way down to 6 by a small boy with an ancient muzzleloader with only one barrel in working order. Saturday the 8th was the best tide so far and a large number of birds were bagged, 156 being the highest heard from. Reed birds are fairly plentiful also.—E. S. G.

REAR GUN SIGHTS.—I don't know of any rear sight which is used for shotguns unless, of course, the shotgun has a rifle barrel. In some cases, however, my shortest rear rifle sight has been used for shot-shooting, and a few think it quite a help. I myself don't recommend my rear sight for shotgun work, except for the closest shooting chokebore.—WILLIAM LYMAN.

LEAVENWORTH, Kan., Sept. 13.—Ducks have begun to come into the Missouri lakes, near this city, in considerable numbers. Prairie chickens are very scarce, and are reported so all over the State. Quail will be more numerous than ever, and will afford good shooting after Nov. 1.—NIM.

ROCKINGHAM, N. C., Sept. 12.—Our prospects for Bob White are excellent. Many coveys can now fly rapidly, and in a little more than a month will be fully grown. I regret that our season opens before Nov. 1; then about all the birds are full fledged and strong.—WELLS.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee, Wis.—*Adv.*

Sea and River Fishing.

LAKE EDWARD.

CAMP TRUTHFUL, Lake Edward, Canada, Sept. 11. —*Editor Forest and Stream:* To-morrow we break camp and return to so-called civilization—a blasted humbug by comparison with this sort of life. I lay awake this morning wondering whether this was not the paradise Adam was fired out of, and whether the greatest of his sorrows was not the loss of such fishing. There are Eves of the present day who would just as recklessly burst up a man's fishing. It behooves one to get all he can of it in this world, so the undersigned proposes to build his cabin up here, and return to his original state. No sheet-iron dude collars, no boiled shirts, no plug hats, no 3 o'clock, no gas and water bills, no lightning-rod men, no desiccated females wanting you to subscribe to the life of Benry Hard Meecher. And then as to the cheapness of living; on what it would cost to take your best girl to the theater and the Delmonico postscript you can live a year in your cabin, and be spared the pang of seeing that same girl out the next evening with another fellow and with apparently an equally unimpaired appetite. Your revenge comes when he has to settle for frogs' legs and terrapin stew, to say nothing of a bottle of "extra dry." By the way, why is it that one's best girl always seems chronically dry? It knocks spots out of five dollars to moisten their delicate clay, but never mind best girls, they don't properly come in here, although they do manage to get in almost everywhere. I was saying, what a place to get to. A good many gentlemen have found the climate of Canada more healthy than the atmosphere of New York, and we had one of the flyers here the other day; but he did not seem to get as good a raise from the trout as the gudgeons at home, and soon got Eno-ugh of it and went away, a bad habit of his.

We have been in camp a week now, and to-day took an account of stock of our groceries. Our original outlay was about $6. We have lived (three of us) on it and trout seven days, and it is not more than half consumed. Say fourteen days for three men with fishermen's appetite on $6. Don't it make a man groan to think of returning to civilization, and $5 a day as its penalty, and your temper spoiled in wrangles with the gas man, and if you are a housekeeper to fall within the baleful soul-destroying clutches of the plumber. Good Lord deliver us and let us return to our natural condition. Canada is our paradise.

I won't say there are not some little drawbacks, for instance from June 15 to Aug. 15 there are black flies (in the paradise I mean). Every fisherman who has visited the Adirondacks or Maine is familiar with those little instigators of profanity. But you can go on a little further to Lake St. John; and there are none there, as the mist is cleared away, and there you can get all sorts of fishing, including winnanichi or landlocked salmon. It is a good place to hedge the fly season; but after Aug. 15 you can return to Lake Edward and have no annoyance from them.

As a missionary in the cause, I will venture to give my fellow fishermen the cue to a proper outfit for Canada fishing. Firstly, as to how to get there easiest. Go to Albany, take the Hudson & Delaware Canal Railroad via Lake Champlain to Montreal; thence either by rail or night boat to Quebec. Take the Quebec & Lake St. John Railroad at 8 A. M. next morning and you are at Lake Edward at noon, at Lake St. John at 6 P. M. You can go via Quebec Central & Grand Trunk a little quicker, but their advertisement to take you through without change is a fraud. If you can get a sleeper from Springfield you may do it, but woe unto you if you don't get a sleeper, and there is but one, and always full. We missed it, and were turned out at all hours of the night, having to wait at a place called Richmond, over the Canada line, four and a half hours in a wretchedly cared for station, no fire, and cold. We changed five times before we got to Quebec, sometimes we were in the Quebec Central, then on the Grand Trunk, then we lost all trace and did not know where we were. We finally turned up at Quebec, chilled and cross; and what the army in Flanders said was not a circumstance to our language. All that is necessary is to be sure and be on hand at the Quebec & St. John station at 8 A. M., as there is but one train a day. Under proper circumstances you should be able to go from New York to Quebec (via Saratoga & Lake Champlain) for about $13.50; from Quebec to Lake Edward $2.50. Hotel at Edwards $1 per day and good fare. Beds a little lumpy, but after you have fished all day and taken a hand at the oar for exercise you will forget all about lumps.

As to rods, leave your 6oz. bamboo at home, take a good 10oz. rod for fly, or 12oz., a good bait rod. Guns not wanted; no game at this season. Take good warm underclothing, for the nights are cool. A flannel shirt, of course, a pair of sturdy thick-soled shoes; and don't forget the waterproof coat. Rubber boots are good in case of rain (of which there is a good deal); they keep your legs and knees dry and are always useful, but climbing around the rocky shores use them up. Leather is always best. You can buy in Montreal and Quebec the porpoise leather, long-legged, waterproof boats for about $7; will last you forever. You can hire plenty of blankets and all camp equipage at Edwards at a very reasonable cost. Everything is cheap at Edwards.

If you want to bring your fish home, clean them carefully, removing the blood streak along the backbone, wipe dry inside and out. Keep free of contact with each other. Put on a board and lay the board on the ice at the ice house at Edwards. They will keep that way indefinitely. When ready to leave, pack in dry fern leaves, keeping the fish from contact still; and unless the weather is very hot, you will find your fish hard and cold when you arrive home. Under no circumstances trust to expressing your fish; take them along with you. A box is a bother and you can't check it, but here is a dodge: take along an old rattle trap of a trunk extra, pack your fish in it with your boots, waterproof, etc , so the fish won't get bruised, plenty of ferns will remedy that. With a check in your pocket you will be all right. You can get better smoking tobacco in Lake Edward than in New York, and cheaper. We shall lay in a month's supply to bring home.

To-morrow we break up camp and a gloom falls upon us. The dog we borrowed for company seems to know

it; lost his appetite; usually eats fifteen trout for his breakfast (Canada dogs eat fish when they are lucky enough to get them; generally live on faith); this morning he only ate fourteen. Our grief reduced our appetites to an even dozen; we usually see that number and go half a dozen better. The fishing grows better until Oct. 1, when the law is up and the snow begins to fall, but not enough to bother until about the 15th. The early spring will see us on hand again. We have had a glorious time, glorious fishing, and ought to be satisfied. Of fishing we have had our fill, but of this free and easy life not so. Hence this coming winter of our discontent—*vale!* PODGERS.

Later—Home.—One of us said, "Let's try that Quebec Central again home; they may treat us better this time." T'other of us said, "If you can stand it, I can;" and so we tried that "through-without-change" road again. It was worse than before. Sleeper full. At Sherbrooke over 500 people got aboard: there had been a horse race, fair or base ball match. Time, midnight. Men and women crowding and pushing, children yelling, half the men tight. They stood up in the aisles, out on the platform, sat on the stove (no fire, and a white frost outside), sung boisterously in bad French, gorged themselves with peanuts and gingerbread, girls sat on fellows' laps (that was not so bad), children were put on the floor to sleep. Toward morning we got a "sit up" in a parlor car. Changed four times, got into Springfield four hours late, lost our train home, waited at Pittsfield four hours, finally got home toward morning, instead of 3 P. M., as advertised. Comment is unnecessary. If you want to travel on six different (indifferent) railroads take the "through-without-change" Quebec Central, Grand Trunk, etc., etc., and then hire a small boy to kick you for being such a blankity blankity fool for doing it. P.

A RESPONSIVE CHORD.

Editor Forest and Stream:

Not long ago one of your contributors, "W. A. B.," wrote:

> I have had applied to me at times by some of my friends—and good friends, too—that much-abused epithet "crank," because of my enthusiasm for the woods and streams, and affection for the rod and gun. They cannot understand or appreciate the taking long journeys or tramping for miles and subjecting one's self to the discomforts of wet and cold and fatigue all for the sake, as they say, of a few fish, which, if the scribe is so fond of them, he might have purchased at a market.

"W. A. B." has expressed just what I have long been trying to put together and slap down in front of those inhuman, unnatural, vulgar and ignorant "persons from whom the savage has been wholly eliminated." "W. A. B." is not the only true lover of nature who is called a "crank" by the city man who, while he ridicules all that is beautiful in the way of birds, trees, flowers, fish and the general object of the world itself, can brag of nothing in their stead but an elevated railroad, a barber pole dude collar, ice cream, tight shoes, and a lot of silly companions. Talk to any of these people about the beauty of the woods or stream, and ask them if they like hunting and fishing and they will tell you yes, if there is plenty of game, and that they don't care to walk all day for nothing. Talk to a man of good heart, a man of true purpose, of enjoying rural life, and he will not think only of the game, but of the natural splendor, and will gladly approve of your appreciation. I have been shooting and fishing thousands of times, and I never walked "all day for nothing," and many and many a time I came home without bird or fish. "W. A. B.'s" article has proved a great find for me. I have long waited for a time to come when I could show my crank-calling friends just how silly they were, and the first column and a half of "W. A. B.'s" affair marked with a blue pencil and mailed to each of them has proven just the thing. What a great man he must be, and how I would like to know him real well and then spend a week or two in the woods with him, walking "all day for nothing." It is a great thing to come on to these men, whose very ideas are quite like your own in every particular, even if one does feel a little embarrassed as I do at not being able to express himself as prettily as his ideals. There is that "Yo" and Rowland E. Robinson and "Iron Ramrod" and "Nessmuk" and a host of others you might insert among them, all just such kind of men many of their disciples would be fairly crazed to meet.

I'm tired of the city and the city man and long for the time when I shall have saved a few hundred dollars, got together a shotgun, rifle, two light rods, a setter, a pointer and spaniel, a wife and a cottage, and gone out into the rural world to walk forever in the woods through the fields, along the river banks every day for nothing. Long live the savage! KAHKAHLIN.

NATURAL AND ARTIFICIAL FLIES.

IN the year 1830, being then a stripling of nineteen, I was residing at Ewart, in the county of Northumberland, England, in the double capacity of tutor to a friend's children and a student of practical agriculture. The farm consisted of 600 acres and was bisected by the pretty little trout river Glen, which pursues a devious course of about a mile through a deep and narrow channel between steep banks of alluvial soil to its junction with the Till, which river forms the eastern boundary of the farm for about a mile and a half further. Both these rivers abound with speckled trout, which attain a large size, individuals from 2lbs. to 4lbs. being occasionally taken; and they are besides frequented by the whistling or sea trout in the spring and fall. In ordinary states of the water and weather these fish are difficult to catch, as the rivers flow with a slow and gentle current, presenting everywhere a smooth and glassy surface, unbroken by stream or ripple, on their course through and alongside the farm; so that the angler's only chance to make a fair basket is late in the evening or early in the morning, or during the prevalence of a smart breeze.

One morning in the month of June I awoke before three o'clock and not being inclined to sleep again, I arose and taking my rod which lay ready mounted on its hooks in the back passage, went up to the northern boundary of the estate, where I knew there were two or three good casts, and fished them very carefully for nearly an hour without success. Not a fin could I induce to stir, though I tried all my favorite lures. By this time it was nearing four o'clock, and the sun was beginning to show his disk above the low range of the eastern hills; and thinking to try a natural bait, I stepped into a clump of osiers which bordered the stream to look for some small beetles. While engaged in the quest, the sun attained a sufficient elevation to shoot his slanting rays above the bushes on the opposite bank, and light up with a golden glow the branches among which I was standing. Absorbed in admiration, I stood for a time motionless watching the play of light and shade, when suddenly "plop" sounded from the water outside of the willows. Thinking it was caused by a water-rat, I went to look for it, when "plop! plop!" sounded again, and I saw it was fish and not rats stirring. As the sunbeams crept down lower on the branches a perfect stream of flies began to pour from their tips on to the surface, and the water became "like a boiling pot," as an old angling acquaintance of mine used to say.

I tried a few casts where the fish were most numerous, but they would not take my flies, although leaping all around them. I captured a few of the flies, and taking a short cut ran home and tied four of the best imitations I could make. The head, thorax and legs were black, the wings of a brownish hue, the body or abdomen covered with a blue down like that on a plum, and the size about that of the common housefly, only rather longer. I tied two of them on a trace and went up to where the flies were floating down and the fish feeding on them. Keeping well in advance, and casting where the fish broke the surface while sucking in the flies, I fished down to the junction of the Glen with the Till, and when I went home to my breakfast at 8 o'clock I turned out of my basket twenty-two trout, not one of which was less that 9in. in length, and the two largest weighed over 1lb. each.

At noon I went down to the river again and fished for an hour, but could only get three fish, and these must have taken the fly from pure greediness, as they were gorged to the throat with their insect food. I went down to the Till in the evening, but the trout were not on the feed, and I could only get a few small ones, which I returned to the water. What makes this remarkable is that though I have been an angler for over sixty years, and a collector and observer of insects for the same time, I have seen that species of fly only on that one occasion, and the artificial imitation has not proved a favorite with the fish, as I never had any success with it in subsequent trials.

If any of your numerous readers should have had a similar experience with a local insect, I should like if they would relate the same through the columns of FOREST AND STREAM. J. T. B., Sc.D.

BELLEVILLE, Ont.

SOME BASS RECORDS.

Editor Forest and Stream:

I could not follow your advice to go to St. Albans Bay, Vermont, for bass, but I sent an inquirer there, who gives me the result of his visit. He writes: "From St. Albans I drove six miles to Samson's Lake View House, reaching there at 2 P. M. After dinner my guide and I caught nine bass and one wall-eyed pike. Wednesday was an off day. Crickets were all over the fishing grounds and bass would not bite. Thursday bass were leaping all round my boats after the crickets. I tried flies, but unfortunately had no black ones. Guide and self took but seven bass and lost several, one very large one. I took one 4lb. bass, and I do not exaggerate in saying that he leaped nearly 4ft. out of water, fell on tip of my rod and broke it off short. The place has wonderful fishing capacities. The house is very well kept, and a sportsman can have a jolly good time there. Bass fishing is a lottery; and if one has not the real Ike in his make up he had better buy his fish. Samson is dickering with a party who wishes to make the place into a club house. In view of a possible deal next season, I would suggest that you be advised as to what the place is before you go to (now) Samson's in 1889. I am obliged to you for steering me to a very pleasant place. I would further say that the catches are just what you have heard them reported."

W. H. R.

Will De Graw of the Lakeside House, at Greenwood Lake, writes that large and small mouth bass have been biting well, the former on live bait and pickerel belly and the latter on crawfish, worms and helgramites. On Monday, Teller Faust, of the Spring Garden Bank of Philadelphia, was out with Tom Garrison, and caught fifty-three large and small mouth bass, and Fred Clarke took out a New Yorker who caught sixty fish. A small mouth black bass, weighing 4½lbs., was caught during the previous week by Robt. N. Porter, of this city. He and his brother caught fifty-two pickerel on Sept. 14. DeGraw says that he intends to keep his house open all winter for fishing parties.

Editor Forest and Stream:

We have some pretty fair bass fishing in our small lakes. Occasionally one is taken which will go better than 7lbs. One of 7lbs. 6oz. is the best I ever saw taken from Northern waters; but while in Florida last spring I caught a big-mouth black bass, which weighed full 10½lbs. This was in Lake Tsala Apopka, Citrus county, about fifteen miles east of Homosassa. I used a troll line and common spoon hook. My time was limited, so this was the only opportunity I had to try the fishing. In less than one hour I took four bass, ranging from 3lbs. to 10½lbs. This was a big catch according to my notion, but I was assured by Judge Crofts, Col. Sam McCall, P. J. Peacher, Esq., of Citrus county, and Dr. J. C. Perine, of Ocala, that it was no uncommon thing to catch bass which would weigh 16 and 18lbs. The hunting and fishing there are certainly "immense," and I expect to return this fall accompanied by several friends. I was induced to visit this sportsman's paradise by reading descriptions of it in FOREST AND STREAM. Returned delighted with my trip and anxious to get back. W. B. T.

RAVENNA, O.

Editor Forest and Stream:

Col. D. A. McKibben, of this city, returned from Lake Minnetonka, Minn., yesterday. He brought with him a black bass, weighing 6¾lbs. This magnificent specimen was the largest caught in those waters this year. Mr. McKibben is an ardent fisherman, but still hangs on to the old bamboo pole. During his two weeks at the lake he caught 217 trout, weighing 453lbs. in all, an average of over 2lbs. NIM.

LEAVENWORTH, KAN., Sept. 13.

Lake Hopatcong, N. J., is yielding some big bass just now. We were shown a 6½lb. bass caught there Sept. 15 by Mr. H. P. Frothingham of this city.

GRAND CASCAPEDIA SALMON SCORE.

QUEBEC, Canada, Sept. 10.—*Editor Forest and Stream:* Having recently returned from my annual tour in the Kingdom of Herring and Cod, in the lower St. Lawrence, I have been in a position to ascertain the yield of our deep sea and shore fisheries. It is a sorry record, this year. The cod and herring, I fear, must have known intuitively that our amiable neighbors were bent on brewing trouble in their old summer haunts. They have deserted a large portion of their former retreats, in quest of other feeding grounds. The summer fishing has failed. Possibly the fall catch—which begins in September—may restore hope and bring relief to our despairing fishermen of the Gaspe and Baie des Chaleurs coast, who depend on hook and line for their winter supplies. Gaspesians have not captured enough of the finny tribe to keep together the body and soul of the natives; and there has been none to spare for American fishermen.

Your columns have lately teemed to overflowing with so many flourishing accounts of Lake Edward and the Lake St. John region as the elysium of anglers, that I shall abstain from adding on this score any more fish stories; it would look like an attempt to "paint the rose."

My visit to the salmon estuaries of the Baie des Chaleurs has made available to me the official score of the most famous salmon stream of Canada—I may add—of the world; for Norway and even British Columbia must hide their heads in presence of the record of the Grand Cascapedia. The score was made by that keenest of fishermen, our popular new Governer-General, Capt. Joceline Bagot, his aide-de-camp, and party.

The grandest of all salmon rivers, the Grand Cascapedia, was especially set aside and fished during the month of July by Their Excellencies Lord and Lady Stanley of Preston, and their suite, composed of His Excellency's eldest son, the Hon. Victor Stanley, R. N., Mrs. Bagot, Miss Lysten, Miss Barrett, Capt. J. Bagot, Lieut. A. H. McMahon, Grenadier Guards; Mr. Campbell, Sir John Ross, Col. Lanne and E. Jenkins, Esq. Three hundred salmon were caught. Total weight, 7,692lbs.; average weight, 25½lbs. Of the twenty-nine pools spread over the course of this noble stream, the following yielded:

Almond's Pool	34 salmon.
Big Camp	31 "
Limestone	28 "
Ledge	27 "
Parson's	24 "
Lazy Bogand	17 "
Rock	17 "
Captain's	16 "
Tent	14 "
Big Pico	14 "

His Excellency made a capital score and so did the ladies, but the most remarkable one during the twenty-one days' fishing was Capt. J. Bagot's, which actually reached eighty-nine fish and one grilse—his largest fish weighing 43lbs. I subjoin the actual weight of each fish.

Salmon caught in the Cascapedia by Capt. J. Bagot: 28, 25, 22, 22, 32, 21, 39, 33, 43, 27, 29, 20, 28, 21, 25, 23, 12, 24, 24, 29, 20, 21, 22, 35, 24, 27½, 23, 32, 33, 19, 31, 30, 14½, 39, 28, 31, 23, 13, 26, 24, 34, 22½, 19, 23½, 22½, 27, 29, 34, 35½, 24, 23, 21, 24, 24, 22½, 22½, 27, 23, 25, 35½, 22, 26, 32, 36, 22, 24, 28, 23½, 25½, 17½, 28, 21, 25, 25½, 25½, 22, 24, 33, 24, 34, 25½, 22, 22, 35, 10½, 20, 21, 41, 31.

I do not recollect a larger score ever exhibited by this river in the same number of days. J. M. LE MOINE.

TROUT AT THE UPPER DAM.

CAMP BEMIS, Me., Sept. 8.—*Editor Forest and Stream:* I give you a correct statement of the weight of trout taken with a fly in the pool below the Upper Dam, Rangeley Lakes, since Aug. 24:

Mr. W. H. Fullerton, of Windsor, Vt., has taken two of 5lbs., one of 6lbs., two of 6½lbs., two of 6¾lbs., one of 7¼lbs., one of 6½lbs. The 6¾-pounder was taken on a 4½oz. Leonard rod.

Rev. Mr. Wall, of New York, one of 5½lbs., one of 5lbs.

Mr. Drury, of St. Louis, one of 6¼lbs.

Mr. Bearce, of Lewiston, Me., one of 6¼lbs., one of 6⅜lbs.

Mr. F. P. Thomas, Andover, Me., one of 5⅜lbs., one of 3¼lbs..

These trout were taken between Aug. 24 and Sept. 6. Since then, which is two days' time, there have been taken fish of 6, 6½, 3½, 3½, 2½, 4⅜, 2, 7⅜, 5½ and 3lbs.

I believe every one of these trout have been taken on a fly by fair casting. The Parmachenee-belle has been the favorite.

If the fishing was entirely "played out" here three years ago, does not this look as if there had been quite a remarkable increase of trout since then? This is the place, FOREST AND STREAM readers should remember, where the persistent angler claims to have cast his flies for thirteen days without getting a single rise, three or four years ago this month. F. C. BARKER.

We never could see why the man who fishes should be suspected of lying. As a matter of fact not one man in a hundred ever lies about his fish.—*Detroit Free Press.* The *Free Press* man should remember that the dog was hung for having a bad name.

THE HUNTER'S PARADISE.—If you would hunt, fish or camp out, and enjoy any or all of the various pastimes incident to camp life, we are here to say, and to bring the indisputed logic of experience to support our statement, that no region under the sun offers better facilities, more genuine sport "to the square inch," clearer sky or balmier atmosphere, than Northern Wisconsin and Michigan. Within a few hours' ride from Chicago are virgin forests and streams, where the wary deer and speckled trout reign in almost uninterrupted supremacy, quiet and fearless in their own wooded haunts, unused to the invasions of men. The Chicago and Northwestern Railway, with its varied ramifications of main and branch lines, penetrates the sylvan depths of these "forest homes," and carries the sportsman in palace cars to within a few miles of trout streams that surpass the liveliest fancies of Izaak Walton, and hunting grounds whose actual realities exceed the brightest visions of the most enthusiastic Nimrod. As an inducement to sportsmen to visit these regions, the Northwestern has made round trip excursion rates to the various hunting resorts, which will materially reduce the expense of the trip. If you want real, unadulterated sport, you can hardly go amiss by taking the Northwestern into the woods of Wisconsin or Michigan. Full details will be given on application to E. P. WILSON, General Passenger Agent C. & N. W. R'y, Chicago.—*

Fisheulture.

THE CINCINNATI EXHIBITION.

THE United States Government appreciates the value of instructing the masses by a practical illustration of the advances which have been made in fisheulture, and the Fish Commission annually arranges for an exhibit. It is given this year at the Cincinnati Centennial Exposition. The exhibit is particularly fine, not alone that devoted to fisheulture, but in other branches of science as well. The Fish Commission occupies a space about 31x95ft., every part of which is taken up by something of interest. The exhibit is in charge of Capt. J. W. Collins, assisted by Mr. Seal, superintendent of the central station in Washington, who supervises the exhibit of aquaria, Mr. W. F. Page, the exhibit of fisheulture, and Mr. Greenman, in charge of division of scientific inquiry.

In the center of the exhibit is a grotto, down which trickles a miniature waterfall, passing over a McDonald fishway at the bottom. Back of the falls are the aquaria, in which are specimens of various kinds of fishes, from the plebian mud fish to the sportive trout and black bass, and the beautiful paradise fish of Japan. The quill fish, the chappy, the carp and the gizzard shad all have a place here, and submit placidly to the gaze of admiring visitors.

In one corner is a deep-sea sounding machine, and in a handsome glass case are specimens of the dredge's work, preserved in glass jars. One of the monsters is a deep-sea spider crab, *Lithodes agassizii*, taken by the United States Steamer Albatross, just south of Block Island, in a depth of 4,230 feet. A model of the Albatross and pictures showing various portions of her interior and the many appliances with which she in fitted, gives one a fair idea of the way in which scientific research is carried on.

A large part of the exhibit is devoted to working models of the latest inventions for propagating fish, including a model of the Loomis filter for filtering water for aquarium use, a model of the McDonald fishway, a model of the Northville hatching house, one of the most important hatching stations of the United States and formerly used as a hatchery for brook trout, but for some years devoted by the Government to collecting and developing eggs of the whitefish, many millions of which have been handled there and shipped to various points in the United States and Europe. There are models of a half-dozen different kinds of egg transportation boxes, cans used in transporting young fry, a model of railroad car used by the Commission in transporting young fish. There are also models of the Holyoke fishway and of one designed by Everett Smith, with numerous others for different uses.

On a pedestal is mounted a very life-like figure of a man, illustrating the method of stripping a salmon for its eggs. Opposite this are stuffed specimens of fish, also pictures of many other kinds, giving their popular and scientific names. Here also are many models of fishing boats from the Galway Hooker, introduced into the United States in 1846, to the Georges Banker of the present time. The walls are hung with pictures depicting various scenes in the pursuit of the finny tribe, well known to fishermen, but entirely novel to the ordinary visitor.

To give a detailed account of the numerous objects of interest would require too much space, but many hours could be spent here with profit to the seeker of knowledge. The Commission expects to have some eggs before long, which will be hatched in the McDonald jars, giving a practical illustration of the methods now in vogue, which the ordinary citizen rarely has an opportunity to see. F. M.

CARP VS. FROGS.—White House, N. J.—*Editor Forest and Stream:* Why do not some of the many inquirers about frog culture turn their attention to carp? They are very easy to raise, requiring only a pond of warm water and sufficient attention to keep the herons, frogs, turtles and other vermin from preying upon the young fry. I would rather shoot than fish, although the columns of Sea and River Fishing and Fisheulture in FOREST AND STREAM claim a full share of my attention, though I must say I have not learned much from them about carp culture. But, thanks to the FOREST AND STREAM'S Answers to Correspondents, I have learned enough to start, and last spring I constructed a pond, placed nine spawning fish in it, and have the satisfaction of knowing that they have filled the pond with young carp the first summer. Let some of your readers try carp culture, and let those who have tried, report results.—H. B.

CODFISH HATCHING.—As an instance of the success in planting codfish on new grounds it is worth recording that thousands of young cod have been taken in the pound nets in Buzzard's Bay, where they were planted by the United States Fish Commission, and where they were never found before. The work of hatching cod will begin at Ten-Pound Island about the middle of October.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 24 to 27.—Fifth Dog Show at London, Ont. C. A. Stone Superintendent.

Sept. 25 to 28.—Second Annual Dog Show of the Bristol Park Agricultural Society, Bristol, Conn. Entries close Sept. 22. C. F. Barnes, Secretary.

Oct. 2 to 5.—Seventh Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Oct. 2 to 5.—National Exposition Dog Show, Kansas City, Mo. C. R. Evans, Manager, Room 16, New England Building, Kansas City, Mo.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6512.**

BUFFALO DOG SHOW.

THE Buffalo exhibition has come and gone, showing a result that was hardly anticipated by its most ardent admirers. Everybody who is capable of distinguishing between honorable enterprise and sportsmanlike means of elevating the standard of the various breeds of dogs, as compared with anarchistic attempts to rule dogdom by corrupt and vicious methods, anticipated success for the men of iron will who refused to be bulldozed by a hungry gang of unprincipled dictators. But nobody anticipated such a crowning victory as the best show held outside the cities of New York and Boston. This is what Buffalo was. The oldest show goers said so, Mr. Davidson among the number, and no person who is competent to estimate the value of quantity and quality combined will deny it. It was fortunate for the Anarchists that the Buffalo management decided to recognize A. K. C. rulings. This spared them the pain of seeing the largest provincial show. If the entries—35 in all—of D. O'Shea and T. J. Farley, disqualified by the A. K. C., had been accepted, the show would have been the largest as well as the best that has ever been held, save by Boston and New York. The catalogue gave 532 entries, but a few of these were duplicates, and the correct number was probably about 525. Add to these the 35 that were returned and we have a total of 560, the best on record. Further than this, a large number of exhibitors sent word to the secretary of the National Dog Club advising him of the poor condition of their dogs, owing to the effects of the hot term, and expressing regret that they were unable to enter. My advice to the Anarchists, now that they have been made to realize that Buffalo and the N. D. C. are stronger than any rabid clique, is to change their methods and try to be men. Let honorable men be represented in council by honorable men.

The only drawback to the Buffalo show was the management, this, I regret very much to say, was anything but good. The catalogues were not out until the second day, no judges' books had been provided, the space allotted to the judging was neither large nor well fitted, and even Spratts' people seemed a little careless, especially in supplying water. The tents were packed with eager sightseers, and at certain hours of the day it was impossible to get near the dogs. There was a rumor that Mr. Robinson would advocate the erection of a building, on a large scale, for the next show. If this be done, and a small fee be charged for admittance, Buffalo will be the best paying exhibition in the country.

On Wednesday the secretary of the Syracuse show came up to try and persuade certain exhibitors to enter their dogs. This seemed a little strange in view of the fact that the entries for his show closed on Monday. The members of the National Dog Club decided to enter some of their dogs, and when the catalogue appears it will be seen that Syracuse would have been a complete failure without the support of the National Club. If the A. K. C. has not been paralyzed by the events of the past few days, it will realize two things, viz.: (1) That Buffalo has held a better show (Boston and New York excepted) than has ever been given under its rules, and (2) that Syracuse would have collapsed utterly without the timely aid of the National Club. This clearly proves that the National is stronger than the A. K. C. The busy little editor, who is as slippery as an eel that has been dipped in Gallipoli oil, cannot extricate the people who own him from the dilemma. It is quite true that "in the streets of Buffalo alone enough dogs run loose to fill a big building," but unfortunately for the little horse jockey, they were not entered. Out of the 525 entries Buffalo supplied but 47. Whereas, out of 462 at the last Philadelphia (A. K. C.) show Philadelphia gave 174, or nearly four times as many locals as Buffalo. No $5,000 argument can shake the truth of these statements. Buffalo was to test the strength of the two clubs; the stronger and more upright won, that is all. Instead of crowing over a vanquished foe, let the National Club members save Richmond as they have Syracuse, and then exert themselves to exterminate the insects that have eaten a way into the heart of the A. K. C. and made it a laughing stock of the dog-loving community, as well as an ash barrel for the refuse of all that is loathed by right-thinking and honest people.

MASTIFFS—(MR. WATSON).

Minting and Wacouta Nap represented champions, and both were in splendid condition. Minting's grand head and greater substance throughout made him an easy winner, although Nap was a worthy competitor. The open class for dogs was a hot one, with Mr. Moore's recent purchase Alonzo properly placed first. It was his debut, but I prefer not to criticise him until certain parties have stumbled over him. Ashmont Major, another new one, bred and exhibited by Dr. Perry, the gallant president of the National Dog Club, made a good second, although not the winner's equal in head properties. Benjamin Franklin, very highly commended at Boston and fully described in my report of that show, was well placed third, but was crowded by Brother, who is well known to all of your readers. Elm Place Jumbo, hc., was not on the bench when I called. Hero, also hc., was second to Wacouta Nap at Buffalo, 1887. Ashmont Hero, hc., is long in head, crooked in front and not sufficiently massive. Agrippa, c., begins to show age. Baldur, c., was first at Albany. He is not developing. In the class for bitches The Lady Phyllis, a specimen showing rare character and quality, scored an easy win. I will have more to say about her on a future occasion. Boss Lady Clare, second at Philadelphia, held the same position here; she was not in good condition. Lady Florence, third prize, has bad eyes, is plain in head and undersized. Linden Duchess, vhc., was third in the open class at Boston. Ilford Cambria, unnoticed, is too long from the eye forward, large in ear and was in bad condition. In the class for dog puppies, Rex, a son of Ilford Caution, was about the best. Like his sire he is heavy in ears, while his muzzle, unlike his sire's, is too long. Derbyshire Lad, by Minting out of a very ordinary bitch, was second. He is not the champion's equal in any one point. Wanda, defective in eyes, ears and expression, and not first-class either in skull or in muzzle, easily beat her three opponents in the corresponding bitch class. Twenty-nine entries all told. Quality excellent.

ST. BERNARDS—(MR. MASON).

Kastelhorn II., winner in the open class for rough-coated dogs, held the same position at Boston, but on this occasion was very closely pressed by Alpine Chief, a young and promising specimen from the Hospice Kennels. Kastelhorn was looking well, but Alpine Chief has evidently suffered considerably from the effects of the hot spell. His coat was looking badly, and he was many pounds too light in flesh. He has plenty of size and is good in head properties, but lacks in color, and in strength and straightness of forelegs. Meadowthorpe Enterprise, a new one, was third. With good hindquarters, more length of body and a better coat he would be a very hard one to beat. Crystal, a white and brindle son of the English champion, Guide, took the reserve. He is defective in muzzle, eyes, expression and in carriage of tail, the redeeming points being body and limbs. Monk D., vhc., is an undersized and rather plain-headed specimen, fairly good in other points. Leo, also vhc., has excellent color and markings, but his plain head beat him. Monte Rosa, unnoticed, would have been first had he been in fit condition for the show bench. A word to the wise is sufficient. Mr. Hopf's excellent specimen, Gemma, scored a rather easy win in the bitch class, with Chequasset Minna second and Lady Flories third. All of these are well known to your readers. If Lady Flories had been shown as she was at Troy, it is more than probable that she would have exchanged places with Minna. Lady Godiva, hc., lacks size and is not good in foreface. Barry, Jr., was the only rough-coated puppy shown. Although rather plain in head he won first and deserved it. Hector, the prince of smooth-coats, was alone in the champion class for smooth-coated dogs, and his kennel companion Daphne, who is equally well known, represented the ladies, Queen of Sheba and the peerless Leila being absent. Rigi, the typical, was my choice for the blue ribbon in the open class for dogs. Lodi, showing less character and quality, but more size, being second, with Chang, rather plain in head, but good in coat, third. I fear the Buffalo Hat Manufacturing Company made a mistake in entering St. Lawrence as a son of Plinlimmon and Belinda. The English champion has hitherto sired St. Bernards and not mastiffs from St. Bernards. Rigi's kennel companion, Thisbe, won in bitches, with Apollonia, first at Boston, second, and Beatrice, second at Troy, third. Thisbe's lack of size is always against her when she meets a good class, but her sweet quality took her to the front on this occasion, as it often has done before. Puppies, with the exception of Burton Belle, who is a daughter of Guide, were an indifferent lot and I withheld the prizes. Thirty-four entries. Quality of a high order in all but puppy classes.

NEWFOUNDLANDS—(MR. WATSON).

First in this class went to the only really good specimen that I have seen since Mayor of Bingley. Fairly good in head, strong in bone, first-class in back, loin and hindquarters, this son of Lord Nelson should prove a great boon to breeders in the States. Folly III., who is not his equal either in head, back or coat, was second, and New York Lass, who was first at Troy, Boston and Albany, came third. Three entries. Quality better than I have seen elsewhere this year.

GREAT DANES—(MR. MASON).

Hector, not first-class in head and lacking in size, won easily from Leo, who is short in head, wrong in expression and crooked in front, besides being faulty in stifles and hocks. Augusta won very easily in the bitch class. She outclasses her kennel companion in head, and shows more quality throughout. Frances, who took second, is very defective in fore-face, round in skull and has a bad expression, but she is stronger in quarters and limbs than Augusta. Four entries. Quality better than I usually find at American shows.

DEERHOUNDS—(MR. WATSON).

Chieftain, Ramona, Robber Chieftain, Highland Laddie, Theodora and Lassie were the winners, with Duncan and Thora vhc. Eight entries. Classes well judged. Quality superb.

GREYHOUNDS—(MR. WATSON).

The champion classes contained *la crême de la crême* of the breed in this country, and I indorse the award in favor of Balkis over that once great dog Memnon. Both were looking well, but Memnon's mouth is gone, and he now must make way for younger and more vigorous opponents. When shall we see another like him? That sweet bit of quality, Cassandra, represented the gentler sex. The judge did not handle the open dog class at all well; in fact, I have never seen Mr. Watson do so bad work. In my opinion, Highland Chief, third prize, was not only best in the class, but he fairly out-classed the first prize winner and beat second prize winner pointless. Hazelhurst, that is the name of the winner, is round in skull, defective before the eyes, not first-class in neck, shoulders nor in spring of ribs, and is very weak and stilty behind, showing scarcely any muscular development of quarters and thighs. Rialto, second prize, is not a show dog. He has wretched head, eyes and expression, is lathy and slab-sided, very bad in loin, and altogether wrong in hindparts. His elbows are twisted under him and he has not half enough bone for a dog of his inches. Highland Chief, while not first-class in head, is better than any other dog in the class in this respect; he is first-class in back and loin, and grand in quarters and second thighs. These are not his only good points, for he stands on a rattling good set of legs and feet. His defects are rather heavy shoulders, flatness in ribs and not sufficient bend in stifles. He is short in neck. I have an idea that it will not take him long to win his way to the champion class, and that when he gets there he will crowd or beat Balkis. I would have placed Highland Laddie, hc. second to Highland Chief, with Hazelhurst third. A description of Highland Laddie will be found in my Boston report. No fault could be found with the decisions in the bitch class. I preferred the second prize winner for the leading position, but it is a close thing between second and first, and there is plenty of room for difference of opinion. Catch Fly, third prize, is not first-class either before or behind the withers. I did not see Creole Belle, vhc. Lady Olivia, hc., is a white and black bitch, weak before the eyes, large in ears, straight behind, weak in knees, and her forelegs are not in good position. She would be improved by spring in ribs and by more bone. Stands on good feet. Fancy, hc., is a red of some quality. In skull, loin and in position of forelegs she might be much better; stands badly; lacks substance. Spider, hc., is defective in skull, muzzle, eyes, ears, expression, shoulders, quarters and tail; but she shows good breeding withal. Highland Lassie, hc., would probably have been higher in the list but for her poor condition. She was first in the puppy class at Boston. First in puppies was very properly awarded to Jebb, a light brindle showing some quality. He is fairly good in head and stands on average legs and feet. His prominent defects are flatness in ribs and lightness in loin. Second was given to a fawn and red dog by Muldoon's old Spring. He is first-class before the eyes, but is heavy in ears, rather shallow in body, flat in ribs and on loin, and is not quite right in the propellers; has a good killing neck, and stands on useful-looking legs and feet. Bell, the blue third prize winner, lacks in head and hindquarters. Beauty, hc., is rather plain in head, and not first-class either in shoulders or position of forelegs. King, unnoticed, is a strong, but rather coarse sapling. Barney, also unnoticed, is strong, but plain. Thirty entries, probably the largest number ever seen at an American show. Quality rather better than at New York.

SETTERS—(MR. DAVIDSON).

Rockingham, Cora of Wetheral and Fairy III. were the

entries in the champion classes for English. Rockingham, in fine condition, had a walk-over, and Fairy III. evidently knew better than to face Cora. That good dog, Roger, overlooked by New York judges, but finally placed in the position to which he was always entitled, won well in the open class for dogs. I had the pleasure of giving him the first blue ribbon he ever won. Locksley, a new one, was second. His head, while not bad, is a trifle plain, and his eyes are too light in color. In loin he is strong, but too long, and his hocks are too close, especially when in motion. Add to these defects a long and not correctly carried tail and a lack of substance throughout and you have a fair description of Mr. Davey's clean built and racy-looking son of Scottish Chief. In my opinion Mr. Davidson made a mistake in placing him second. Rollo, third prize, was, I think clearly entitled to the place. I need say nothing about this dog except that he was in good condition. Peveril, commended, is a rather promising young dog that will be heard from again. His eyes are not right, and he is rather light in loin and in bone. He shows lots of quality, but was out of condition on this occasion. I thought Smuggler, vhc., rather lucky in winning the card. He is very wide in front and crooked in forelegs, and is not right below the eyes. His redeeming qualities are fairly good head, strong back and loin, great bone and excellent stifles and hocks. Gene, hc., has a nasty, sour face, and is throaty, but there is no getting away from his excellent legs and feet. Don Petrel, c., is defective in muzzle and tail, light in bone, and too long and sloping in pasterns. Spot B., unnoticed, is a heavy topped dog, with a light lower half and bad eyes. Teddy, unnoticed, is coarse, plain in head and lacking in character. William Shears, also unnoticed, is a big, clumsy white and lemon dog, that was in no condition for the show bench. Dan Monroe and Bruce lack quality throughout. The bitch class was headed by the New York and Boston winner, Haphazard, and her kennel companion, Saddlebags, who is equally well known, was third, the pair being split by Countess Daisy, a new one. This is a very deceiving bitch. She shows intense quality throughout, but in my opinion lacks strength in every point where it is most needed. Her neat and rather well-bred looking head is well set to a long, clean and elegant neck, and her shoulders are better than average. In spring of rib she is defective, the loin is inches too long and as flat as a billiard table, whereas her hindparts are much too narrow, especially the second thighs. She is slightly confined in elbows and has not enough bone for me. She has a lovely coat, makes the most of herself when under judgment, and was in tip-top condition. I thought Saddlebags an easy winner of second, with Canadian Lassie, vhc., and Calico, c., about equal for third place. These bitches, also Rose Mandan, vhc., have been fully described by me on previous occasions in these columns. Blue Belton, c., has gooseberry eyes, is snipy in muzzle and peaked in skull. Her forelegs are not in good position, and she would be improved by more bone and bend in stifles. Pearl Mandan, hc., was described in my Pittsburgh report. Fannie Gladstone, hc., has a neat, clean-cut head, and is good in legs and feet. She is faulty behind the short ribs, has a heavy neck and lacks in coat, which is scanty. New York Beauty, c., is not good in head, shows throatiness, does not stand up well at the pasterns, and is not first-class in hindquarters. Frolic Bondhu, hc., is snipy, light in bone and a trifle sway-backed. She has fairly good skull, loin, quarters, legs and feet. Apology, c., is out of coat. First in dog puppies went to a rather promising youngster, Brighton Dick by name. If he does not develop coarseness in head and neck he will be heard of again. He stands on most excellent forelegs and feet, and has a very promising body. Liddesdale II., a full sister to the winner in the dog class, was first in bitches. She is not so good as he, being light in eyes, defective in muzzle, wide in skull, not correct in set of forelegs, bad in tail, rather light in bone and not level in back; in other points she is a good one. Marcella Glad stone, second prize, must develop improvement at both ends before she can win in the all-age class. Juno, third prize, is not right below the eyes, has a long tail, and shows weakness in knees; the last defect may be outgrown. She has promising body. Forty entries. Quality about the same as at New York.

Chief and Tim were the champion Irishmen, the latter, not in good coat, won. Rover, who was first at Toledo, scored again in the open class. He is a grand-bodied dog, with a bad head. The cheeks are full instead of being flat, the muzzle is too short, eyes are light and ears set high. In my opinion an Irish setter, above all others, must have a fairly good head to be able to win on the bench. His head shows his breeding, character, and the right to be considered a good one. For these reasons my choice would have been either Larry S., who was third, or the highly commended Redstone. Larry S. was second at Philadelphia and Redstone first at New Haven. They were fully described in my reports. Ned, placed second, held the same position at Troy and New Haven; he was looking well. Jack Malone, vhc., is too wide in skull; ears set too high; muzzle not quite right; chest should be deeper; tail defective; back and loin fairly good; color better than average. A raw-looking young dog, that needs furnishing. Gordon, c., is not a show dog. Head, coat and color decidedly bad. Bitches were well judged, with Berna, second at Philadelphia and New Haven and first at Utica and Washington, at the head of the class. Rosie, a well-bred looking daughter of Tim and Yoube, was a good second, although her poor stern and lack of condition were dead against her. Belle Ida, second at Danbury, and noticed in my New Haven report, was third. There was a large entry in the puppy class and it was thought advisable to divide it by sex. Both the first and second in the dog class are too houndy in head and are developing throatiness. The one that I shall look for in the future is Elcho Fitz Maur, a five-months-old son of Elcho, Jr., and Maggie H. He was handicapped owing to lack of age and size, but will, I fancy, develop into the best dog in the class. In the bitch class the issue was never in doubt, Mr. Max Wenzel's Bonny coming to the front with several points to spare. She is not quite first-class in head, but has good body, legs and feet, and carries herself gaily. Coe, second prize, is light in eyes, full in forehead and long in tail; promising in other points. Florie II., third prize, is plain in head, lacks style and will not, I fear, come right in color. Twenty-seven entries. Quality better than at A.K.C. show held at Philadelphia.

Beaumont and Rose were the champion Gordons. The handler of the latter not caring to tackle Beaumont, Mr. Morris's good dog had a walkover. Little Boy had only Shot to beat in the open class for dogs, and this he did handsomely. The bitch class brought out a new one, Meadowthorpe Belmont, who is a long way the best bitch I have ever seen in America. As some very queer reports will be written on her during the next few weeks, I will hold over my criticism until a future occasion. Lottie, placed second, was first at Cleveland and second at Detroit. She was closely pressed by Meadowthorpe Heather Model, a bitch that I will have more to say about when she next comes under my notice. Belle Stephen, a rather lightly built puppy showing quality, was vhc., and later on in the day scored a rather easy win in the puppy class. Don, second in puppies, has only a moderate head, is straight behind, rather coarse, and not good in lip markings. Pete, third prize, has a rather plain face, is long and straight from the hocks down, has washy color, with white markings on breast and toes. Twelve entries. Quality better than at either Boston or New York.

FOXHOUNDS—(MR. WATSON).

There were some very useful-looking dogs in this class, prominent among them being Viscount, Judge and Grover, who, however, only competed for the special. First in the dog class went to Pride of Hornell, who is lacking in coat and brush, rather weak in knees and defective in feet and hindquarters. Dan T., placed second, is also lacking in coat and brush, and is not good behind the short ribs. His head is only moderate. Gar, third prize, would have been distanced by Viscount and Judge, if these dogs had competed. Equal first prizes were awarded in the bitch class to Lady Naylor and Countess. Her ladyship is plain in head, wide in front, heavy in shoulders, not quite straight in front and lacks in coat and brush. Countess is of the bloodhound type, and with a little more wrinkle and strength in limbs she would score in the bloodhound class. Mattie Hunter, third prize, is light in bone, scanty in coat, not first-class in feet and shows pointer character. The balance of the classes were workmanlike-looking dogs. Twenty-four entries. Quality, without the Wadsworth dogs, about average. With these dogs in competition it would have surpassed anything that have seen this year.

SPANIELS—(MR. WATSON).

Mr. Wilmerding was wise in not placing Newton Abbot Lady in competition with Newton Abbott Darkie. Messrs. Oldham and Willey's grand dog would have won anyway. The open class for field dogs found Newton Abbot Lord, the Birmingham winner of 1886, well placed first, with Negro, a leggy and rather plain-headed specimen, second, and Count Obo third. The last named is faulty before the eyes, stands rather high and is light in bone. Competition in the corresponding class for bitches was very keen, the competitors being Brideford Negress, Miss Newton Obo and Lady Abbot, all well known and prominent winners. In my opinion Miss Newton Obo, placed third, is very many points ahead of Lady Abbot. True, Miss Newton Obo shows too many cocker attributes, but her vastly better muzzle and stronger limbs should, I thought, have made her a very easy winner over Lady Abbot. Between Negress and Miss Newton Obo it is a close call. Mr. Morris' bitch has points the best of it in head, length of body and straightness of forelegs, whereas in bone, chest, back, loin and substance Miss Newton Obo is vastly superior. President and Beau represented liver colored dogs; both were winners at Philadelphia. Lady and Brideford Ruby, also well known, were the winners in the corresponding bitch class. In the class for any other color Newton Abbot Laddie, first at Birmingham, Crystal Palace and Warwick, won well from Adonis, who was first in the puppy class at New York. Laddie's defects are in head and forelegs, whereas Adonis is faulty in head, muzzle, position and formation of forelegs, and is rather light in bone. Hornell Mikado, placed third, is good in body, but deficient in head properties. Charley II., if not handsome, certainly has the appearance of a workman. He is rather light in bone, is not quite right before the eyes, and the color of his eyes is too light. I liked him fully as well as the third prize winner. Hornell Sport, unnoticed, is too defective in head and ears for show purposes. I was unable to find the winner in the bitch class.

Brant, Doc and Hornell Silk, the old time champion cockers, were all on hand, and competion between the two first named was keen. After giving them a very careful examination the judge decided in favor of Brant. Judges are divided in their opinions of the merits of these dogs. Before Brant filled out in cheeks I thought him a better dog than Doc, but it is probable I would reverse the decision to-day. Hornell Silk, a useful looking one, is not up to the form of Doc and Brant. My old favorite, Miss Obo II., had a walkover in the next class. Juno W. faced the judge, but was found to be over weight and was disqualified. Under weight or over, she cannot beat the old champion. I shall have to give the judge a raking over his awards in the open classes for blacks. Baby Obo first, Sir Walter Scott second and Giffee third I can't stand. It seemed to me that Jersey, vhc., was points the best dog in the class. Further than this, I consider him the best cocker dog in America. For second place I liked Baby Obo, and Giffee would have been my choice for third. I thought Sir Walter Scott was outclassed in the company he met on this occasion. Your readers will find a full and careful criticism of Jersey and Baby Obo in my Boston report. Sir Walter Scott has yellow or gooseberry eyes, his ears are set high and he is very defective from the eyes forward, besides being wrong in shoulders and in set of forelegs. Giffee is also defective in muzzle, but not to the same extent as Sir Walter Scott, and he is neither straight in front nor strong in knees. How the judge got Fritz, reserve, ahead of Jersey I cannot tell. He has a very bad head, light eyes and curly coat. I would not have given him a commended in this very excellent class. In bitches Mooress was placed over Chloe W. and Psyche. I thought either of the last could give her many points and a good beating into the bargain. She is apple-headed, light in eyes, snipy, light in bone and bad in color. I say bad in color, for the black is intermixed with white all over the body. Her redeeming qualities are excellent body, hindquarters, stern and gait. Chloe's defects were noted in my Boston report. Psyche is a fairly good bitch, and one that, if shown, will do more winning. She is not quite right before the eyes, nor clean-cut in stop, and is light in bone; but in other points is good. I would have placed her second. It seemed to me that Mooress and Lady of the Lake were about equal for third place. Nina, reserve, has a bad muzzle, is light in bone and rusty in coat, but has fairly good body and quarters. Bonita, vhc., could not be found when I called upon her. Either Mr. Watson or I have changed our views about cockers, and we must agree to disagree over the awards in the open classes for blacks. If he is right, time will indorse him. If I am wrong, Mr. Watson won't forget to remind me of it. Little Red Rover, a hard one to beat in his class, won the champion prize for cockers of any other color than black, and Robin, who was first at New York, Philadelphia and Boston, was rightly placed at the head of affairs in the open class for dogs. Rocks, awarded second, was not his equal in skull, muzzle, body or limbs, and is much too leggy. Bitches saw Hornell Fancy and Hornell Buff first and second, but they must have been crowded by Vermillion, who is about as good as either. Clip and Pearl, vhc., are too leggy and light in bone, and none of the winners are good in head. Duchess III. and Colleen O'Donoghue, wrongly entered as Jess, had a sharp tussle in the Irish class. The winner has the best of it in head and eyes. Both are weedy and neither was in good coat. Seventy-one entries. Quality decidedly better than at New York and slightly better than at Boston; in fact, the field spaniels and cockers were the best lot ever seen in this country.

POINTERS—(MR. DAVIDSON).

Much interest was shown in the judging of these classes. The heavy-weight dogs were the first to make their appearance before the popular judge from Michigan. Around the ring the opinion seemed to be that Fritz, who had won first and special for all classes at New York, would prove the winner, but the good thing did not come off, and the winner turned up in a rank outsider, Duke of Vernon by name. The new comer is a strapping white and liver ticked, by Glendale out of Spotless, and is owned by Mr. Gardner, who is also the owner of the English setter Roger. He is a big, handsome dog, with good back and ribs, strong loin, great quarters and plenty of bone. His head is of good length, clean-cut and showing true pointer character. In color of eyes and in expression he might be much better, and his ears are not set just right. His neck is truly formed, but it is not quite clean. In shoulders, and position of forelegs he might be better, and his stifles and hocks are somewhat straight. He has a beautiful stern and it is well carried, and he stands on straight pins, which are set into good feet. Taken all in all he is unquestionably one of the best pointers in this country, and in my opinion he beat Fritz with some points to spare. Brake, the best of Bang Bang's get, and a decidedly better dog than his sire, was third, with Trinket's Cash he. The last named was second at Toledo. This class had much merit. Christmas Vic and Molly Faust, first and second in heavy-weight bitches, need not be described again. I would have reversed the decision. Devon Nell, the best bitch in the class, is suckling puppies and consequently not in condition to be shown. Fashion, the son of Donald and Revel III., who was first in the puppy class at Boston, 1887, was well placed first in the light-weight class for dogs. He has grown wrong in head and shoulders and is not first-class behind the short ribs; but he still retains character and quality. Bruce Beaufort, a rather plain-headed son of Robert le Diable, with a thin tail, light quarters and not the best of feet, was second and Meadowthorpe Duke, first at Toledo, third. The last named is a rather raw-looking white and lemon, with black nose, defective head and light loin; in other points will do to show again. Croxtine, another Robert le Diable dog, was vhc. He has a plain head, light eyes, light loin and quarters, thin tail and badly set forelegs. He is also lacking in bone. Count Beaufort, hc., is plain in head, throaty, lathy, light in loin and quarters, thin in tail and defective in feet. Robert le Diable, Jr., also hc., is of similar type. Vanderbilt, c., was second at New York, 1887, on which occasion you considered him a rather lucky dog. In the corresponding bitch class Molly Beaufort, lacking substance, but showing quality, was properly placed first, while second and third were given to useful-looking specimens that would probably do better service in the field than on the bench. First, second and third in the puppy class went to three heavy-headed sons of Bang Bang and Christmas Vic. All have good legs and feet, but have inherited the short throaty neck of their sire. Thirty-two entries. Quality better than average.

COLLIES—(MR. MASON).

Guelph was my first choice in the class for dogs. This is a new-comer and it will always take a good one to beat him. He has good head, plenty of size, stands on strong legs and well formed feet, is good in body and carries an excellent brush. He lacks in undercoat, and topcoat should be harder. He also scored an easy win in the puppy and novice class. Clipper was out of coat or would have made a better fight for the blue. Kenilworth, third prize, is a useful-looking one that is spoiled by a rather plain head and bad eyes. Like all of Mr. Watson's dogs, and others shown on this occasion, he was out of coat. Meadowthorpe Reality, hc., would have been higher in the list, but for his ragged appearance. Royal Monarch has lots of coat and it is of fair quality, but his ears and general contour are against him. I thought Meadowthorpe Parole an easy winner in the bitch class. She is not quite right before the eyes, and her coat might be much better, she has good expression, excellent ears, fairly good body and stands on capital legs and feet. Belle, first at Utica, was second. She, too, was out of coat, but I doubt her being able to beat the winner when she is in full bloom. Her ears will not, I fear, come right. Meadowthorpe Blueberry Girl, third prize, is a well built specimen with good ears. She is too strong in head and will not, I think, have enough coat. She won first at Cincinnati. Mavis who is brim full of quality, would be a smasher if her ears, shoulders and back were right; but they are all wrong. Her type was not equaled by any collie in the show. Ailsa, vhc., is round in skull and not right in coat. Flora, vhc., held the same position at Boston. Prince Charlie, second in dog puppies, beat Sir Wallace of Nesseldown, on account of his better type and greater quality. His condition was dead against him. Sir Wallace is too low and chuncky, and is not first-rate either in head, ears or hindparts. He has lots of coat, but I feel quite sure that the Prince will make the better collie. Dean, a pretty daughter of Bendigo, was first in the bitch class. Her ears and coat will never be right. Parton Ella, the best coated one in the class, was second. Her ears and hindparts are the more prominent of her defects. The vhc. bitches should make a mark as breeders, more especially the daughter of Sefton and Mavis. Mr. Wade's old standby, Sir Lucifer, had the class for bobtails to himself. He is as well known as a Pittsburgh silver (?) medal. Forty-one entries. Quality better than average.

BULLDOGS—(MR. MASON).

Mr. Thayer's renowned winners, Robinson Crusoe and Britomartis, took the champion prizes without competition. Heald had both in first-class condition. The open class for dogs had much merit and gave me some trouble. Portswood Tiger proved the winner. He is a grand bodied dog, with good shoulders and well placed legs, but I don't quite like either his skull or his somewhat pinched foreface. His condition reflected credit on his owner. Before coming to this country he won first at Portsmouth, Warwick, Brighton, Birmingham and Barn Elms, Hillside, Mr. Thayer's old winner, but now owned by John P. Barnard, Jr., was a handsome second, and might have won outright if he had been in equally good condition. Quasimodo, third prize, who has improved considerably since last year, was crowded by Remus and Calaban, both of which were awarded vhc., and are well known. Seven entries, all of which have won a number of prizes. Quality of high order.

DACHSHUNDE—(MR. MASON).

Vixen, first in this class, is a little red bitch, with a rare good skin, but she is too short in head and ears, is light in bone and lacks in crook and length of body. Hilda, second, has more length than the winner, but she knuckles over badly and is tight in skin. Combat, vhc., shows too much daylight under him, is not first-class in head and stands badly in front. Four entries. Quality, as is always the case at American shows, bad.

BEAGLES—(MR. WATSON).

Fitzhugh Lee, in great form, was the winner in the champion dog class, with Bonnie, who is equally well known, first in bitches. With the decision in the open class for dogs I cannot agree.

The judge took a great deal of pains with the class and was at least consistent in awarding the prizes to the two light-weights, Banner Boy and Bugler. In strength of limbs, length of body, and in coat and brush they are not of the sort I like. Frank, c., who was first at Boston and New Haven, is decidedly more to my liking, and I would have placed him first, with Royal Krueger, who was third, second. The bitches were not quite so good as the dogs, and I thought the judge hit the right nail on the head when he placed Mabel II., the New York winner, first. True, she has developed considerable throatinesss, but she is vastly superior to the second prize winner in ears, coat and brush, and is not so long cast. Una, second at New Haven, was vhc., with Betty, who is long cast and not right in ears, third. I did not see anything in the puppy classes that is likely to reach the champion class. Twenty-four entries. Quality much above the average.

TERRIERS—(MR. MASON).

That lucky little rascal, Belgrave Primrose, scored another win in the champion class. Had I judged him on all occasions, it is probable he would still be in the open class. He has beaten dogs that were twenty points above his form, but his present owner had nothing to do with the lottery-box. Richmond Olive, beautiful as ever, was first in bitches; and in the open class for dogs Mr. Thayer scored another win with that sterling terrier Raby Mixer. Luke and Reckoner, from the same kennel, took the other prizes, followed by the London and Toronto winner, Venator. The last named has

lots of room for improvement in head, ears, shoulders, forelegs, loin and coat, but shows character through all his defects. Of Mr. Thayer's exhibits I need only say that all were in splendid condition, and that Raby Mixer looked better than ever he has since he came to this country. The master of Hillside entered Richmond Dazzle, Princess, Lyra and Franklin in the bitch class, and made the mistake of thinking Princess and Lyra good enough to win. Richmond Dazzle was kept at home, and Mr. F. C. Wheeler's Rosa Canina, who is a first prize winner at Liverpool, Oxford, Whitby and Dublin, beat the other two for premier honors. While this bitch is not first-class, she is of a useful sort, and should do some winning for the London kennel. She is rather long-cast, light in bone and not quite right in head, ears and eyes. I do not like Princess's fore-face and eyes, but she had no trouble in beating the light-boned, weak-faced and scantily-coated Lyra. There was nothing first-class among the puppies. The wire-haired exhibit was about the best that has been seen in this country, although there was really nothing first-class among them. If Chagrin was as good in shoulders, legs and feet as he is in other points he would have won. Daredevil and Rat Trap, the Saratoga winners, took the money. Thirty entries. Quality better than average.

Mr. Dole had matters all his own way in the bull-terrier class. The winners are well known to your readers. Eleven entries. Quality moderate.

Black and tans were probably the best class ever seen in this country. Vortex, fully described in my Boston report, was first, with Jack, a Toledo winner, second. The last named shows slight coarseness and is defective in fore face. King, vhc., is also deficient in head properties. The competition between Desdemona, Nanon, Gypsy Queen and Squaw was very keen. Gypsy Queen and Squaw were given vhc., with Desdemona first and Nanon second. Nanon has the best of it in head, but so vastly superior is Desdemona in shoulders, hindparts and tail that I placed her first. Gypsy Queen lacks in head, shoulders and in color; the other three are well known. Safety, the winner at St. Paul, Milwaukee, Utica and Philadelphia, was commended. She was outclassed in this company. Ten entries. A number of exhibitors who had noted the empty benches at the Long Island Fox-Terrier Show, held at Saratoga, expressed surprise at the quality in these classes.

Erin, a new one, was first in Irish terriers. He is of a good sort, although not first-class neither in head nor shoulders. Judy, faulty in head, too flat in ribs, rather shallow, and with badly carried ears, was second. Sandycroft Vim was absent. Three entries. Quality indifferent.

Pansy, Mr. Naylor's really good Dandie bitch, won the champion prize in her class, and the open class for dogs introduced me to the only first-class male specimen that has been exhibited in this country. This is no £5 Border-Wang, but a sterling terrier that can win in any company or under any judge. Border Clinker, the first prize winner at Boston and Cincinnati, stands too high and is not equal to the winner neither in muzzle, skull, eyes, ears, neck, body nor limbs. Bonnie Briton, vhc., is a prominent winner, well known to readers of this paper. Lady Wallace, second at New York and Boston, and described in your reports of those shows, was first in the bitch class, but owed the position to Rosalind's bad condition. Mr. Naylor's bitch had a swelling, the size of a duck's egg, on her jowl, and being out of coat as well, was, I think, fairly beaten. The winner is not first-class in head or body, and her head and ear color is decidedly wrong. She, too, was out of coat. Rosalind is much below the great form of the winner in the dog class. Ford Lass, vhc., is wrong in head and coat, and lacks the strength of a typical specimen. Seven entries. Probably the best lot of Dandies ever seen together in this country.

Skyes were a grand lot, and I divided the class by sex. Gladstone Boy, the Philadelphia winner, was first in dogs, but owed the position to the good form in which he was shown, rather than to structural superiority over one or two others in the class. I don't quite like his head, and his face coat is too short. Drollie, placed second, is not straight in coat and carries his tail too high. Ben, vhc., lacks in head, coat and length. Claymore, unnoticed, was out of condition or would have won. First in bitches went to Meadowthorpe Coila, a beautiful specimen, with good head, plenty of length, nice level top and a coat of exquisite texture. She is by many points the best prick-eared bitch that I have seen in this country. Kirkella, twice a winner at Birmingham and the Crystal Palace, was second. When this bitch is shown in good condition there will be an interesting contest between the two. Colleen, hc., has neither the head, coat nor length of body to place her on equal terms with the winners. Nine entries. Quality decidedly better than at any other show held in this country.

Mr. Naylor took all the prizes but one for Scotch terriers with his well known team. His winner in the open bitch class had a very narrow shave, and if Meadowthorpe Glen Ettle had been in good coat the decision would probably have been reversed. The Meadowthorpe Kennels' representative had all the best of it in chest, length of fore-face and in formation and position of ears. Old Duchess, with her plain head, was outclassed by the first and second prize winners. Six entries. Quality as good as has ever been seen in this country, being better than at Boston and decidedly better than at New York.

In the class for Yorkshire dogs, Whiskers, who is short in body-coat as well as in whiskers, and too light in color, was an easy winner of first, while Napper, who was second at Saratoga, held the same position here. He is bad in head, coat and in color. In bitches there was little to choose between Meadowthorpe Fairy and Fannie. Fairy's better head won her the prize; in other points they are nearly equal. Dolly, the Boston and New York winner, was absent. Three entries. Quality as it always is at American shows. Topsy, a moderate black and tan, was the winner in the toy class, with Punch, a badly coated Yorkshire, second, and Manzanita third. Four entries. Quality decidedly bad.

PUGS—(MR. MASON).

The winners in these classes, with the exception of Royal Duke, placed third, are well known. Royal Duke, who is winner at Barn Elms, Darlington and Scarborough, England, must have met a very ordinary lot of dogs at those shows. There are twenty or more in this country that can beat him. He is very defective before the eyes, is pounds too heavy and is not clear in color. Seventeen entries. Quality equal to Boston and New York.

TOY SPANIELS—(MR. MASON).

Roscius, Hazel and Princess Kate, who are well known, won in Prince Charles class. The New York champion outclassed his competitors in chop, lay-back, eyes, skull, body, strength of limbs and true toy spaniel character. Seven entries. Quality about average. King Pippin and Little Banjo, winners in the Blenheim class, are well known to all show-goers. Cherry, unnoticed, tried hard for a card, but as I do not award prizes to cripples, he was left out in the cold. Blen was absent. Four entries. Quality about as usual.

ITALIAN GREYHOUNDS—(MR. MASON).

I withheld first for want of merit and awarded second to a rather large and coarse specimen. Four entries. Quality bad as usual.

MISCELLANEOUS AND MEXICAN HAIRLESS.

The best black retreiver that I have seen in this country was first in the miscellaneous class, with a fairly good harrier second. The first prize Mexican hairless has a good skin but is defective in head. Seven entries. Quality somewhat better than average. CHAS. H. MASON.

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* E. H. Moore's Minting. *Bitch:* No entries.—OPEN—*Dogs:* 1st, E. H. Moore's Alonzo; 2d, Dr. J. F. Perry's Ashmont Major; 3d, T. C. Gram's Benj. Franklin. Very high com., C. Porter, Jr.'s Brother. High com., L. D. Ely's Elm Place Jumbo, Buffalo Hat Manufacturing Co.'s Hero and H. J. Behrend's Ashmont Hero. Com., R. Westlake's Agrippa and W. Wade's Baldur. *Bitches:* 1st and 3d, E. H. Moore's The Lady Phyllis and Lady Florence; 2d, C. Porter, Jr.'s Boss's Lady Clare. Very high com., J. Cole's Linden Duchess.—PUPPIES—*Dogs:* 1st, J. L. Hope's Rex; 2d, G. M. Diven's Derbyshire Lad. *Bitches:* 1st, J. L. Hope's Wanda; 2d, withheld.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—No entries.—OPEN—*Dogs:* 1st, W. H. Walbridge's Kastelhorn II.; 2d and reserve, Hospice Kennels' Alpine Chief and Crystal; 3d, Meadowthorpe Kennels' Meadowthorpe Enterprise. Very high com., B. S. Deering's Monk D. and E. A. Rockwood's Leo. *Bitches:* 1st, Hospice Kennels' Gemma I.; 2d, Chequasset Kennels' Chequasset Minna; 3d, J. Marshall's Lady Flories. High com., S. H. Rockwood's Lady Godiva.—PUPPIES—*Dogs:* 1st, A. Laidlaw's Barry, Jr. *Bitches:* No entries.—SMOOTH-COATED—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitch:* Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, J. W. Dunlop's Rigi; 2d, Chequasset Kennels' Lodi; 3d, A. R. Hemmer's Chang. *Bitches:* 1st, J. W. Dunlop's Thisbe; 2d, J. Kenyan's Apollonia; 3d, J. P. Davis's Beatrix. Very high com., W. H. Walbridge's Burton Belle.—PUPPIES—*Dogs:* Withheld. *Bitches:* 1st, W. R. Walbridge's Burton Belle.

NEWFOUNDLANDS.—1st, Meadowthorpe Kennels' Meadowthorpe Prince George; 2d, W. W. Silvey's Follie III; 3d, E. H. Morris's New York Lass.

GREAT DANES.—*Dogs:* 1st, Savage & Farnum's Hector; 2d, W. C. Boller's Leo. *Bitches:* 1st and 2d, Savage & Farnum's Augusta and Frances.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain. *Bitch:* J. E. Thayer's Ramona.—OPEN—*Dogs:* 1st, 2d and very high com., J. E. Thayer's Robber Chieftain, Highland Laddie and Duncan. *Bitches:* 1st, 2d and very high com., J. E. Thayer's Theodora, Lassie and Thora.

GREYHOUNDS.—CHAMPION—*Dog:* H. W. Huntington's Balkis. *Bitch:* H. W. Huntington's Cassandra.—OPEN—*Dogs:* Hornell-Harmony Kennels' Hazelhurst; 2d, Rockwood Greyhound Kennels' Rialto; 3d, H. W. Huntington's Highland Chief. Very high com., H. P. Thompson's Volunteer. High com., L. H. Broome's Highland Laddie. *Bitches:* 1st and high com., Hornell-Harmony Kennels' Harmony, Lady Olivia and Fancy; 2d, G. Bell's Dashing Maid; 3d and very high com., Rockwood Greyhound Kennels' Catch Fly and Creole Belle. High com., P. Horn's Lady, L. H. Broome's Highland Lassie and T. P. Hebblewhite's Spider. *Puppies:* 1st, A. Spies's Jebb; 2d; R. S. Lewis's Thracian; 3d and high com., P. Horn's Bell and Beauty.

POINTERS.—LARGE—CHAMPION—No entries—OPEN—*Dogs:* 1st, L. Gardner's Duke of Vernon; 2d, C. W. Littlejohn's Fritz; 3d, S. W. Pentz's Brake. Very high com., J. B. Downing's Trinket's Chief. High com., C. G. Stoddard's Trinket's Cash. *Bitches:* 1st, G. F. Gray's Christmas Vic; 2d, Hollywood Kennels' Mollie Faust.—SMALL—*Dogs:* 1st, J. Pentz's Fashion; 2d and very high com., R. Westlake's Bruce Beaufort and Crestline; 3d, Meadowthorpe Kennels' Meadowthorpe Duke. High com., R. Westlake's Robert le Diable, Jr., and Count Beaufort. Com., J. M. Aldrich's Vanderbilt. *Bitches:* 1st and 3d, R. Westlake's Molly Beaufort and Beau Beaufort; 2d, Mrs. C. A. Painter's Nanon. Very high com., C. W. Littlejohn's Patti Ross. High com., H. Bright's Jean. Com., Warner & Hamilton's Hannah.—PUPPIES—*Dogs:* 1st, 2d and 3d, G. F. Gray's Christmas Bang, Prince Bang and Startop Bang. *Bitches:* Withheld.—NOVICE CLASS—1st, R. Westlake's Bruce Beaufort; 2d, Meadowthorpe Kennels' Meadowthorpe Duke.

ENGLISH SETTERS.—CHAMPION—*Dog:* F. Windholz's Rockingham. *Bitch:* F. Windholz's Cora of Wetheral.—OPEN—*Dogs:* 1st, L. Gardner's Roger; 2d, T. G. Davey's Locksley; 3d, G. R. Wright's Rollo. Very high com., A. A. Francis's Smuggler. High com., T. M. Aldrich's Geno. Com., F. W. Durkee's Peveril and R. Meyer's Don Petrel. *Bitches:* 1st, 3d and com., E. W. Durkee's Harpzard, Saddlebags and Calico; 2d, T. P. Hebblewhite's Countess Daisy. Very high com., G. W. Neal's Daisy Foreman, T. G. Davey's Canadian Lassie and R. B. Morgan's Rose Mandan. High com., J. P. Gray's Frolic Bondhu, R. B. Morgan's Pearl Mandan and J. M. Fronefield's Fannie Gladstone. Com., T. G. Davey's Blue Belton, L. Miller's Apology and Dr. J. H. Myer's New York Beauty.—PUPPIES—*Dogs:* 1st, T. G. Davey's Brighton Dick. *Bitches:* 1st, T. G. Davey's Liddesdale II.; 2d, F. M. Shelley's Mascella Gladstone; 3d, R. A. Spalding's Juno.—NOVICE CLASS—1st, T. P. Hebblewhite's Countess Daisy; 2d, B. F. Lewis's Polly.

IRISH SETTERS.—CHAMPION—*Dog:* M. Wenzel's Tim. *Bitch:* No entries.—OPEN—*Dogs:* Meadowthorpe Kennels' Rover; 2d, J. F. Wolf, Jr.'s Ned; 3d, E. Maher's Larry S. Very high com. and high com., A. W. Pearsall's Jack Malone and Redstone. Com., J. Dickson's Gordon. *Bitches:* 1st, E. K. Kirk's Berna; 2d, M. Wenzel's Rosie; 3d, A. W. Pearsall's Belle Ida.—PUPPIES—*Dogs:* 1st and 2d, A. W. Pearsall's Connelly and Redstone, Jr.; 3d, H. B. Anderson's Maxy Cobb. Very high com., E. A. Pierson's Elcho Fitz Maur. High com., W. C. H. Ferris' Joe. *Bitches:* 1st, M. Wenzel's Bonny; 2d, G. Ferris' Joe; 3d, F. Davis' Florie II. Very high com., H. B. Anderson's Elcho's Girl.—NOVICE CLASS—1st, Meadowthorpe Kennels' Rover; 2d, A. W. Pearsall's Connelly.

GORDON SETTERS.—CHAMPION—E. W. Morris' Beaumont. OPEN—*Dogs:* 1st, S. G. Dixon's Little Boy; 2d, E. W. Morris's Shot. *Bitches:* 1st and 3d, Meadowthorpe Kennels' Meadowthorpe Belmont and Meadowthorpe Heather Model; 2d, F. W. J. Ball's Lottie. Very high com., Mrs. J. E. Dager's Belle Stephen. *Puppies:* 1st, Mrs. J. E. Dager's Belle Stephen; 2d, A. J. Lessler's Don; 3d, C. F. Rockwell's Pete.

FOXHOUNDS.—*Dogs:* 1st, Miss Mary Robinson's Pride of Hornell; 2d, Hornell-Harmony Kennels' Dan T.; 3d, Associated Fanciers' Gar. *Bitches:* Equal 1st, Miss Mary Robinson's Lady Naylor and Associated Fanciers' Countess; 3d, W. C. Crandall & Co.'s Mattie Hunter. *Puppies:* Withheld.

FIELD SPANIELS.—CHAMPION—Oldham & Willey's Newton Abbot Darkie.—OPEN—BLACK—*Dogs:* 1st, Oldham & Willey's Newton Abbot Lord; 2d, E. W. Morris's Negro; 3d, R. G. Wilkie's Count Obo. *Bitches:* 1st, E. W. Morris's Bridford Negress; 2d and 3d, Oldham & Willey's Lady Abbot and Miss Newton Obo.—LIVER—*Dogs:* 1st and 2d, E. W. Morris's President and Beau. *Bitches:* 1st, E. W. Morris's Lady; 2d, W. T. Paine's Bridford Ruby.—ANY OTHER COLOR—*Dogs:* 1st, Oldham & Willey's Newton Abbot Laddie; 2d, G. H. Bush's Adonis; 3d, Hornell-Harmony Kennels' Hornell Mikado. High com., Brant Cocker Kennels' Shaun Rhu. *Bitches:* 1st, withheld; 2d, R. W. Metcalf's Lady.

COCKER SPANIELS.—BLACK—CHAMPION—*Dog:* Brant Cocker Kennels' Brant. *Bitch:* Oldham & Willey's Miss Obo II.—OPEN—*Dogs:* 1st and very high com., Oldham & Willey's Baby Obo and Jersey; 2d, G. Bell's Sir Walter Scott; 3d, F. E. Curtis's Giffer. Reserve, A. M. Ecclestine's Fritz. Very high com., Brant Cocker Kennels' Mike. *Bitches:* 1st, Associated Fanciers' Mooress; 2d, J. C. Eccles's Psyche; 3d, Oldham & Willey's Chloe W. Reserve, Simcoe Kennels' Nina. Very high com., M. O. Hendrie's Lady of the Lake, Hornell-Harmony Kennels' Hornell Martha, and Brant Cocker Kennels' Bonita.—ANY OTHER COLOR—CHAMPION—Brant Cocker Kennels' Little Red Rover.—OPEN—*Dogs:* 1st, A. Laidlaw's Robin; 2d, Brant Cocker Kennels' Rocks; 3d, Hornell-Harmony Kennels' Hornell Dick. *Bitches:* 1st, 2d and high com., Hornell-Harmony Kennels' Hornell Fancy, Hornell Buff and Beauty; 3d, G. Bell's Vermilion. Reserve, A. Laidlaw's Senora. Very high com., Brant Cocker Kennels' Pearl.—PUPPIES—*Dogs:* 1st, G. Bell's Sir Walter Scott; 2d, Hornell-Harmony Kennels' Hornell Venus; 3d and very high com., S. Insull's Saturn and Newbian. *Bitches:* 1st, Hornell-Harmony Kennels' Hornell Velda; 2d, Brant Cocker Kennels' Shaun Rhue.—NOVICE CLASS.—1st and 2d, Brant Cocker Kennels' Rocks and Shaun Rhue.

IRISH WATER SPANIELS.—1st, W. W. Silvey's Duchess III.; 2d, B. F. Lewis's Colleen O'Donoghue.

COLLIES.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, McEwen and Gibson's Guelph; 2d, 3d and very high com., J. Watson's Clipper, Kenilworth, Glen Cairn and Glen Ruadh. Very high com. and com., A. R. Kyle's Royal Monarch and Sir Wallace of Nesseldown. High com., Meadowthorpe Kennels' Meadowthorpe Reality. Com., E. Bradford's Collie. *Bitches:* 1st and 3d, Meadowthorpe Kennels' Meadowthorpe Parole and Meadowthorpe Blueberry Girl; 2d, Dr. H. S. Quinn's Belle. Reserve, J. Watson's Mavis. Very high com., McEwen & Gibson's Ailsa and W. A. Hitchcock's Flora. High com., A. R. Kyle's Adila Doon and Edith Bell.—PUPPIES—*Dogs:* 1st, McEwen & Gibson's Guelph; 2d, J. Watson's Prince Charlie; 3d, A. R. Kyle's Sir Wallace of Nesseldown. *Bitches:* 1st, J. P. Gray's Dean; 2d, Brant Cocker Kennels' Parton Ella; 3d, McEwen & Gibson's Ailsa. Very high com., A. R. Kyle's Edith Bell and Adila Doon.—NOVICE CLASS—McEwen & Gibson's Guelph; 2d, Dr. H. S. Quinn's Belle. Very high com., Brant Cocker Kennels' Parton Ella and J. Watson's Kenilworth. High com., A. R. Kyle's Edith Bell and Royal Monarch, and J. Watson's Glen Ruadh.

BOB-TAILED SHEEPDOGS.—1st, W. Wade's Sir Lucifer.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, W. T. Tebbutt's Portswood Tiger; 2d, J. P. Barnard's Hillside; 3d, J. E. Thayer's Quasimodo. Very high com., Campbell & Blake's Remus and J. H. Parrott's Caliban. *Bitches:* No entries.

BULL-TERRIERS.—OVER 25LBS.—*Dogs:* 1st, withheld; 2d, W. McDonald's Count Dick. *Bitches:* 1st, F. F. Dole's My Queen; 2d, J. P. Gray's Countess.—UNDER 25LBS.—*Dogs:* 1st, F. F. Dole's Sensation. *Bitches:* 1st, F. F. Dole's Nell Bright. *Puppies:* 1st, F. F. Dole's Jack of Clubs. 2d, W. A. McDonald's Count Dick.

DACHSHUNDE.—1st and very high com., F. H. Mills's Vixem and Combat; 2d, W. W. Silvey's Hilda.

BEAGLES.—CHAMPION—*Dog:* W. S. Clark's Fitzhugh Lee. *Bitch:* Hollywood Kennels' Bonnie.—OPEN—*Dogs:* 1st and 2d, C. E. White's Banner Boy II. and Bugler; 3d, Hornell-Harmony Kennels' Royal Krueger. Very high com., Associated Fanciers' Little Prince. Com., W. S. Clark's Frank. *Bitches:* 1st, W. S. Clark's May Belle II.; 2d, Associated Fanciers' Fay; 3d and very high com., Hornell-Harmony Kennels' Betty and Una. High com., C. E. White's Bijou and W. S. Clark's Norah.—PUPPIES—*Dog:* 1st, Hornell-Harmony Kennels' Uncle Dick. *Bitches:* 1st and high com., Hornell-Harmony Kennels' Baby W. and Wye; 2d, Hollywood Kennels' Queen of Hollywood.—NOVICE CLASS.—1st, Hornell-Harmony Kennels' Kate W.

FOX-TERRIERS—CHAMPION—*Dog:* J. E. Thayer's Belgrave Primrose. *Bitch:* J. E. Thayer's Richmond Olive.—OPEN—*Dogs:* 1st, 2d and 3d, J. E. Thayer's Raby Mixer, Reckoner and Luke. Very high com., F. C. Wheeler's Venator. *Bitches:* 1st, F. C. Wheeler's Rosa Canina; 2d, 3d and very high com. J. E. Thayer's Princess, Lyra and Fraulein.—PUPPIES—*Dogs:* 1st, J. E. Thayer's Hillside Monk; 2d, H. P. Thompson's Zig-zag. *Bitches:* 1st, H. P. Thompson's Bacchante; 2d, J. G. Milkwin's Toxie.—WIRE-HAIRED—1st and 2d, J. E. Thayer's Dare Devil and Rat Trap. Very high com., F. C. Wheeler's Chagrin.—NOVICE CLASS—1st, F. C. Wheeler's Rosa Canina; 2d, J. E. Thayer's Princess.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, J. F. Campbell's Vortex; 2d, Campbell & Blake's Jack. Very high com., A. W. Smith's King. *Bitches:* 1st, J. F. Campbell's Desdemona; 2d, Campbell & Blake's Nanon. Very high com., J. F. Campbell's Squaw and A. W. Smith's Gipsey Queen. Com., F. P. Kirby's Safety.

IRISH TERRIERS.—1st, R. C. Clipperbun's Erin; 2d, Associated Fanciers' Judy.

DANDIE DINMONT TERRIERS.—CHAMPION—J. H. Naylor's Pansy.—OPEN—*Dogs:* 1st, Meadowthorpe Kennels' Rover; 2d and very high com., J. H. Naylor's Border Clinker and Bonnie Briton. *Bitches:* 1st, G. Bell's Lady Wallace; 2d and very high com., J. H. Naylor's Rosalind and Ford Lass.

SKYE TERRIERS.—*Dogs:* 1st, Dr. M. H. Cryer's Gladstone Boy; 2d, J. H. Naylor's Drollie. Very high com., W. Coate's Ben. *Bitches:* 1st, Meadowthorpe Kennels' Meadowthorpe Coila; 2d, Oldham & Willey's Kirkella. High com., R. Evans's Colleen.

SCOTCH TERRIERS.—CHAMPION—J. H. Naylor's Rosie.—OPEN—*Dogs:* 1st and 2d, J. H. Naylor's Lowrie Dunbar and Glenyon. *Bitches:* 1st and 3d, J. H. Naylor's Fanny Fern and Duchess; 2d, Meadowthorpe Kennels' Meadowthorpe Glen Ettle.

YORKSHIRE TERRIERS.—*Dogs:* 1st, W. W. Silvey's Whiskers; 2d, F. F. Dole's Napper. *Bitches:* 1st, Meadowthorpe Kennels' Fairy; 2d, W. W. Silvey's Fannie.

TOY TERRIERS.—1st, E. Dillon's Topsy; 2d, E. Bradford's Punch; 3d, Miss Ethel Agnes Watson's Manzanita.

PUGS.—CHAMPION—*Dog:* Dr. M. H. Cryer's Max. *Bitch:* Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st and 2d, Dr. M. H. Cryer's Dude and Othello; 3d, H. Smith's Royal Duke. Very high com., G. Bell's Rustic King. *Bitches:* 1st and 2d, Dr. M. H. Cryer's Vesta and Vic; 3d, G. Bell's Rustic Queen. Very high com. and com., Chequasset Kennels' Bijou and Victory. *Puppies:* 1st and very high com., G. Bell's Rustic Queen and Rustic King; 2d and very high com., Dr. M. H. Cryer's Little Bob and Mary Ann.

KING CHARLES SPANIELS.—OPEN—1st, W. Phillips' Roscius; 2d, J. Grimm's Hazel; 3d, Associated Fanciers' Princess Kate.

BLENHEIM SPANIELS.—1st, W. Phillips' King Pippin; 2d, Dalwit's Little Banjo.

POODLES.—P. May Steel's Diver; 2d, J. S. William's Pinkey.

ITALIAN GREYHOUNDS.—1st, withheld; 2d, R. Westlake's Posey.

MEXICAN HAIRLESS.—N. A. Dame's Jip.

MISCELLANEOUS.—OVER 25LBS.—1st, Meadowthorpe Kennels' Meadowthorpe Black Diamond; 2d, Hornell-Harmony Kennels' Rover. UNDER 25LBS.—Withheld.

SPECIAL PRIZES.

Kennel mastiffs, E. H. Moore; American-bred, Boss's Lady Clara; kennel St. Bernards, rough-coated, Hospice Kennels; smooth-coated, the same; American-bred, Daphne; kennel greyhounds, H. W. Huntington; greyhound, Cassandra; American-bred, Harmony; pair black or black and white, the same with Hazelhurst; kennel pointers, R. Westlake; pointer, Duke of Vernon; American-bred, the same; second best, Fashion; kennel English setters, F. W. Durkee dog, Rockingham; dog or bitch, the same; bitch, Cora of Wetheral; American-bred, Haphazard; kennel Irish setters, Max Wenzel; best, Tim; Gordon dog, Little Boy; pack of foxhounds, W. A. Wadsworth; dog, Pride of Hornell; kennel field spaniels, Oldham and Willey; cocker, the same; buff or red, Hornell-Harmony Kennel; field spaniel, Newton Abbot Darkie; cocker, Miss Obo II.; American-bred, Mooress; kennel beagles, Hollywood Kennel; pair under 13 inches, Bannerboy II. and Bouney; kennel collies, Jas. Watson; dog, Guelph; American-bred, the same; bulldog, Britomartis; bull-terrier, Sensation; dachshund, Vixem; fox-terrier, Raby Mixer; black and tan terrier, Desdemona; Irish terrier, Erin; Dandie Dinmont, Pansy; Skye, Meadowthorpe Coila; Scotch, Fanny Fern; Yorkshire, Meadowthorpe Fairy; King Charles spaniels, Roscius; Blenheim, King Pippin; Italian greyhound, Posey; kennel bull-terriers, F. F. Dole; pug breeders' challenge cup, Dude; American-bred, the same; owned by member of American Pet Dog Club, Vesta; pair pugs under 12 months, Little Bob and Mary Ann; kennel Scotch and Dandie Dinmont terriers, J. H. Naylor.

SYRACUSE DOG SHOW.

Special to Forest and Stream.

SYRACUSE, N. Y., Sept. 18.—The show opened this morning with clear weather. The entries are said to number 319, but there have been no catalogues at all to-day, and without the catalogue it is impossible to tell how many entries there are. The quality is fair, the absentees are few. Judging was begun very late in the day, and only some of the minor classes were got through with. It will drag through Wednesday and probably well into Thursday, to the disappointment of many. The hall is well adapted for the purpose.

CARING FOR ONE OF 'EM.—The other day I overheard a bright young miss explaining to a resolutely sedate, but deeply interested companion, the method of caring for an Irish setter as practiced by a family down on the Jersey coast with whom she has been summering. This particular canine, of aristocratic tendencies it seems, occupies during the night an altogether sumptuously furnished apartment in close proximity to his master's bedroom. The walls of his domicile are profusely adorned with many celebrated specimens of his near and remote ancestry. A big easy chair, a fine old couch that dates back to the Renaissance, and rugs of various hues, impart an air of comfort to the room not easily found in the average home of his dogship. Each morning, on emerging from his quarters, his honor, the setter, must have his face washed, his sleek and glossy coat (of which he is said to be amply proud) carefully combed, and his nose greased. He then hies himself to his mistress, coldly disdaining the proffered services of anxious attendants, to have his neck encircled with a valuable band of silver, which always takes the place of a plainer collar worn during the night. And none but his mistress, mind you, is ever allowed to perform this act of adornment. Information is lacking as to the quantity and quality of the daily delicacies tendered him from the pitcher and the platter. Aside from embellishing the front piazza of a genteel country home, his usefulness is unknown. I may add, by way of conclusion, that the above manner of bringing up a well-bred pup is not intended to supplant any erudite volume on the management of dogs.—M. C. H.

THE TWO DOG CLUBS.

Editor Forest and Stream:

I have read the published correspondence between Mr. Jas. L. Anthony and Dr. J. Frank Perry. This discussion has certainly "stirred up things," but every true lover of dogs will hope that it will not proceed so far but that amity, and not hopeless dissension, may be the final result. Those engaged in it, in view of their position and character, are sensible and doubtless honest men, and any disposition to unduly embitter and envenom the matter would be unfortunate and ill-advised. Indeed, one of the points that has favorably struck me is the following passage in Dr. Perry's letter of Aug. 23: "I do not advise, but I honestly think that if you and other prominent breeders who feel as you do, instead of attempting to whip the N. D. C. into line, * * * would either hold aloof, or content themselves for a time with an effort peacefully to solve the * * * problem, you would, I am sure, be successful, and a more healthy tone to doggy affairs in America be the only lasting result of the existing disorder." This is in the right vein. It recommends the method of argument rather than of attempted coercion. There is in this, as in most other discussions, nothing that calm and logical conference will not settle much better, with less rancor and more permanently than any resort to force.

I must say Mr. Anthony's letters have impressed me as having a decidedly spiteful tone. He declares, too, that he is a member neither of the A. K. C. nor of any other kennel club (of which more anon), but is quite disinterested and impartial. Yet (under date of Aug. 22) he says, "As a breeder, I cannot sit idly by and see what I believe to be an attempt to disrupt the A. K. C. without saying how I feel." Surely, all must be forced to admit, the A. K. C. has never done so much for breeders who belong to no kennel club that they need be anxious to run to its rescue. He says further, in the same letter: "I know most if not all the prominent breeders feel as I do." It will occur to every reader that no mean proportion of them, in point either of quality or quantity, have signified a condition of feeling opposite to his. Further along still, he flatly contradicts himself, and concedes that the body of breeders who belong to the N. D. C. possesses influence. In advising the N. D. C. to withdraw from the field of shows, join the A. K. C. and make its influence felt there, he adds, "as it surely would be." Those words could not be used of a body of men possessing little or no weight. Again he says, "The A. K. C. has for the last year done well" (letter of Aug. 25), thus conceding that at other times the object of his case has not been quite all that might have been desired.

It will be noted (Sept. 5) that on writing to Mr. Dawson, telling him of Dr. Perry's statement that Mr. Belmont had declared his willingness to spend $5,000 to ruin the N. D. C., Mr. Anthony added the remark, "I do not believe you ever made any such statement." This straw shows very plainly which way this disinterested and impartial man's feelings and prejudices set. Mr. Anthony's attitude strikes me as very much that of a partisan. One of his sentences, viz., "Since the receipt of your letter I have not seen any of the A. K. C. people, nor shall I till I hear from you" (Aug. 25), certainly suggests that he has at some previous time been in conference with them and will be again. It certainly looks as though Dr. Perry was right when he called Mr. Anthony a "catspaw."

The correspondence on Dr. Perry's part, moderate and restrained throughout, strikes me as that of a man meaning the best, having before all things the true welfare of the dog world at heart, ready to be convinced, and when wrong—or if not wrong, put in a false position—not shrinking from doing that very difficult but manly thing, making amends for his mistake. In that attitude, Mr. Anthony suffers much by comparison. FAIR PLAY.

MANITOBA FIELD TRIALS.

[*Special Report.*]

MORRIS, Manitoba, Sept. 11.—The third annual trials of the Manitoba Field Trials Club commenced at this place to-day. The weather was very boisterous, making scent variable and trying on the dogs. Birds were fairly plentiful. Notwithstanding a few drawbacks the meeting proved the most successful yet held by the club. The work done by the dogs being of a very high order. The ultimate winner, Pitti Sing, is a very nice looking bitch, and taking into consideration that she only arrived in this country from England about a month ago her performance must rank first-class. She however came very highly recommended by the father and originator of field trials, Mr. Wm. Brailsford and from a family of field trial winners, being litter sister to Tutsham Trip, last year's National Derby winner, and Woodhill Bruce, winner of the All-Aged Stake this year. She is a very stylish bitch on point, carrying her head high and evidently is endowed with that great essential requisite for a field dog, a grand nose. Manitoba Belle, winner of second prize, is a very handsome bitch and an old veteran at these trials, having run and won a place at the two previous ones. She also has a splendid nose and is full of hunting and bird-finding sense, but is unsteady behind. Fannie M., winner of third, evinces considerable of the qualities noted in her sire Count Noble; but is somewhat erratic in her running and given to false pointing, else her chances for winner would be good.

The first series was drawn for and won as under:

T. A. Montgomery's liver and white English setter dog Bruce M. (Cable—Bredna)

beat

D. M. Blackwood's black and tan Gordon setter dog Grouse (Major—Young Flora).

Thos. Johnson's lemon and white English setter bitch Pitti Sing (Baron Doveredge—Norah)

beat

S. Beckett's white and black English setter bitch Jenny Deans (Baron Doveredge—Border Belle).

Thos. Johnson's blue belton English setter bitch Cambria (Cambridge—Pet Laverack)

beat

C. A. Boxer's black, white and tan English setter dog Van R. (Dime—Frost II.).

D. Smith's liver and white English setter bitch Fannie M. (Count Noble—Prairie Belle)

beat

C. A. Boxer's black, white and tan English setter bitch Qu'Appelle Belle (Mark J.—Betsy).

Thos. Johnson's black, white and tan English setter bitch Manitoba Belle (Pride of Dundee—Jeanette)

beat

Major Bedson's black and tan Gordon setter dog Shot (Blossom—Flora).

Second Series.

Pitti Sing beat Bruce M.
Fanny M. beat Cambria.
Manitoba Belle a bye.

Third Series.

Manitoba Belle beat Fannie M.

Pitti Sing running a side heat while the former was being run.

Fourth Series.

Pitti Sing and Manitoba Belle both belonging to the same owner, the judge was requested to select the best, according to rules, and selected Pitti Sing. This give Pitti Sing first and also the championship collar. It now having been won two years in succession (according to the donor's wishes, (Major Belle) by Mr. Johnson, he having won with Cambria last year, it now becomes his property.

Bruce M. then competed against Manitoba Belle for second prize, which was won by Belle. The judge then awarded third to Fannie M., this giving Pitti Sing first, Manitoba Belle second and Fannie M. third.

THE DERBY.

At the conclusion of the All-Aged Stake, on Thursday at about 11 o'clock, the Derby commenced. No work of note was done in this stake, but it must be taken into consideration that shooting only opens on the first, and the trials began on the 11th, which afforded no opportunity to get young dogs in shape. The probability is now that the club will abandon this stake next year, and give prizes for a pointer stake instead. The awards on the Derby were Mac, Prairie and Pete, equal first, second and third.

Mr. W. B. Wells, of Chatham, Ont., who judged the trials last year with such satisfaction to the club, again officiated, and without even hearing a complaint from the beaten ones. This will be readily understood and wondered at by "doggy" men who read the discussion by the National and A.K.C.'s friends. MANITOBA.

THE INDIANA FIELD TRIALS.

THE following correspondence has been sent to us for publication:

INDIANAPOLIS, May 1, 1888.—*Jas. L. Anthony:* DEAR SIR: Several parties in the East are desirous of entering dogs in our trials, and will do so providing Mr. Wm. T. Mitchell will be allowed to handle them. While this club has no grievance against Mr. Mitchell and would gladly consent to his handling, we cannot consent to his handling at our trials until he is reinstated by the Eastern Club. I cannot guarantee that the Eastern Club would remove the disability on his application, but I am almost certain they would. I have some assurance to that effect. Personally I do not know who is to blame. The fight is not ours, and we do not feel like questioning the acts of either the Eastern Club or Mr. Mitchell. Therefore we cannot ask the Eastern Club to reinstate him. But, I can assure you, we would hail with delight the announcement of his reinstatement. We hope that Mr. Mitchell will make application to the Eastern for reinstatement. While he may consider he has been wronged by them, this action on his part would greatly increase his popularity with the dog men of the country and be of great benefit to his own as well as the dogs of his friends. I trust you will use your influence with Mr. Mitchell.

Yours truly, P. T. MADISON, Secretary.

NEW YORK, May 3, 1888.—*Mr. P. T. Madison, Secretary Indiana Kennel Club:* DEAR SIR: I have yours of May 1. As I have already informed Mr. Isgrigg, I do not blame your club for the position they take. Mitchell is not the most agreeable man in the world. He has made many enemies, and he does not know how to appreciate friends. With all this, however, he is entirely right in his position with the Eastern, and to my knowledge, with the full proof in my hands, of the arbitrary and unjust action of this club, I cannot advise him to make any application to them for reinstatement. This would imply that he had been wrong, a position the Eastern no doubt would like, but one I cannot ask him to assume. The facts that can be proved are simply outrageous. Mitchell was barred without notice, without charges previously made, without a hearing, and on the contents of a stolen letter, taken from my possession by fraud, and put in the possession of the club by James Watson, a letter private in its nature and containing the request that the writer should in no way be involved. Whether the statements were true or false it could form no basis for a bar. The Western Club applied for the charges and specifications, and none were furnished, because there were none, and they refused to recognize the bar. Last year the American applied also, and then the Eastern certified as I was informed by the American) that Mitchell was only conditionally reinstated, and that having misbehaved himself his original bar was put in force. This was merely a subterfuge, the reinstatement was not conditional in any way. I have the published letter reinstating him, and no conditions were named. The American agreed to ignore the bar if I presented the facts as stated at Florence. I went there, prepared with all the evidence, and Gen. Shattuc refused to hear it, because, as he said, Gen. Logan, the counsel, was absent; but, notwithstanding this, it was not a question of law, but of fact, for them to consider. Add to all this the fact that at the very meeting where Mitchell was barred by the Eastern a letter was received from Mr. Heath and myself asking for a hearing, and that this letter was never answered in any way, and simply ignored. After having been written at the written suggestion of the then Vice-President of the club, you can judge of the justice and equity shown in the whole proceeding. I have had a long talk with Hitchcock; he acknowledges the truth of all the facts I have stated, but says he does not think the club will remove the bar, but that they would offer no objection, he thought, to any club's allowing him to run. My own belief is, the matter will get into the courts, as I know Mitchell has only been waiting to get in funds to press it, and there can be but one result—very heavy damages against every person who voted to bar him in January, 1886. If Mitchell was still my handler, I should furnish him the money, but he is not. I dislike the man, but that is no reason why he should not receive fair treatment; right is right, and no club can succeed which allows partisan motives or prejudices to sway them. With kindest regards, believe me as always, very sincerely yours, JAS. L. ANTHONY.

NEW YORK, May 4, 1888.—*Mr. P. T. Madison:* MY DEAR SIR: Referring to my answer to your favor relating to the reinstatement of Mr. Mitchell, would say I trust you understand my position. I would gladly do anything I could in any way to add to the success of your trials and secure entries. A suggestion of the same kind was made by the late E. F. Stoddard, viz., that Mitchell should apply for reinstatement at the hands of the Eastern. In fact, I have his written assurance that if Mitchell would sign and forward a letter similar to a proposed one sent me, he, Mr. Stoddard, could almost guarantee that Mitchell's bar would be removed. The letter would not have hurt Mitchell, but any application on his part would waive his rights, which now are perfect. He has been injured greatly in a pecuniary way, to say nothing of the injustice shown him, and I cannot ask him to do what I would not do in his place. If the Eastern are wise they will remove the bar without his application; this would mitigate any future damages and show they were not vindictive. Very truly yours, JAS. L. ANTHONY.

NEW YORK, July 12, 1888.—*Mr. P. T. Madison, Sec'y Indiana Kennel Club:* DEAR SIR: I am informed that your club has refused to allow Mr. Mitchell to handle at your trials, having sustained the action of the Eastern. If, of course, the charges sent you by the Eastern are in your opinion sufficient to sustain your action, you are the judges. I further understand, however, that you have refused to furnish Mr. Mitchell with a copy of the charges preferred by the Eastern, that you further refused a copy to one of your committee, that you further refused Mr. Mitchell an opportunity to defend himself or to disprove them. May I ask if I am correctly informed? The fact is neither Mr. Mitchell, Mr. Heath, Mr. Farnham nor myself have ever been able to get at any of these charges on which the second bar was based, the Eastern having refused Mr. Farnham's request, and having ignored Mr. Heath's, Mr. Mitchell's and my own requests to the same effect. Perhaps I may be misinformed; if I am, I should be glad to know it. While I am not even disposed to befriend Mitchell in any way, I do not now, and never have believed in holding court with closed doors and denying the accused, however guilty, the opportunity of defending himself. If this action of the club is as reported, kindly inform me. I believe field trial clubs should be very careful in dealing with such matters, and not allow personal prejudices to weigh in the balance. If the public once believes justice is denied any one it will go hard with any club. No one believes in a strong rule more than I, but it should be a just rule—just not only to the accuser, but to the accused. I am, dear sir, very sincerely yours, JAS. L. ANTHONY.

INDIANAPOLIS, July 24, 1888.—*Mr. Jas. L. Anthony:* DEAR SIR: In answer to your letter of the 12th inst. I am instructed by the Board of Directors to say that we were not trying Mr. Mitchell. The question before us was, whether our club should sustain the action of clubs in general, and the Eastern in particular, in placing bars on handlers for what they (the clubs) considered sufficient grounds. The Eastern Club sent us at our request the charges on which Mr. Mitchell was barred. Our club received these charges in good faith; they were read in open meeting to our board; we did not keep a copy of said charges and considered it would be a breach of confidence to make a copy for our club or any of its members. Our club sustained the Eastern in the matter, and the charges were so indorsed by us and returned to the Eastern. In your letter to Mr. Isgrigg (in which you sent your letter of the 12th inst. to the secretary of this club) you said you would send it in this way, so that you could prove delivery. This action on your part our club considers a gross insult, and I am instructed to say to you that your services as judge of coming trials will not be required. I am, sir, yours very truly, P. T. MADISON, Secretary.

NEW YORK, July 26, 1888.—*Mr. P. T. Madison, Sec'y Indiana Kennel Club:* DEAR SIR: I have your favor, and have carefully noted contents. Your explanation of your conduct in the Mitchell case is such that I am glad you have decided "my services as judge will not be required." I am, however, of the opinion that your club is as guilty of fraud in suppressing the charges on which Mr. Mitchell has been barred as were the Eastern in refusing him a copy of the same. I am further of the opinion that you and others may learn something of your duties to the public. At any rate, I am glad that I can now publicly announce the reasons why I am not to judge, and leave it to the public to determine as to how much justice they may expect at your hands. If the club chooses to consider my action in sending my letter so I could prove delivery an insult, I have not the slightest objection. I regret they should be so childish. It appears to me that there is a conspiracy among three clubs—the Eastern, American and Indiana—to keep Mitchell and the public from knowing what the charges are on which his second bar was based. I have placed the onus of the matter exactly where it belongs. I had at first, on receipt of Mr. Isgrigg's letter, intended withdrawing as a judge for your trials, but the many entries made on the strength of my name prevented me from so doing, as I did not care to pose as a "decoy" for your club or any other, and I was urged to remain by many that would not have entered otherwise. I have never urged you even to take the Mitchell matter up, in proof of which I have my letters (copied); but as you chose to do so, you were bound in fairness to hear both sides, and whatever influences determined your conduct, it is no less reprehensible on that account.

Believe me, etc., JAS. L. ANTHONY.

AMERICAN COURSING CLUB.

THE third annual American Coursing Club meeting will be held at Great Bend, Kas., Oct 15 to 20. Following is the programme issued by the club:

The American Field Cup Stake.—All ages; entrance $10. To winner, $200 and cup ($100 cash). To runner-up, $100. Third and fourth, $20 each. Fifth, sixth, seventh and eighth, $15 each.

Great Bend Derby.—For greyhounds 18 months old or younger; entrance $5. To winner, $150. To runner-up, $50. Third and fourth, $20 each. Fifth, sixth, seventh and eighth, $5 each.

Grandparent Stake.—For greyhounds eight years old or older; entrance $5. To winner, silver cup, value $100. To runner-up, $40. Third and fourth, $5 each.

Consolation Purse.—For greyhounds thrown out in the first round in either stake; entrance fee $5. To winner, $65. To runner-up, $25.

The title of "Champion of America" will be conferred by the president of the club for the dog winning the American Field Cup. Entries close Oct. 13 at 8 P. M., at which time drawing will take place. All greyhounds running in the stakes must be registered in the American Coursing Club's stud book before entering the slips. For registering, 25 cents. Extensive pedigree not required, but age much be vouched for. Only members of the club allowed to enter a dog for the races, but others can have their greyhounds entered by members of the club as nominators. The rules of the American Coursing Club will govern all contests. Entries should be made as soon as possible, and those who intend to visit the meeting will confer a favor by writing the secretary at once, that suitable arrangements may be made. Bring your saddles, bridles and field glasses, and also saddle horse if possible. Great Bend is situated on the line of the Atchison, Topeka & Santa Fe, and Missouri Pacific Railroads, almost in the exact center of Kansas. For entry blanks, applications for memberships, rules of coursing, etc., address FRANK K. DOAN, Secretary, 1210 Olive street.

ST. LOUIS, Mo.

AMERICAN KENNEL CLUB MEETING.

THE regular quarterly meeting of the American Kennel Club was held at their office, Sept. 12. Before approving the minutes of the last meeting the action in relation to dropping the Stafford Kennel Club was ordered expunged, as it appeared that the club had not resigned. The Committee on Associate Members reported, and the report was accepted and ordered printed. The same action was taken on the report of the Committe on changing the Rules. The committee appointed to draft a circular to breeders requested more time, and also power to send when complete, which was voted. It was also voted to appoint a committee to confer with the proposed Canadian Kennel Club for the purpose of securing harmony of action. The Mascoutah Kennel Club, of Chicago, Ill., and the Chattahoochee Valley Exposition, of Columbus, Ga., were elected as members. The Columbus Fanciers' Club, of Columbus, O., and the Rochester Kennel Club, of Rochester, N. Y., applied for admission; Mr. Belmont was appointed to examine the papers and report at the next meeting regarding the protest of J. L. Anthony to the American Field Trials Club as to the division of a stake at their field trials last year. In the absence of Mr. Vredenburgh Mr. H. F. Schellhass was appointed secretary *pro tem.* As soon as received we shall publish the proposed changes in the rules.

DOG TALK.

THERE is a white bulldog now living in Philadelphia whose case should be brought before the Ladies' Branch of the Society for the Prevention of Cruelty to Animals for amelioration and sympathy. His name is Pete, and in the past he has not been wholly unacquainted with the prize-ring, as a few scars on his body and one torn ear surely testify. At present he is the property of a young medical student, who is the victim of a consuming passion for poker. To this passion all his griefs are due. It so happens that the owner's devotion to the Goddess Fortune is not bounded by his ancestral wealth; and the consequence is that Pete, representing a certain monetary value, is being continually put up as collateral during the progress of these interesting games. During the past month he has been staked at least twenty times and is carried off by a new owner at the expiration of nearly each evening's sitting. Being of a loyal and affectionate nature, Pete is put in a sad dilemma by this state of affairs. Just as he is beginning to learn to love, honor and obey a new master a bad stroke of luck comes in and that night he finds himself the property of another and a stranger. It is true he may be won back in a day or so, but all the same it is very embarrassing for the dog. When on the street he has to be continually keeping in mind whose property he is for the time being lest in a fit of absentmindedness, spying some former master, he might follow him instead. Pondering so deeply upon this subject has had the effect of straining Pete's brain quite severely, and it is but right that some charitable society should take the case in charge.—*Philadelphia Times, Sept. 16.*

A "dog fiend" at Fort Hamilton is administering the laws in relation to dogs in a manner that should end his official career at once. We commend his case to the Society for the Prevention of Cruelty to Animals. Following is the story as told by the New York *Times:* "There is mourning in the household of Col. Abram C. Wildrick of Fort Hamilton. Until last Monday Col. Wildrick boasted one of the finest Irish setters on Long Island. Range, that was the dog's name, was from the St. Louis Kennel and was a remarkable animal, not only for his beautiful coat of hair and an intelligence of expression almost human, but for the fact also that he was the constant companion and guard of the Colonel's children. Last Monday the nurse took little 3-year-old Meade out for a ride. It was only a step from the Colonel's house into the barracks, and as usual Range accompanied the child. Unfortunately Range had no muzzle

on. The nurse told Mrs. Wildrick it was broken, but she would see that Constable Drury, who was always on the watch for unmuzzled dogs, did not shoot him. When the nurse a moment later started to return from the barracks Range, feeling frisky, ran out of the reservation gate ahead of little Meade's carriage. Constable Drury stood on the opposite corner with his shotgun. He saw his game, and no sooner did he see it then visions of 50 cents loomed up before him. Up went his gun and down came the faithful friend of Col. Wildrick's children. The charge struck the animal it the shoulder. Mortally wounded and unable to stand upon his feet, Range crawled toward his murderer, begging pitifully for mercy, but the officer knew no mercy. Taking his gun by the muzzle, he dashed the dog's brains out, and the carcass was thrown over the fence. Twenty minutes later a soldier discovered that the dog was not dead, and appealed to Justice Church to have him killed. The Justice sent for the constable, and the dog's misery was brought to a close. Mrs. Wildrick is almost prostrated by the affair. Her husband is in the Blue Ridge Mountains hunting, and she has not yet notified him. The dog was known to every villager of Fort Hamilton as a pet and valuable animal, and the act is denounced as an outrage. Justice Church says the officer only did his duty, but thought perhaps he was hasty in this instance, as valuable property when no one was in imminent peril should receive consideration, and he was heartily sorry the dog had been killed. Father John is also an indignant citizen of Fort Hamilton. His valuable dog ran out of the gate and barked as Constable Drury was passing, and Constable Drury got 50 cents for his carcass. Capt. Romer of the Fifth Artillery, Julian Magnus of theatrical fame, and others have lost valuable dogs at Fort Hamilton this summer through the constable's alertness with his gun."

The following story reaches us from Montrichard, and is declared, although improbable, to be "a true bill." A short time ago a fine sporting dog was found by some kind people wandering collarless, in search of its master. They gave the animal a home while they looked far and wide for its owner. The dog, however, was restless. It ran out at intervals during the first week, but on its return it was always well received. The next week, however, it absented itself for some days, and when it came back its host gave it a beating. It started off at once in the direction of the river, plunged into the water, and struck out until it was exhausted—deliberately drowning itself in the middle of the stream. This strange incident was witnessed by several spectators, who are unanimous in declaring that this was a decided case of *felo de se*. The poor animal is supposed to have been inconsolable at having lost its master, and the harshness with which it had been treated by its new friend settled the business.—*London Daily Telegraph.*

Mr. F. Windholz received on last Thursday, from the kennel of Mr. George Potter, Carlisle, Eng., a pair of English setters that have made their mark at the English shows, and will now try conclusions with the cracks in this country. The dog Count Howard is a litter brother to Mr. Windholz's well-known Cora of Wetheral, and has done a lot of winning on the other side, including no less than fourteen firsts in the challenge classes at such shows as those at the Crystal Palace, Royal Aquarium, Barn Elms, Warwick, Edinburgh, Liverpool, Glasgow and others, as well as specials almost without number. The bitch, Princess Beatrice II., was whelped March 24, 1887, and is by champion Royalty and out of Kate Westmoreland (Sir Allister—Countess of Appleby). She has won three firsts and is said to be an elegant performer in the field. Mr. Windholz is fortunate in securing such an addition to his kennel.

We have received from Jas. L. Anthony a letter charging the managers of the Eastern Field Trials Club with fraud and trickery in respect to the Mitchell bar. We do not print it. The managers assailed are men of good repute, we consider them entitled to protection in our columns from the cheap vaporings of this blusterer. Moreover, we propose to maintain the FOREST AND STREAM'S reputation for decency, and this we could not reasonably hope to do if we were to print all that Anthony writes.

Thomas Dawson of this city died suddenly of pneumonia last Sunday. Mr. Dawson came to this country from England five years ago and was employed for some time as kennel manager by the Messrs. Rutherfurd, and later by Mr. L. Daniels. He then entered upon newspaper work in New York. He was pleasant mannered, clever and well liked, and many friends lament his untimely taking off.

We regret to learn that Dr. Louis H. Twaddell, of Philadelphia, met with a serious accident last Saturday night, having been thrown from his carriage and sustained injuries of a very grave nature.

"Our Prize D 3s," Mr. Mason informs us is now in the printer's hands and will soon be ready for delivery.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

O. W. P., Pacific, S. C.—My pointer bitch pup, 6 months old, has a protrusion from the navel about ¾in., about ½in. diameter, and quite hard; probably a case of umbilical hernia. The pup does not seem to suffer in the least from it. Kindly let me know whether this case could be cured, and if so, how? Ans. Umbilical hernia can be cured if reducible; that is, if it can be pressed back into the abdominal cavity and kept there. In a young puppy this may be done by making a flat pad of lint and placing it over the rupture after reduction, and holding it in place by means of plaster around the body. The puppy should be kept very quiet for some weeks. A veterinary surgeon could do this for you. It may cure itself or may get worse if left without attention.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

BELOW will be found a detailed report of the work of the 16th annual meeting of the National Rifle Association, held during the past week upon the range of Creedmoor. It was an encouraging meeting in some respects, and not at all in other regards. There were high scores and there were few shooters. One match went over for want of a single entry, but it was a team match and a long-range one, affording a queer comment on the rush there was in marksmen's effort and popular interest for long-range work but a few years ago. The encouragement was in the military work. The National Guardsmen of this State are showing the highest possibilities of the Remington State model .50-cal. rifle. Dolan capped the climax with a score of 50 in a possible 50 at 200 and 500yds. on the same day in a set match. The feat has never before been paralleled, and it has been striven for now this 15 years by every man of arms in this State. It should hardly be taken as proof that the Remington does not need an allowance, even with its Edwards sight, against the Springfield weapons used by the other State teams and by the Regulars with the screw rear sight, up to the mid ranges it is not so much the large bore as the sort of sights which militates against the Remington when fine work is attemped.

There were not a few interesting little episodes, and one man at least went home a victim of his own good nature. It was Frank Holton, an old time Creedmoor shot, and now an Ohio resident. He came on to New York with the determination of capturing the honor of holding the Wimbledon cup for a year. He went into the preliminary pool shooting and found his rifle in fine order. Beside him was an Eastern rifleman, who was trying to get on the target. He fired a dozen shots and failed to bring up the disk. Holton noticed the efforts of the stranger, and seeing that he had the same make of rifle, kindly offered him the proper elevation, Just then the signal sounded for the opening of the match. The stranger caught the target the first scoring shot, held it through the thirty shots until the last, and wound up with a total of 134 in the possible 150, while Holton caught second place, 9 points behind. So it was that the Wimbledon cup goes to Merrill, of Massachusetts, and Holton, of Ohio, will wait another year, a victim to the gentlemanly bon camaraderie so often seen on the rifle range.

The weather during the week was a varying factor. There were winds and showers, but enough good weather to permit good scores and enough to show that the choice shooters there could make good scores despite the tricky winds. There is encouragement in the fact that there are marksmen enough to act as a leaven in case the demand should ever arise for a large number of expert shots. Sergt. Dolan could by word and example teach a big company in short order and we would expect from Prof. Tom a fine output of pupils. Ira Paine was on the range but went away at once the head of his class and a disappointed man. He had looked for the Bennett brothers, but they kept warily up Boston way, and the Chevalier failed in the gratifying victory he had looked for. The day to day story of the meeting will tell of the progress of the American Wimbledon while the record of the matches which follow gives in a compact form the figure facts as they were marked upon the target scores.

Sept. 10.—The meeting opened with a fine day on the range. A number of the marksmen had arrived at Creedmoor last week, and among them the Massachusetts team, of which Col. H. T. Rockwell is the captain. When the signal horn was sounded at 8 o'clock yesterday morning the entries for the first days' shooting were much larger than those of last year. The day was a perfect one for the marksmen. The light was good and an early 9 o'clock breeze soon died out. Brig.-Gen. Charles F. Robbins and his assistant executive and statistical officer Capt. G. Henry Witthaus, had perfected all the arrangements for the meet and looked jubilant as they thought of the large scores which would be made. There was only one match to be closed with the day, that was the Wimbledon Cup, at the extreme range. It went with a capital score to an Eastern rifleman. This was not the only good shooting as in the matches running through the week high figures are found.

Sept. 10.—The second day was not a happy one in a weather way. It opened with a light wind, which held until two hours before noon, when it increased in force and blew at the rate of twenty miles an hour. Rain began to fall at midday and did not cease until 4 o'clock. It was estimated that the wind was then rushing across the range at a thirty-mile-an-hour gait. It was a shifting wind as well, and altogether it was a time for the best effort of the marksmen. The long, range military was on, and the score shows that with anything like an opportunity the American militia marksmen can be depended on for good scores. The Judd match was finished but the scores were somewhat confused. The reason was because of the mistake made by Messrs. Merritt, Hussey and Edes, who shot on the Tiffany match target, which is the American standard, while the Judd match was to have been shot on a Creedmoor target. In the former a bullseye counts 8, 9 and 10, while on the latter it counts only 5. The tickets the riflemen turned in gave the standard count, and the difference will have to be adjusted.

Sept. 12.—Match No. 12 for long-range teams should have been on to-day, but there was not a single team of long-range men which could be mustered and this contest lapsed. Let our British friends take the hint and make a dash for the Palma trophy. To-day there is picked by the magnificent and hitherto unequalled score made in the marksman's badge match by Ord.-Sergt. Thos. J. Dolan, of the 12th Regt., N.G.S.N.Y., who made 10 consecutive bullseyes at the two distances—200 and 500yds. When it was announced Dolan was the recipient of hearty congratulations on all sides. In 1883 John K. Green, of the 7th Regt., made the same 50 out of a possible 50, but it was in two days' shooting. Never before was it done on the same day with no chance to wait for a better light. The day opened with a slight breeze from the N.W., which afterward ranged around to dead south and then switched back to the westward, where it held with but few variations. What there was of it was steady and not fitful, and consequently baffling as on the day before.

The president's match was the event of the day, and it had enough entries to make a good fight. It fell to a regular army man and showed that there were good shots who were not at Fort Niagara.

Sept. 13.—The fine weather attracted a large attendance at Creedmoor to-day to participate in and watch the shooting in the fall meeting of the National Rifle Association. It was not a fine day for the riflemen, however, for all day a strong northwest wind blew across the range, making large scores a difficult undertaking. The short range team match was the only one completed, and was won by the Zettler Rifle Club, with a score of 232 out of a possible 400. The shooting all day was fair, but nothing remarkable was done in the way of scores. In the Governor's match some records of 48 out of a possible 50 were made, and also some very good shooting in the revolver match. Gen. Wingate was one of the contestants at the pistol range. The various continuous matches went on.

Sept. 14.—Friday brought military men to the range to meet in the local regimental matches. The conditions were superior for fine shooting opportunities, and the riflemen made the most of the clear weather and the light southwest wind at the ranges. The attendance was larger than usual. The average shooting was uncommonly good, and in some instances remarkable. Brilliant records were also made in the revolver match. Chevalier Ira A. Paine, the champion pistol shot, succeeded in beating the score made on Monday by T. G. Newbury, which was 123, by 11 points. In the Directors' match, which is open to the directors of associations only, James Duana made a record of 23 out of a possible 25 at 200yds. One of the most interesting events of the day was the Gen. Sheridan's skirmishers' match, in which the United States Engineer Corps of Willet's Point had a walk over and went through the maneuvers of advancing, retreating, halting at and firing at the bugle call, and succeeded in placing on the several targets a total record of 906 points.

Sept. 15.—The weather was all that could be desired, unusually clear, and during the forenoon there was little or no wind, but in the afternoon a fair 3 o'clock breeze blew. The attendance was large and the interest frequently enthusiastic. The events of the day were the Hilton Trophy match and the Inter-State Military match, in which the excellent team work of the Massachusetts State team excited universal comment. The judgment and skill with which they took advantage of every opportunity offered told in the good records made, aggregating in the former a total of 1,080 points, and in the latter a total of 1,047 points. The records in the continuous matches were only fair, compared with those made Friday, and in the revolver match Chevalier Ira A. Paine topped out his revolver score to 140 in a possible 150. He went away at the close of the shooting with a disappointed air. He had been told that the Bennett brothers of Boston, or either of them, was coming down to rake the revolver record. The Chevalier was anxious to meet these youngsters on a neutral range and under different conditions than those which prevailed at the Springfield and Providence shoots, at which the Chevalier suffered a nominal defeat.

The afternoon brought a large throng to the range. Col. John Bodine was there, looking precisely as he did fourteen years ago, when he was the central figure of the first team sent to Ireland. At 6 o'clock the last toot of the big fog-horn signal and the boom of the evening gun told of the finish of this quiet, high-scoring gathering.

BOSTON, Sept. 15.—The attendance to-day at the Massachusetts rifle range was large. Some very high scores were made in the rest match, especially those made by Messrs. Monroe and Francis. Several of the Boston Press Rifle Association members were present and did good shooting, but the scores are not made public. Next Wednesday the trap shooters hold their regular shoot. Following are to-day's scores:

LOWELL, Mass., Sept. 15.—The rifle teams of the Chelmsford Light Cavalry and the Mechanic Phalanx had a friendly contest at Pratt's range, Middlesex Village, this afternoon. The light was good, but a brisk wind across the range militated against high scores. The match was won by the Phalanx team by the following score; distance 200yds.; 7 shots each:

Mechanic Phalanx.		Chelmsford Cavalry.	
Foster	29	P T Hayes	26
Worthen	29	Capt Fletcher	25
Kincaid	27	Sergt Herrick	24
Farnsworth	26	E H Keyes	18
Peters	26	Warren	18
Bagley	24	J Feeney	15
Pratt	24—186	Scribner	14—140

TORONTO, Sept. 8.—A friendly match between the King City and the Newton Brook clubs was shot by telephone to-day. It had been arranged for ten men on a side, and to count one for the championship, but as only seven men shot on the Newton Brook team it could not be allowed on the series. Newton Brook is given three averages of the King City team to make up their other three men.

Newton Brook.		King City.	
Dr Teskay	79	J W Crossley	82
A Muckle	79	J H Ross	77
McGage	79	P Cull	73

SALEM, MASS., Sept. 15.—The return match between teams of Company A, Sixth Regiment, of Wakefield, and a team from the Second Corps of Cadets, was shot this afternoon, each team shooting on its own range and forwarding the result by telegraph. The match was shot on 200yds., Creedmoor paper target, and the totals for each team were identical with those made last Saturday. The Cadet team was minus the services of two of its regular men. It is probable that the Wakefield team will shoot a third match on the Salem range next Saturday. The result of to-day's shooting follows:

Company A, Sixth Infantry.		Second Corps Cadets.	
Pvt J W Babbit	30	Pvt M W Daulton	32
Capt G H Taylor	29	Mus J C Habon	30
Sergt E J Gihon	29	Sergt P F Packard	29
Pvt C E Horton	29	Corp D M Bruce	29

Pvt H T Mellet	25—196	Pvt H B Cummings	22—193

MONTREAL, Sept. 13.—Six men of the Victoria Rifles and six warrant officers of H. M. S. Pylades shot at 200 and 500yds., 7 shots at each range, last evening, at the Victoria armory, with the following result:

H. M. S. Pylades.		Victorias.	
Mr Mathias	24	Lieut Rodden	57
Mr Duncan	36	Private Cooke	51
Mr Hogan	49	Capt Busteed	37
Mr Hughes	49	Lieut Shaw	55
Mr Luke	37	Lieut Desbarats	55
Mr Brown	43—238	Staff-Sergt Macadam	59—294

BOSTON.—The annual fall competitions of the Boston Press Rifle Association will be held at Walnut Hill on Friday, Sept. 28. There will be a match between teams representing the different papers connected with the association and individual competitions.

NEWARK.—A new club was organized last week. It is called the Columbia Rifle Club, and the officers are: President, William Denniger; vice-president, F. Kraus; secretary, William Doull; treasurer, K. Kopf; sergeant-at-arms, F. Siegman.

THE ARMY TEAM.

FORT NIAGARA, Sept. 11.—The fourth biennial army sharpshooting contest opened at the range of the regulars here this morning. Much might be said on the significance of the gathering, for the series of firings which open to-day at Fort Niagara by a team composed of the crack shots of the Division of the Atlantic, the Division of the Missouri, and the Division of the Pacific is the crowning event for the army of the rifle season.

From the earliest spring till late autumn the ranges connected with one or another or all the leading army posts resound with the ping-ping of the rifle. The tropical garrisons far down in Texas and Florida are busy at this work while the snow still surrounds the garrison posts of the North. These latter by degrees take up the pleasant task, and thus the greater part of the available year is devoted to it. First come the various post and regimental competitions; then the department matches, which result in the selection of department teams; then the struggle between department teams, which produces in turn the division representatives, while these latter take part in the final firings by the army team. A favorite place for this final exhibition has hitherto been Fort Leavenworth, but for the present year a change has been made to Fort Niagara. The order for this purpose was issued from Gen. Sheridan's headquarters over three months ago, and the second paragraph ran as follows:

"II.—The marksmen to compose the army team will be selected as follows: Two from the Division of the Atlantic, six from the Division of the Missouri, and four from the Division of the Pacific, with one alternate from each division. Each division commander will select the number of marksmen above designated, and cause them to report to the commanding officer at Fort Niagara, New York, on Sept. 3."

The Division of the Atlantic closed its annual meeting at Fort Niagara last week, and the character of the shooting may be known from the fact that out of a possible 600, eleven of the twelve contestants forming the Division team made 500 or upward. Indeed, the very lowest score of the twelve this year was the top score in last year's team. Yet the Division of the Pacific did still better in its home competition, since all five of the contestants which it has sent to Fort Niagara had scores higher than those of the twelve men on the Atlantic team. As for the Division of the Missouri, the aggregate score of its twelve members this year was 5,970 against 5,734 last year, and 5,798 the year before that.

The record of the entire team to-day was excellent, only one man falling below centers. There was just a slight breeze blowing and the sky was very clear. There was a large crowd of spectators present, and they evinced great interest in the competition. Very little interest was taken by the competitors in the pool shooting, this afternoon, the men preferring to keep quiet for to-morrow's skirmish shooting.

The following were to-day's scores, 10 shots each distance, at army target (oval divisions):

	200yds.	300yds.	500yds.	600yds.	Total.
Lieut Day, 9th C	46	42	44	43	175
Pvt Foley, 2d C	42	44	47	47	175
Farren Hughes, 1st C	40	44	44	44	172
Lieut Hale, Corps Eng	44	44	43	40	171
Sergt Palmer, 3d I	42	40	43	45	170
Sergt King, 20th I	43	43	42	41	169
Lieut Stewart, 3d C	37	40	48	42	167
Corp Nihill, 4th C	42	42	43	40	167
Corp Dell, 2d C	41	41	45	37	164
Sergt Miller, 2d C	39	43	45	36	163
Lieut Garrard, 9th C	40	43	41	38	162
Sergt Seal, 14th I	40	41	43	28	155

Sept. 12.—To-day was given up to skirmish shooting, and all day long during the test the field looked like a play battle ground, and the spectators got a very good idea of what a modern battle would be under the present conditions of high individual merit and responsibility rather than the old style of solid formation and field firing.

Sept. 13.—The wind was strong on the range to-day from the east and the consequence was that the shooting was not as good as usual. A visitor on the range was Frank Ehrenfried, of Buffalo. Mr. Ehrenfried served five years in the 18th Infantry band, and won the Division of the Missouri first gold and silver skirmish medals in 1885. The competition was finished this morning at 10:15 o'clock, and the medals were presented by Col. Blunt. The 2d Cavalry carried off all the honors, having three men—Sergeant Miller, Corporal Dell and Private Foley—leading the team, and also winning the gold skirmish medal, and by that taking all the gold medals. four in number. This is the first time in the history of the rifle competition that a man shooting in the prone position, as Sergeant Miller did, won the first medal. This is of course at long ranges. The following men are the medal winners: Sergeant Miller, first gold medal; Corporal Dell, second gold medal and skirmish gold medal; Private Foley, third gold medal; Lieut. Day, first silver medal; Sergeant King, second silver medal; Lieut. Cecil Stewart, third silver medal. All the successful ones, with one exception, are cavalry men. The following is the standing of the team:

	200yds.	300yds.	500yds.	600yds.	Total.
Sergt Miller, 2d C	43	44	38	46	171
Corp Dell, 2d C	35	42	45	38	160
Pvt Foley, 2nd C	45	44	44	39	169
Lieut. Day, 9th C	40	41	43	43	167
Sergt King, 20th I	41	43	41	42	167

Corp Nihill, 4th C	39	43	41	37	160

The fight for first place between Sergt. Miller, Corp Dell and Pvt. Foley, all of the Second Cavalry, was a pretty one. Miller won by two points. Dell took second place, although tied with Foley. He obtained this on account of his excellent work at skirmishing, in which he took the special gold medal.

Following are the full scores for the three days' shoot:

	1st day.	2d day.	3d day.	Tot
Sergt Geo E Miller, Troop H, Second Cavalry Division of Pacific, Fort Spokane, W T	163	202	171	537
Corp Adam Dell, Troop F, Second Cavalry, Division of Pacific, Fort Walla Walla, W. T	164	211	160	535
Pvt John Foley, Troop C, Second Cavalry, Division of Pacific, Fort Bidwell, Cal	175	191	169	530
1st Lieut Matthias W Day, Ninth Cavalry, Division of Missouri, Fort Robinson, Neb	175	187	167	529
Sergt Geo N King, Co F, Twentieth Infantry, Division of Missouri, Fort Assinniboine, Mont.	169	188	167	524
2d Lieut Cecil Stewart, Third Cavalry, Division of Missouri, Eagle Pass, Tex	167	192	164	523
1st Lieut Irving Hale, Corps of Engineers, Division of Atlantic, Willet's Point, N Y	171	178	162	511
Sergt Charles Palmer, Co E, Third Infantry, Division of Missouri, Fort Snelling, Minn	170	180	151	507
1st Lieut Joseph Garrard, Ninth Cavalry, Division of Missouri, Fort Robinson, Neb	162	152	167	481
Corp John Nihill, Troop B, Fourth Cavalry, Division of Atlantic, Fort Meyer, Va	167	136	160	463

RANGE FAME.—The winning Zettler team in the short-range match suffered when the news of their victory came to be scattered over the country by the clicking keys of the telegrapher. The Boston *Herald* makes the team to be B. Matthew, M. Dorreler, C. S. Zetzler and L. Flanch, while the Philadelphia *Item* enters them on the record as B. Walther, M. Doerner, L. Fluch and C. F. Zoeffler. By the way, where was the New York Rifle Club in this match? There was a big vacancy there.

STATEN ISLAND, N. Y., Sept. 10.—The 17th annual shoot of the Staten Island Schuetzen Corps took place to-day at Clifton. About 75 members, with invited guests of the Morrisania and New York Independent Corps, took part. Chas. Brown won the King medal and was crowned with proper ceremonies. The prize at the first target was won by Chas. Zendel, who also made the first bullseye; August Meyer and Chas. Schaefer winning repectively the prizes at the second and third targets. Louis Bardes, Chas. Schaefer and Jachne Morrison, the latter making the last bullseye, also won prize medals. The first prize at the company target was secured by A. Gebhardt, August Mayer winning the second.

LEBANON, Pa., Sept. 14.—The annual target firing of the National Guard at Coleman range. Mt. Gretna Park, closed this evening. The contest to-day was between brigade teams of 12 men each for the brigade trophy, now held by Gen. Goblin's Third Brigade. The score was: First Brigade 983, Second 984, Third 994. The trophy having been won thrice successively by the Third now becomes its property.

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE CHAMBERLIN TOURNAMENT.

[From our own Staff Correspondent.]

CLEVELAND, Ohio, Sept. 15.—The Chamberlin Cartridge Co.'s fourth annual tournament has been held here this week, lasting five days, and attracted some of the most prominent shots from all quarters of the United States. The main feature of the tournament was the tie shooting for the Chamberlin prizes, $3,000 in cash. This began on Wednesday morning and occupied two entire days.

As usual, all the moneys in the 60 class were won with scores which put the winners way up, 94 being the highest made in that class, by E. D. Miller, of Springfield, N. J.; 94 also won in the 70 class, made by the old reliable Wm. Sigler, of Montclair, N. J. In the 90 class, J. R. Stice, using a 14lbs. Parker gun, and H. McMurchy, with a 12-gauge Smith gun, also tied on 94, and in the shoot-off the following day McMurchy won, with a score of 95 to 99; thus winning the $59 badge offered by the management, the honors going to the Smith gun. Stice could not seem to reach the straightaway birds, 8 out of the 10 missed being from center trap. In the 80 class, H. B. Whitney, of Phelps, N. Y., with a Smith gun, made the highest score of the tournament, 93, doing some remarkably good shooting for the condition he was in; he was suffering with a high fever and was disobeying the doctor's injunction not to shoot. There were several sick ones on the list, A. G. Courtney, of the Lefever Arms Co., being obliged to withdraw on account of an injury lately received at Pittsburg, where he was badly squeezed between two cars. The Eastern contingent were out in full force. Charlie Smith, of Plainfield, N. J., familiarly called "The Dutch," wore an enormous diamond (?) at his neck and did his best to rattle the shooters in his class by flashing its rays in their eyes. He and "Tee Kay" furnished considerable amusement for the crowd. "Old South Paw" (Al. Heritage) broke loose every time he made a six straight, and his dulect tones could be heard proclaiming the fact from one end of the grounds to the other.

With the exception of an hour or two on Wednesday morning, when it rained, the weather was fine, but not particularly conducive to good scores, as some high winds prevailed and played tricks with the birds.

During the week Mr. A. B. Day, the retiring manager of the Chamberlin Co., was presented with a very handsome gold-headed cane, suitably inscribed, by the employees of the company. The happily-worded presentation speech was made by Mr. J. Palmer O'Neil, and was responded to in felicitous vein by Mr. Day, although he was very much taken by surprise.

The tournament was a success, but we consider that one of the chief ends of the management was defeated by the disgraceful manner in which combinations were made by the shooters. All sorts of pools were entered into in the most open manner as the contests in each class neared completion. Shooters dropped birds right and left, and agreed to "divy," so that the whole purse could be "hogged" by a few and ties avoided wherever this was possible. The amateur shots—those young at the business—had no chance to win a share of the money, as purposed by the management; which they would have had if the shooting had been done honestly and fairly. It is time that some plan was adopted to put a stop to this evil practice, and the best means of so doing is the general adoption of the Tucker Pool System, which, we believe, would effectually stop pooling and combining. By adding a given number of tie birds to a man's score and making those the vital ones in the contest, after the manner this system provides, dropping would be rendered impossible or at least made much more difficult. This system was given a thorough test during the week and worked very satisfactorily, even in a race with 55 entries and only 5 tie birds, a total contest at 12 birds. The number of tie birds can be increased or decreased as found necessary in order to regulate the number of winners.

A notion prevailed among the shooters that this would be the last Chamberlin Tournament. Whether this be so or not, no one can blame the company if they object to hanging up purses simply for a few of the best shots. They have been most liberal with the shooters, giving two dollars for every dollar put up, and it must be exasperating to them to see their aims defeated by the grab-all system of the expert shots. All ties in the class shooting were supposed to be shot off, one man alone to have the money and honors. With one exception in the 60 class, where Vincent, Starr, Holzapfel and O'Neil tied on 90 for fifth money, and shot the tie off at 100 birds each, this was not done, all the moneys being divided and the shoots-off simply a "fake." The programme was about half shot out. On Thursday and Friday no attention was paid to it, and extra sweepstakes only were shot at the will of the shooters.

The $3,000 was divided as follows: $750 and $59 trophy to the 90 class, with 8 moneys; first $200, second $150, third $100, fourth $90, fifth $80, sixth $60, seventh $40, eighth $30.

$700 to the 80 class, with 9 moneys: $150, $125, $100, $90, $70, $60, $50, $30, $25.

$700 to 70 class, with 9 moneys divided as in 80 class.

$800 to 60 class, with 12 moneys divided into $150, $125, $100, $90, $75, $60, $50, $40, $35, $30, $25 and $10. The 60 class was shot at two sets of traps on account of the number of entries. Below are the scores in full. 100 bluerocks each, 3 traps, 16yds. for 12-gauge, and 18yds. for 10-gauge:

Andrews	10 11 10 11 11 10	— 9	Messner	10 01 11 10 01 01	— 7
Wheeler	11 11 11 11 10 10	—10	Whitesides	01 11 11 10 10 11	— 9

First and second divided. Ties on 10 shot off and divided by Stice and Wheeler. Ties on 9 shot off and divided by E. D. Miller, J. W. Budd and Whitney.

Match between E. D. Miller and Heikes and Vincent and O'Neil at 100 birds each for $20 a side:

E D Miller	0111101111010111111111111111111111101000111	
	1111111111011011011111111111001111111111111111—87	
R D Heikes	1111111111111111111011111111100111111111111111	
	1101111111111111111111111111011111111111111111—95	
		182
Vincent	1111111111111111111111111111111111111111111111	
	1111111111011111111111111111111111111111111111—96	
O'Neil	1111101111010100101111011111111111011111111111	
	1111110011111111111101111111111111011111111111—82	
		178

In this shoot Vincent equalled the highest score of the tournament, 96, and Heikes came but one bird behind with 95.

NEWARK, N. J., Sept. 14.—The Mountain Side Gun Club opened their grounds at South Orange for the fall season yesterday, and the weather being all that could be desired their neat little house was filled with members and friends. All who visit these grounds will not fail to recognize, without any special introduction, the vital force and hidden energy of the club. "Bogardus" Smith, while everywhere and full of attention, still never loses his turn, but toes the chalk mark and makes the chips fly. Having an eye to business he had leveled the rank grass and weeds, making a soft bed for the cripples to fall upon, and thus swell the salvage account. New guns figured prominently in the several events, which, together with the presence of such veterans as Brentnall and Von Lengerke, had a tendency to weaken some of the timid ones, but with a little practice the club will soon be in a position to extend a warm reception to kindred organizations. In the way of encouragement and as an incentive, the scores are appended, all events being at targets named and thrown from 3 screened traps set in 4th notch, 16 and 18yds. Entries voluntary and all ties divided.

First event, 10 clays:

Brientnall	1111111111—10	Reeves	1000010111— 5
Burnett	1111111101— 9	S Tillou	0110101003— 4
O von Lengerke	1110101111— 8	Riley	0101010010— 4
Smith	0111010111— 7	Stager	1001090100— 3
D Tillou	1010011110— 5	Coons	0001000100— 2

Second event, 10 clays:

Brientnall	1111011111— 9	Reeves	0100010011— 4
O von Lengerke	1111110111— 9	Coons	0100010100— 3
S Tillou	1101111111— 9	Riley	1000010010— 3
Burnett	1101100110— 6	D Tillou	1010010001— 4
Smith	1010111100— 6		

Third event, 10 bats:

D Tillou	1111111111—10	S Tillou	1101011111— 8
Brientnall	1111111111—10	Smith	0111011101— 7
Von Lengerke	1111111101— 9	Reeves	1011111010— 7
Burnett	1111101111— 9	Riley	1100110010— 5
A Sickley	1110111101— 8		

Fourth event, 10 bats:

Von Lengerke	1111111111—10	S Tillou	1011111011—8
Smith	1111111111—10	Reeves	0101000100—3
Breintnall	1111111111—10	Riley	0000000010—1
Burnett	1111111110— 9		

Fifth event, 10 bats:

Burnett	1111111111—10	Parry	1010111111—8
Breintnall	1111111111—10	Reeves	1010111101—7
S Tillou	1110111111— 9	Van Idestine	1001110101—6
Smith	1111010111— 8	Coon	0011101010—5

Sixth event, 10 bats:

Breintnall	1111111111—10	Parry	0111010011—6
S Tillou	1101111101— 8	Van Idestine	1011011001—6
Smith	1011111001— 7	Burnett	1000111101—6

Seventh event, 10 bats:

Smith	1111111111—10	Parry	1001011011—6
Breintnall	1111110111— 9	Vanimer	0100111000—4
Burnett	1111101111— 9		

ST. PAUL, Minn., Sept. 12.—The annual tournament of the St. Paul Gun Club was opened this morning under the most favorable conditions. The action of the club in offering generous guarantced prizes was rewarded by the entry of crack marksmen from all parts of the State, many of whom, while nominally amateurs under the stipulated conditions, possess the skill of professionals. Following are the winners in the five events to-day:

First event, 10 single Peorias.—First money divided by Baldwin, Skinner and Dalton, second money divided by Tuttle, Smith, Cutter, Newton and Forbes, third money divided by Shelley and Mass, fourth money divided by Kenneday and Brown, fifth prize, 250 loaded shells, Jones and Jones.

Second event, 15 singles.—First money, $40, Dalton; second, $30, divided by Noreen, Block, Forbes and Jones; third, $20, divided by West, Ahlstrom, Van Saun, Blakely and Kennedy; fourth prize 250 loaded shells, divided by Parker and Ensign, sixth prize, one quarter keg of powder, Stone.

Third event, 5 singles and 2 pairs Peorias.—First money divided by Catamaran, Van Saun, Block, Hunter, Skinner, Cutter and Ahlstrom, second divided by Noreen, Max and Lawrence, third divided by West, Kennedy and Ebner, Pfister fourth, Kenkle, fifth, 250 loaded shells.

Fourth event, 10 singles and 3 pairs Peorias—First money, $60, divided by Barnes and Hunter; second money, $45, divided by Jones, Forbes, Stone and Skinner; third money, $30, divided by Parker, Durant, Catamaran, West, Pfister and Block; fourth money, $15, Brown; fifth prize, 300 loaded shells, Holt; sixth prize, one-quarter keg powder, Kennedy.

Sept. 13.—The fine scores made in the first day's shooting of the St. Paul Gun Club attracted a large number of spectators to-day. The tournament has been the most successful in the history of the club; the prizes have been larger than ever before, and the contestants have been drawn from the ranks of the most expert marksmen in the Northwest.

Fifth event (unfinished from previous day's programme): first money divided by Kennedy, Block and Hunter; second money divided by Extine, Baldwin and Barnes; third money divided by Skinner, Smith, G. Pfister and Forbes; fourth money divided by Brown and Jones. Fifth prize, 250 loaded shells, Van Saun. Highest daily average, first day: first prize, hunting suit, Hunter; second prize, lap robe, Forbes.

Sixth event, entrance $1.50: first money divided by Dalton and Block; second money divided by Parker, West and Hanson; third money divided by Skinner, Catamaran, Jones and Forbes; fourth money, Stone. Fifth prize, quarter-keg powder, J. G. Smith.

Seventh event, entrance $3.50, 5 single and 3 pairs Peorias, $100 guaranteed—First money, $40, divided by Van Saun, Barnes and Forbes; second money, $30, divided by Brown, Newton, Block, Stone and Chantler; third money, $10, divided by Skinner, Noreen, Durant and Kennedy; fourth money, $10, Jones; fifth prize, pair hunting boots, Pfister; sixth prize, shell case, Ahlstrom.

Eighth event, entrance $4.50, 15 single Peorias, $150 guaranteed—First money, $60, Kennedy; second money, $45, divided by Skinner, West and Jones; third money, $30, divided by Block, Pfister, Ahlstrom, Baldwin and Barnes; fourth money, $15, divided by Fox, Van Saun, Blakeley and Brown; fifth prize, hunting coat, Newton; sixth prize, pair hip rubber boots, Lawrence.

Ninth event, entrance $2, 10 single and 2 pair Peorias—First money divided by Block, Shelley and Parker; second money divided by Blakeley, Skinner, Catamaran and Ahlstrom; third money, Brown; fourth money, J. Smith; fifth prize, gun case, Kennedy.

Chamber of Commerce badge contest, entrance $5, 26 Macomber metal targets and 12 pair Peorias, previous winner of badge to take all entrance fees; won by G. W. Baldwin, the present holder.

FRANKFORD, Phila., Sept. 15.—A select party of gentlemen went down to the Sportsmen's Gun Club grounds at Fernwood to-day, to witness what proved to be a very interesting match between Mr. J. H. Davis, of the Sportsmen's, and Mr. A. L. Lumb, of the North End Gun Club of Frankford. The shooting began at 2 P. M. Three matches of clay birds, 30 singles and 20 doubles. Good shooting was the order of the day, and exceptionally good and close scores were made. Mr. Muir acted as judge for Mr. Davis, and Mr. Jas. Wolstencroft performed a like service for Mr. Lumb. Mr. W. Gibbs, whom everyone seemed to like as a first-rate good fellow, made a very acceptable referee. $35 a side was put up, as an incentive only, and 12-bore guns were used, and by the way, there seems to be quite a disposition to put 10-bore guns on the shelf by the trap shooters of this section, and use 12-bore guns altogether.

First Match.

Lumb	11101101101011111111111111111101	11 11 11 11 11 01 11 11 11 01			—43
Davis	11111110110011111100110110111011	10 10 11 00 11 10 01 11 11 01			—35

Second Match.

Lumb	01101011011011111111111101111111	11 11 10 11 11 11 11 00 11 11			—42
Davis	11111111111111011111111110111	11 00 10 11 11 11 11 00 11 11			—43

Third Match.

Lumb	11111111111011111111111111011	11 11 10 11 11 11 11 01 11 11			—46
Davis	11011111011011001101111011111	11 11 11 11 11 10 11 11 11 11			—41

Mr. Davis seemed disposed to try conclusions again with Mr. Lumb, and if another match is arranged, I think that either one will have to make the fur fly to win.—J. C. S.

PHILADELPHIA, Sept. 14.—A very interesting match at standard pigeons thrown from the new standard trap was shot at the Wild West show to-day between Johnny Baker and one of Philadelphia's well-known amateurs, Mr. S. B. Vandegrift, as a result of a challenge from Mr. Vandegrift. The first match at single birds was won by Mr. Vandegrift, by one bird, and the second and final match by Johnny Baker, with the remarkable score of 50 straight birds. Mr. Vandegrift was only two birds behind him with 48 to his credit, making Baker's score the winning one by one bird only. All were loud in their praise of the standard traps and pigeons, as all birds broke perfectly in the air.

SARATOGA LAKE, Sept. 8.—Saratoga Gun Club's weekly practice shoot, single Lockport bats, 18yds., 5 screened traps, 10-bore guns:

Hull	1101111111111111111111111111—29
Coster	1111111111101111110111111111—28

10 Doubles, 18yds.:

Hull	11 10 11 11 01 11 01 11 10 00—14
Coster	11 11 10 01 10 11 10 11 10 11—15

CAPUCIN.

WELLINGTON, Mass., Sept. 15.—There was a fair attendance at the grounds of the Wellington Gun Club to-day, and some good scores were made in the sweepstake matches. The winners in the several events are as follows: 6 clay-pigeons, Chapin; 6 bluerocks, Melcher, Stanton and Wardwell; 6 bluerocks, Melcher and Peyson; 6 clay-pigeons, Swift; 6 bluerocks, Snow; 3 pairs clay-pigeon, Swift and Edwards; 6 bluerocks, Snow and Wardwell; 6 clay-pigeons, Stanton; 6 bluerocks, Stanton; 6 bluerocks, Stanton; 3 pairs clay-pigeons, Snow and Bond; 3 pairs bluerocks, Bond and Swift; 6 clay-pigeons straightaway, Stone; 6 bluerocks, Edwards, Savage and Stone.

MONTREAL, Sept. 13.—What proved certainly the biggest thing in the shooting line held in Montreal for years was brought off at Lepine Park to-day. It was a shoot at live birds, held under the auspices of the St. Hubert Gun Club, an event which has been looked forward to for some weeks by all local marksmen. The shooting all round was remarkably good, while some of the scores made were deemed wonderful, when the wind, light and conditions are taken into consideration. Mr. W. L. Cameron, winner of first prize, especially distinguished himself, killing 87 out of a grand total of 89. He has quite recovered his old form. The following are the scores. Sweepstakes at 20 live birds, 21yds. rise: Lebeuf 16, G. Lajeunesse 18, Marcoux 14, Smith 16, S. Chapleau 17, J Chapleau 17, Laveau 17, Brault 18, Lamoreaux 17, A. Contant 16, W. L. Cameron 18, Sicotte 17. Tie scores: Cameron 57, Brault 56, Lajeunnesse 17. Sweepstakes at 12 live birds, 21yds. rise: Cameron 12, Lajeunnesse 12, Lamoreaux 12, Chapleau 11, Contant 11, Bedard 11, Allan 11, Laveau 8, Boisseau 5. The three ties at 12 divided.

BROOKLYN, Sept. 8.—The members of the Fountain Gun Club were not to be deterred from holding their regular monthly shoot to-day at Dexter's Park, Long Island, by the rain. The shooting element of the club is not so large as in past years, but they still have some good shots in their ranks. Only seven went to the traps to shoot for the handsome club badge and extra prizes, and nearly all did some good shooting. The birds that Bondan furnished were strong ones and were in a hurry to get in out of the rain. The donor of the medal, Mr. C. A. Seddons, J. McDermott, and J. E. Lake killed 7 birds each, tieing for the emblem. On shooting off Seddons killed 6 more straight and won. J. E. Lake killed 5 out of 6 and J. McDermott 2 out of 3.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

CAMPING AT THE MEETS.

AS very clearly set forth in the FOREST AND STREAM of Sept. 6, camp life at the A. C. A. meet this year differed in many respects from that of 1884. Perhaps a majority of canoeists consider this change a step in the wrong direction, but the remedy does not lie entirely with the officers of the Association. It is true that it is possible to bring the number of races down to eight events, one for each paddling class, excepting No. 1; one for Class A and one for Class B sailing; one sailing race, free to all, sail limited to 75ft., no ballast; a combined sailing race, and the trophy race. Let the members at meet arrange any other races they please; but the A. C. A. is not a racing organization.

Still the true remedy rests with individual members of the Association. We are too apt to drift with the tide. Can we not all meet next year at Grindstone (if possible) to repeat the never-to-be-forgotten meet of 1884? There should be no need of prizes to induce us to go back to camp life as it should be. Let the cooks and cruisers write and publish their individual ideas as to what is the necessary impediments for individual cooking and camping either on a cruise or at the meet. Should any deem this suggestion sufficiently meritorious to be adopted I will be glad to give a list of the articles which I find necessary and which can be carried in any canoe. LORNA.

PITTSBURGH, Pa., Sept. 10.

While it lies with the officers to select a place suitable for actual camp life, and apart from outside attractions, it rests entirely with the canoeists who attend a meet as to how much camping they will do. Our comments on the meet have served to awaken a very general interest in camping, and next year it is probable that the meet will show a very great improvement in this essential point. We hope to describe and illustrate the subject of camp and canoe gear this winter, and any suggestions from readers will be welcome. Perhaps "Lorna" will lead off with a description of his outfit.

IANTHE C. C., FALL REGATTA, SEPT. 15.

THE fall regatta of the Ianthe C. C. was held on Saturday, on the Passaic River, at Woodside. The day was fair, but with a good breeze for the sailing races, and a large number of ladies were present. Vice-Com. Stephens and Mr. Walter Stewart sailed up in the Tomboy, while Messrs. Wilkin, Nadal and other came out by rail. The first race was for Class 1., paddling, for the Commodor's cup, to be won three times, Mr. W. R. Burling having won it in 1886-7. The starters were:

1. ——, Gabriel Reevs, Yonkers.
2. Scoot, L. B. Palmer, Ianthe.
3. Addie E., W. R. Burling, Ianthe.
4. Redante, A. C. Molloy, Arlington.

Mr. Reevs paddled a very light Canadian canoe.

The second race was the unlimited sailing, course 1½ miles, the novice race being started at the same time over one-half the course. The wind was very squally, sometimes falling to a calm, and then coming hard off the hills. The starters were:

1. Essex, G. W. Cox, Essex.
2. Atalanta, L. B. Palmer, Ianthe.
3. Idlemere, J. L. Douglas, Ianthe.

Novices' race:

1. Will o' the Wisp, W. D. Anderson, Essex.
2. Wind, P. F. Hogan, Ianthe.
3. Bachelor, Barron Fredericks, Ianthe.
4. ——, W. Scott, Essex.

Essex won by a good lead, and Will o' the Wisp was first in the novices' race.

The sailing upset had only 3 starters, Mr. Palmer winning easily.

1. Atalanta, L. B. Palmer, Ianthe.
2. Wind, P. F. Hogan, Ianthe.
3. Old Ironsides, Geo. P. Douglas, Ianthe.

Mr. Palmer righted his canoe very quickly, though carrying over 100ft. of sail. The "man overboard" race was sailed with two in the canoe, one jumping overboard at the signal and being picked up.

1. Bachelor, B. Fredericks with W. T. Marvin.
2. Wind, P. F. Hogan with H. S. Farmer.

Marvin and Farmer went over at the signal, afterward regaining their boats. Bachelor won.

The tandem paddling had two entries:

1. Bachelor, Fredericks and Burling, Ianthe.
2. Egret, T. D. Palmer and Pierson, Ianthe.

Bachelor again won.

The standing-on-deck-paddling had four starters, Bachelor winning:

1. Bachelor, Barron Fredericks, Ianthe.
2. ——, H. S. Farmer, Ianthe.
3. Wind, P. F. Hogan, Ianthe.
4. Nita, W. F. Marvin, Ianthe.

The junior paddling, classes III. and IV., had 4 starters, being won by Mr. W. Myers of the Bayonne C. C.

1. ——, W. Myers, Bayonne.
2. ——, W. B. Daly, Arlington.
3. Cynthia, W. J. Stewart, Ianthe.
4. Egret, J. V. L. Pierson, Ianthe.

The senior paddling had 3 starters, Bachelor again winning.

1. Bachelor, Barron Fredricks, Ianthe.
2. ——, Wm. Myers, Bayonne.
3. Atalanta, L. B. Palmer, Ianthe.

The hurry-scurry race had 3 starters.

1. ——, H. S. Farmer, Ianthe.
2. Old Ironsides, Geo. P. Douglas, Ianthe.
3. Bachelor, Barron Fredricks, Ianthe.

Only two started in the paddling upset, Mr. Palmer turning his canoe entirely over while sitting inside, while Mr. Douglas's canoe sank with him.

1. Atalanta, L. B. Palmer, Ianthe.
2. Old Ironsides, Geo. P. Douglas, Ianthe.

The tournament was, as usual, very amusing, though the lances were replaced by brooms. The competitors were:

1. Wind, P. F. Hogan, paddler, H. S. Farmer, lanceman.
2. Bachelor, W. F. Marvin, paddler, B. Fredericks, lanceman.

At the first fierce charge the crew of the Bachelor bit the dust, but soon righted and bailed out their craft and challenged to a second charge. This was fought stubbornly for some ten minutes, with no advantage to either side, but finally victory perched on the broom of the Wind.

After this race the prizes, consisting of silk flags, camping and canoe gear and other useful articles, were presented by Mr. Wilkin, after which a supper was served in the meeting room of the club house, the evening being spent with songs and music by the banjoist of the club. A number of the visitors camped in the club house over night, starting for home in the morning.

CANOE RACING ON THE DELAWARE.—The Quaker City Y. C. will hold its first open regatta on Sept. 27, at Gloucester, opposite Philadelphia, and among the many events it has arranged for sailing and paddling races for canoes, as follows: Sailing, unlimited and 75ft. limit; paddling, single and tandem, each 1 mile; standing, hand paddling, upset. The races are open to all yachts or canoes belonging to recognized clubs. Entries must be in writing on the club's blanks, and must be sent by Sept. 25 to A. F. Bancroft, Room 17, No. 114 South Sixth street, Philadelphia. No entrance fee will be charged.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $5. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

EASTERN Y. C.

FALL REGATTA, SEPT. 14.

THE race of the Eastern Y. C. on Friday last may seem a comparatively flat and tame affair after some of the exciting races over the same course in 1885, 1886 and 1887, in which Volunteer, Puritan, Mayflower, Priscilla, Sachem and Iroquois had met so often, but at the same time there are several points in the present race that are as important and instructive as any that have been brought out in the more showy races of the larger classes. The first point, and one that specially concerns the leading yacht clubs, is that in spite of all that has been done to foster and develop racing in the larger classes, the sport has not vitality enough to carry itself creditably through the season, but quietly collapsed with the end of the New York Y. C. cruise, save for one last spurt at New York to-day. At the same time, more by chance than by dint of any special patronage or encouragement, a practically new class of racers has arisen, in which not only are the entries good, but the interest is so keen that one race is followed by another immediately; as at Marblehead in June, at Larchmont last month, and again at Marblehead last Saturday.

The doings of Volunteer and her class have excited little interest this season; Sachem, Grayling and Sea Fox have had few decisive meetings, and only two or three entries have graced the races of the 70ft. class; but the new 40-footers have already compelled a notice from all yachtsmen, and their races are watched with no less interest than attended the big boats last year. This interest is in no way due to any extraneous feature, such as superiority in size over the older yachts or the fact that such a trophy as the America's Cup is at stake, or from any international rivalry; the prizes are merely nominal, the surroundings are purely local, and the interest arises solely from the equality in size between all the competitors and the fact that each is manned and handled as a racing yacht should be.

The name which the class has made for itself in one short season with no outside aid; the number and quality of the entries, and the great value of the results which must follow from the hard racing of so many different models of practically the same size, should prove to all clubs the importance of encouraging the class as far as possible, rather than in wasting money on larger classes that never fill. It is not necessary to give up racing in the larger classes, but a glance at the list of entries for this season will show at once what we have contended for some time—that the conditions under which yachting is carried on in America are not favorable to the maintenance of a racing class of large yachts, to be kept up in first-class racing form from June to October to the practical exclusion of cruising.

Owing to the fact that nearly all in the class are new this year, and not ready until late in the season, the races of the 40-footers have not yet been definite or conclusive in their results, but every one who is at all familiar with the wide range of the class in respect to model, from Crocodile and Rival to Baboon and Minerva, will admit that more may be learned from the racing of these boats than from any other class, large or small, in the country.

It is only at the end of the season that the new boats are fairly in racing trim, and though several races will probably be sailed in which three or four of them will compete, the season is apt to close without such a thorough test of all the craft as is in every way desirable, thus postponing for another year knowledge of a most valuable kind which might be utilized during the winter. The matter is of so much importance both to owners and designers that the clubs could not do better than to take it entirely in hand, and organize a series of thorough test races for the class. One or two races sailed in chance weather will not do it, what is needed is to bring all the yachts in the 40ft. class together on some good course, and to sail not less than five races, barring flukes and drifting matches as far as possible.

As the object is to test racing boats under racing conditions there should be no restrictions on sail, and professional skippers should be allowed if desired, in order that there may be no backing out on the part of a Corinthian who is familiar with the boat, as sometimes happens. If necessary high prizes should be offered; the clubs might easily make up a purse of $1,000 for first and $500 for second. A series of races of this kind under proper management and with such a fleet as Pappoose, Baboon, Xara, Banshee, Minerva, Chiquita, Crocodile, Nymph and Rival, would be watched by yachtsmen at home and abroad with as much interest as any of the late cup races, and the results would be the most important and conclusive that the yachting world has ever known. Such a series of races is perfectly practicable if taken in hand at once, though the season is too far gone to permit of much delay. Probably every yacht named could be induced to start, and it will be a decided loss of time if the season is allowed to close without more definite results than have thus far been obtained.

Besides the size of the entries in the E. Y. C. regatta, it was noteworthy that out of a fleet of seventeen starters only four were centerboards, one of them being Chiquita with 7ft. 3in. draft and keel. As far as the East is concerned, the keel question seems pretty well settled up to a draft of 10 or 11ft., and except in the smallest and largest classes the centerboard has abandoned the fight.

Not only were the centerboards in a small minority in the present case, but though they represented the very best of their class, the famous old Vixen and the invincible Fanita, besides the fast little flyer Atalanta, they were all badly beaten by the keel boats, the winner in the fifth class being the new Watson cutter Bayadere, beating Fanita by over 5m. and Vixen 10m. corrected time.

The Eastern Y. C. has not been successful in its racing this year, both the spring and fall regattas having been failures so far as the large yachts were concerned, but the season cannot be counted as lost when it has proven the three important points of the special adaptability of the 40ft. class for the purposes of keen match sailing, the practical withdrawal of the centerboards in favor of the keel, and the superiority of the keel in point of speed. We learn that several new boats are already in prospect for the same class, and the number is likely to reach half a dozen before spring.

The sum of $1,500 was appropriated for prizes, the course being the fairest and best on the Atlantic coast, but not a yacht entered in the large classes, either schooners or singlestickers, the only entries being:

CLASS 5.

	Rig.	L.W.L.	Beam.	Draft.	Allow
Fanita, T. H. Shepherd	C.B. sloop	44 00	17 00	5 00	...
Vixen, W. C. Loring	C.B. sloop	44 01	16 00	5 04	.34
Bayadere	K. cutter	45 00	9 11	8 00	2.21

CLASS 6.

Chiquita, A. Homenway	K.&C.B. cut.	39 06	13 08	7 06	...
Baboon, C T Adams	K. cutter	39 06	13 06	8 03	.38
Xara, C. J. Means	K. cutter	39 06	13 04	8 03	1.17
Pappoose, Simpkins&Thayer	K. cutter	36 00	12 06	7 06	7.38

SPECIAL CLASS.

Marguerite, C. H. Taylor, Jr.	K. cutter	28 00	10 06	7 00	...
Saracen, W. P. Fowle	K. cutter	29 03	10 00	6 06	.15
Elf, W. H. Wilkinson	K. cutter	28 10	11 00	6 06	2.17
Mignon, Horatio Babson	K. cutter	28 00	...	6 00	3.42
Beetle	K. cutter	29 04	7 10	6 00	4.18
Atalanta, I. R. Thomas	C.B. sloop	27 07	11 11	3 06	4 18
Prince Karl, E. L. Williams	K. cutter	28 06	8 11	5 07	5.30
Ione, J. S. Poyen	K. sloop	25 07	10 00	5 06	6.46
Swordfish, J. B. Paine	K. cutter	23 06	9 00	5 06	9.15
Siva					10.08

A special arrangement was made for the small class, the yachts being entered in the Corinthian Y. C. and not in the Eastern.

The courses were for classes 5 and 6 an eight mile triangle, commencing from the starting line, off Marblehead Rock, leaving outer Pig Rocks Buoy on starboard, to Graves Whistling Buoy, leaving on port, thence to a mark, consisting of a small raft, 8 miles east, leaving the same on port, to the finish line, 24 miles.

Special class, 8 miles to the southeast mark, leaving it on port and return, 16 miles.

The wind at the start was N.W., about a 10-knot breeze, with the last of the ebb to help over the first leg. The preparatory whistle blew at 11:30, with the start at 11:40 for fifth and sixth classes, Pappoose going over first with Xara on her lee beam, and Chiquita and Baboon a little to leeward of the latter. The fifth class followed the others, Fanita having a good lead, with Vixen to windward of Bayadere. On board of Chiquita were Messrs. Hemenway, Edward and Sidney Burgess, Dr. John Bryant and Capt. Crocker, while Baboon was sailed by Messrs. C. F. and Geo. Adams, her owners; Xara by Capt. Harry Haff, Jr., and Pappoose by Capt. Watson. All carried clubtopsails and jibtopsails, except Pappoose and Chiquita, who were contented with jibheaders. The special class was started at 11:45, Atalanta leading over the line. Most of them carried a reefed mainsail and sprittopsail with spinaker. The start was timed:

Pappoose	11 40 33	Siva	11 45 45
Xara	11 40 36	Marguerite	11 45 48
Chiquita	11 40 42	Saracen	11 46 00
Baboon	11 40 50	Mignon	11 46 00
Fanita	11 41 02	Beetle	11 46 00
Bayadere	11 41 23	Prince Karl	11 46 00
Vixen	11 41 24	Atalanta	11 46 02
Swordfish	11 45 31	Elf	11 46 48
Ione	11 45 38		

Xara did well from the start, but finally the larger boats shook her off, Fanita leading the fleet, with Bayadere pushing her. Near Egg Rock the wind shifted a little to the westward. Xara and Baboon had a hard fight for the lead in their class, both being very close to Vixen. Bayadere began to gain on Fanita, and overtook her before the mark was reached, getting the best of a little luffing match. The times at first mark were:

Fanita	12 39 30	Baboon	12 40 47
Bayadere	12 39 47	Chiquita	12 41 45
Vixen	12 40 04	Pappoose	12 42 02
Xara	12 40 18		

The wind thus far had been fairly steady, but now it fell and at the same time varied in direction, giving a chance for some fluking. Some of the boats carried spinakers, others to port, or starboard as occasion served, while some could not carry them at all. After several calm streaks the wind came out S.E. when the leaders were near the second mark, both Xara and Bayadere profiting by the first of the breeze. The times at the second mark were:

Xara	3 41 40	Pappoose	3 48 28
Bayadere	3 42 15	Fanita	3 48 35
Chiquita	3 47 10	Vixen	3 49 07
Baboon	2 48 09		

Xara and Bayadere tried a luffing match at the beginning of the last leg in which the former was victorious. The wind was now ahead but very light and unsteady during the whole of the leg. Xara and Bayadere led their classes and won very easily. The special class carried spinakers over the first leg, Saracen and Swordfish holding to the eastward and Marguerite and Ione sailing more to the south. Mignon was near to Saracen and turned second at the mark, the times being:

Saracen	1 06 30	Prince Karl	1 24 05
Mignon	1 07 26	Beetle	1 24 58
Swordfish	1 14 20	Atalanta	1 25 13
Siva	1 20 46	Marguerite	1 25 21
Ione	1 22 15		

On the way home Atalanta and Ione gave up. The official summary of the race is as follows:

Fifth Class Sloops—Over 40ft. and not over 46ft. waterline; first prize, $100; cutter Bayadere wins:

	Start.	Finish.	Elapsed.	Corrected.
Bayadere	11 41 23	5 18 31	5 37 08	5 44 47
Fanita	11 41 02	5 20 56	5 39 54	5 39 54
Vixen	11 41 24	5 26 38	5 45 15	5 44 41

Sixth Class Sloops—Over 35ft. and not over 40ft. waterline; first prize, $75; cutter Xara wins:

Xara	11 40 36	5 12 04	5 51 28	5 30 11
Pappoose	11 40 33	5 30 46	5 50 13	5 42 35
Chiquita	11 40 42	5 24 21	5 43 39	5 43 39
Baboon	11 40 50	5 29 55	5 49 05	5 48 28

Special Race—Yachts belonging to any yacht club, 25 to 30ft. l.w.l.; cutter Saracen wins first prize, $50; Mignon second prize, $25:

Saracen	11 46 00	3 14 13	3 24 30	3 29 14
Mignon	11 46 00	3 20 05	3 35 06	3 31 23
Marguerite	11 45 48	3 29 53	3 44 53	3 44 53
Swordfish	11 45 31	3 45 52	4 00 52	3 51 36
Siva	11 45 45	3 48 28	4 03 31	3 53 20
Elf	11 48 44	3 44 53	3 59 53	3 57 36
Beetle	11 46 00	3 54 41	4 09 41	4 05 25
Prince Karl	11 46 00	3 59 01	4 14 01	4 08 30
Ione	11 45 38	Did not finish.		
Atalanta	11 42 02	Did not finish.		

While the wind was very fluky and unsatisfactory, the conditions were fair enough to show a decided victory for Bayadere, especially when her rig and the light weather are considered, with the reputations of both her antagonists in light weather, for which Fanita, at least, is especially rigged. Xara's performance was especially good, as she beat both her own class and that above her.

After the race, Com. W. F. Weld, of the Eastern Y. C. offered a challenge cup to cost $250 for the class from 35 to 46ft., to be held by the winner subject to challenge up to July 1, 1889; to be held permanently only when won twice in succession. The first race was arranged for the following day, but only the four Burgess boats, Pappoose, Baboon, Chiquita and Xara entered.

WELD CHALLENGE CUP—SEPT. 15.

It was arranged to sail this race in connection with the Corinthian regetta, and at 1:15 P. M. the tug York, with the judges, Messrs. F. B. Crowninshield and E. W. Hodgkins, were off Marblehead Rock and the preparatory signal was blown. The interval was 5 minutes, with a one gun start. The times were: Baboon, 1:20:29; Xara, 1:20:42; Pappoose, 1:20:58; Chiquita, 1:21:35.

The wind was S. E. fresh, and a course of 8 knots to windward was logged off by the tug. All crossed on port tack, each boat in turn, as she shaved the weather end of the line, shooting well out to windward. Baboon soon led decidedly, with Xara second, but Pappoose came up and passed her, taking second place. There was now a good breeze and a moderate sea, all having the wind and water alike, so that the fight was a very fair one. Pappoose continued to gain and after some 40 minutes she caught and passed Baboon to windward. At 2:25 Baboon went on starboard tack, followed by the others. Chiquita held a good wind and footed very fast, making up gradually what she had lost at the start, catching Baboon at the mark. The latter had lost ground for a time on the starboard tack, but broke tacks finally and picked up a little breeze that sent her ahead of the others. She and Xara came together at the mark, but as she had the starboard tack Xara had to give way and Baboon turned well ahead of her. As Baboon rounded she carried away a backstay and the hollow topmast went over the side, throwing her out of the race. The turn was timed: Chiquita, 3:20:05; Baboon, 3:20:30; Xara, 3:23:50; Papoose, 3:24:00. Spinakers were set to port and balloon jibtopsails run up, the three traveling very fast. Pappoose man-

aged to hold Xara all the way in, though nearly 4ft. shorter, while Chiquita outran the pair. The official summary is:

	Start.	Finish.	Elapsed.	Corrected.
Chiquita	1 21 35	4 25 18	3 03 43	3 05 18
Pappoose	1 20 58	4 30 15	3 09 17	3 05 25
Xara	1 20 42	4 29 44	3 09 02	3 09 18
Baboon	1 20 29	Disabled.		

Elapsed time to outer mark: Chiquita, 1:58:30; Baboon, 2:03:15; Xara, 2:03:08; Pappoose, 2:03:02.

Chiquita allows Xara 26s. and Pappoose 4m. 40s.

Time from starting whistle, 1:20 o'clock: Chiquita beats the Pappoose; actual time, 4m. 57s.; corrected time, 17s. On handicap time—Actual time, 5m. 31s.; corrected time 54s. Chiquita beats Xara, starting whistle time—Actual time, 4m. 26s.; corrected time, 4m. Handicap time—Actual, 5m. 19s. corrected time, 4m. 53s.

Chiquita has 17 seconds leeway over Pappoose, but on account of the closeness of the race on corrected time, they will have to be remeasured.

NEW ROCHELLE Y. C. MOSQUITO FLEET.

THE number of small craft of all sorts has greatly increased within the last three or four years about New York, the old catboat, once the sole resort of the amateur sailor, being replaced by a large fleet of all models and sizes, from the singlehander with a cabin down to a racing canoe. Thus far little has been done to promote the interests of these cruisers, but the New Rochelle Y. C. has started the good work by a regatta, held on Sept. 15, under the following conditions:

"Entrance fee, $3 for each boat, the combined stakes to purchase a silver bowl for first prize, and a U. S. yacht ensign for second prize; this regatta is open to canoes, open rowboats, St. Lawrence skiffs, sneakboxes, duck boats and small cruisers; no restrictions as to number or area of sails; crew to be limited to two persons in each boat; the time allowance will be computed on length over all, and based on the Larchmont Y. C. table of allowances. The start and finish will be across an imaginary line drawn from the New Rochelle Y. C. house to the spindle southwest, known as Bailey's Rock. The course will be to and around striped buoy west of Execution Lighthouse, thence to and around stakeboat anchored two miles northeast of Execution Lighthouse, thence to starting line; distance, 6 miles; stakeboat and all buoys on Execution Reef to be left on port hand; if the wind should be southwest, the order of going out will be reversed, and stakeboat and buoys left on starboard side. At the firing of the gun on Echo Island at 2 P. M., 10 minutes will be allowed to make ready; a flying start to be made at the firing of the second gun at 2:10 P. M. Mr. Amos Brown, New Rochelle, N. Y., will act as stakeholder, and receive entrance fees; Mr. John S. Nicholas will act as judge.

The starters were:

Lestris	Yawl	Dr. Ledyard.
Chamberlain	Cat-rigged rowboat	C. Chamberlain.
Puck	St. Lawrence skiff	J. W Gibson.
Unique	Whitehall boat	F. B. Jones.
Angelita	Rushton rowboat	A. W. Naumann.
Polly	Lateen and jigger	C. T. Strauss.
Erl	Cat-rigged rowboat	F. W. Lawton.
Bess	Balance lug	Louis Rahner.
Surprise	Cat-rigged rowboat	C. M. Bird.

The start was made at 2:32 P. M., the fleet getting over quickly. Unique took the lead and held it to the finish. Puck found the water too rough, so gave up and returned. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Chamberlain	2 30 10	4 34 33	2 04 23	1 58 58
Erl	2 33 13	4 19 23	1 47 10	1 40 27
Puck	2 35 55	Did not finish.		
Lestris	2 33 19	4 24 32	1 51 13	1 46 46
Unique	2 33 26	4 13 41	1 40 15	1 40 15
Surprise	2 33 40	4 36 34	2 02 54	1 58 45
Polly	2 33 51	Did not finish.		
Bess	2 33 55	4 29 16	1 56 21	1 55 27
Angelita	2 36 31	Time not taken.		

Winners—First prize, Unique; second prize, Erl; difference in time 12s.

QUAKER CITY Y. C.—The first open regatta of the Quaker City Y. C. will be sailed on Sept. 27, starting off Gloucester, N. J., opposite Philadelphia. The race will be open to all boats enrolled in recognized yacht or canoe clubs, the classes being: Schooners—First class, 60ft. and over, l.w.l.; second class, less than 60ft. Sloops, cutters and yawls—First class, more than 38ft. l.w.l.; second class, 32ft. and less than 38ft.; third class, 26ft. and less than 32ft.; fourth class, less than 26ft. Open yachts, jib and mainsail—Class A, more than 26ft. l.w.l.; Class B, less than 26ft. Open yachts, cat—Class C, more than 26ft. l.w.l.; Class D, 20ft. and less than 26ft.; Class E, less than 20ft. Tuckups—Third class, unlimited sail, more than 15ft. 3in. in length, 4ft. 7in. beam; fourth class, unlimited sail, not more than 15ft. 3in. in length, 4ft. 4in. beam; fifth class, 56ft. and under around the bolt rope, and not more than 15ft. 3in. in length, 4ft. 6in. beam, and 15in. in depth. Duckers—First class, unlimited sail, not more than 15ft. 3in. in length, 4ft. 2in. beam; first class, 49ft. and under around the bolt rope, and not more than 15ft. 3in. in length, 4ft. 2in. beam, and not to carry more than three men; second class, 38ft. and under around the bolt rope, and not more than 15ft. 3in. in length, 4ft. 2in. beam, and not to carry more than two men. Canoes—Sailing—Sail area unlimited; sail area limited to 75sq. ft. Paddling—Single, 1 mile; tandem, same course; standing, 200yds.; hand, 100yds.; upset, 500yds. A first prize will be awarded in each class in which two enter and start; a second in which four enter and start, and a third prize in which seven enter and start. Entries on the club blanks must be made to the regatta committee on or before 6 P. M. Tuesday, Sept. 25, addressed to A. F. Bancroft, Room 17, No. 114 South Sixth street, Philadelphia. No entrance fee will be charged. A very large number of entries is expected, and the fleet will be a most unique and interesting one.

BEVERLY Y. C. 13STH REGATTA.—Marblehead, Sept. 13.—Sail-off for third class pennants. Course: Leaving R. buoy No. 6 on starboard, Bowditch's Ledge beacon and stakeboat off Curb's Point on port, B. buoy No. 7, 5 and 3 and buoy on Selman's Berth on starboard and return; 7½ miles. Wind strong west.

	Length.	Start.	Finish.	Elapsed.	Cor.
Wraith, H. P. Benson	22.10	1 34 05	1 03 08	1 29 03	1 18 14
Nerina, R. Saltonstall	21.10	1 34 45	1 03 50	1 29 05	1 17 18
Holden, G. Dexter	21.11	1 34 47	1 05 50	1 31 03	1 19 22

Pennant for best corrected time won and held by Nerina. Pennant for best actual time won and held by Wraith. Champions for 1888, corrected time: First class, Atalanta; second class, Sprite; third class, Nerina; fourth class, Psyche. Holders of pennants for best actual time, 1888: First class, Atalanta; second class, Witch; third class, Wraith; fourth class, Psyche.

139th regatta, 4th open sweepstake, Monument Beach, Sept. 13.—Courses, sloop class, leaving buoy No. 5 on starboard, Bowbells Buoy, Scrag Neck, Buoy No. 10 and Buoy No. 3 on port, and return, 13¾ miles. First class, leaving Pine's Buoy on starboard, Bird Island Light Buoy and Pine's Buoy on port, and return, distance 11 miles; third class, leaving Pine's Buoy, Abel's Ledge Buoy, judges' boat and Pine's Buoy on starboard, and return, 8 miles; fourth class, leaving Pine's Buoy, judges' boat and Pine's Buoy on starboard, and return, 6½ miles. Wind S.W. to S., moderate.

	Length.	Elapsed.	Corrected.
SLOOP CLASS.			
Ramona, M. N. Bray	36.00	3 13 01	3 09 33
Reliance, N. H. Emmory	35.05	3 29 19	3 23 20
Carita, Geo. Weld	32.09	4 04 18	3 57 39
FIRST CLASS.			
Surprise, J. M. Codman	27.03	2 23 36	2 13 03
Mucilage, C. C. Hanley	29.06	2 24 02	2 15 47
Mist, Geo. Lyman, Jr.	27.00	2 25 23	2 14 39
Mattie, Vice-Commodore Stockton	28.10	2 33 33	2 24 39
THIRD CLASS.			
Daisy, Vice-Commodore Stockton	21 01	2 12 15	1 58 53
Petrel, Geo. H. Richards	20.07	2 13 29	1 59 34
Star, W. C. Bray	20.07	2 15 36	2 01 41
Dolly, A. Hardy	22.08	2 19 57	2 08 15
Eleanor, John Parkinson	23.08	2 25 40	2 14 56
Bertha, Z. Huckins, Jr.	21.04	2 25 50	2 12 44
FOURTH CLASS.			
Edith, J. Chapman	16.05	1 39 51	1 27 25
Toney, Jos. Jefferson	18.07	1 55 22	1 42 05
Redwing, Eben Holmes	17.07	Withdrawn.	

Winners of first prize, class one, Surprise, Mist second; class three, Daisy, Petrel second; class four, Edith, Toney second; special class, Ramona. Judge, W. Lloyd Jeffries. Judges' boat, Pathfinder.

HAMILTON Y. C.—A race was sailed on Sept. 15, for the White Wings cup, the starters being, Cyprus, White Wings, Stella, Comet, Coquette, Psyche, Alert and Flight. The course was 12 miles, with a fresh N.E. breeze. The cup and championship of the bay were won by White Wings, with Coquette second, Cyprus third, and Psyche fourth. On the result of this race also Cyprus wins the third class championship with two firsts and one second, Coquette takes second with one first and two seconds.

CORINTHIAN Y. C., MARBLEHEAD.—The sail-off in the second class keels of the Corinthian Y. C. took place off Marblehead on Sept. 12, in a light and variable wind. The starters were Swordfish, Carmita and Witch. The latter carried away her topmast through the straining of the shroud after she had gone two miles, and then withdrew. The times were:

	Length.	Elapsed.	Corrected.
Swordfish, J. B. Paine	34.01	2 43 20	2 43 20
Carmita, F. E. Peabody	21.02	Time not taken.	
Witch, B. B. Crowninshield	23.03	Disabled.	

The 25th regatta was sailed on Sept. 15 in a strong S. E. wind. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Saracen, W. P. Fowle	30.10	1 48 27	1 21 55

Dolphin, R. P. Robing, disabled.			

The judges were William A. Taylor, F. N. Stearns and Edwin F. Harriman.

RACING ON THE DELAWARE.—*Editor Forest and Stream* The Cook—Anderson race (two men in a boat) from Cooper's Point to Reedy Island and return (100 miles) took place on Sept. 4, starting at 10 A.M. Wind light N.E., flood tide. The Anderson took the lead, holding it to the horseshoe. Tide began to set down stream at 1.10 P.M. at Fort Mifflin; Cook ¼ mile in the lead, wind S.W., a dead beat. At Chester Cook 1 mile ahead and gradually getting away. When the Indges' boat (Wilkins) came to at Pennsgrove at 5.25 P.M. the boats were out of sight in the rear. Both anchored at 6.35 P.M. under the highlands of Christeen, flood tide. Cook 1½ miles ahead. Night set in dark and threatening. Wilkins under way at 1.08 A.M. 5th, double reefed and stood to westward, wind S.W., could not find race boats in the impenetrable blackness. Did not pass a vessel of any kind under way. Sighted Reedy Island light 4.10 A.M. on 5th, came to at light 6.05, flood tide, and reported to Mr. Geo. W. Jones, the affable keeper; the ladies kindly furnished a hat to one of our crew. Left at 6.48 A.M. Anderson rounded Island 7.15 A.M., Cook 10.45 A.M. on 5th as per keeper's report to writer. Anderson passed judges' boat off Deepwater Point, homeward bound in tow of a tug, and was ruled out of the race. Anchored at Old Man's Point 1.05 P.M., ebb tide, no wind. Got under way 2.10 P.M. in a stiff northeaster that increased to a moderate gale, double-reefed, came to at Gloucester 4 miles from Cooper's Point 8.05 P.M. Left here at 8 A.M. on 6th, beat up against wind and tide, arriving at 10 A.M., making the entire run in just 48 hours. Cook arrived at 10 P.M., making the run in 60 hours, and winning the race. Considering the dirty weather, the time is creditable to Captain Cook, his mate and his little namesake. Why the captain of the Anderson showed the white feather is best known to himself, as boat and rigging were intact when arriving at the Point. Captain Cook will wager that he can cover the same ground in the same boat in 36 hours.—R. G. WILKINS, Capt. Judges' Boat. *Copy of Judges' Report:* Yachts Anderson and Cook, race from Cooper's Point to Reedy Island and return. Left Cooper's Point 10 A.M. on Sept. 4, rounded Reedy Island, Anderson 7.15 A.M., Cook 10.45 A.M. on 5th, Anderson took a tow homeward bound and was ruled out. Cook arrived at Cooper's Point 10 P.M. on 6th and wins.—WM. D. CLARKE, HUGH KING, Judges of Race.

MARBLEHEAD Y. C., SEPT. 15.—The final race of the season was sailed by the Marblehead Y. C. on Sept. 15, the times being:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Mist, I. R. Thomas	14.05	1 11 41	1 07 59
Inez, Joe Bowden	17.02	1 15 06	1 14 16
Zip, J. Dennis	15.04	1 20 59	1 18 23
Ella, Peter Cortee	17.08	Did not finish.	
Milo, E. Mason	16.00	Did not finish.	
SECOND CLASS.			
Perhaps, B. B. Crowninshield	12.10	0 57 02	0 53 18
Ruth, J. Dunlop	12.00	0 58 10	0 53 45

Lone Star, Joseph Stacey	16.04	1 23 52	1 22 52
SECOND CLASS DORIES.			
Ethel, H. Stone	12.06	0 56 17	0 52 13
Jay Gee, F. B. Litchman	16.07	1 01 50	0 58 02
Countess, H. C. Snow	12.06	1 13 25	1 09 21
Heron, W. E. Bowden	12.06	Disabled.	

LARCHMONT Y. C., OPEN BOATS, SEPT. 15.—A very good race of open boats was sailed on Saturday by the Larchmont Y. C., the courses being: From buoy on Hen and Chickens Reef to and around Mattinicock Buoy and return, sailed twice over; 15 miles. The start was made at 1:35 P. M., the wind being moderate from the S.E., shifting later to E. Before reaching Mattinicock Susie S. capsized and was towed home by an oyster sloop after being righted by the judges' boat. The times were:

CLASS I.—JIB AND MAINSAIL.

	Start.	Finish.	Elapsed.	Corrected.
Ananda	1 36 23	4 37 05	3 00 42	3 00 42
Susie S.	1 37 09	Capsized.		

CLASS II.—JIB AND MAINSAIL.

Expert	1 36 30	4 35 39	2 59 29	2 59 29
Twilight	1 35 31	4 38 16	3 02 45	3 01 49
Nabli	1 35 30	4 39 46	3 04 16	3 03 36
Sirene	1 36 45	4 40 25	3 03 40	3 03 45

Ananda wins $150, Expert wins $100 and sweepstakes $50, while Twilight wins $50. On Sept. 22 a match will be sailed at Larchmont between, Nymph, Banshee and Baboon.

MONTGOMERY SAILING CLUB.—Seventeenth weekly cruise, Sept. 16.—Course, Morristown to Indian Creek and return, 5 miles. Weather cloudy. Wind fresh southeasterly:

	Length.	Start.	Finish.	Corrected.
Playford, tuckup	15.00	1 40 00	2 56 43	1 16 43
G. W. Bowers, tuckup	15.00	1 40 00	2 57 23	1 17 23
Sadie, canoe	16.00	1 34 40	3 01 40	1 21 40
Iola, ducker	15.00	1 30 00	3 05 40	1 25 40
Gracie, skiff	12.00	1 30 40	3 10 55	1 30 55
Volunteer, tuckup	15.00	1 40 00	3 25 00	1 45 00

Volunteer capsized below the line just before the start and was late getting away. After the conclusion of this race a private match was sailed between the Playford and the E. C. Potts, both tuckups, the latter being sailed by John Sheard, a professional from the Delaware:

	Start.	Finish.	Elapsed.
Playford	3 03 10	4 14 30	1 11 20
E. C. Potts	3 03 10	Withdrew.	

The Potts was beaten about 8m. Judge, Wm. Alcorn.

NASHAUTUCKET BAY.—On Sept. 15 a race was sailed off Fair Haven, Mass., over a 6½ mile course, the times being:

	Elapsed.	Corrected.
SHARPIES.		
Fish Hawk, D. C. Potter	1 56 42	1 56 10
Lamplight, F. Lawton	1 58 00	1 57 17
Maud S., H. Allen	2 00 47	2 00 47
Gracie, Prince Aiken	2 04 05	2 01 09
ROUND BOTTOMS.		
Flora, Frank Paine	1 57 15	1 55 38
Flirt, B. Parker	1 57 50	1 57 59
Mollie, W. Stetson	1 58 45	1 58 29
Dora, Thompson	Dodged a turning stake.	

Fish Hawk was protested for carrying a spinaker, the judges deciding that the sharpies should sail again, with no limit as to sails.

HULL Y. C., SEPT. 15.—The sail-off of classes 1 and 3 centerboards in the Hull Y. C. was sailed on Sept. 15 in a good breeze from S.E. Shadow did not start, her owner being in the E. Y. C. race, and Albatross had a sail over. In the third class only Posy and Nora raced, the former winning. The times were:

	Elapsed.	Corrected
Posy	1 17 56	57 40
Nora	1 20 01	57 53

Judges, Wm. A. Cary, Edward C. North.

SWANANONA.—This name has been given to the new yacht lately built by Mumm and purchased by Mr. J. D. Barrett, who gave his sloop Madcap in part payment.

A FATAL DISASTER TO A SAILBOAT.—On Sept. 13 Mr. Ralph Maugham, of Tenafly, N. J., made up a sailing party including his 4-year-old son Sylvester, Miss Elizabeth Butler, Miss Nettie Voornees, Mr. John Demorest and Mr. Mayhew Yerrington, for a sail on the Hudson. At Nyack they hired of a boatkeeper named Latourette a 20ft. cabin sloop, a craft of unknown age. As they had no ballast they loaded a lot of stone on board and started, sailing down to Alpine Grove. When near Hastings the boat began to sink rapidly, and before aid could reach her from the shore she was under water. Rowboats quickly put out and picked up Mr. Maugham and Miss Butler, both being still alive. After some difficulty Mr. Maugham was revived, but all efforts failed with Miss Butler. The steam yacht Inanda sent a crew to the rescue and many other boats turned out, but no other bodies could be found. An effort will be made to raise the boat, and until this is done the cause of the disaster cannot be ascertained, but it is beyond question that the boat was rotten and entirely unfit for use.

NORTH SHREWSBURY Y. C.—A ladies' regatta was sailed on Sept. 14, on the North Shrewsbury River, with nine starters, the course being four rounds of the triangle, 10 miles, with a moderate S.E. breeze. Seven of the yachts were sailed by ladies, each having a gentleman as crew, who was not allowed to touch the tiller. Two yachts were sailed by young men disguised as girls, but they failed to fool the judges. The starters were: Enigma, sailed by Miss Minnie Borden; Undine, Mrs. Florence Philips; Kitty K., Miss Kitty Bussell; Lizzie R., Miss Laura Roberts; Theresa, Miss Lilian Wild; Gussie, Miss Jessie Bussell; unnamed, Miss Mabel Fisher, Mr. Joseph Snyder and Mr. George Bussell. Enigma won by 6m. 25s., with Undine second and Kitty K. third.

TORONTO Y. C., SEPT. 16.—A race for fourth class was sailed on Saturday in a reefing breeze from the east. The entries were, Alvaetta, Mischief, Caprice, Christobel, Alert, Finette, Elaine and Molly. Caprice led the fleet, though nearly capsized near the channel buoy. The times were:

	Elapsed.	Corrected.
Caprice	4 35 50	4 30 47
Alert	4 38 53	4 38 41
Finette	4 38 50	4 38 50

Caprice takes first prize, $20, and wins the championship flag for the season in her class.

MILL ROCK TROPHY CUPS.—A race was started on Sept. 11 in a fresh N.E. breeze, the course being from Capt. Jacob Varian's Pavilion, at the foot of East Ninety-second street, to and around a stakeboat off the west end of Ward's island and return, the course to be sailed ten times over to make ten miles. Only two yachts, Julia and Gracie, started, and the former capsized on the first round, throwing her crew of six into the water. The race was postponed to Sept. 18. On Sept. 13 the race for the larger cup was sailed in a strong N.W. wind, resulting as follows:

CATRIGGED YACHTS—COURSE 10 MILES.

	Length.	Elapsed.	Corrected.
Julia, Alf Wright	18.00	2 04 45	2 04 45
Gracie, George Varian	18.00	1 47 00	1 47 00
Surprise, O'Brien	16.06	Did not finish.	

Thus the Gracie won by 7m. 45s.

DORCHESTER Y. C.—The race of Sept. 15 was postponed to the 22d. The Regatta Committee announce the following award of prizes for the runs during the annual cruise: First day, Hull to Marblehead—Club burgees, presented by Commodore H. W. Savage, won by Ethel and Marion. Pewter mugs, awarded Ianthe, Magic, Ethel and Marion. Second day, Marblehead to Dorchester—Club burgees, presented by Vice-Commodore J. C. Soley, won by Ianthe and Ethel. Pewter mugs awarded Bohemian and Marie.

MONATIQUOT Y. C.—On Sept. 10 the fifth and last race of the series between Secret, Posy and Folly was sailed over a 12½-mile course, in a strong N.W. wind, the times are:

	Length.	Elapsed.	Corrected.
Secret, E. F. Linton	22.06	2 43 52	2 01 40
Posy, R. G. Hunt	22.03	2 46 18	2 03 28
Folly, J. F. Shepherd	20.08	2 40 40	2 04 15

The judges were Messrs. Henry Gardner, T. D. Bagley, E. P. Worster and Dana Smith.

GREAT HEAD Y. C.—On Sept. 13 the final race of the Great Head Y. C. was sailed in a strong S.W. wind, with smooth water. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Moondyne, Eliot Shaw	24.08	1 11 35	0 54 16
Elta May, A. H. Lawrence	21.04	1 30 20	1 02 58
Vixen, P. B. Wadsworth		1 30 47	1 06 31
SECOND CLASS.			
Trouble, Mason Bros.	19.08	1 30 50	1 01 43
THIRD CLASS.			
Modoc, D. W. Belcher	15.07	1 07 10	0 44 08
Mischief, J. A. Lowell	16.07	1 19 10	0 57 07
Topsy, H. J. Vinal	14.04	1 22 00	0 57 31

PLEON Y. C., SEPT. 11.—The fifth and last race of the series for the Wood Cup was sailed on Sept. 11, the times being:

	Length.	Corrected.
Jay Gee, F. B. Litchman	12.07	1 33 33
Perhaps, B. B. Crowninshield	12.10	1 33 41
Monarch, W. O. Taylor	12.07	1 36 44
Estelle, J. W. Dunlap	11.09	1 37 10
Ruth, J. Dunlap	12.06	1 38 47

Judges: W. A. Parson, C. E. Wilson, R. C. Baldwin. Jay Gee has won two legs, Perhaps two legs, and Ruth one leg, so that a sail-off is necessary.

MARGUERITE AND ATALANTA.—A private match was sailed on Sept. 12, 8 miles to windward and return, between the cutter Marguerite, owned by Mr. C. H. Taylor, Jr., and the sloop Atalanta, Mr. J. R. Thomas. The wind was light S.E. and very unsteady. The start was made off Marblehead at 1:48:30, the finish being timed: Marguerite, 3:10:7; Atalanta, 5:35:7. Marguerite won by 23 minutes corrected time.

LAKE CHAMPLAIN Y. C., SEPT. 15.—The annual race for the championship pennant was sailed on Sept. 15 in a light S.W. wind. The times were:

	Elapsed.	Corrected.
Flyaway	1 26 05	1 30 42
Ripple	1 32 50	1 32 50
White Wings	1 45 00	1 48 30

The annual regatta will be sailed on Sept. 21.

CAPT. ANDREWS AND THE DARK SECRET.—The dory Dark Secret was picked up by the Norwegian bark, Nor, and with her owner was safely landed in New York on Sept. 12. Capt. Andrews will for the present confine his cruising to the pleasanter and more profitable waters of a stage tank in a theater. The latest candidate for death or a dime museum hails from Brooklyn, from which port he has cleared for Boston in a 7ft. dory.

ST. LAWRENCE Y. C.—The sail-off for the commodore's cup of the St. Lawrence Y. C. was sailed on Sept. 15. Lulu and Madge each having won 3 races out of the series of 6. Lulu won by 1m. 30s. The owners of the Minnie A. have challenged the Lulu for a race in which professional crews shall be allowed.

ARIADNE, sloop, Sackett Bros., was burned off Cape Vincent, St. Lawrence River, on Sept. 4. She was a centerboard sloop of 52ft. 6in. l.w.l., and 18ft. beam, of the old type. The boat was almost entirely destroyed.

CHIQUITA.—Prior to the races last week Chiquita was hauled out and 1,000lbs. of lead was run into her deadwood aft to trim her properly.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

IF "J. J.," Malden, Mass., will write to Mr. Frank P. Phillips, Sanford, Fla., I think he will get the skins for him.—J. A. H.

B., Bristol, R. I.—1. Ought a well bred pointer have dew claws? 2. Would a pointer having them score as high at a bench show as one who did not? 3. What would be the difference? Ans. 1. Dew claws are common to all breeds of dogs. 2. Yes.

10-BORE, Boston, Mass.—Some time ago one of my friends went to Colorado, and on his return reported to have met with a duck called there the "musk duck." Now, I have tried to look up this duck in a number of bird books. The bird was described very vaguely to me, and from it I should judge the prevailing colors were white and black. From this very poor description can you tell me about the duck? Ans. We know of no species of North American wild duck which goes by this name. The nearest is the so-called muscovy or musk duck (*Catrina moschata*), a domestic bird native to South America, may be the bird referred to, and would correspond well enough with the scant description given; but we understand you to refer to a wild duck.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 27, 1888.

VOL. XXXI.—No. 10. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

RETALIATION.

THE fisheries imbroglio between the United States and Canada has hitherto been confined to the commercial sea fisheries. The Canadians have stoutly declined to grant American fishermen certain privileges in Canadian seas; but the Provinces have been ready enough to admit American anglers to the trout streams and salmon rivers of the Dominion. Americans, as individuals and clubs, are holders of leases covering extensive territory in Canada; they control a large number of the best fishing grounds there. They pay well for their privileges, and while a certain amount of dissatisfaction at this has been expressed by individuals, the general feeling in Canada it one of willingness to exchange salmon and trout fishing privileges for American greenbacks at current rates of exchange.

The recent discussion of the fisheries treaty and the talk of retaliatory measures to be adopted the United States have had the effect of fostering whatever prejudice existed across the border against American lessees of angling rights; and we hear it bruited that if retaliation ever becomes more than talk the Canadian Parliament will be asked to enact a law declaring that only naturalized British subjects shall be allowed to fish in Canadian waters. The possibility of securing the enactment of such a measure is now discussed in Montreal and elsewhere. If a law of that purport were to be enacted, it is easily seen that it would seriously affect very many Americans who now hold Canadian leases, both individuals and clubs, as the Restigouche, St. Marguerite and others. It would certainly cut off from Canada a large revenue now derived from these lessees, but on the other hand, those who are talking of the measure, reason that Canadian and British anglers stand ready to take up the leases of salmon and trout streams at a moment's notice.

We are quite free to say that we do not believe any such retaliatory law will ever be enacted, even should the United States enforce retaliation against Canada. In leasing to American anglers, the Canadian authorities have been governed in the past by business principles; they leased to Americans, not because they preferred American to Canadian lessees, but because the Americans were ready to put up the money. They will be governed by the same principles in the future, retaliation or no retaliation. When the Canadians have territory to lease to sportsmen and anglers, they come down to the Boston, New York, Philadelphia, Chicago and other American cities as a matter of course.

It is here they find the men and the money for their lands and waters, and it is here that they will come in the future in quest of more men and more money. And retaliation or no retaliation, the Indian and half-breed and Canuck guides in the wilds will rejoice as much as ever to see the color of the "Boston man's" wealth.

There are other considerations than this one of mere money. How many Americans are there to whom an angling excursion in Canada means the renewing of old friendships cemented by many a day and week of pleasant fellowship with Canadian brothers of the craft. It will take an iron-clad law and a whole army of police to sever these friendships or break up the annual renewals of good will in the camps on Canadian lakes and rivers.

A STORY OF DESTRUCTION.

IN the Smithsonian department of the Cincinnati Exposition there is now to be seen a startling exhibit. It is a collection of objects which have been brought together by Mr. W. T. Hornaday, to illustrate and impress upon the mind of the observer the fact that nearly all of our most conspicuous and interesting game quadrupeds are rapidly being exterminated, and will soon disappear forever. The lesson it teaches is both impressive and saddening to every lover of animated nature, and like all the lessons taught by the National Museum collections, it is strictly true.

The most prominent feature of the exhibit is a series of mounted specimens representing the species of American mammals which have become extinct (in a wild state, at least), and also those which are now approaching extinction. The buffalo, Californian sea elephant and West Indian seal are represented as having become extinct in a wild state, with the exception of perhaps a score of stragglers which the hunters have not yet found. In the series of species threatened with speedy extirpation are found the mountain sheep, mountain goat, elk, a fine group of antelopes of various ages, the moose, caribou, blacktail deer, beaver, otter, sea otter, walrus and grizzly bear.

The story of the great buffalo slaughter is very graphically told. A mounted specimen and a series of superb photographic enlargements of the various specimens composing the large mounted group in the National Museum represent the species as it once flourished. Opposite these hang another series of pictures, three of which are large oil paintings, illustrating the methods employed in the destruction of the buffalo. The first is a representation of the "Chase on Horseback," which the label declares to have been the only fair and sportsmanlike mode of hunting ever practiced by either reds or whites. Next to this hangs a magnificent oil painting, executed by special order by J. H. Moser, of Washington, entitled "The Still Hunt." This represents the typical still-hunter, who killed buffalo by the hundred, for hides worth a dollar each. The hunter is lying flat on the ground at the top of a ridge "pumping" bullets from a Sharps rifle at a bunch of buffalo, on which he has "got a stand." A dozen or more have fallen, but the stupid brutes stand there in wonder, while the remorseless butcher pours in the bullets of death. In the distance, a snowy plain, backed by snow-clad mountains, is "black with buffalo," to the number of ten thousand or more. The picture is a very striking and truthful representation of the method by which the destruction of seven or eight million buffalo was accomplished in a few short years.

Other pictures in this series represent the other methods employed in killing buffalo, chiefly by Indians, such as impounding, hunting on snowshoes, hunting in disguise, "the surround," etc. On three large flat screens are shown samples of "the objects for which the buffalo was exterminated." One is a skin of a large buffalo bull, and another is a cowskin, both in a raw state, just as they came from "the range," where the former sold for the insignificant sum of $1.25 and the latter brought even less. A third specimen is a bull hide, taken in the summer when almost bare of hair for use as leather, and having only about half the value of the robe. The label attached to this specimen fitly characterizes the hunters who killed buffaloes in summer for hides as "greedy wretches."

Last come two objects to show what remains of our most valuable American quadruped. On a section of Montana prairie, eight feet by ten, lies the complete skeleton of a large buffalo bull, just as it was found bleaching on the range, and just as ten thousand others lie to-day. The powerful action of the weather has stripped every particle of flesh from the bones, and left them clean and white, but still, attached to each other by their dried-up ligaments, the legs in position precisely as the animal fell. It is a ghastly object, and surely must awaken a feeling of remorse in the breast of every old buffalo hunter who comes face to face with it as he passes along the main aisle. Hanging near it is another large oil painting by Moser, entitled, "Where the Millions Have Gone." It represents a scene on the Montana buffalo range as it is to-day. A wide plain is covered with bleaching buffalo skeletons, similar to the actual skeleton already mentioned, as weird and ghastly a scene as could be found anywhere outside a charnel house.

One of the most startling features of this strange display is a lot of seventy tanned skins of the rare and little-known Rocky Mountain goat, which the label explains were purchased in New York, fully tanned and dressed, at $1.50 each, and originally sold in Denver at fifty cents each, to be made into sheep rugs and mats. This shows what railroads and breechloaders are doing for the game of the West. When it is possible for the pot-hunters to get at even the mountain goat in its remote and dangerous fastnesses, kill them by the score and sell their hides at fifty cents each, we can count on our fingers the number of years within which the total extinction of this rare and interesting quadruped is likely to be accomplished, in this country at least. Western newspapers occasionally report hunters as hauling in a wagon load of mountain goats at a time. The Cincinnati lot includes the pelts of adult males and females and young of all ages, even to kids. If the members of State and Territorial legislatures in the West could see this lot of skins and read the descriptive label attached to it, they might be induced to pass a protective law that would really protect these animals, and others also, from such purposeless and wanton destruction.

The final feature of this unique exhibit is a collection of "weapons of destruction," which includes specimens of nearly all the sporting rifles that have been used against American game, from the old Harper's Ferry flintlock down to the latest and deadliest patterns of repeating breechloaders.

THE "AL FRESCO" FUND.

Editor Forest and Stream:

Let "Onondaga" contribute a trifle toward the "Al Fresco" fund. I would that it might be an hundred fold greater. I cannot refrain from an opportunity to show the esteem I feel for "Al Fresco," both as a personal friend and as one of the truest sportsmen America has ever known. The gloom that overspreads fair Jacksonville extends even above these mountain tops, for among the list of stricken I remember many friends with whom I have cast the line, raised the gun and traversed Florida waters. Should you publish the list of donors let mine be as "Onondaga," as the Doctor will recognize that as coming from me through our common medium, FOREST AND STREAM. ONONDAGA.

CRANBERRY LAKE, Adirondacks.

["Onondaga's" check for $10 has been forwarded.]

TRAP SHOOTING CLASSIFICATION is a subject now much discussed. There is a call for some system of shooting which will give all contestants a fair chance. Too many clubs have gone to rack and ruin because the rest of the members have tired of putting up money for two or three of the best shots to win. Classification according to record remedies this in some cases, but the Chamberlin tournaments have demonstrated that the experts can grab all the money in a big meet by pooling. What is to be the way out of this?

THE MAINE COMMISSIONERS are so thoroughly convinced of the good results of keeping the dogs out of the woods that they believe the Maine deer supply would take care of itself without protection from August to January, were the dog law enforced to the letter.

SILAS STEARNS.

FEW men engaged in business pursuits have been of such substantial aid to science as Silas Stearns, and few have had as many warm and devoted friends among scientific men as he. For the past ten years all naturalists investigating the fauna of the Gulf of Mexico have been under the strongest obligations for his untiring help, while most of them have been guests under his roof and have sailed in his boats while on their collecting tours. Our present comparatively thorough knowledge of the fishes and the fisheries of the Gulf of Mexico is due directly and indirectly to him more than to any one else.

Silas Stearns was born in Bath, Maine, May 13, 1859, and died in Asheville, N. C., August 2, 1888. His early education was received in the schools of Bath. The death of his father threw him at the age of fourteen on his own resources, and compelled him to abandon for the time being the hope of a college education. After an excursion through the "North Woods" of New York he entered a bookstore in Concord, New Hampshire. Later, in 1875, he went to Pensacola, Fla. Here he was at first book-keeper for a fishing firm, and afterward associated with his brother-in-law, Andrew F. Warren, in the firm of Warren & Co.

"Early in boyhood," writes Mr. Warren, "he had displayed a fondness for out-of-door sports, and an aptitude for woodcraft and boating. The broad bays and sounds of West Florida were well adapted for such sports, and he conceived a love for these waters and shores which remained with him until his last hour and found an expression in his choice of burial place. Upon these waters he was entirely at home, and he became familiar with the whole extent of the coast from Pensacola to Key West. This familiarity included an exact knowledge of all the ins and outs of their navigation and an acquaintance with all the dwellers in their waters. At the very first of his residence in Pensacola his attention was directed to the fishes of the Gulf. Wishing to learn of their characteristics and habits, he made inquiry for books treating on the subject. Finding that none existed, he set himself to the work of original investigation."

In 1878, Mr. Stearns visited the Smithsonian Institution. Here his thorough and exact knowledge of the habits of the fishes of the Gulf attracted the special attention of Professor Baird, and of Mr. Goode, Mr. Bean and others interested in the study of fishes.

His inclinations toward the life of a naturalist were very strong. In this ambition he had been discouraged by absurd advice received from some one in Washington to the effect that no successful work in science was possible without a classical education. To acquire this knowledge, however, he entered in 1878 the academy at Waterville, Maine. Here his studies were shaped with special reference to the nomenclature of science. Failing health, however, compelled his return to Florida.

In 1880 he was made a special agent of the U. S. Census Bureau and of the U. S. Fish Commission, in charge of investigations for the Tenth Census, on the marine industries of the Gulf of Mexico. Few pieces of work have been performed with more accuracy and fidelity than his report. Professor Baird showed his appreciation of it by presenting to Mr. Stearns a valuable series of works on fishes, which became the nucleus of a considerable ichthyological library. A number of papers from the pen of Mr. Stearns have been published by the different scientific bureaus of Washington. His actual publications, however, represent but a slight part of the work done by him, for his discoveries and specimens were always freely placed at the disposal of others. Upward of fifty new species of fishes were discovered by him or through his help. This number includes almost all that is known of the deep-water fish fauna of the Gulf. Four of these species have been named for him, a *Lutjanus*, a *Scorpæna*, a *Blennius* and a *Prionotus, stearnsi*.

As to Mr. Stearns's personal qualities, I cannot do better than to quote the words of Mr. Warren:

"To my mind, his most striking characteristic was patient persistence. No trouble was too great, no time too long, no discomfort too annoying, to deter him from the present accomplishment of any task to which he addressed himself. In his many excursions to South Florida he endured the discomforts of heat, insects, bad water and bad food without a murmur. In fact, it has only been by his casual references that I have gotten any idea of how great these discomforts had been. It may be that to his ardent love of nature many of them were unnoticed.

"Of a retiring disposition and little inclined to the enjoyments of society, he made few acquaintances. Those who came to know him better became at once his friends. The number of these was unknown to us until in his last illness they came forward with helping hands and loving hearts. Now that he is gone we find on every side those who esteemed him as a friend.

"Inheriting a pure literary taste, his reading was thorough and his mind well stored with varied and accurate information. The purity of his moral character was above all praise. It is the testimony of those who had associated with him on hunting or collecting trips that he was at all times a gentleman."

In 1886 Mr. Stearns was married to Miss Hays of St. George, Maine. He leaves no children.

DAVID S. JORDAN.

THE UTICA FISH AND GAME PROTECTIVE ASSOCIATION, of Utica, N. Y., have prepared for gratuitous distribution a very useful compendium of the game and fish laws. It is a capital specimen of what a society can do if it really means to help the cause of protection.

OUR GAME COLUMNS contain reports of the game in many fields. Now that the shooting season has come around again we shall expect frequent notes from our readers.

The Sportsman Tourist.

ECHOES FROM THE MEXIC GULF.

PENSACOLA, Florida, Sept. 15.—The glorious month of September ushers in the shooting season in the North, but here in the faraway Florida we have but little sport before the November frosts. Dove shooting is indulged in to some extent during the summer months, but there is not much pleasure gained by shooting under a southern summer sun. The "bonnie brown" quail is not molested by true sportsmen until the autumn is far advanced. Our colored brother persists in shooting them the year round, but I note that in some parts of Florida the game laws are being enforced. A friend, who is a game warden in Orange county, recently had two negroes arrested and punished for shooting quail out of season. Bob White has had a favorable season to rear his family, and the natural result is that the surrounding country has a great many coveys.

I am told that the sportsman's paradise in this part of Florida is in the wilderness surrounding Choctawhatchie Bay. Deer, bear, turkey and small game abound. Fishing is also good. This region lies about fifty miles from nearest railroad and is mainly reached by sailing craft from Pensacola.

Some of the varieties of shore birds have already reached us, and are to be seen along the beaches of Santa Rosa Island. The sportsmen here take little interest in such small game, but to one whose early shooting days were passed on the sandy beaches and marshes of old Cape Cod they are old friends. Many a pleasant hour have I passed in the blind watching the horizon for the wary willet and unsuspecting yellowleg, and upon detecting a solitary specimen in the blue ether, how patiently we have whistled until our efforts were rewarded by seeing him glide up to the decoys and his life go out in a cloud of smoke and the roar of a breechloader. Our L. C. Smith has been idle many months, but we trust its tuneful voice will soon be heard on the hills, rivers and bays of West Florida. IVANHOE.

GLIMPSES OF THE CONTINENT.

DANSVILLE, N. Y., September.—Last month I took a flying trip over the great Northern Pacific Railway clear to Puget Sound and return, and while my outing was not taken for the purpose of indulging my love for fish and game but rather as a delightful change from the cares of business, I still kept my "game" eye open and saw much to assure me that along this line was a veritable sportsman's paradise.

Looking out from the Pullman, as we rolled through Minnesota and Dakota, I could see the teal and mallards fly up from the sloughs, disturbed by the thunder of the train, while coveys of prairie chickens would jump out from beside the track and drop down at a little distance away in the bunch grass. Plover were constantly rising, and now and then a jack rabbit would go coursing away over the prairie. Passing through the Bad Lands and the plains of eastern Montana, but little game was visible. This vast territory, once the home of the bison, while now well tenanted by deer and antelope, is rather too vast and dry for successful hunting.

Up the valley of the Yellowstone 400 miles to Livingston, Montana, is a good game country. The numerous affluents, the Tongue, Powder, Rosebud and Bighorn open up valleys that abound in elk and deer. At Livingston the Yellowstone has lost its muddy tinge and is clear as crystal and full of trout. Here the river takes an abrupt turn to the south and I had the pleasure of following it up to the National Park, where it is joined by the Gardner, another fine trout stream.

The Government has adopted a wise policy in allowing no shooting in the Park. It does not seem to be generally understood, however, for every day I was there tourists were disarmed and their weapons taken care of by the guard until they came out. But fishing can be indulged in to the heart's content, and trout is a common article of diet at the Park Company's hotels. I noticed at the Mammoth Hot Springs Hotel a goodly supply of the "Park bill" petitions lying on the office counter for signatures. Whether the attention of tourists is directed to them or not I can't say; mine was not, but they are there and get a good many signers. The amount of poaching in the Park is not great, considering the vastness of the territory and the smallness of the force of soldiers who police it. A force of only sixty-four men for that great tract seems ridiculously small.

Game is very plenty in the Park. I was told of seventy-two head of bison being seen but a few days previous, and one soldier told me he saw seven bears in one wallow. The number of elk is roughly estimated at three thousand head, and mountain sheep and deer are numerous. Nearly every tourist has something to say of seeing bears or deer. The elk and buffalo being back in the summer ranges, seldom show themselves along the line of travel.

I was very much pleased with the appearance of the country along Clark's Fork of the Columbia. The country is finely wooded and abounds in perfect camping sites. A deer feeding within 50yds. of the tracks only raised her head inquiringly as the train went by and at once resumed her meal. Grouse are very plenty here, and were constantly flying up and crossing the river. As we neared the coast and followed the tortuous course of the Green River down the slope, I was treated to a trout display I never saw equalled outside of a hatchery. The Green River is a small, swift stream, full of deep pools, and as the road crossed and recrossed it I could see great schools of trout 12 to 18in. long lying in the shadows. This stream is fished very little, and a fortnight upon its banks would satisfy the most exacting angler.

Washington Territory, the resources of which the Northern Pacific is doing so much toward developing, is one vast fish and game preserve. At Seattle and Tacoma I heard wonderful stories of what was being done by local sportsmen, and the markets gave ocular evidence that the stories were true. In fact I knew I had entered Washington Territory when I got up one morning and found delicious venison and Columbia River salmon being served for breakfast on the dining car. Puget Sound with its numerous estuaries and inlets is the natural home of the wild duck, goose and brant, and in taking that delightful ride over the sound from one city to the other great flocks of them could be seen.

The forests and mountains back from the sound are full of game and the streams swarm with trout. One need not go very far either. Why the very morning I left Seattle a bear and cub were killed in the city limits. I regretted very much that my time was so limited that I was unable to even wet a line or pull a trigger; but I comforted myself with the thought that in the near future perhaps I might be permitted to indulge my taste for the sports of the woods and streams in this wonderful country.

The Northern Pacific is indeed the sportsman's route, and the lover of field sports who can't along this line somewhere find that for which he is seeking, will certainly be obliged to wait until he is transferred to the "Happy Hunting Grounds," for surely earth offers no better opportunity than this. The grayling, so long supposed to exist in this country only in northern Michigan, is found in several streams along the line, and Mr. Chas. S. Fee, General Passenger Agent at St. Paul, showed me a beautiful painting of *Thymallus tricolor*, from a fish caught in one of these streams. Being familiar with the Michigan grayling, I at once recognized it as identical with that fish.

If any of the readers of FOREST AND STREAM are fortunate enough to take the trip I did I hope they will profit by my experience and take along a gun and rod. Had I done so I would have had more to tell.

H. W. DELONG.

SOME WOODS CHARACTERS.—II.

THE novitiate, or greenhorn, the term they are best known by, is to be found in the woods as well as anywhere else in the world. His manners, his dress, his very carriage, all betray him. His gun is a new one; his shooting jacket and boots smell of the shop. He has an exaggerated idea of everything about the woods. To his verdant imagination trout are as plenty in the lakes and streams as herring in the mighty ocean. There is at least one wildcat in every tree and a deer feeding in every meadow. To his mind the deep forest is clothed in a halo of mystery, of which he is to be the explorer; and, like Livingstone and Stanley, he is to be the revealer of these mighty secrets. The old woodsman makes nothing of creaking trees, and the weird sound produced by one branch scraping against another would hardly command a passing thought, but I have known a novice to sit half a day by the side of this phenomenon, waiting for a wildcat to show himself from among the branches overhead. There is a tinge of disappointment occasioned by the knowledge of the fact which comes later on, that of all solitary places—excepting perhaps the fabulous Great American Desert—the unbroken wilderness has the fewest signs of animal life of any place on the entire continent. You may travel all day and not see a partridge, a deer, wildcat, bear, fox, robin, crow or bluebird, and hardly a squirrel. The deep wood on a quiet day is the very personification of stillness. Game there is, but it gathers in certain localities, according to the season. The newcomer has eyes, but they see not; ears has he, but they hear not; and you can trust him to make noise enough to keep the game always just out of sight.

A friend of mine went to the Adirondacks many years ago for the first time. It was in early November, and a light snow was on the ground. Presently he took up the trail of a deer. He struck it in the morning and followed it till nearly dark. Five minutes before beginning to retrace his steps, he had accidentally laid down his ramrod, and turning back to pick it up found that his quarry had in the meantime crossed his trail, and had actually stepped on his ramrod! A practiced hunter knows very well that a deer does not travel in a straight line, that he is constantly maneuvering to keep his adversary in the same quarter from which the wind comes, and that a man who goes stamping through the snow makes noise enough to enable him to feed along ahead just out of harm's way.

Jack shooting is very deceitful business to the beginner and some even after long practice can never kill a deer except by the accidental discharge of their piece, or by the second shot from the guide in the stern of the boat. Under the jack all surrounding objects become invested with a most weird aspect, bushes, stumps and boulders are transformed into most grotesque shapes. If a deer is sighted he is magnified into twice his size, and when three rods off will appear under this strange optical illusion at least eight or ten rods away. The beginner almost invariably shoots over. I knew of a young sportsman who lodged his buckshot 30ft. from the edge of the water, where the buck stood, in the body of a spruce tree. Evidently his deer was a very tall one, or he failed to take account of the hind sight of his gun.

For woods shooting the ears of the young man need quite as much education as if he were learning to be a musician and play the violin. Muskrats, beavers, "stake drivers," frogs, and even suckers will all simulate the stepping of a deer in the water. A bank of fog, a whiff of wind, will defeat his end, and be the only reward for a long night spent cramped and cold in the bow of the boat, suffering as if from the chills.

A friend of mine, a guide, once had the pleasure of paddling a greenhorn up to an old bear and two cubs on Dead Diamond River, in Maine. When he heard bruin sniffing and whistling and was told it was a bear, he commenced to shake like a leaf and to beg very piteously to be let off. He had come into the wilderness to remain several weeks, but ever after nothing would tempt him to leave the camp-fire at night. The guide had to do the shooting while the boy did all the bragging.

This same guide narrated a funny experience of two "down-county chaps," as he called them, who were out on a certain lake fishing for trout. In an extra boat he had accompanied them to an advantageous locality, and when after a little, with their boat anchored just off an incoming stream of cold water, they had begun their sport, he left them and went back to camp, a mile or two down the lake, to cut camp wood and get the dinner. The day had begun to drag away, and all his preparations were made for their reception. "Flip flops" were fried, trout and venison with vegetables were all ready to be served; but still no fishermen came within sight of the landing. He knew, as all guides know, that the fascination of fly-fishing, when trout are biting freely, is so great that hours will slip by, and one takes no note of the flight of time till a storm, or darkness, or sudden holding up of all the school, as if by simultaneous consent, brings him to his senses. And besides, the guide is not set to dictate

when sportsmen are to take their meals, and he generally waits their time to quit, or to begin, for that matter.

But it had now become so late that he felt impelled to get into his canoe and go in search of them. He was not long in coming at the secret of this long delay. He had not proceeded far when the mingled noise of splashing oars and angry voices saluted his ears. "What's the matter, there?" he exclaimed, coming within hailing distance. "Why, this confounded boat won't budge an inch. We have pulled at the oars the past two hours, and haven't made half a mile, and now we are dead stuck and she won't stir a peg." The guide, who by this time had guessed the difficulty, but who was disposed to prolong the amusement for his own special benefit for a little, suggested perhaps they might have run on a rock or sand bar. "Oh, no, nothing of the sort; we put the oars down the whole length, and there is no bottom for ten feet. I say, what is the matter with this contemptible boat?" "You haven't caught so many fish or shipped so much water you've weighted the thing too low in the water, or run afoul of some sea monster which is fastened to your bottom?" he mildly suggested. But as they were in no mood to be trifled with, he hastily drew in their anchor, which had been dragging all the while they had been fishing, and subsequently made the mild remark that he usually hauled it aboard when he was not fishing.

SOMERS, Conn. C. H. G.

Natural History.

THE SEWELLELS, THE BEAVERS, AND THE MURIDÆ.

BY R. W. SHUFELDT, M.D., C.M.Z.S., ETC.

FOLLOWING the family *Sciuridæ*, the leading family of the order *Rodentia*, as arranged by our Provisional "List" of the U. S. National Museum, we come next in that order to the family *Haplodontidæ*, a group created to contain the sewellels. By turning to my article on the "U. S. Rodentia," published in a former number, it will be observed there that the *Haplodontidæ* includes but one genus, the genus *Haplodon*, and it is this animal we have in our fauna is distinct from the form of it which is still to be taken in some parts of northern Europe and Asia, but I am inclined to think that the weight of opinion is in favor of their being the same. The great commercial importance of the beaver, its unusually interesting habits and its wide distribution, have forced this animal upon the attention of all kinds and classes of observers, so that its bibliography is quite extensive. Few animals have been better and more thoroughly written up than this illustrious rodent. From the days of Herodotus, Pliny and Aristotle, all of whom noticed it in their writings, down to the present time, the works and genius of the beaver have furnished an ever-fresh theme for the pens of animal biographers. *Castor* is without canine teeth, and its dental apparatus otherwise presents the very acme of development of the gnawer's tool chest; while its exquisite pelt, its webbed hindfeet, and above all its unique tail are sufficiently well known to obviate the necessity of my dwelling upon them here.

Upon numerous occasions I have had the opportunity of watching beavers as they plied their work on the rivers and smaller creeks in various localities in the West. I have watched them upon moonlight nights as they girdled both trees and saplings to construct their notorious dams and dome-shaped aquatic habitations. For this purpose they would choose trees all the way from an inch to seven or eight inches in diameter, and as most of the trees I observed them at work upon were soft cottonwoods, it was truly marvellous to see how rapidly they felled them and afterward fitted them to their use. It's a weird and never-to-be-forgotten sight for the one who has ever witnessed it. The very stillness of a moonlight night on the prairies is of itself impressive, and add to this the almost silent labors of the toiling creatures before you, the scene indeed becomes a rare one. On such occasions the combination of sounds which fall upon your ear are in the highest degree pleasurable; you distinctly hear the constant murmur of the flowing creek, the drip, drip, of the water over the dam, the ceaseless gnawing made by these invincible builders, the almost inaudible ripple of one as he swims by you in the still waters of the dam, or the pat of his tail on the surface as he dives therein. Finally your senses are kept on the alert by the momentary expectation of seeing some tree or sapling slowly pass in its fall from the vertical to the horizontal with apparently far less disturbance than when it succumbs to the axe of the woodman.

Fig. 1.—BEAVERS AT WORK.—Drawn by Dr. Shufeldt, from one of his field sketches.

From tip to tip a large, full-grown beaver will measure a yard and a half, or rather less, and in their best element, the water, they are notably active and graceful in all their movements, while on the land their gait is waddling and clumsy. Their bite, as we may imagine, is unusually severe, and I once saw a young Sioux Indian pick up a large wounded beaver by the hair of his hinder parts, when the animal, as quick as a flash, turned and bit him through and through the hand in several places, inflicting wounds that took a month to heal. During the pairing season, beavers give vent to a peculiar call, and they have from six to seven at a litter, the young being born open-eyed, and remain with their mothers for the best part of two years. Usually and in nature these animals feed upon the bark of trees and pond lily roots; sometimes on certain plants and berries, but when domesticated, and they make wonderfully interesting pets, they are omnivorous, as is the case with most rodents. As is well known, there is a class among beavers dubbed the "old bachelors," who burrow in the banks, never build, and are generally ignored by the rest of the industrious community; and equally is it well known that this animal possesses a special pair of glands, from which the *Castoreum* is obtained, a substance much in vogue several years ago as a drug for certain diseases, but now, as in the case of so many substances senselessly used to combat diseases, largely "gone out of fashion."

Roasted beaver tail is considered a great delicacy in many parts of the country, and even the animal itself is eaten with great relish roasted whole in its skin; but for my own part I have never been hungry enough on occasions when I have been present where it was served to make a meal of it; it tastes something like pork, but is a strong and powerful food. That kind of venison is unsuited to my palate, unless starvation lingers in the near neighborhood.

To describe how beavers build their habitations and dams would occupy more space here than would be warranted, the more especially as every reading child in the country is familiar with the feat. I have before me an exceedingly interesting account of a beaver which was kept in confinement by a gentleman many years ago in London; he tells how the animal constructed a would-be dam in his library, using every kind of imaginable light article about the room to effect the purpose, such as books, dust-brush, sticks, clothing, paper, and a long list too varied to enumerate. A year or two ago I had a pet *Neotoma*, which amused himself in much the same manner in my dining room, and in the course of one night barricaded himself up under the sideboard in a most marvelous manner, absolutely stripping the apartment of every small article he was able to carry or push along to the place he had chosen.

Beavers commence cutting their wood in early summer, and set to construct their dams and houses about the close of August, but never finish them until severe frosts set in, so the mud will freeze and render the entire structures solid and impervious to the entrance of the Carnivora that prey upon them, as wolves and wolverines.

Formerly in this country beavers were to be found upon all suitable streams from New York to California and Maine to Mexico, but the ceaseless war of trade is rapidly exterminating the species, and in a few more generations this interesting and highly valuable animal will pass over to the long list of mammalian names which means with us—natural products either ruthlessly wasted, as in the case of the buffalo, or no proper provision taken to protect and propagate them to the welfare of the nation's futurity.

Following the *Castoridæ* our "List" next presents us with the family *Muridæ*, including all such forms as muskrats, lemmings, field mice and wood rats.

Our numerous array of species in this group leads off with the almost universally known muskrat, the *Fiber zibethicus*, and how the very mention of his name and suggestion of his form summon up in our minds the thoughts of a hundred and more moonlight or lantern-lit hunts for him; or else the early morning visits to the steel traps we have placed along the water ways of his haunts.

Hundreds of thousands of the pelts of this animal are annually taken in by the fur traders, and were it not that the species is so prolific, it having fifteen or sixteen young as a rule each season, brought forth in three litters, it would surely be exterminated. It seems to hold its own, however, and is still numerous in many regions in the Eastern districts. Like the beaver, it also has a musky odor, but to me by no means a disagreeable one; it, too, as we well know, builds in the winter its habitations of mud and weeds, which have a dry chamber above, with the entrance to it under water. Muskrats in certain localities also riddle the banks of the marshes and sluggish streams where they live, with branching burrows. These latter are their summer houses and where in the spring the females breed their young. Muskrats are vegetable feeders, but they also eat mussels (*Unios*), leaving the shells in notable heaps in such situations as they find them to live upon, and collect. They will also devour each other, should one of their number by any chance be wounded; and in confinement they will feed upon almost anything that you may offer them.

A number of years ago, while I was hunting muskrats in a marsh on Long Island Sound, there being several feet of snow on the ground, I chanced to get myself in between one of these animals and his burrow, which happened to be the only means, beyond his running away from me, that presented itself for his escape. He took in the situation at a glance, and I was curious to see what he would do about it. Imagine my surprise when he started to come down for me as fast as his legs could carry him, and in a few moments he was too close for me to shoot without tearing his beautiful pelt all to shreds, for I at once saw that he was an unusually handsome specimen, and to thus spoil him would be a great shame. When within about a yard of me, and his eyes actually flashing out their meaning at his thus being cornered, he, without a moment's hesitation, made a spring at me and landed on the top of one of my leather shooting boots, a pair that came above my knees; in an instant he commenced tearing away with his teeth at a great rate, but before he had bitten anything but my boot I grabbed him at the back of his neck, and between throttling him and bumping his head against the heel of my gun, he was rendered lifeless. This formed the only case of a muskrat attacking a man that has ever come to me, and in this particular instance I admired the little brute's bravery all the more after I found that he possessed but three legs, one of them having long since been amputated high up, probably in a steel trap, but the stump was perfect, and he had the blackest hair of any muskrat I ever saw.

Only a few years ago, an entirely distinct genus and species of muskrat (*Neofiber alleni*) was discovered in Florida, the animal being described by Mr. True in the Smithsonian Report for 1884 (Part II). It is not more than one-half the size of the common muskrat, and among many distinctive structural differences between it and the latter animal, is its possessing a round tail instead of a laterally flattened one, as in *F. zibethicus*. So far as I at present know, but one single specimen of this

We next pass to the consideration of the family *Castoridæ*, which also includes but one genus and one species, *Castor fiber*, the beaver of North America. There are authorities who maintain that the species of

represented but by two species, *H. rufus* and *H. major*, the sewellels of the Pacific Coast and northern California. Personally I have never enjoyed studying the sewellel in its native haunts, and know the animal only from museum skins and mounted specimens studied by me on former occasions, and even these, at the present writing, are not available for inspection. I had looked forward to illustrating my article with a good figure of this animal, and that pleasure is denied me, but it may be realized some time in the future. Yet, just now I have before me two small wood cuts representing the sewellel; one of these is in Prof. Packard's Zoölogy, being copied from the *American Naturalist*, while the second one is evidently intended to be a trustworthy portraiture, and is in Goodrich's Natural History. Upon comparing these two figures, however, I fail to detect the slightest resemblance between them, and I am of the opinion we stand much in need of a correct figure illustrating this animal; I do not recall, at the present time, any such cut.

Prof. Flower says that the habits of the sewellel are similar to those of the prarie dog; while Prof. Packard remarks that the animal "is nearly as large as a muskrat, is nocturnal in its habits, and, therefore, rarely seen, and burrows in the earth, feeding on roots." Still another authority before me observes that it digs burrows, and is found "living in small societies in the neighborhood of the Columbia River, and abundant near the Great Falls. It is about the size of the gray rabbit, being 14in. long, with a tail half an inch long. It is of a reddish brown color, and has no cheek pouches; the eye is small, and the fur thick and soft, resembling that of the musquash. The skins are much used by the Indians for robes. It feeds on vegetables, and is said occasionally to climb trees, but only for a short distance, as is the case with the woodchuck. It produces four or five young at a birth."

It seems to me that it would be a very good idea to collect together all we know at present relative to the habits and natural history of the sewellel and illustrate the account with correct drawings of adult specimens and young, and complete it with a thorough review of its anatomy. Even some of our best known mammals, yes, those of the Eastern districts, stand in need of such treatment and revision, and their natural history requires a deal to be added to it, before we can say that our knowledge in such matters is in any way complete.

Fig. 2.—THE ROUND-TAILED OR FLORIDA MUSKRAT (*Neofiber allenl*).
One-half natural size; copied and adapted by the author from the Smithsonian Report, 1884. (Part II.).

highly interesting form has come into the hands of science, and so far as its habits are concerned, they are quite unknown. The specimen was captured by Mr. William Wittfeld, at Georgiana, Merritt's Island, Brevard county, Fla., and other examples, with a full account of its natural history, will be in demand. Mr. True made the most of the specimen which came to him, and his paper is full and well illustrated by figures, and he says, "Throughout its entire structure the Florida muskrat displays an affinity to *Fiber* on the one side and to *Arvicola* on the other. It is strictly intermediate between the two genera."

New mammals of any importance are not discovered in this country as an every day occurrence in these times, and I look upon this species as one of the most interesting which has come to light for some time past.

Believing that a figure of this "round-tailed muskrat," published in the present connection, may assist in securing additional specimens, as well as giving my readers a correct conception of its general appearance, I made a careful copy of the drawing of it in Mr. True's paper, referred to above, and offer the same herewith. The general color of its coat is said not to differ materially from the coat of our common species.

Two genera of lemmings, each represented by a single species, are also found in the group we have at present under consideration, but as I have already alluded, in a former paper, to their marvelous migrations, and as the history of this animal is quite widely known, and our species confined to Arctic America, Greenland and Northwestern America, I will not especially refer to them here, but upon some future occasion review our knowledge of their natural history more in detail.

Hosts of mice follow the lemmings in our family *Muridæ*, and these are arrayed under such genera as *Synaptomys, Evotomys, Arvicola, Hesperomys* and *Ochetodon*, while a volume of no mean size could be filled with the accounts of their varied habits and distributions, to say nothing of the discussion, anatomical and otherwise, that might be made upon the subject of their physical differences. Baird, Coues, Allen and others have all paid great attention to our United States forms, and have furnished science with a deal of their history and structure. Small as they are, mice play a very important part in nature's drama; they are the main stay on the diet list of hawks, owls, herons, and many of the smaller mammalian Carnivora; while in certain sections they become on occasions the greatest grain pests the farmers have to dread; though at other times years may pass by where he is comparatively exempt from their ravages, owing to the fact that a season may have arrived with much rain, causing inundations which swept away and actually drowned millions of meadow mice while it lasted. Some species in the country districts come into our houses and barns, and many of them build pretty little nests, and most of them are prolific, rearing many young each season. All are easily tamed, and if kept in commodious quarters afford us in this way the best means of studying their habits, something it is quite hard to accomplish in a state of nature, as many of them are nocturnal, and thus seldom seen unless hunted for in their daily retreats and hiding places, while at all times these little creatures are timid and retiring, and not likely to pursue their normal avocations in the presence of man.

The "List" quotes the little harvest mouse (*Ochetodon humilis*) as occurring in the "Mississippi Valley and Gulf States to Mexico." I can extend the range of this species, for I have found it breeding here at Fort Wingate, New Mexico, and it probably occurs still further to the westward. In the Proceedings of the U. S. National Museum, a year or so ago, I figured the head of this species, as well as some species of *Hesperomys*.

During the spring of 1885 I found a new species of *Hesperomys* here at Fort Wingate, which I described as True's piñon mouse (*H. truei*), and have taken many specimens of it since. It is especially noticeable from the great size of its ears, while in color it differs markedly from our Eastern field mice, as for example the common white-footed or deer mouse. In habit it is given to living among the piñon trees (*P. edulis*) which cover the mountainsides of this region, and it generally constructs its nest in the hollow of a dead one. Once or twice I have shot specimens of this mouse out of these trees, and it will when alarmed often run up one, even to the uppermost branches.

Of the cotton rat (*Sigmodon hispidus*) an author before me says, "It is very abundant in the Southern States, where it prefers hedges, ditches and deserted fields to gardens and cultivated lands; it feeds on seeds, grass and vegetables, but relishes flesh, and readily devours birds that fall wounded in the fields; it also eats crayfish, which it gets from the ditches. It is very voracious, attacks and devours other species of mice and rats, also killing and eating its own species. It is exceedingly prolific, lives in burrows, and is nocturnal in its habits."

The various genera of rats and mice differ from each other in some degree structurally, decidedly in some directions in their dental formulæ, but on the whole they are quite homogeneous as a group, and never attain any great size in any of the species, though some of them are exceedingly small, as the little harvest mouse of Europe, one of the tiniest of mammals. Wallace has pointed out how they are being constantly spread over the world, by ships, or transported from island to island, and continent to continent on sea by means of driftwood and other material. Thus it is, too, that new species are ever on the road toward development, as existing types are by such means brought to different regions, where they are submitted to widely different influences, as food, climate and environment. Rats and mice are never distinguished by highly colored pelts, but are given chiefly to browns, whites, buffs, and ochres, while one of the common rats is quite black. Such coloring affords one of their best means of protection, for they are thus rendered more difficult to be seen by birds of prey and the lesser sized carnivora, which seek them for food.

Fig. 3.—TRUE'S PIÑON MOUSE (*H. truei*).
A new Mexican form of this genus. Drawn life size by the author from a specimen in his own collection.

Wood rats of the genus *Neotoma* close our "List" of the *Muridæ*, and of these we have in the United States three species, and one for Mexico and Guatemala. Opportunity has never been afforded me to study the Eastern types of *Neotoma*, but there is a very interesting form here in New Mexico, to which I have paid no little attention. Last spring I made up several skins and alcoholics of this *Neotoma* and forwarded them to Mr. True of the U. S. National Museum, who carefully examined them and arrived at the conclusion that they were but western varieties of our common wood rat (*N. floridana*), but with the colors of its pelage considerably lighter. In the Proc. U. S. National Museum for 1885, I figure the superior aspect of the skull of one of these rats, and record some notes there in regard to them. Nearly four years ago, when I first came to Fort Wingate, these animals were plenty about the station, and I had no trouble in securing specimens within ten minutes' walk of my house. Their nests were to be found in any of the hills about the place, and consisted of a pile, often as much as six or seven bushels, of rubbish and sticks gathered about the roots of some pine or piñon tree. Sometimes, however, the rat would choose as the site of his domicile the cleft between two great rocks, or perhaps under some big boulder, in which latter situation I never made the attempt to secure the inmate. These nests, when built about the roots of a small tree, were usually of a dome-like form, and consisted principally of short dry sticks of varying lengths, bones, dead cactus leaves, dry, loose manure, pine cones, and indeed anything they could manage to lay their paws upon and drag over to the heap. One time I saw one of these nests built in the rocks on the side of a cañon, near where the Navajo Indians had buried some of their dead, and where the rat, of a decorative turn of mind, had cocked up on top of his rubbish-pile nest the skull of a Navajo baby. Inside one of the piles, usually near its center, the *Neotoma* constructs what is really its true nest, a globular wad of the soft shreds of the pine bark, and such other pliable material as it can secure. This part of the structure is about as big as a man's head, and has an opening at one side; and so all the rubbish heaped upon and about it simply serves as a protection against marauding coyotes and other vermin.

To capture one of these *Neotomas* I generally put on a good pair of stout gloves, and kicking away his pile of rubbish with my boots, I pounced upon the heart of the establishment just so soon as I could seize the entire mass in my hands. And rarely did I fail to find somebody at home. It is in these nests that they spend the winter, and in the spring rear their young; but I am inclined to believe they desert them during the warm summer months, for at such latter seasons I have always found the nests empty, and more or less weather-worn. As stated above, I have kept this little animal in confinement for months at a time, and although they have many interesting habits, they are, on the whole, difficult to tame, and make constant efforts to secure their liberty again, even after they have been in limbo for a number of weeks. Food of all kinds is eaten by them, and on several occasions, where one of my captives got out in the pantry, his cage was a sight to behold next morning, for he had packed it full of oyster crackers, apples, lump sugar, raisins and almonds, to the measure of a full half peck.

These wood rats of which I am speaking have pretty bushy tails, with about as much show of hair as the spotted spermophiles, and have large and rather expressive eyes. Both their sight and hearing is very acute, especially the latter.

In my next paper I will have something to say about the gophers (*Geomyidæ*) and pouched rats (*Saccomyidæ*), and hope to complete this large order shortly afterward.

BLACKSNAKES.

Editor Forest and Stream:

I read with a good deal of interest an article appearing in you issue of Sept. 13, from the pen of N. Starkweather. The larger portion of that article was a description of the habits of a snake extremely common in the Middle and New England States—the one known simply as blacksnake in every locality where I have known and met it. The subject is one with which I am somewhat familiar, and my own experience tells me that the gentleman is mistaken in a few of his premises.

For thirty years I resided in a country hilly and rocky beyond measure. As a boy and man every foot of this territory became as familiar to me as are now the streets of your city. The fences were everywhere stone walls, the material for which had been taken from the land as the fields were cleared. In many cases so stony was the land, that it was and is still truly wild land. The heavy timber once cut off, the land was left to grow as it could another crop of timber. Nature in her beginnings started a growth of underwood or brush almost tropical in its richness. These spots were more than well watered. Little streams ran in every direction, while each hollow held its little pool or pond of water. Food being plenty and foliage dense, birds were bred and reared in numbers unknown at the present day.

I have stated that this section of country was stony; it was not alone that, but immense masses of trap rock, almost deserving the name of cliffs, are scattered throughout the county. The section I refer to is that part of Fairfield county, Connecticut, commencing at the mouth of the Byram River, where it empties into Long Island Sound, and running almost northerly along the banks of that stream to its beginning at Byram Pond, a distance of some eighteen miles. All the conditions necessary for the preservation of snake life are here found at their best, and never in all my wanderings have I seen so many of the kind of serpent written of as are met with here. I do not dare mention how many I have destroyed, but it seems to me now, looking back, as if it must have been well up in the hundreds. The largest I ever killed was in length 6ft. 8in., but very many were over 6ft., not by guess, but by actual measurement.

Now to one point, that the one regarding white on this snake. I have never seen a white ring encircling this snake's neck, but I have seen many times, so often, indeed, as to be to me a common thing, a white spot commencing at the point of the under jaw and running thence backward along the whole of the lower jaw to a little past the junction of the head with the neck. I have no doubt that this white patch may often extend upward along the back of the jaw on either side, so that one catching a glimpse of this white from above, and seeing it on either side, would call it a ring, especially so as the broad patch covering the under side of the jaw would be hidden. This was not a dead white color, but a creamy white, which the surrounding dark color made more pronounced. The old people, fancying it a different species, invariably spoke of it as the white-throat, black racer or chaser, and it was always referred to as being quicker and more rapid in its movements than the other. Of that I can give no opinion, for I know of nothing more rapid than the movement of the common blacksnake when alarmed or after a running field mouse.

One of my first experiences with this constrictor was when whortleberrying in a dense patch of woodland known as Ahred Peck's woods. The timber was heavy oak and hickory. The land was low-lying and pools of water were in great numbers in spring and fall. During the heats of summer this water was evaporated, leaving the surface a soft damp mould, formed exclusively of decomposed swamp grasses and well rotted leaves. From these rich spots grew the bushes of the swamp-whortleberry to a height of a dozen feet. The berry was large, excellent in flavor, and much sought for by the farmers' wives for summer puddings and winter preserves. At each recurring year, as the berry ripened, parties were made up to go to these woods for a supply of the fruit. The locality was, however, just as well known for its supply of ophidians as it was for its berries, and the "snakes' den," or wintering quarters, one of which hibernating places was in this patch of woods, was always spoken of with something akin to fear. As a consequence, each of the party went around with a lithe but strong rod, with which to battle with the snakes. Scarcely had the people commenced picking on this occasion when a scream was heard from a colored servant girl by the name of Sarah Green, and she was running for dear life, emitting a screech with every jump. Directly after her was a blacksnake, and as this race was for some hundreds of feet, and seen by dozens of people before the *coluber* was killed, it would seem a matter of fact. No more berries were picked that day. Sarah always said that the snake came directly for her from the top of a berry bush, which she had pulled downward toward her so that she could reach the fruit. As the blacksnake is a capital climber, there would seem to be no reason to doubt her statement.

Mr. Starkweather seems to doubt the aggressive disposition of the blacksnake. I always remember it as a fighter when so inclined. I grant it will usually move off rapidly with a rustle of leaves which is somewhat startling, but I also know it will turn and fight with a vehemence which fortunately its powers of injury do not equal. I was sitting one day after the midday meal upon the front porch of the old farmhouse which was close upon the road. A fringe of spicewood and alder bush separated the road from the Byram River. Hearing an incessant screaming on the part of a pair of catbirds, I naturally went to discover the reason. I found in one of the spicewood bushes snugly coiled about its trunk an immense blacksnake. The birds were wild with excitement, one of them especially so. Seeing them so intently engaged, for they did not notice me, I stood and watched them as intently as they did each other. After some moments of continual chattering on the part of the birds, one of them flew to some distance and perching upon a limb, stood with head outstreached and downspread wings screaming for dear life. The other bird kept at its fluttering, flying around and around the snake, which with sharp beady eyes kept its neck as well as tongue in slow vibration. I had read of the charming power of snakes and watched with an eagerness impossible to describe to see the end. The catbird evidently was becoming wearied, for its wings beat hurriedly while I could see the puffing out and in of the body, effect of the prolonged exertion. It has been always a matter of regret with me that I had not coolness enough to see the finish, but I became so sympathetic on account of the birds' sufferings that to put an end to the scene, I picked up three or four big stones and "fired" one savagely at the snake. Imagine my surprise when the snake, although badly hurt, dropped from the bush and came directly toward me. Another heavy stone broke its back, when I killed it with the stamp of a cowhide boot upon its head. This was the snake that measured the 6ft. 8in. written of in an early part of this. It was measured by the farmer I was boarding with, Peter Nusted, and in the presence of a Baptist minister by the name of Thomas Richard Green.

On another occasion, when the farmers were mowing a patch of meadow, a large blacksnake was started, which one of them impaled by a hasty thrust of a hay fork, pinning it to the earth. I secured that snake, kept it for some time in a box, and finally sent it as a present to a friend in New York, the late Enoch Dick, at that time receiving teller of the Bowery Bank. That snake would fight savagely and would strike the glass of the box, within which he was confined, at a pointed finger or anything held toward him. Although his head must have suffered from the concussion, he would over and over again strike at objects. When a face happened to be close to the glass looking in and the strike came, the effect upon the onlooker was startling.

Although I have never seen an enormous blacksnake I still believe that occasionally one may grow to abnormal dimensions. Thus in a field owned by a blacksmith named David Lyon, and which bordered the river, a long blacksnake was seen so often and by so many people that I would be loth to doubt the accuracy of the report. Another was seen for many years in a patch of low meadow land, through which ran a small stream called Hangroot Brook. I am inclined to think that once in a while, as in the human species, a giant specimen might appear, which by its superior size would call attention to itself, become identified with a certain locality and being seen of many soon "acquire a habitation and a name."

A word as to hibernating holes. I know of many places so designated, but never examined but one. Almost always they are found where a cleft or rift in outcropping rocks leads to open space below. In the one I was familiar with the rock is not two feet above the surface, not over a dozen feet in length, and narrow in proportion to its length. This body of rock had two long, narrow cleavings or crevices. In the fall a snake could occasionally be seen entering, but this was seldom, and owing no doubt to the long time over which the period of seeking repose on the part of individual snakes extends. I do not think, however, that I ever knew or heard of the snakes leaving this winter home until the frost was thoroughly out of the ground and at least midday warmth thoroughly assured. The warm days of late April, when a little frost lingers in the air at night, followed by warm sun during the day, seemed to be the period chosen for going forth. They did not issue out singly or in couples, but reptile would follow reptile in quick succession. Their movements would be quite sluggish, and often one would remain half in and half out the opening until thoroughly warmed up by the heat of the sun. This outgoing was all finished in two or three days. Hundreds would be no synonym for the number, it was thousands. One April morning—I think in 1863—the late Colonel N. B. Bartram and myself killed over forty, all blacksnakes, in as many minutes; and that same morning over a hundred had been killed by Amos Lyon, son of Purdy Lyon, who owned the farm upon which this hibernating spot is located. All kinds of snakes seemed to come together here for their winter's slumber. Adders and milksnakes were the greater in number after the blacksnakes. Singular to say, this pile of rock is in an open field not 200ft. from a well-traveled road, and not twice that distance from the front door of the Lyons house. The rock is bare of cover, or was when I last saw it, for not a bush or weed in any way screened it from observation. I presume it originally had been in dense woods and well hidden, but why, after being denuded of its cover by a clearing up of its surroundings, it should still be used year after year by the reptiles, is a question which cannot be answered by JACOB PENTZ.

BROOKLYN, N. Y.

SNAKES SWALLOWING YOUNG.—Nevada. Sept. 16.—*Editor Forest and Stream:* I notice in your issue of Sept. 6 the notes of N. Starkweather concerning serpents. Truly, there are "more things in heaven and earth" than even our philosophy acknowledges. Whether or no serpents swallow their young, I am not prepared to assert; but I hereby attest and subscribe to the following: Some fifteen years ago, in northern Illinois, I saw a number of young snakes run—or at least go, and go quickly—into the mouth of a large one. Upon killing the large snake the small ones squirmed from its body. They were a species of watersnake, I think. I have since frequently heard of similar cases. Doubtless others have seen as much. I tender my testimony in support of Miss Wolcott's anecdote.—C. L. PAIGE.

PLEASANTVILLE, N. Y.—*Editor Forest and Stream:* I quite agree with Miss Emily L. Wolcott, that snakes do swallow their young for protection. I have seen three or four incidents of the kind. On approaching the old snake she would make a peculiar noise and immediately the young would run down herthroat. The snake is called in this section the black watersnake.—J. O.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee, Wis.—*Adv.*

Game Bag and Gun.

RIFLES FOR SMALL GAME.—III.

Editor Forest and Stream:

Since my article under the above heading appeared in FOREST AND STREAM I have had a great many letters from different parts of the country, with so many inquiries about the small-bore rifles that I have felt obliged to ask for space in the FOREST AND STREAM to answer in part the many correspondents that have requested me to do so. As this may also interest some new readers who are fond of rifle shooting in the woods and fields at small game, I will submit it to you without any apologies, merely stating that it is simply the result of careful observation, and it is hoped by the writer that some useful information may be given to the young and inexperienced sportsmen that are looking for a good rifle to do the work required in a quick, thorough and decisive manner.

First, the .22cal., which I treated of in former articles, is now fitted up ready for the market with four different cartridges, which are good for game shooting. There are many good rifles in the market, and it is merely a matter of fancy which to choose—provided of course that they are chambered for the short shell.

There is another rimfire cartridge called the .22 long "rifle" cartridge, made by the U. M. C. Co., that contains 5grs. powder and 40grs. lead. This cartridge, although it has been on the market for some time, does not seem to be very well known—judging from letters that I have received regarding it—and to those who wish a cheap rimfire cartridge and wish to do accurate work up to 100yds. I will say that it will fill the bill every time, for it will shoot—in a good rifle—closer than any man can see to hold—for hunting small game. There are two rifles only, known by the writer, that handle this cartridge in a satisfactory manner, viz., the Ballard and Stevens, that are sold at a moderate price. There is one other make that does good work, but costs too much and is no better. These cartridges cost the same as the common .22 long pistol cartridge, but are much more accurate and better every way. The rifles, however, are made especially for them and require a quicker twist in the barrel, so that old rifles can seldom be rechambered to use the new cartridge successfully. Next comes the .22 10-45 c. f. rifle and cartridge.

This cartridge is now made by the U. M. C. Co., to use the No. 1 copper primer, which is a great improvement on the 00 primer formerly used in it. The No. 1 primer is stronger and does not blow out and go to pieces like the old one. This cartridge was fully described in the former article, but it is now so much improved that it is on the whole the equal of the .22-15-45 B. N. cartridge made by the Win. R. Arms Co. Among the rifles to use the 10gr. cartridge, or as it is better known, the .22 extra long c. f., are the Maynard, Bullard, Wesson, Stevens and Ballard. The first and last named have given the best results to the writer, and a point in favor of the latter is that the cost is much less. The strongest shooting cartridge known to the writer in .22cal., is the .22-15-45 cartridge, made by the Winchester Co. The trajectory is very flat up to 200 yards, as the bullet is long enough to have good staying power, and having a powder proportion of 1 to 3, it must, of course, give such speed that for all distances at which small game is killed there are no changes of elevation, which, by the way, is the only fault to be found with both the rimfire cartridges, viz., the .22 short and .22 long rifle cartridges.

Both the 10 and 15gr. cartridges can be reloaded several times, while the everlasting shells for the Maynard rifle can be reloaded indefinitely, the writer having loaded one of them over a hundred times to test it, and apparently it is in just as good condition as when it was first fired. All of these four cartridges are very accurate, and are well adapted to shooting squirrels, grouse, quail or any small game that comes within their range.

There is a question—which I have worked on for a long time and one which I have been asked a great many times—that is worth answering here. We often hear it asked what kind of a rifle can I have for all around work? One that is heavy enough to kill a deer and one that will do to shoot a duck or even a gray squirrel without either tearing the latter all to pieces or kicking a man's head off. A rifle that will down a deer at 300yds., or one that will drop a red squirrel at 30yds. A rifle that can be found in the market at any time with shells and all kinds of reloading material, at a reasonable price, and one that will do good work both with patched and naked bullets, long and short, to use for both large and small game, and for fine work at the target. After a great deal of hunting and measuring with the micrometer caliper, study and theory, I was ready to give the experiment a test, and as the results were satisfactory in every respect, I will give you the story. So here it is:

The rifle used was a No. 4 Ballard with 30in. barrel, .32cal., using 40grs. of powder, and a bullet of 185grs. The results of this cartridge for target and game are too well known to need any comment here, and work well for deer, geese, turkeys or any of the game east of the Rocky Mountains except moose or bear. For the smaller game at shorter range, such as squirrels, ducks, woodchucks, grouse, etc., I loaded the shell with 10 to 15grs. of F.G. powder, a cardboard wad, and a .32 S. & W. revolving rifle bullet, which weighs 100grs. The results are good up to 100 yards, while the report is very light, the recoil is not noticed at all and the expense of shooting is reduced to a minimum, everything that is required can be easily obtained, and you are ready for long or short-range work for any distance at which game of any kind is killed in this part of the country. Of course, there are rifles that will answer a particular purpose better, and particularly for the larger game, but for an all-round gun in this part of the country I have not found anything better. We have little use for large bores for game shooting, while almost all of the target work is at 200 yards, and the small bores are much pleasanter to use, and get into the bullseye just as well.

There are many questions of minor importance that I have answered by mail, and will be happy to give any further information that I can to the readers of FOREST AND STREAM regarding the use and care of small-bore rifles. A letter with a stamp for it sent to the FOREST AND STREAM office I think will be forwarded to me, and I find that this kind of correspondence is of mutual benefit, as I learn of new ideas as well as help others with what are to me old ones. IRON RAMROD.

SOMERVILLE STATION, Boston, Mass.

GUN-SHY DAN AND THE CHICKENS.

WINNIPEG, Manitoba, Sept. 5.—Yesterday was a cool—decidedly cool—bracing day here, with a slight breeze, just the kind of a day for a chicken hunt over the prairie; and when a friend proposed a drive out in the afternoon after chickens, I gladly accepted the invitation. We were away shortly after noon. My friend, Mr. Wm. Hine, a resident of this city, is a gentlemen well known to many of your readers, a crack wing shot, and a thorough sportsman and naturalist. A young brother of Mr. Hine's, whom we dubbed "Youngster," was taken along to drive the horse. He drove with one hand and held fast to a 12-bore Greener with the other. Our dogs were Hine's well-broken Gordon setter Vine, a beautiful animal, and a young English setter Dan, the property of a Toronto sportsman.

Oh, George, what a setter your Dan is, to be sure. He reminds me of an old school-day friend, Charley S., now of Hatfield, Mass., who, when a youth up in the northwest part of Vermont, was ever ready for a lark, excepting when a gun was around. He had a decided aversion to a gun, and if one was fired in his vicinity he would hunt his hole in double quick time. He has, however, got over this, and is now engaged in the manufacture of firearms. I must not omit mentioning the horse Rob, who takes a lively interest in chicken shooting. When Vine struck a scent Rob would stop and look interested; in fact, Hine says that Rob sometimes tries to point a bird himself.

A few miles out from the city the dogs were cast loose, and soon the youngster shouted, "Dan has a point." Sure enough a short distance to the left Dan stood stiffened out, head slightly raised, with a curved tail elevated at an angle of 45°. A few feet in front of his nose stood a low, dead bush, on it was a ground sparrow with feathers ruffled up, curiously watching the pup. Dan stood staunch for about two minutes, then made a sudden jump into the air and came down with a thud into his former position. This caused the sparrow to fly, then there was a chase. If George could have been there how he would have admired his Dan, and how he would have sa d so.

Soon Vine struck a scent, the pony stopped and we tumbled out and prepared for action. Dan precipitated matters by swinging around some distance ahead of Vine and flushed the game, an old sharp-tailed grouse. He immediately gave chase. As the bird came down past like a bullet, a long shot off, my Greener uttered its protest, which caused the bird to turn a double sommersault into the grass. Hi, Vine, seek dead bird; and proudly and daintily he brought in our first bird of the day, a fine cock grouse. But where is Dan? There stands Rob shaking his head and champing his bit, expressing in a horsey way his pleasure. At our feet stands Vine wagging his tail and waiting for a caress as reward for retrieving the bird so promptly. A little distance away the youngster stands with an expression that betokens mischief later on. Hine and myself are surely here. But Dan is absent. After some moments of calling and whistling the top of a dark head adorned with a pair of glistening eyes, appear above the grass near the spot where Dan was last seen. As we drive away that head grows larger and takes the form and body of the lost Dan, who follows along behind the rig with a demeanor that plainly said, "That was a mean trick to play on a fellow who was doing his best to catch that bird." But he soon recovered his spirits and was coursing about as lively as ever, though if a gun was pointed he would "set" out of sight as quickly as possible.

We cross a dry slough to a ridge, where there are a few scattering scrub oaks, a most likely spot for chickens. We turn up the ridge and Vine works across the ridge in front of us. He is a rapid worker, going at a swinging gallop. Suddenly he stops and "stiffens" a moment, then turning his head slowly he sniffs the faint scent-laden air on each side, then slowly moves onward, working up the trail. We extend out our line and await developments. Dan makes a rush ahead of the other dog. We shout "Give the rascal a peppering;" he bursts in among the covey, which gets up with a whir-r-r some 50yds. from Hine. Crack, goes one barrel of his gun, and the nearest bird is doubled up and comes down a limp mass of flesh and feathers, and Dan, true to his instinct as a blue-blooded setter, "sets" as close to mother earth as possible. The covey is composed of well-grown birds, and as they scatter out over the prairie they are well marked down. Dan is disposed of for the time being and will not interfere with Vine, who soon comes to a point. They are pinnated grouse and the bird runs. Vine follows it up silently and carefully, and stiffens again within a few feet of the writer, when whir-r-r up goes the bird behind me. A quick turn and at 30yds. away I knock it cold. Vine, who drops to shot, is told to "Hi on, dead bird." In another moment the bird is in my pocket; and within another two minutes Vine has found another bird near Hine, who walks it up and downs it. Vine is soon again at a staunch point, with nose into a thick clump of brush. We take our positions and order the youngster to enter the brush and flush. He walks into the thicket with a dangerous look in his eyes. As the birds starts he snaps it before it is out of the brush. We exchange looks of disgust as the young'un makes a clucking sound with his tongue as he picks up the riddled bird. "Now look here, youngster," says Hine, "No more such snap shots again to-day; do you hear?" The youngster makes in reply a thumb and finger movement. Soon Vine is tracing up another grouse. We spread out in a line, Hine to the extreme left, the youngster in the middle and the writer at the right. Rob, who has found a tender bit of grass to nibble, is busily engaged in the rear. Vine comes to a point fifty yards in front of Hine, the bird is shy and flushes, and is hardly up in the air when bang and it is down. I look at Hine, he is looking at me, with his gun down. The young ter coolly extracts an empty shell from his gun and blows the smoke from the barrel. He has made a clean kill at seventy yards if it is a foot. "I say, youngster"—another thumb and finger movement cuts short the sentence. We first feel like wilting and keeping Dan company. A second thought prompts us to brace up, fully determined to make age and experience tell and assert their supremacy before the day closes. The next bird is doubly killed, as Hine and I each cover it. The youngster was a trifle late.

We soon exhausted that covey, and further on other coveys are found and worked with varied success. Dan gets interested and actually stands a grouse, but "sets" when the gun comes up. The sport goes on until it is too dark to shoot. We are then ten miles from the city, but Rob knows the route back and we have a pleasant ride into town.

Regarding the number of birds bagged I overheard the youngster tell a hunting party we passed near the city that we had killed twenty-seven, but Hine says that according to his arithmetic nine and twenty-one are thirty. They were nearly all pinnated grouse, which are newcomers in this vicinity. The native sharptail grouse have nearly all disappeared, which is perhaps owing to the fact that they lie better to the dog and are easier killed. The pinnated grouse scatter, run and hide when a dog comes among them.

A word more about Dan. This was the second time that he had been out in the field. It is Hine's idea to first get him interested and familiar with the game, and then try to break him of his gunshyness. When this is done he will no doubt become a valuable dog, though to become a prize winner he must be taught to lower that curved tail several degrees. It may, however, of its own accord straighten and drop with age. He is young yet. His present usefulness is confined to defending Vine from the attacks of the halfbreeds' curs. Dan goes into a fight with a dash and vim that enables him to thrash an Indian dog quicker than you can say Jack Robinson (of Matepedia). STANSTEAD.

ADIRONDACK DEER AND HOUNDS.

Editor Forest and Stream:

Some time since I had the pleasure of placing before you the story of the two hounds and the deer. Let me give you an instance of the instinct of the deer in knowing that a particular hound is on his track. An old guide with whom I have had many a cosy chat over a camp fire, told me that when deer were plenty in that region. he had often seen a small herd of eight or ten feeding in some grassy meadow. Once he saw a number feeding, and in the distance he heard the baying of a hound. He had been trying to draw near enough to get a shot at one of those he saw, but the voice of the hound had made a stir among them, as if they were taking note of that music, so pleasant to the hunter, and so ominous to them. As the voice of the hound drew nearer, one of the deer raised his head and seemed to be listening very intently, when he quickly drew off from the others, and slowly increased his distance from his companions, from time to time throwing back his head in order to catch every sound of the nearer approach of the hound. Presently he trotted away, and drew out of sight, when soon came the unerring animal on his trail, passing almost in sight of the other deer, but causing very little excitement and no hurry. The deer on whose track he had started led him almost through the drove.

There can be no doubt of the fact, as there is abundant testimony to corroborate the statement, and I really think it more remarkable than the faculty in the hound, which enables him to claim his deer. I promised to place before you some facts which occurred under my own observation, to demonstrate beyond a doubt the truth of this wonderful instinct. One of my favorite camping grounds, when I was a little more supple in the joints, was Ampersan Pond, which is beyond the top of Ampersan Mountain, over the roughest and the steepest carry of five miles it has ever been my pleasure to encounter. The grand old mountain overlooks the Lower Saranac and Round Lake. I have visited that enchanting lake four or five times, and camped near the ruins of Prof. Agassiz's old hunting lodge, and the hours spent around that silent lake, only awakened by the weird cry of the loon, have given me more rest than any other part of the wilderness. It is an undertaking to reach it, but when once settled you feel certain that no one will disturb your repose. Part of the ascent is so near perpendicular that you are obliged to go in a slanting direction, and even then take hold of a line, if your burden is heavy, to pull up the steepest part.

I was watching on Burnt Island, about the center of the lake, where a fine run comes down the mountain by the side of a rousing brook, full of deep, dark holes, just the places the deer love to sulk in and worry the dogs; this ended at the mouth of the stream in a long, shallow sandbar, where the deer can run out a hundred yards or more before he is compelled to swim. The cunning creature had baffled several dogs nearly all day; first one could be heard, and then two or three; and again all was silent. It was late in the day when at last they succeeded in routing him out of all of the hiding places, and they were heard coming in no amiable temper, three of them. As I sat, rifle in hand, out came a magnificent buck, and seemingly in no great haste, leisurely walked out on the shallow bar, and drew nearer to me with every step. Just before the waters deepened, I fired and put the ball behind his ear. Electricity could not have been quicker. Very soon, in fact before my guide could draw the deer to the island, an old dog, Tyler, came into the water and swam over, regaling himself on a dainty meal. Close at his heels another dog, belonging to me, came in. He is a small but musical little fellow of the old Virginia stock of black and tan. He swam right up to the deer and in language not to be mistaken claimed it as his. Old Tyler reluctantly and sullenly walked up the bank; and Ned after his meal lay down by the buck; and just then came in the third dog, swam to the shore, noticed the deer and also walked up the bank. Now either of these animals could have thrashed Ned; and old Tyler could have eaten the little fellow up; he was a powerful animal, noted for his strength and pluck, a cross between greyhound and foxhound, and always came in first with a rush, giving the game little time to rest. The old fellow was out of sorts all the rest of the day, in fact when about to seek camp we thought it best not to take either of the dogs in the boat, as they were dissatisfied, and I am sure if it had not been a law that these creatures obey, it would have been a bad business for Ned. Though the little fellow had a splendid nose and a beautiful voice, yet he was no match for the others in a battle.

This little hound was cruelly shot by some inhuman hand, the ball tearing open a great seam in the back of his neck, which I stiched up under ether. By the way, let me say for the benefit of our friends that dogs generally take anæsthetics badly, and have to be handled very carefully under its use.

I think I need not trouble you with any further instances to prove the point under discussion. I should be glad to hear from any of your friends on the subject' as all such matters of natural history interest me.

HORACE CARUTHERS.

Editor Forest and Stream:

As each year has its biggest buck ever seen in the Adirondacks, I have to tell you of the one for 1888, killed by the Hon. L. E. Chittenden. Mr. Chittenden had taken post at the mouth of the outlet, and says he would not have missed the sight of the buck coming in for anything. He did not come in as if sca ed, but came with an easy bound, as if he knew his power to whip the dogs or escape them by running a short distance in the water. His head was turned, listening to the dogs. Two young ladies, rowing for pleasure, had just come up the outlet and stopped just where the buck wanted to go. When he saw the yellow boat and the two New York girls he stopped to take a look at them. The rifles ofMr. Chittendenden and his guide, DeBar, took him on the fly as he turned to run when about 200yds. away, each shot striking him, one in the neck and one through the body. His hair had just changed from the red coat to the short blue coat, which makes the finest kind of a rug. The huge antlers have eleven prongs. All hands are satisfied it will be the best head sent from the Adirondacks for 1888. We certainly have seen none as fine since the famous Star Mountain buck was killed by Mr. Kneeland. The hunting has been unusually good since August 15. Thirteen deer have been killed about the lake since that date.

MEACHAM LAKE, N. Y., Sept. 11. F.

A report from Blue Mountain Lake, Sept. 18, says that Mr. S. Fairchild, of New York city, killed one of the finest bucks ever seen in that region. Its antlers were five-pronged and very symmetrical. It weighed 258lbs. net on hotel scales; width across antlers, 20in.; length of antlers, 29in.

NOTES FROM CHICAGO.

CHICAGO, Ill., Sept. 17.—Mr. Gillespie, long so familiar in the gun end at Spalding's, is just recovering from an illness which leaves him unable to enjoy life with his accustomed vigor. He has his eye on the ducks, however, and says if he don't go after them this fall, he will next time, sure.

One of the wealthiest and most prominent shooting clubs of this city—or rather of this country, for it has members in New York, Boston, Grand Rapids, Mich., and other cities—is the one commonly called the De Golyer Club, because of the prominence therein of the Messrs. DeGolyer. There are only twelve members, and these twelve do their best to beat each other down to the grounds, when a special wire announces that the ducks are coming in. The grounds of the club are near Roselawn, Ind., and comprise over 5,000 acres of shooting country. They have nineteen miles of river front on the Kankakee to rattle around in.

Mr. Bond, of Bond's Commercial Agency, and Mr. F. R. Smith, of Pardridge's Western house, receive word from their intended shooting ground near Liverpool, Ind., that one gun has bagged five dozen snipe to a day's shooting, and another has had 50 ducks. They wish to get away by Sept. 25, if possible, as by that time game should be coming in well. Mr. Smith's red Irish dog Don, as fine a specimen of his kind as there is in the city, has had a bad round with distemper, but will be well enough to work this fall.

Mr. Alex. Harvey, well known in the sporting goods department of Montgomery Ward & Co., has been sick, and will miss his regular annual trip to Senachwina Lake after the ducks.

I learn from the town of Henry, Ill., that market hunters are getting a few ducks on Senachwina and adjacent waters. This is the home of the great North American market hunter.

Sept. 20.—The boys are mostly back from their first fall outing, and there is a temporary lull along the line. The local ducks, teal and woodducks, have now mostly been shot off, and the flight of the migrators has not yet well set in. Snipe are being shot in good bags along the Kankakee.

The plentiful fall rains have filled up the marshes and bayous well, and shooters along the Kankakee and in the Fox Lake system anticipate a good flight of ducks this fall.

A few ducks are being picked by the juveniles along the Calumet, almost on the edge of this city. These young shooters, however, say, "'Taint cold enuf up North yit." E. H.

TOMPKINS COUNTY GAME.

Editor Forest and Stream:

Under the above heading "M. C. H." says in the FOREST AND STREAM for Sept. 20, "The big b gs at first reported dwindled down terribly when the truth was scattered abroad. In one instance that came to my knowledge a well known local sport accompanied by a more or less conspicuous member of the medical profession of Gotham town, was reported as bagging thirteen woodcock on Aug. 1. The hard cold facts of the matter, as related by the farmer, at whose place the gunners found shelter, were in effect that the day's work resulted in the shooting of three woodcock, two robins and one partridge (shot out of season by professed sportsmen)."

Dr. J. S. Kirkendall, of Ithaca, and the subscriber, are the parties referred to, and the writer of the above slander is evidently not acquainted with us. We manage to get in a good many days in the field together during the season every year, and our bags of birds are usually able to stand on their merits without any varnishing, when the weather and other conditions are favorable. We reported twelve woodcock killed, and that was the number of woodcock killed by us on that morning, and there were no robins nor partridges nor other birds of any kind mixed with them. If I did not profess in public to be an upholder of the game laws "M. E. H.'s" letter would not disturb me any, but it will be read by a good many who will think it is time for them to shoot partridges out of season, if the letter states facts. It so happens that we did not show any birds to any farmer on the morning in question, and that while our bag of woodcock numbered a dozen of those birds, we were disappointed at not being able to make a really large bag of them.

Partridges, by the way, are always plentiful in Tomp-

kins county, woodcock are fairly abundant and quail are scarce. Brown rabbits are easily found, except near the large towns, and white rabbits are plentiful enough in the swamps to make good sport with beagles. A few ducks and turtle doves complete the list of feathered game of the county. Coons, foxes, skunks, muskrats and mink can be found in almost any part of the county by hunters who care to gather fur.

ROBT. T. MORRIS, M.D.

NEW YORK, Sept. 20.

BEARS IN MAINE.

IT is a curious feature in natural history that bears are on the increase in Maine, especially in Franklin and Oxford counties. It can hardly be claimed that this increase is due to protection, as in the case of deer, where the restraint of dog hunting and crusting by the hand of the law is certainly the means through which a very marked increase in numbers is apparent. But *Ursa major* has grown in numbers in Maine in a very marked degree. Time was when the mountains of Oxford and Franklin counties were great living grounds for these animals, but the advent of civilization more than fifty years ago seemed to drive them nearly to extermination. Thirty years ago, in the very neighborhoods where bears have made sad havoc with the farmer's sheep this summer, such an animal was rarely known, except in name. It is true, that in the early history of politics in Oxford county certain stalwarts obtained the title of Oxford Bears, a name given to them because they were the hardy sons of a locality where bears had once been wonderfully plenty. But civilization, accompanied by the settler's steel trap and flintlock, had driven them almost to extermination. Still, on occasion these animals were seen even in those days. In conversation with a gentleman born in Oxford county, in that State, the other day, he remarked that he well remembered the advent of a bear some thirty years ago near the village of Pinhook. Old bruin crossed the road only a few rods from the post office. He was seen by a teamster on his way to Bryant's Pond, a station on the Grand Trunk Railroad, that had been but a short time completed as far as Island Pond. His story created a good deal of excitement, as soon as it was believed, which was not till he had pointed out the tracks of the beast to the villagers whom he had alarmed. The gentleman himself—then a boy—says that he saw the tracks though several days old, and that the place where the bear crossed the road was for a long time pointed out to strangers as one of the wonders of the town. But this year, strange to say, two bears have already been killed in that section, which is really a part of North Woodstock. The killing of one the FOREST AND STREAM has already had an account of. The beast was shot by Charlie Bessee some time in May. But later in the season the farmers began to find that the bears were not all dead after all. Their sheep were begining to be killed by the dozen. A Mr. Felt lost a large number. The bears evidently killed them for slaughter. In most cases, so the story goes, the hindlegs only of the sheep were eaten off, and it is claimed that in some cases the entire body of the sheep was skinned, and the skin rolled up in a wad. I cannot vouch for this part of the statement, but it comes to me from authority undisputed, though received second hand by my informant. But this report of bears in plenty is only one of many. They are also being caught in traps to an extent almost unknown before. Two have been caught in the section of the state where the sheep were killed. SPECIAL.

DAYS WITH THE PARTRIDGES.

LAST week I spent two or three days in Granville, Mass., just over the Connecticut border, in search of that kingly bird and greatest of game birds, the ruffed grouse. In response to your request for a few notes of my trip, I send this. You will not expect figures of rhetoric or descriptions of scenery, but facts and information. I will be truthful at least, and (if I may borrow a figure from Wendell Holmes) "cling to the fact as an embryo marsupial clings to the teat."

We did not find partridge very plenty, and the bevies were not large. One bevy of thirteen was found in a swamp on the third day, but on all other occasions they numbered five or four, or even fewer. We found the birds on all kinds of ground: on the high hills and in low places; in the woods and in the alders; in dense cover and occasionally in the open on the edge of a wood.

During two days' tramp we did not put up a single woodcock, and not more than four cock were found on the last day, which was spent in the low valley.

I had my old dog Dash, who has spent nine autumns with me in the woods and is almost human in his nature, and my fine Llewellin bitch Star—a brace of splendid dogs. It was their first fly for the season, but they did well in every way, except that the bitch lacks endurance. This fault I bring against the fine-bred Llewellins; they lack stamina. My old dog is from a Lester—Doll sire and a beautiful orange and white native bitch, and he has every quality of a gentleman's hunting dog.

We were also surprised at the apparent wildness of the birds. They were young for the most part, not over two-thirds grown, and it is not at all probable that they had been hunted, and yet they seldom lay for the dog, but would rise a dozen rods away and make for the deep woods.

The first bird fell to my gun. We were working a piece of sprouts and ivies when I noticed old Dash take on a statelier attitude. He grew tall, head up, nose pushed out, and moved quietly ahead. I cried "Game, look out." Then there was a burst from the bushes and an old cock dashed into the woods, rising fifty paces ahead. I followed Dash, who was on the trail of that old cock, and my two friends walked into a small brood that were in some ivies on the right. Two of them climbed the hill to the right; four shots greeted them, but they went on, and two went back up the run. High up and moving like a meteor was one of these, when I turned my 16-bore upon her, and keeping well ahead, pulled. The grouse responded, and made the ground at an angle of 45 degrees fully 60yds. away. Dash was proud as he laid her at my feet, and seemed to say, "Master, that is pretty good. Now for more."

On the edge of a wood in a meadow among low black berries we found a brood of four. Star did the honors on this occasion. The birds had gone freely among the berries, and the work of Star was to trail. She followed them out into the meadow and back again, moving too eagerly but with an assurance that said, "I've got 'em; come on." At last she stopped on edge of a clump of bushes by the wood.

"Quickly, now, here they are; John, get there." Whirr! Bang, bang. All escaped. Some made straight back for the wood. Two swinging along the edge, and I fired; saw some feathers cut from the tail and on she went. We followed them. John got his bird, but I missed a second time.

My companion the third day was Mr. Wilcox, proprietor of the hotel at Granville. Mr. Wilcox took me over excellent ground, but the scarcity of the birds surprised him. We were drinking at a farmer's well when the owner said, "If your dogs w'ld n't break down my corn I'd tell you where was a couple of snipe."

We quieted his fears, and he said, "Well, in that piece back of the barn, but you can't hit 'em.' Soon the dogs were in the corn, and in ten seconds a woodcock was in the air. Two guns were emptied, but the beautiful fellow went on swinging to the end of the piece. I followed around. He had lit in the open, and I put him up. The little gun followed him as he lifted over an apple tree, and he fell at the foot of the tree. Dash was called to retrieve, but he would not come. "Dash is down on the other bird," I said. We moved back for him; the bird was put up and missed; was found again, and joined his companion in the bag.

Similar incidents might be repeated, but the experienced bird hunter can fill out the picture. "Write me," said Abou Ben Adam, "as one who loves his fellow men." Let me also say, write me as one who loves the woods and meadows, who loves his dog and gun, and who confesses a singular sympathy with the fraternity of true sportsmen. GROUSE.

SALEM, Mass., Sept. 20.—Ipswich gunning the past three weeks has been tame. More gunners than birds at every place except Eagle Hill, where Mr. James Ward and son, of Ipswich, have been doing some excellent shooting I am told. There were some teal about Salem last Sunday. I saw two winters and one female wood duck at Indian River, West Newbury, recently, but not a Wilson snipe, and only one has been shot to date. Rail last Saturday were *non est* also. Salem parties have had some fine plover shooting on the highlands of Cape Cod recently. Within a week I have been through some fine woodcock cover, getting but one bird, although I shot at another on a pine sidehill. I found some alder swamps filled and spattered in good shape, and the dog drew around through the cover in a cautious manner without a point. I then hunted through corn without a feather. If some of your correspondents can tell us where the birds were, you will oblige a number of your readers.—X. Y. Z.

"AUTUMN ANTICIPATIONS."—*Editor Forest and Stream:* I am troubled with that complaint—have it bad—in fact it has been growing worse ever since I read your article with the above caption in the FOREST AND STREAM of Aug. 30. But the affection is not a new one to me; it has taken possession of me annually for fully fifty years, and I can truly join you in saying those years are full of "happy memories!" The charm has never left me, and so long as I can see and walk I feel it will not. The opening season will find me once more among the hills and valleys where my early days were passed, and though my pleasure may be tinged with a sadness from missing those who were wont in years gone by to share it with me, still it will be the more tender and true from these memories which are sacred. Who can say they are poor, when even once a year they can revel in a charm that fades not?—A. (Brooklyn, Sept. 22.)

ENGLISH SNIPE.—Oakdale, Long Island, Sept. 17.—I bagged the first English snipe of the season to-day while beating the meadows for kreakers. Bay snipe shooting over decoys is about at an end for this season. A few of the large-sized kreakers can be picked up by shooting long distances, as they flush very wild, and talk and act very much like an English snipe. A dozen are considered a good bag. There are yet a few straggling yelpers and yellowlegs, but not enough to make shooting a pleasure from a blind. I see every day a few golden plover on the wing, but have not had the fortune to have any decoy since the big flight of September 1. These birds, no doubt, are stragglers from the big flight, having stopped on the hills of Montauk and Orient to feed on grasshoppers.—A. A. F.

THE SUSQUEHANNA RIVER.—Towanda, Pa., Sept. 20.—In a day's hunting trip by a party of sportsmen of this place, on eleven miles of the Susquehanna River, neighboring shores and islands, the following were sighted: large flock of red-winged blackbirds, large flock of crow blackbirds, 3 ducks, 3 rails, 1 plover, 2 English snipe, 1 crane, 1 eagle, 4 red squirrels and a number of blue herons. Woodcock very scarce, not one put up, although we had two good setters and hunted the ground carefully. The following brought to bag: Five redwings, 5 crow blackbirds, 1 duck, 1 rail, 3 red squirrels. Very few black and gray squirrels in this neighborhood. Prospects for ruffed grouse shooting are fair.—D.

PUPPIES AND GAME LAWS.—Thomaston, Conn., Sept. 17.—I saw a letter last week in which the writer said that a puppy of his, in a trainer's hands in Meriden, Conn., had had fourteen woodcock and three partridges shot over it this season. Are there any game wardens in Meriden?—GAME WARDEN.

COHASSET, Mass.—The cooting is just beginning here, and the old black ones are coming along in large bunches. The gunners, however, are getting very few, as the birds are wild. Still, in a little while the young gray coot will begin to arrive, and then the fun will commence.—TEN-BORE.

LATE QUAIL.—Oakdale, L. I., Sept. 24.—Inclosed please find sample of small game bird. I found nest to-day; had nine eggs in; four were hatched out and rest of eggs cold, and nest abandoned, probably on account of this dead bird being in it.—ALFRED A. FRASER.

DILLINGERSVILLE, Pa., Sept. 14.—On Saturday last we were visited by a large flight of golden plover, the first large flight that has visited us for a number of years.—L. W. M.

DOVER, Del., Sept. 24.—Plover and snipe shooting in this section very poor. An excellent outlook for partridges, ducks, rabbits and squirrels. Numerous coveys of partridges that remained untouched last season. In some localities squirrels are doing considerable damage to corn in the fields. Duck shooting mostly confined to sprigs and black ducks. Food for game plentiful and varied. Fox hunters will have plenty of sport, as the little reds are everywhere. Raccoons and opossums are plentiful enough to afford some good solid fun.—DEL A. WARE.

WESTCHESTER COUNTY.—Pleasantville, N. Y., Sept. 19.—Woodcock shooting in this county has been very poor so far this season, but there is no end to the quail here this fall. The blizzard seems to have been a benefit instead of a damage. In passing over a farm of about 140 acres I put to flight five flocks of those swift-winged little fellows, all about two thirds grown.—J. O.

THE CONNECTICUT ASSOCIATION.

Editor Forest and Stream:

I inclose clipping from the *Globe* of Sept. 23: "The fact that the Connecticut Farmers and Sportsmen's Association for the Protection of Game and Fish has made its first successful prosecution will be good news to all who wish to see the game laws enforced. The difficulty in obtaining convicting evidence against game law violators is very great, and therefore the successful prosecution of "Col" Barnard, of North Bloomfield, yesterday, is a fact worth general attention. Complete evidence again Barnard could not be obtained, owing to the absence of several witnesses, but enough was secured to convict him on two counts and fine him $37.36. D. A. Markham appeared for the club. Two other counts on which Barnard was arrested were not pressed yesterday, but will be acted on in case the association thinks best to further push the matter. Detective Fielding worked up the case and did it well, securing all the evidence necessary. Barnard snared over 1,000 partridges last year, according to his own statement. He had been snaring this year and hunting previous to the time the law goes off.

I also clip from the Colchester *Advocate* the following: "Farmers of Westchester Urged to Unite in Enforcing Trespass Laws.—Farmers of Westchester and vicinity, greeting: As our city friends (?) are so much afraid that we shall not observe the game laws properly, let us one and all post notices on our farms and enforce the trespass law.—J. L. CARRIER, Westchester, Conn., Sept. 10, 1888."

The *Globe* says: "We have learned that Mr. Carrier is the station agent at Westchester, and for a number of years past has bought most of the game that was snared and shot in his town. We therefore easily see why Mr. Carrier is so grieved over the situation and thinks the present laws unjust. Mr. Carrier's pocket is struck by the law which does not allow him to sell snared birds or send birds out of the State. We never yet saw a case of pure unselfishness, and Mr. Carrier illustrates the fact admirably."

Some people are unkind enough to say Mr. Carrier is the party who wrote an article for the FOREST AND STREAM signed "One of the Farmers," and another signed "The Same Farmer." I respectfully ask Mr. Carrier to make affidavit that he is not the party. If he does I will have something to say on the subject.

ABBOTT C. COLLINS, President
Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish.

HARTFORD, Conn. 24.

Sea and River Fishing.

MAINE FISHING.

BOSTON, Sept. 20.—The September fishing is good in the most of the Maine waters. Several reports have come in from Moosehead and they all indicate good fly-fishing. The Megantic Club is getting ready for its opening trip, which will include a grand excursion of the members and invited guests. The club has met with some delay in building club houses, etc., but things are fast drawing into shape. The excursion will include a large number of prominent Boston merchants and business men. Some of them will throw the fly for the first time, but the majority are old hands at the trade. The fishing is reported good in the Rangeleys. A number of prominent sportsmen have lately been domiciled at the Upper Dam, at Camp Bema, Indian Rock and at Student Island. They generally report the fishing quite good. A Mr. Brown, of North Bridgton, Maine, with his nephew, Mr. F. S. Brown of that place, have recently returned from a trip to Richardson Lake. They report good sport. They caught below the dam three or four trout of 3 and 4lbs. weight, with an abundance of small ones. A Philadelphia gentleman caught, the day before the Messrs. Brown came out, a 7lb. trout. It was caught with the fly; at least so the story goes. But the Union Waterpower Company has been raising the gates for sportsmen to fish this fall, and that brings the trout up into the pools below the dam. The jigging of last year is not yet forgotten, and true sportsmen do not like the sound of the gates being raised. It gives the fishermen an unnatural chance at the trout, which naturally, as the spawning season approaches, seek the running water and struggle to get up stream.

It is said that some very remarkable trout were seen under the mill at that point one morning last week, but that none of them were taken, for the mill was soon started and they were all driven out. Would it be safe to trust a number of big trout in plain sight on the bottom of that stream, with the ordinary number of those who style themselves sportsmen there? The trout might not be molested, but on the whole it were better that the mill was started. Will the next session of the Maine Legislature have anything to say about this raising of gates for the accommodation of sportsmen with long pocketbooks?

Mr. and Mrs. Chas. H. Johnson, of Somerville, Mass., are now at Camp Stewart, on Richardson Lake, for two weeks. Mr. O. H. Smith, of Smith & Blanchard, Boston, with Mrs. Smith, started for the same camp on Thursday, the 20th. On the Monday following they were joined by Mr. and Mrs. Geo. T. Freeman and Mr. and Mrs. W. K. Moody; Mr. C. W. Cutting is cook for the party as usual. His experience as a lumber camp cook has been considerable, and in fact he has cooked for Camp Stewart parties something like a dozen times, but this only brings to mind the first time the idea was proposed to him to go to the same camp and cook for a party with ladies in it. He quietly sat down in a chair—it was in the grocery store at Andover. "Do you suppose that I would go up there and cook for wimin? Ha! ha! ha! Not much. I'll go and hang myself if you want me to, but I can't make bread for wimin. My hands in dough with wimin around! No you don't!" But he did go—has been a number of times—and now, somehow he likes to have the ladies mentioned above in the party. SPECIAL.

TWO GOOD MEN GONE WRONG.

CHICAGO, ILL., Sept. 17.—*Editor Forest and Stream:* It is painful to record the lapse from rectitude of men who have long stood high in the esteem of their fellow men, who have enjoyed to the fullest measure the confidence of the business community in which they have lived. More especially painful is it, and attended with yet greater regret in the chronicling, when those individuals have been not only business men, but also sportsmen, of irreproachable standing. Yet duty to the public cannot be foregone, and to the newspaper the most lenient and forgiving there must be ever present the obligation of presenting the facts to its clientage.

Until very lately no man in Chicago was more universally respected than Mr. A. Montgomery Ward, of the world-known firm of Montgomery Ward & Co. He stood high in the esteem of all who met him, and was fairly reverenced by his fellow sportsmen as a man of unimpeachable veracity, integrity and honor. All of the above could also, until lately, have been said of Mr. E. C. Cook, the head of the popular sporting goods house of this city, who has often been heard to say that he would give anything in the world if he could only tell a lie like other folks. Matters remained in this condition with these two gentlemen until when, a few days ago, they returned from a trip to their club grounds along the Kankakee, in Indiana. They were still the two same innocent, light-hearted members of society, marked, as above mentioned, only by a strong tendency toward things of gravity and by a constitutional inability to struggle with the truth. But immediately upon their return it was noticed that something had gone amiss. The countenances of both were overcast and troubled, and they looked at each other nervously and guiltily, as if fearing the approach of some avenging Nemesis. Mr. Ward was approached by a confidential friend as he sat at his private desk, and in response to an inquiry he told his story:

"Mr. Cook and I had been out all day, and we hadn't had very good luck on the chickens, and not such very good luck with the early ducks. We stepped lightly into our gondola, and were soon gliding gently over the waters of the Kankakee marsh, whose surface was just rippled by the passing breeze. The mellow autumn sun tinged all the scene with a glorious golden light, and over all brooded the spirit of peace and content.

"We were not out fishing, but as our gondola lightly parted the silvery waves as we glided into a bayou of the Kankakee, Mr. Cook remarked that if he had his tackle along he would bet a hundred dollars he could catch a string of fish. I replied that there could be no doubt of it, but that unquestionably I could catch two to his one. This he denied. We argued the case as we rowed gently on.

"Suddenly, however, our attention was called to a rippling in the water near us. A large bass flung himself bodily into our boat. We were surprised and delighted. Much greater was our surprise when, after rowing for a few yards further, another bass sprang lightly and joyously into the gondola, scarcely touching the gunwale as he came over. He was followed by another, and yet others. Before long the air was filled with the lithe and iridescent forms of leaping fish, whose shining scales glittered weirdly in the rays of the sinking sun. When our gondola glided to the foot of the stair on our return, we took out from the boat and held up to the gaze of our admiring friends one hundred magnificent specimens of stalwart bass and pickerel."

"Great Scott!" exclaimed Mr. Ward's friend.

"I know you may seek to cast discredit upon my story," replied he, "but I will bet five hundred dollars—I wouldn't like to bet less than that—that Cook and I can go down there and do it over again."

Mr. Ward's friend said nothing. "You'd better go and ask Cook," said Mr. Ward.

When Mr. Cook was found he was approached on the subject delicately. Looking up, with a guileless smile upon his innocent face, he spoke as follows:

"Mr. Ward and I had been out all day and we hadn't had very good luck on the chickens, and not such very good luck with the early ducks. We stepped lightly into our bark——"

"It was a gondola, wasn't it?"

"Who's telling this story? We stepped lightly into our bark, and were soon gliding quietly over the waters of Kankakee marsh."

Mr. Cook told almost exactly the same story as Mr. Ward, as may be seen. At the end he remarked, "I know you may seek to cast discredit on my story, but I will bet five hundred dollars—I wouldn't like to bet less than that—that Ward and I can go down there and do it over again."

The evidence of both gentlemen coincided exactly. They told precisely the same story. There was no subverting their testimony by cross-examination. It came, therefore, to be generally accepted as a fact, that one hundred fish had jumped into the boat of these two gentlemen. But only yesterday, by the merest accident, the real truth became known. Mr. Cook came around to Mr. Ward's place late in the afternoon, and was overheard to say, in an injured tone of voice:

"Say, I haven't seen that box of cigars yet."

"What box of cigars?"

"Oh, come now! None of that, Ward, I mean the box I was to have if I didn't say anything about your falling head first out of the boat in six feet of water."

Some one passed near the door just then, and Mr. Ward was heard to say, in a firm, clear tone of voice, "I say, Cook, why don't you send that box of cigars around?"

"What box?" asked Mr. Cook, getting very red in the face.

"Why, that box I was to have for keeping quiet about you taking the header out of the boat, you know!"

The two men rose to their feet and glared at each other.

"I'll give the whole snap away!" said Mr. Cook in a hard, cold tone of voice.

"I wish I may die if I don't make a public confession!" said Mr. Ward, solemnly.

A little later, Mr. Ward remarked to a friend, "It's too bad about my friend Cook. He's telling an awful lie about a lot of fish jumping into his boat, down in Indiana. You know, Cook took a header out of the boat, and caught cold. I think it must have settled on his mind!"

At about the same time Mr. Cook was heard to say to a friend of his, "Have you heard that infernal yarn Ward tells about a lot of fish jumping into his boat, down on the Kankakee? Poor Ward! He fell out of the boat, you know, and he's never been quite right since!"

There is probably a misunderstanding somewhere, but these are the facts. E. H.

CHICAGO.

CHICAGO, Ill., Sept. 22.—So great has been the demand for fishing tackle, created by the unusually fine fishing of this season in Michigan, Wisconsin and other sections near by, that one of our largest sporting goods dealers actually ran short of flies, and was unable to supply the demands made in various departments of his house. Everybody has been fishing and everybody caught something.

Mr. James Lightfoot, a gentleman 49 years of age, and a resident of Elgin, Ill., has just died a slow and horrible death of blood-poisoning, caused by a slight scratch received from a fish fin not long since.

Capt. Ramage started to-day after the bass at Silver Lake, and will reach them. Mr. J. Clark, of the Wilkinson Co., goes again next week to Camp Lake, where he last Saturday took nine good bass in a half day's fishing. There have been big catches of bass all through the Fox Lake system lately, especially just before the equinoctial storm. A friend of Mr. Clark's, who fished later into the evening, took twenty-seven fine bass.

So far from being depleted, the Eagle waters have this season been unusually prolific. Our fishermen returning from those localities declare that the bass and mascallonge fishing there this season was better than ever in their experience.

Mr. J. M. McKay, better known as "Jimmie," an enthusiastic young sportsman of this city, has recently returned from a two months' hunting trip in the Northwest, including the Sound country, and is delighted with the sport he had. He in company with two friends "packed it" into the woods 150 miles from the railway and shot blacktail deer, antelope and mountain sheep.

Sept. 22.—Mr. Paul Morton, of the Q road, Mr. Jay Morton, his brother, Mr. W. B. Chatfield, Mr. Kirk, of Kirk & Co., and two or three other friends of theirs, start to-day in a special car for a grand sporting trip in the Northwest, British Columbia, the Sound country, etc. They will turn themselves entirely loose on the country, live chiefly by hunting and fishing, and have one of the largest times ever measured up to date. E. H.

SOME BASS RECORDS.

Editor Forest and Stream:

If my friend W. W. Byington, the president of the Anglers' Association of the St. Lawrence River, was not such a modest fellow, he would have added to your last week's record of bass catches. In a private letter to me he says, "I spent seventeen days up the Bay of Quinte with Dr. Louis. I never saw such bass fishing. We had one that weighed 5lbs. 2oz. He was twenty-two inches long. We had numerous ones that weighed 4½lbs. I sent the Fort Orange Club here a barrel of the handsomest bass that ever came to Albany. Then I fed the whole community where we were fishing." H. S. C.

If the following story is true New Jersey may claim the honor of producing the largest black bass yet caught in any of the Northern States. The New York *Times* has the following:

"Phillipsburg, N. J., Sept. 22.—The largest black bass on record was caught in the Wallkill at this place yesterday. It ran into the turbine wheel running March's mill and stopped it. The wheel was taken out and the bass was found to weigh a trifle over 9lbs."

A LARGE STRIPED BASS.—Mr. W. F. Sibley, of New York, was fishing in the Great Kills, last Saturday, for striped bass. He used a light two-jointed chumming rod and caught fast to a "big one." This is what he told a *Sun* reporter: "Such plunging, such mad breaks, such surging here and there, and such determination to foil all efforts to subdue it, I never had the pleasure of seeing and feeling in the case of any striped bass I ever handled before. I knew that this one must be an enormous fellow, but I hadn't the slightest idea of seeing what I did see when after nearly half an hour's steady and wearying work at the end of my rod I had tuckered my game out, I reeled it, still stubborn and showing all the fight its tired nature could provoke, and saw the length and breadth and thickness of the bass I had been pitting my skill against. As it came up alongside of the boat its great head and broad sides were actually startling to me. I had the monster bass conquered, but looking around in the boat I discovered that I had no gaff hook. Here was a pecarious situation. I knew by the look of the bass in the water that it would be the largest one on record to be killed in any water within twenty miles of New York, if I could only get it in the boat. There was only one way to do it. Holding it close with a stiff line, I ran my hand up along its great shoulder and slipped it beneath its immense gill covering. That fish would have had to pull me out of the boat and take me along with it if it had made a break to get away, for I'd have clutched that gill and held on from the Kills to Sandy Hook. But I had too nearly exhausted the fish for it to make this break, and, putting forth a good deal of strength, I lugged the big fellow into the boat. It lacked just half an inch of 3ft. in length, and weighed a full 18lbs. The largest striped bass on record caught within twenty miles of New York before this one was the 12-pounder caught by George Graham a year ago in the Great Kills. This one of mine beats the record."

STEEL RODS.—St. Louis, Mo., Sept. 6.—*Editor Forest and Stream:* In answer to "Percyval's" inquiry as to steel rods, would like to give my experience. I used a Horton tubular steel rod forty-two days trout fishing in Bayfield county, Wisconsin, and seven days at Long Lake, in same county, for large fish. My experience is that the rod is indestructible, as several falls over mine failed to injure it; that for fishing in alders or thick brush it is absolutely faultless. I know that I did not use one-tenth of the hooks on this trip I usually do. This because it is so easy to unsnag your hook when fast. I know by its use I have saved the Recording Angel a world of trouble. W. H. Woodward, Esq., of this city, an enthusiastic angler for large fish, used it one day at the lake, and declared that his first business on his return to St. Louis would be to purchase a similar rod.—HENRY B. DAVIS.

Fisheulture.

CO-OPERATION IN FISHCULTURE.—II.

BY JOHN H. BISSELL.

[Read before the American Fisheries Society.]

ANOTHER direction in which co-operation can, I believe, be advantageously employed is in a thorough examination of interior lakes. By interior or inland lakes the dwellers along the Great Lakes are wont to distinguish the smaller bodies of water wholly within the boundaries of the several States. In Michigan, the numbers, size, and natural conditions of the inland lakes make them a considerable part of the waters we are called upon to care for. In the earlier days of this work these lakes were planted with different kinds of fishes, not with any special reference to their adaptability to the fish planted, but because the Commission had fish for that purpose, and in a general way the people in the vicinity of the lakes wanted fish. I do not say this with the design of casting any reflection upon the authorities of those days. The promiscuous planting of fish was then perfectly natural; and our experience is based largely upon their mistakes as it is still more largely upon the notable success of many of their experiments. As the years went by a very natural curiosity arose among citizens and fishery authorities to know what had been the result of those plants. Had all failed? If so, why? If the fish planted had not lived and prospered, would no others live in those waters? And, finally, the question formulated itself, are these waters suitable for any fish? If so, what kind?

There was but one way to answer these questions, and that was to go and find out. And so we went (by proxy). In 1885 in a desultory kind of a way the work of examining the lakes was begun. In 1886 a proper crew was organized, consisting of three men, one being in charge. They were provided with a gang of gill-nets having meshes of four different sizes, thermometers, a small drag or trawl, sounding lines, fishing tackle, blank reports with printed instructions, and a complete camping outfit. And so with fairly good and practical results the lakes of three counties on the southern border of the State were examined and reported on. For a short time toward the end of summer a second crew was sent out to examine some places where there were special reasons for knowing the contents and capabilities of several lakes. In 1887 further improvements were made in the outfit, and the crew increased to four. The addition of one man secured more expeditious work. The result of these examinations give the Michigan Commission, in permanent and convenient form, not only the exact, but the essential, size, depth, character of bottom, quality of water, temperature, inhabitants, kinds and quantities of food; in a word, what fish are there, and the knowledge what can and ought to be there in order to obtain the greatest productivenes of the given waters.

One characteristic these examinations have lacked. They afford an opportunity for scientific investigation, which would add materially to their practical utility, and which would certainly make them more complete from all points of view. We have not the means to supply that want. The United States Fish Commission has the means and the men. We are discussing with the Commissioner, and the head of the Department of Scientific Research of the United States Fish Commission, a practicable method of co-operation in carrying on further examinations of Michigan lakes. Here is a field well worth cultivating. If fishculturists are to do anything for the interior lakes they must know as well as possible the conditions under which their efforts must be tried. There are six or seven Northern States besides Michigan, of which I have some knowledge, where such efforts ought to be made.

And while the lakes are being examined, why not the streams and rivers? Our experience has proved that there are hundreds of spring brooks in this State suitable for the growth of speckled trout where that fish was not native. A systematic examination of all streams would, in this State, within a few years, secure the planting of trout only in waters entirely adapted in temperature and food supply to trout. It would in my judgment also result in our being able to establish black bass in miles of water suitable for this admirable game and food fish where now they are unknown. Definite and comprehensive knowledge of the rivers and streams of the State, put into the same permanent and accessible form as the reports Michigan is getting of the lakes, is of importance just as the work on the lakes is.

Secondly, what coöperation can there be between State Fish Commissions? The most obvious points for coöperation between States are where they border the same waters, as on the Great Lakes, or have a common boundary on a river—as the Ohio, Mississippi or Missouri. And here we must touch upon the regulation of fisheries, a subject pregnant with difficulties. For the States bordering the Great Lakes, a uniform system for every mile of the great waters ought to be established. Not necessarily identical enactments; for the waters of a single State, like Michigan, require a diversity of regulations to make complete for all its waters the operation of a general system. The objects to be sought by each State are the same, the means to reach these objects will necessarily be somewhat modified by local conditions. From our own experience, I assume that it is a difficult thing to secure the passage of suitable laws by the State Legislatures for the preservation of industrial fisheries. We have no difficulty in obtaining fairly good laws for the protection of game fish; but we have tried in vain thus far to persuade the Legislature of this State to do for the fisheries of the Great Lakes what must be apparent to any man of common sense, who gives the subject any attention, is essential to preserve them

I think the common judgment of men, who are entirely disinterested, but careful observers of the past and present condition of our fisheries, accords with that which is always expressed by the most intelligent and candid of practical fishermen and fish dealers, to the effect that our laws should cover three vital points:

First—To regulate the size of the meshes of nets, the times and places of fishing.

Second—The market size of the various valuable kinds of fish.

Third—The employment and authorization of competent State officers to enforce the regulations and inspect the products being marketed; and there should be confided to the chief officer discretionary power to suspend, within prescribed limits, the regulation respecting the apparatus, when such suspension will not result in the destruction of immature fish and may be an advantage to the fishermen.

Regulations should be as general, as exact and as simple as is compatible with efficiency, in order that they may not be oppressive or obscure. Of course, each State must enact its own laws. Each State has exclusive jurisdiction of its waters to its boundary line; this on the Great Lakes is a matter of great importance. It has many times been suggested by persons who had not examined thoroughly the question of jurisdiction, that Congress could better provide for the regulation of the fisheries of the Great Lakes, because these lakes bordered so many different States. This question has been settled once for all by the Supreme Court of the United States, so that whatever of advantage Federal legislation on this subject may seem to offer, it is a legal and constitutional impossibility, and must be dismissed. The States must do all there is to be done, and do it in their own several ways. Thus far it has been badly done, or to speak

more accurately, has not been done at all. Can there be any co-operation between the States to remedy this evil? That there ought to be is plain. And the fact of its recognized necessity ought to bring about, eventually, an affirmative answer. The force of a substantial and efficient example is the only constraint that can be brought to bear. When any one of the States bordering the Great Lakes will enact laws that are effective, its example will be followed.

Full and candid discussion between the fishery officers of the different States will be useful, and ought to be employed more frequently than in the past for the purpose of harmonizing the views of all. By fishery officers I do not mean alone the Fish Commissioners, but include the wardens or officers employed to enforce the laws, by whatever names they may be known. And I believe that good results might be obtained from conferences between the Fishery Committees of the Legislatures of Michigan and Ohio, and Michigan and Wisconsin, and Ohio, Pennsylvania and New York. At least this is worth consideration.

A step in the right direction was taken by Michigan, in 1887, in the passage of an act for the appointment of a Game and Fish Warden. The act was not as broad nor the powers as extensive as the Commissioners urged upon the Legislature; but it was one point gained. The thorough, consistent and intelligent course pursued by the gentleman selected by the Governor as the State Warden will go far toward securing at another session of our Legislature the required improvements in the law, as it has already demonstrated the important advantages of the proper enforcement of such laws as we have. Wisconsin took the lead in this class of legislation, but from all I have learned of its operation, I judge that the statute needs amendments in some important points to make it effective. Ohio, too, has started in the right direction. This is all encouraging, because in each case it has been a movement in the right direction.

The fisheries, in my judgment, have reached a point where no half measure will answer. What is needed is to look the necessities of the case squarely in the face and provide wholesome and sufficient remedies that will put a stop to the destruction and marketing of immature fish of all valuable kinds; and while it gives nature a chance to help repair the mischief already done, will likewise help to secure to the States the benefits of the artificial propagation of planting.

A third suggestion in the line of coöperation that I think worthy of discussion is between the Fish Commissions and the educational institutions of the State—as for instance, with the instructors in natural history in the State University, or the Agricultural College. There are many ways in which the two could aid each other. The University, or Agricultural College, or both, might furnish the naturalist to accompany a crew of Fish Commission men in examining interior lakes and streams. They might do a notable service by furnishing a naturalist, who is expert with the microscope, along with our crews employed in gathering ova of different fishes; and by a critical study of ova and milt during the spawning time, instruct the men as to the appearance of perfectly matured male and female properties, so as to bring such operations still nearer to perfection. At the same time, facts so acquired might be an actual and useful contribution to scientific knowledge. The Michigan superintendent last fall proposed a very similar method for the purpose of improving the already good results in artificial fertilization.

DETROIT, May 16, 1888.

FROG CULTURE.

Editor Forest and Stream:

The many inquiries which you have recently had concerning the culture of frogs for market, prompts me to say something on this subject. For the past four years this question of frog culture has given me some trouble in answering private letters from would-be frog-farmers, and is a legacy left by the late Mr. Seth Green, who wrote an article on it in the report of the New York Fishery Commission for 1873. This was widely copied, and each year some imaginative reporter gives an account of a mythical frog farm which has never existed. In 1875 this farm was located near Smithtown, Long Island, and I went there and found that there was no frog farm in that vicinity, nor was there any man living near the place bearing the name given. The next year the apocryphal farm was located near Philadelphia, and I had the same experience. Since that time I have only wasted postage in the pursuit of this fabled industry.

Mr. Green gave the results of two years' experience in which he gathered frog spawn and hatched it, but lost his polywogs and abandoned frog culture, but he encouraged others to try it, by saying the "difficulties can be overcome by patience and perseverance." Yet he further said: "When they become frogs they live on all kinds of insects, and the only thing I can see to make success sure is to procure insects in large quantities, enough to support a great number of frogs." And here is where the impracticability of raising frogs lies.

It is no trouble to gather large quantities of frog spawn and hatch millions of tadpoles, nor to feed the latter on meat and vegetation, for they eat both. The enemies of the tadpole, or polywog, are numerous, and large frogs will eat small ones. As an instance of the latter fact, I once took a dozen large American bullfrogs to Prof. Moore, of the Derby Museum, at Liverpool, and they quickly swallowed the small European frogs that were in the tank where he placed them. Even if it were possible to feed the frog on meat, which it is not, the batrachian is of slow growth, and the balance would be on the wrong side of the ledger when they were sent to market.

An inquiring correspondent recently sent me the following, copied into the New York *Sun* from the Boston *Journal*, headed "Fortunes in Frogs." The article says:

"Any man who has a pond on his farm can try the experiment of raising his own frogs. First, let him buy six pairs of fine Jersey breeders and dump them into the water. With these for a starter, you may select a quantity of domestic batrachia, and then you will have the nucleus of a fortune. Don't interfere with your water investment for a year, any more than to keep your growing stock well supplied with food. They require an abundance, but as they are not very dainty in their taste, the expense account will be light. For a young farm two barrels a day of hotel table scraps will keep the frogs in splendid shape, so that at the end of twelve months you can begin marketing all that you can fish out at the same price as spring chickens. Give me the time and facilities and I will wager that at the end of two years I will be living on an income of $5,000, and my frogs will pay all my expenses."

I will travel far to see frogs fed on hotel table scraps, or to see the frog-farmer "living on an income of $5,000," all from his frogs. In my long experience as a fishculturist the frog has been under constant notice, and I have tried to feed them on meat and mussels without success. My belief is that frogculture is a delusion, and that such a thing as a frog pond does not exist, and unless some genius arises who can find a way to feed his frogs on beetles, flies and other insects, which, with some snails, constitutes their natural food, there will never be a frog farm. The supply of frogs to New York markets comes mainly from Canada and places of sparse population, where they are not extensively eaten. Forty years ago Americans did not eat frogs, and every marsh in the country contained large ones. Now they are almost extinct near cities in the State of New York, and do not breed and grow rapidly enough to pay to catch them. I think it probable that the batrachians, like the reptiles, are of long life and slow growth, and that a man would get very tired waiting to see a crop mature. Perhaps he might wait ten years to get large ones, but never having raised a frog to maturity I cannot say. The belief in their slow growth is based on the fact that many of the polywogs do not get their legs the season that they are hatched, but pass the winter in the tadpole state; this points to slow maturity.

FRED MATHER.

COLD SPRING HARBOR, N. Y.

THE ROMANCE OF RODENBAUER.

THE wild and wicked West is not without elements of romance. Indeted, it occasionally furnishes forth a hero of such nobility, clad on with feats of such martial derring-do, as to merit not less than a lasting place in poesy.

There is Mr. Rodenbauer, of Quincy, Illinois. Plain Peter Rodenbauer was his name, and he himself was a plain, unvarnished Teuton from Fatherland, who, since he had left a land of game laws, had naturally a perfect right to violate the game laws of the country to which he came. Under Mr. Rodenbauer's plain, unvarnished exterior there beat a noble soul. His was a spirit whose least accomplishment, in case of the given emergency, would have been that of the late Leonidas, or Mr. Bludsoe, or Casabianca of beloved memory.

Mr. Rodenbauer's haughty soul scorned the fish laws of the dastardly commonwealth of Illinois. What? Should he beg? Should he cringe? Nay, by the nine gods! There were fish in the waters, and Mr. Rodenbauer would have fish or blood. Not a few, but a wagon load. Mr. Rodenbauer had a wagon, and more than a wagon-load of nets.

Game Warden Pipino and Constable Sacra sought to confiscate the heroic Rodenbauer's nets and wagon. "Away, slight man!" cried the hero. And in vulgar parlance, he "pulled down on them" with a shotgun. The officers retired. They had no fear, but they thought of their families. Mr. Rodenbauer retained his property, and remarked that he would continue to do so, until warm localities become comparatively frigid.

Mr. Rodenbauer mounted his trusty steed, and placing his arquebus across the pommel of the saddle, rode into town and publicly invited the officers or the whole dastardly and 'dasted Commonwealth of Illinois to come out into his parlor and take him, his nets, his wagon, or any appurtenances unto him belonging. Mr. Rodenbauer returned and fortified himself in his house and loaded a number of rifles, revolvers and shotguns. He courted investigation. The brave officers invested the place, and detective Purcell started to investigate. He saw that heroic Peter held a full hand; he resolved not to call him, and so retreated. As he turned to go, this simple-minded "courageous hero" shot him in the back with a load of large shot, inflicting wounds from which Mr. Purcell will probably die. Mr. Rodenbauer would have fish or he would have blood.

This was in the night time. The officers had not courage to go in and make the arrest. Perhaps they were not sure that such laws as they professed to maintain had anything behind them. Perhaps they were not to blame, feeling this lack of moral support. Perhaps they were cowardly. It is not known. It is only known that they waited patiently about, like Mary's little lamb, till daylight did appear.

When daylight ushered in the peaceful calm of another day, Mr. Rodenbauer, with devout smile on his face and a shotgun on his shoulder, tripped lightly from his domicile and started for St. Francis Church, there to offer up his thanks to the God of battles and of smiling peace. The brave officers, when he was wrapped in sweet religious revery, sprang upon him, took away his shotgun and his smile, robbed him of his liberty, and on the following morning, the fifteenth in the ides of September, had him foully consigned to a loathsome dungeon in default of $5,000 bail, which this suffering hero was unable to furnish on the spur of the moment.

The Kennel.

FIXTURES.

DOG SHOWS.

Oct. 2 to 5.—Seventh Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Oct. 2 to 5.—National Exposition Dog Show, Kansas City, Mo. C. R. Evans, Manager, Room 16, New England Building, Kansas City, Mo.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 15.—Fifth Annual Field Trials of the Philadelphia Kennel Club, open to members only. Wm. H. Child, Secretary, Philadelphia, Pa.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 6578.

BEAGLES.

Editor Forest and Stream:

The beagle classes at our shows are among the very few which in average merit excel those at the exhibitions of our English cousins.

For this we are indebted to the good judgment displayed by General Rowett in the selection of his importations, and to Messrs. Cameron, Elmore, Dorsey, Todd, and one or two others for their carefulness in breeding the stock that General Rowett brought to this country. By glancing over the pedigrees of the show winners, the idea will be suggested to a thinking person that the paucity of the importations and the necessity of close inbreeding also had probably much to do with the improvement of the breed.

Recent importations have really tended to degenerate the type rather than to improve it. This can readily be proven by examining the pedigrees of this year's winners.

Champion Bannerman, for instance, has probably been used in the stud more than any other recently imported beagle. He has never, so far as is known, produced but one really good dog, and this one has since gone to pieces. The reason for this is simply the fact that this much lauded champion was never really worth a c. If he was, then every beagle of the Rowett type should have been turned out of the ring when he was present. Had he been bred here instead of having been imported, he never would have received a letter. It is true he has a grand body, good feet, tail and coat, but so have hundreds of our native nondescript beagles. His head is that of a toy bull and terrier. Many of his get are snow white, and I have seen some that, if they had their ears cut, tail shaved and coat clipped short, would have stood excellent chances of getting first money in the apple-headed bull-terrier class at the last Boston show.

Head, I claim, is the key of the type of every breed. Look around any show after the prizes are awarded and notice how a good head overcomes all other defects. If the mastiff Ilford Caution and the St. Bernard Otho had not, in the judges' opinion, good heads, they certainly would not be in the champion class.

I have not the slightest grudge against Bannerman or his owner. In fact, the second best worker I have in my pack is a son of this dog. The best, I am sorry to say, is not a Rowett beagle, but a cross between a black and tan terrier and a Virginia harrier. This only goes to show that a good rabbit dog is not necessarily a good beagle. It is only because I dislike to see an unworthy dog used so frequently in the stud, and impart to the strain a taint that it will take years to efface, that I write so strongly against this particular dog. Chimer, while a better beagle than Bannerman, is to me for many reasons almost as unsatisfactory a stud dog. Little Duke, Rattler III., Tony Weller, Little Ned, Tony, Little Prince, Dorsey's Lee, Fitzhugh Lee, Trailer, Cameron's Racket and Dandy, rank very high in my estimation as among the best available stud beagles. One or two of them, however, I believe are now dead.

The true color of a beagle is black, white and tan, and I have seen but few really good specimens otherwise marked. To Captain Ashcton principally we owe the original introduction of the blue-ticked stock. Any one who breeds beagles must have noticed that this color is generally accompanied by oversize and lack of carage. My theory is that the blue ticking comes from the old blue-spotted harrier, or our native small-eared foxhound, and that when puppies inherit the color they also inherit the size and short ears of this line of their ancestors. Therefore, I suggest that all who are trying to breed winning beagles should steer clear of pedigrees containing the names of Blue Belles, Blue Boys and Blue Caps. Old Victor also has considerable of this taint in his blood.

While beagle breeders were hunting all over England for stock to improve the strains, a person in Canada picked up in our own country some which he brought to our shows and carried off the honors with. He knew that to get big money for them he must stamp them with the magic word imported. With this sugar coating we bought them, and it has been only recently that their actual pedigrees have been discovered, and they turn out to be the Rowett beagles.

It is all nonsense to look now to England for stock to improve our strain of beagles. Since the days of Queen Bess their usefulness there has gradually lessened, until they are the scarcest of breeds at the English shows. But right here in America we have the proper game for them. The importations of General Rowett have placed us in possession of the choicest of the breed that was in England in his day, and there has been no improvement in them there since.

To improve the breed we want to use intelligence in the selective mating of the best specimens we have, and not by the haphazard method of introducing unknown blood.

S. REIGNAF.

INDIANA FIELD TRIALS.

INDIANAPOLIS, Ind., Sept. 19.—*Editor Forest and Stream:* At the annual meeting of the Indiana Kennel Club held this day, the following officers were elected: D. C. Bergundthal, President; Ed. S. Shultz, First Vice-President; J. E. Dougherty, Second Vice-President; J. M. Freeman, Third Vice-President; S. H. Socwell, Treasurer; P. T. Madison, Secretary. Board of Governors, D. C. Bergundthal, Ed. S. Shultz, J. E. Dougherty, J. M. Freeman, S. H. Socwell, P. T. Madison, H. A. Comstock, Royal Robinson, A. P. Craft, M. R. Williams, Frank W. Samuels, Joseph Becker.

Mr. Ed. S. Shultz was selected to judge the Derby in connection with Mr. Bergundthal and Col. Sloo.

The entries for the All-Aged Stakes are coming in very rapidly. Vice-President Freeman, who lives at Bicknell, reports an abundance of birds. We anticipate a very successful meeting. The Central Traffic Association will sell tickets to Vincennes at regular first class rates, and will return the parties at the rate of one cent per mile. Parties who anticipate attending the trials should secure from the agent of whom they purchase their tickets, a certificate stating that they have paid the regular fare to Vincennes. These certificates will be signed at Bicknell, Ind., by the secretary of the club, which will enable the holder to purchase his return ticket at the above mentioned rate. Bicknell is only fifteen miles from Vincennes.

P. T. MADISON, Sec'y.

INDIANAPOLIS, Ind., Sept. 24.—*Editor Forest and Stream:* I have just finished the perusal of the letters of Mr. Anthony in relation to his little attempt to bulldoze our club, and the only conclusion that I can arrive at is that he is a very funny individual. Why does he not give us a history of the *manner* in which his invitation to judge was brought about? If I am correctly informed, this would be *very* interesting reading. His pose as "decoy" to *attract* entries is decidedly rich in view of the fact that the *many* entries he speaks of are only *three*, while on the other hand the club has received *many* more than this number of *refusals* to make entries solely because of his appointment. I am not acquainted with Mr. Mitchell, and know almost nothing of his case, but would remind him of the untimely fate of "poor old Tray," and advise him to "dispense with the services" of his advocate.—UNO.

HIGHLAND CHIEF.—*Editor Forest and Stream:* My report of the Buffalo show contains the statement that the greyhound Highland Chief, "is short in neck." Instead of "short" read "long." Highland Chief has as good a neck as I have ever seen on a greyhound, and I doubt if there is another dog in the country that is his equal in this essential point.—CHAS. H. MASON.

THE SYRACUSE DOG SHOW.

[Special Report.]

SYRACUSE, N. Y., Sept. 22.—*Editor Forest and Stream:* The first annual show of the Syracuse Kennel Club opened with a catalogue entry of 319 dogs; 28 absentees reduced the number present in the building to 291. The quality in some of the classes was good. The attendance on the whole was poor. Not for any one moment, save perhaps for the first evening, could it be said that even a fair crowd of paying visitors was in the hall. As a result the club must have had a shortage when settling time came. The unfortunate delay in the appearance of the catalogues caused much discomfort alike to visitors, exhibitors, reporters and ring-stewards, as is always the case where it occurs. The steward in the judge's ring must have a catalogue for reference, as frequently there are transfers to be made from one class to another, and incorrect entries that have to be looked into immediately, and where this has to be done by searching the club's entry books a long delay is necessary and much valuable time is lost. Bench show committees should bend all their energies to get out a prompt catalogue on the first morning of the show, thereby earning the thanks of both visitors and assistants. In this instance the catalogues did not arrive until the afternoon of the second day. The judging was begun very late, the first dogs not being led into the ring before 2 o'clock, and it dragged along until well into the third day; as a consequence all of the award cards were not up in place over the kennels of the winners before the fourth and closing day. The management seemed to do all in their power to keep things right, but the work appeared to devolve upon two or three men, and notably upon Mr. Ward the secretary, who throughout maintained his self-possession in spite of the many demands, almost without ceasing, upon his attention. The weather for the four days was clear. Tallman superintended. Spratts Patent fed and benched.

The mastiff classes contained fifteen entries, these were made up mostly of Mr. Winchell's and Mr. Moore's dogs, in fact, the entries were all from these two kennels, excepting four. There were five absentees. Of course Minting in his usual good form carried off the honors.

St. Bernards (rough) contained twelve entries all told. There was one absentee and one was disqualified for mange. Smooth St. Bernards numbered seven only, but quality answered for the quantity lacking. Mr. Hopf's Hector had things his own way, both in his own class and for the specials.

Newfoundlands had but one entry worthy of the name; the other dog partook of the nature of an overgrown retriever, and was in poor condition, too.

In bloodhounds, first went to Premier III., a very good looking representative of this breed, second to Burniston, the other three entries were absent.

Deerhounds had three entries, each one scoring a first in its separate class.

Mr. Huntington took good care of the greyhound classes, with Balkis, Highland Chief and Cassandra.

The Cook Kennels owned most of the sixteen entries in the foxhound classes. The quality was good and the judging satisfactory, with the exception, we think, that Passion in the bitch class and Warrior in the dog class should have been closer to first.

Thirty-three of the thirty-eight pointers faced the judge with Lad of Bow and Lass of Bow in the pink of condition, clear winners over and above all others.

The English setters were not strong as a class, there were many absent, and many not for competition. The club's own exhibit, not for competition, containing Dad Wilson, Lil II., Dot, Sunshine and others made a nice display.

Elcho Jr. won champion and specials in the Irish setters. Larry S. and Berna each scored a first respectively in the dog and bitch class.

We have not seen so many entries in the black and tans in a long time; the quality was good, too. Royal Duke was entered not for competition. W. S. Hammett's Rose won with no competiton in the champion bitch class. Little Boy and Beaumont had a tussle for first honors in the open dog class, and finally it was awarded to the former. In bitches Clio won.

The spaniel classes were good. Darkie was alone in the champion field class. Newton Abbot Lord scored in the open class with Negro chasing him up pretty well. Negress, not in good condition, won in the bitches. Newton Abbot Laddie got first, with Farmer second to him in the any-other-color class. Bridford Ruby won in the corresponding bitch class. Brant took the cocker championship; Miss Obo II. would have beaten him under some judges. Baby Obo and Chloe W. were winners in the dog and bitch class. Some reds or buffs came up strong in the other class.

Collies were few but good. Mr. Mortimer did not have much trouble in getting them right. Scotilla and Flurry II. won the champion prizes, Roslyn Sensation and Cora II. took care of the open classes.

There was some difference of opinion in regard to placing Bonnie over Lou in the beagle classes, but otherwise the breed was well judged. No. 244, Bijou, a nice little bitch, was disqualfied for having deformed toes on the front feet.

In bulldogs the quality was very good. Entries numbered only five.

In bull-terriers Mr. Hobbie's lot took the money, with Cairo Grabber and Bonnie Princess in grand condition.

Fox-terriers were few but good. The Blemton Kennels filled up the classes.

Skye terriers contained five nice ones, but all out of condition.

Dr. Cryer's pugs were on hand. The other classes were not strong. Following is a complete list of the

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* E. H. Moore's Minting. *Bitch:* No entry.—OPEN—*Dogs:* 1st, E. H. Moore's Alonzo; 2d withheld. Com., G. M. Diven's Derbyshire Lad. *Bitches:* 1st and high com., J. L. Winchell's Boss's Minnie and Bess; 2d and very high com., E. H. Moore's Duchess and Lady Florence.—PUPPIES—*Dogs:* Withheld. High com., G. M. Diven's Derbyshire Lad. *Bitches:* 1st, J. E. R. Bondreous's Chip.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* W. J. Ehrich's Barry II. *Bitch:* No entry.—OPEN—*Dogs:* 1st, Hospice Kennels' Alpine Chief; 2d, Mrs. J. M. Nicholson's Mount Sion III. Very high com., B. S. Dering's Monk D. *Bitches:* 1st, Hospice Kennels' Gemma I.; 2d, Chequasset Kennels' Chequasset Minnie. Very high com., L. Zettwick's Nell.—PUPPIES—*Dogs:* 1st, L. Zettwick's Gen. Scott. *Bitches:* No entries.—SMOOTH-COATED—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitch:* Hospice Kennels Daphne.—OPEN—*Dogs:* 1st, Chequasset Kennels' Lodi. *Bitches:* 1st, J. W. Dunlop's Thisbe; 2d, J. P. Davis's Beatrice. Very high com., Hospice Kennels' Thuna.

NEWFOUNDLANDS.—1st, E. H. Morris's New York Lass; 2d, withheld.

BLOODHOUNDS.—1st, E. Brough's Premier III.; 2d, Cook Kennels' Burniston.

GREAT DANES.—Withheld.

DEERHOUNDS.—CHAMPION—S. W. Skinner, Jr.'s Mac.—OPEN—*Dogs:* E. D. Morgan's Bevis III. *Bitches:* S. W. Skinner, Jr.'s Brenda.

GREYHOUNDS.—CHAMPION—*Dog:* H. W. Huntington's Balkis. *Bitch:* No entry.—OPEN—*Dogs:* 1st, H. W. Huntington's Highland Chief; 2d, Hornell-Harmony Kennels' Hazelhurst. *Bitches:* 1st, H. W. Huntington's Cassandra; 2d, high com. and com., Hornell-Harmony Kennels' Harmony, Lady Olivia and Fancy. *Puppies:* E. O. Ward's Fancy W.

FOXHOUNDS.—CHAMPION—Cook Kennels' Brave.—OPEN—*Dogs:* 1st, 2d, reserve, high com. and com., Cook Kennels' Dan, Whoopee, Drum II., Roderick and Streak. Very high com., E. H. Morris's Warrior and Hornell-Harmony Kennels' Dan T. Com., Miss Mary Robinson's Pride of Hornell. *Bitches:* 1st, equal 2d, very high com. and com., Cook Kennels' Rose, Spotty, Wild and Fly; equal 2d, E. H. Morris's Passion.—PUPPIES—*Dogs:* 1st, Cook Kennels' Bouncer. *Bitch:* Cook Kennels' Blossom.

POINTERS.—LARGE—CHAMPION—*Dog:* F. R. Hitchcock's Tammany. *Bitch:* Not for competition.—OPEN—*Dogs:* 1st and 2d, Westminster Kennel Club's Lad of Bow and Westminster Naso. Very high com., J. B. Downing's Trinket's Chief and Detroit Kennel's Fleet. *Bitches:* 1st and very high com., Westminster Kennel Club's Lass of Bow and Westminster Sal; 2d, Hollywood Kennels' Mell Faust. High com., G. F. Gray's Xmas Vic. Com., E. H. Morris's Dewan Nell and Fleet View Pointer Kennels' Belle Randolph.—SMALL—CHAMPION—*Dog:* Westminster Kennel Club's Naso of Kippen. *Bitch:* No entry.—OPEN—Westminster Kennel Club's Bang Bang; 2d, M. C. Pierce's Syracuse Joe. Very high com., Hornell-Harmony Kennels' Sam and R. Westlake's Croxtine and Bruce Beaufort. High com., Westminster Kennel Club's Clingstone and Fleet View Pointer Kennels' Shot Dash. Com., H. McMurchy's Morris and C. G. Stoddard's Trinket's Cash. *Bitches:* 1st and reserve, Westminster Kennel Club's Glauca and Westminster Gladiola; 2d, Mrs. C. A. Painter's Nanon. Very high com., R. Westlake's Molly Beaufort. High com., H. B. Thomas's King Bow's Dawn.—PUPPIES—*Dogs:* 1st, G. F. Gray's Christmas Bang. *Bitches:* No entries.

ENGLISH SETTERS.—CHAMPION—*Dog:* R. B. Morgan's Mandan. *Bitch:* No entry.—OPEN—*Dogs:* 1st, W. A. Buckingham's Breeze Gladstone; 2d, J. S. Hudson's Ben Hill. High com., T. H. Terry's Comedy. *Bitches:* 1st, very high com. and high com., J. S. Hudson's Dixie, Sadie H. and Tempest; 2d and high com., H. B. Morgan's Rose Mandan and Pearl Mandan. Reserve, J. P. Gray's Countess Frolic Bondhu. Very high com., C. F. Crawford's Dido Noble. High com., W. Tallman's Galatea.—PUPPIES—*Dogs:* 1st, W. S. Webber's Roy. *Bitches:* 1st, R. B. Morgan's Rose Mandan II.

IRISH SETTERS.—CHAMPION—*Dog:* Dr. Wm. Jarvis' Elcho, Jr. *Bitches:* No entries.—OPEN—*Dogs:* 1st, E. Maher's Larry S.; 2d, W. K. Chase's Rock. Very high com., J. F. Wolf, Jr.'s Ned; com., Prof. L. P. Brave's Royal Ruby. *Bitches:* 1st, Dr. E. C. Kirk's Berna; 2d, Dr. W. Jarvis' Maid.—PUPPIES—*Dogs:* 1st, W. S. Cutler's Rory O'Moore VI. Very high com., Mrs. E. O. Ward's Red Ravenshoe. *Bitches:* No entry.

BLACK AND TAN SETTERS.—CHAMPION—*Dog:* Absent. *Bitch:* W. S. Hammett's Rose.—OPEN—*Dogs:* 1st, S. G. Dixon's Little Boy; 2d, E. H. Morris' Beaumont. Com., G. S. Leonard's Don. *Bitches:* 1st, J. Sullivan's Clio; 2d, Mrs. J. E. Dager's Belle Stephen. High com. and com., J. A. Cheney's Daisy Pilot and Pilotta. *Puppies:* Mrs. J. E. Dager's Belle Stephen.

SPANIELS.—CHAMPION—Oldham & Willey's Newton Abbot Darkie.—OPEN—FIELD SPANIELS—BLACK—*Dogs:* 1st, Oldham & Willey's Newton Abbot Lord; 2d, E. H. Morris's Negro. High com., E. Powers' Oberon. *Bitches:* 1st, E. H. Morris's Negress; 2d, Oldham & Willey's Lady Abbot.—ANY OTHER COLOR—*Dogs:* 1st, Oldham & Willey's Newton Abbot Laddie; 2d, Cook Kennels' Newton Abbot Farmer. Very high com., E. H. Morris's Beau and President and Hornell-Harmony Kennels' Hornell Mikado. High com., Brant Cocker Kennels' Shaun Rhue. Com., Hornell-Harmony Kennels' Hornell Sport. *Bitches:* W. T. Payne's Bridford Ruby; 2d, E. H. Morris's Lady.—IRISH WATER SPANIELS—1st, B. F. Lewis's Jess; 2d, W. W. Silvey's Duchess III. Very high com., Utica Kennels' Oneida Belle.—COCKER SPANIELS—ANY COLOR—CHAMPION—1st, Brant Cocker Kennels' Brant. Very high com., American Cocker Kennels' Doc.—OPEN—BLACK—*Dogs:* 1st and 2d, Oldham & Willey's Baby Obo and Jersey. Reserve, Detroit Kennel Club's Black Obo. Very high com., Hornell-Harmony Kennels' Hornell Jack. *Bitches:* 1st, Oldham & Willey's Chloe W.; 2d, Brant Cocker Kennels' Bonita. Very high com., Hornell-Harmony Kennels' Hornell Martha.—ANY OTHER COLOR—1st, Oldham & Willey's Goldie. Reserve, very high com. and com., Hornell-Harmony Kennels' Hornell Fancy, Dick, Buff and Beauty. Very high com. and high com., Brant Cocker Kennels' Rocks, Pearl and Clip. High com., A. S. Eastman's May. *Puppies:* 1st and com., Hornell-Harmony Kennels' Hornell Valda, Venus, Betty and Lass; 2d, reserve and high com., Brant Cocker Kennels' Psycho, Bertie, and Clip. Very high com., E. Powers' unnamed.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla. *Bitch:* Chestnut Hill Kennels' Flurry II.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Roslyn Sensation. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Cora II. and Luella. Very high com., Dr. H. L. Quinn's Collie Belle. High com., T. J. Hook's Colina.—PUPPIES—*Dogs:* No entries. *Bitches:* 1st, J. P. Gray's Jakyr Dean; 2d, Brant Cocker Kennels' Parton Ella.

POODLES.—1st, Detroit Kennel Club's Duke.

BEAGLES.—CHAMPION—*Dog:* Somerset Kennels' Bounce. *Bitch:* Hollywood Kennels' Bonnie.—OPEN—*Dogs:* 1st and very high com., Somerset Kennels' Storm and Woodwood Rattler; 2d, W. S. Clark's Frank. Very high com., Hornell-Harmony Kennels' Royal Krueger and Hollywood Kennels' Banner Boy I. High com., Detroit Kennel Clubs' Bross. Com., G. Laick's Mayo. *Bitches:* 1st, W. S. Diffenderffer's Belle of Woodbrook; 2d and com., Hornell-Harmony Kennels' Una and Betty. Very high com., Somerset Kennels' Jessie.—UNDER 12IN.—1st, Hollywood Kennels' Bulger; 2d, withheld.—PUPPIES—*Dogs:* 1st, Hornell-Harmony Kennels' Uncle Dick. *Bitches:* 1st, Somerset Kennels' Hope. Reserve and high com., Hornell-Harmony Kennels' Baby W. and Kate W. High com., Hollywood Kennels' Queen.

BULLDOGS.—CHAMPION—R. B. Sawyer's Merry Monarch.—OPEN—*Dogs:* 1st, W. T. Tebbett's Portswood Tiger; 2d, Cook Kennels' Dreadnaught. *Bitches:* 1st, Cook Kennels' Dolores; 2d, R. B. Sawyer's Soudan.

BULL-TERRIERS.—CHAMPION—*Dog:* W. F. Hobbie's Cairo. *Bitch:* No entry.—OPEN—*Dogs:* 1st, W. F. Hobbie's Grabber; 2d, F. F. Dole's Sensation. *Bitches:* 1st, W. F. Hobbie's Bonnie Princess; 2d, J. P. Gray's Countess. Very high com., F. F. Dole's Nell Bright and My Queen.

FOX-TERRIERS.—CHAMPION—*Dog:* Blemton Kennels' Lucifer. *Bitch:* Blemton Kennels' Rachel.—OPEN—*Dogs:* 1st and 2d, Blemton Kennels' Blemton Rubicon and Dusky Trap. Very high com., W. Whitney's Blemton Grumbler. *Bitches:* 1st and 2d, Blemton Kennels' New Forest Ethel and Blemton Consequence.—PUPPIES—*Dogs:* 1st and reserve, Blemton Kennels' Blemton Rubicon and Blemton Calculus. Very high com., W. Whitney's Blemton Grumbler. *Bitches:* 1st, Blemton Kennels' Blemton Rapture.

WIRED-HAIRED FOX-TERRIERS.—No entry.

BLACK AND TAN TERRIERS.—1st, Campbell & Blake's Nanon; 2d, W. Coates's Dick.

SCOTCH AND HARD-HAIRED TERRIERS.—1st, E. D. Morgan's Highland Laddie.

BEDLINGTON TERRIERS.—1st, E. D. Morgan's Tees Rock.

IRISH TERRIERS.—1st, Chestnut Hill Kennels' Rosyln Eileen; 2d, R. C. Clipperbone's Erin. Very high com., P. C. Oil's Bedad.

SKYE TERRIERS.—1st, H. W. Coates's Ben; 2d and very high com., Oldham & Willey's Claymore and Kirkella; reserve, Dr. M. H. Cryer's Gladstone Boy. Very high com., W. L. Morgan's Lochiel.

YORKSHIRE TERRIERS.—*Dogs:* 1st, withheld; 2d, F. F. Dole's Napper. *Bitches:* no entry.

TOY TERRIERS.—Not for competition.

PUGS.—CHAMPION—Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st, Dr. M. H. Cryer's Dude; 2d, A. E. Pitt's Kash. *Bitches:* 1st and 2d, Dr. M. H. Cryer's Vic and Vestar. Very high com., R. B. Sawyer's Chequassst Tiara and J. Sullivan, Jr.'s Topsy. High com. and com., Chequasset Kennels' Victory and Bijou. *Puppies:* 1st, R. B. Sawyer's Chequasset Tiny.

KING CHARLES SPANIELS.—1st, W. Phillips's Roscius; 2d, Cook Kennels' Nell. High com., J. Sneesby's Fannie.—PUPPIES—*Dogs:* 1st, Cook Kennels Punchinello. *Bitches:* 1st, Cook Kennels' Judy.

BLENHEIM SPANIELS.—1st and 2d, W. Phillips's Grand Duchess and King Pippin. Very high com., M. Dalwit's Little Banjo.

ITALIAN GREYHOUNDS.—1st, Hornell-Harmony Kennels' Daisy; 2d, Miss Hepsie Harwick's Dude.

MISCELLANEOUS.—1st, Chestnut Hill Kennels' smooth-coated collie Ladybird; 2d, O. H. P. Belmont's white English terrier Diamond Spark. Very high com., Hornell-Harmony Kennels' harrier Rover.

SPECIAL PRIZES.

Kennel mastiffs, E. H. Moore; dog or bitch (2), Minting; brood bitch, Bess. Kennel St. Bernards, Hospice Kennels; dog or bitch (2), Hector. Newfoundland, New York Lass. Kennel pugs, Dr. M. H. Cryer; dog, Dude; bitch, Bessie; kennel toy spaniels, W. Phillips; three equal specials to winners in miscellaneous class.

DOG TALK.

A WRITER in the Boston *Post* contributes the following: "A friend of mine who lives in the suburbs has a small boy, not more than five years old, I believe, who has an inveterate habit of running away. He is a sturdy, stout-legged little chap, of great courage and enterprise, but his father and mother have been put to a good deal of anxiety on his account. Sometimes he is found in the next town, sometimes by the railroad, and again in a certain pasture where he enjoys the congenial company of several young colts; but it is always a matter of doubt where he will be discovered. Recently, however, the family have acquired a mongrel little terrier, recommended for the purpose, who hunts up Sammy with unerring accuracy. Whenever Sammy is missing, his mother shows his jacket to the dog and tells him to find the boy, whereupon the dog sets off with his nose to the ground, the hired man or somebody else follows, and in due time the young vagabond is brought to bay. Surely, there is a hint here for many anxious mothers."

London Queen has this to say of the Schipperke, the standard for which we publish this week: "A curious reminiscence of barge life on the Dutch canals is unexpectedly furnished by the dog show just opened in Brussels. In *Vanity Fair* "Thackeray" describes the comfort of barge life and tells the legend of the English traveler who went to and fro between Bruges and Ghent till the opening of the railway stopped the traffic, whereupon he drowned himself on the last trip. The canal boats, however, still carry on a good deal of waterside trade, and the barges are found to affect a particular breed of dog. He is called by them a spits—a kind of wiry-haired terrier, who watches the boat, keeps down the rat population, plays with the children and shows no disposition to leave his wandering home. These barges pass through such unfrequented country, and the breed of dogs is so entirely restricted to one class of owners, that their excellence, and indeed almost their existence, was a mere tradition in the Belgian capital. The directors of the exhibition opening a show of native dogs bethought themselves of this breed, and soon it became apparent that they existed in plenty in the country. So many were sent in by the various barges that it was difficult to adjudge their merits. It is thought the exhibition will be the means of making a new dog fashionable on the continent."

A correspondent in the Chicago *Mail* gives us this: "A friend of mine living on the north side has a water spaniel of which he is both proud and fond. Bill is very proud of being allowed to carry things, and often carries his collar from the lake to the house, after a swim, being exceedingly careful about laying it down, and even when meeting another dog keeping a watchful eye upon it. My friend gave him his muzzle one hot day last summer and told him to take care of it. Bill trotted along quietly for a block or so, then dropped behind. My friend watched him suspiciously. The puppy was passing a trench in the street, hesitated, looked to see if his master was looking, then walked over and dropped the muzzle down through. He knew when he had had enough of a thing, and that muzzle was the bane of his existence."

"On to Richmond" is once again the absorbing cry, and we hear from every direction tidings that at the coming dog show of the Virginia Field Sports Association a vast army of sportsmen from all sections of the country will meet in friendly strife to decide the important question as to which is the best dog. The managers of the show will spare no pains to make the visit of all who come something to be remembered, and we shall expect to see such a gathering of sportsmen as the goodly city has never before witnessed.

The *Spectator* publishes the following from a letter from South Africa: "My dog, Cherry, has had three great pups, and I had to leave her behind at the Grange. When I was away, Cherry and the pups were located in some stables. She came out and watched the tent-truck and my things packed up. Presently I went away, and when I came back I found Cherry had carried all the pups on to the top of my luggage, and evidently had not the least intention of staying behind."

The great and only Plinlimmon arrived on the steamer Britannic last Friday morning, and soon after was taken to his new home at Albany. An excellent portrait of Plinlimmon, drawn to the life, may be found in Dalziel's monograph of the St. Bernard, a book which is advertised in another column. The book also gives his pedigree and measurements.

The Kennel department of *Drake's Magazine* starts off with this: "There's the luckiest man in seven counties," said an Arkansaw man to an Eastern traveler. "How so?" "Had his house burned down and lost six children t'other night, sah," "Where does his luck come in?" "Saved his coon dog, sah, saved his coon dog."

The Chestnut Hill Kennel has purchased from Mr. F. Wake-Walker, Watford, Eng., the collie dog Charleroi II., a well-known winner. He was whelped April 18, 1886, and is by champion Charlemagne and out of Sooty (Ruthven—champion Madge).

Spratts Patent writes us that the statement in the report of the Buffalo dog show that they were remiss in supplying the dogs with water should not be made to apply to them, as this is a matter with which they have nothing to do.

Messrs. C. H. Mason and John Davidson have been appointed judges at the dog show to be held at St. Paul, Minn., next month. The premium list will be ready in a day or two, and may be obtained by addressing the secretary, J. E. Stryker, Room 98, *Globe* Building, St. Paul, Minn.

The California Kennel Club propose holding a field trial for members of the club some time in December.

The Irish Red Setter Club of England, in consequence of the small number of entries, has decided not to hold a field trial this year.

The California Kennel Club are talking of holding a field trial, probably in December.

ANOTHER ONE NAILED.

Editor Forest and Stream:

Mr. Watson has drawn my attention to a letter written by Jas. L. Anthony to Mr. P. T. Madison, secretary of the Indiana Kennel Club and dated May 3, 1888. This letter contains the following statements: "Mitchell was barred without notice, without charges previously made, without a hearing and on the contents of a stolen letter, taken from my possession by fraud and put in the possession of the club by James Watson."

As I sent the letter to the Eastern Field Trials Club, which assisted in the expulsion of Wm. T. Mitchell, Mr. Anthony's statement that the letter was stolen from him necessarily implicates me. I have no intention of entering into the controversy, but I must most emphatically contradict the statement as incorrect in every particular. The letter was written by Wm. T. Mitchell and addressed to me as Editor *Sporting Life*. It was of such a scurrilous nature, that at the request of Mr. J. Otto Donner, president of the Eastern Field Trials Club, it was sent to him for his perusal, and by him returned to me. The letter was then placed in the *Sporting Life* safe and is still in my possession. Mr. Anthony will at once see the necessity of retracting his above-quoted statements.

F. C. RICHTER, Editor *Sporting Life*.

PHILADELPHIA, Pa., Sept. 25.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the September number of the *American Kennel Register*:

BEAGLES.

6513. Fitzhugh Lee II., Geo. L. Huscroft.
6514. Floret, Geo. L. Huscroft.
6515. Solomon, A. R. Jacobs.

COLLIES.

6516. Brownie II., Donald McLean.
6517. Couthie II., Elliott Johnston.
6518. Flora VI., Dr. Hitchcock.
6519. Guess, Geo. W. Baggs.
6520. Guy Mannering III., Marie Louise Butler.

STANDARD OF POINTS FOR SCHIPPERKES.

AGREED upon by the general assembly of the Schipperkes Club at Bruxelles, June 19, 1888:

General appearance and character.—An excellent and faithful little watch-dog, who does not take to strangers. Lively, full of agility, and never tired; paying attention to all that is going on around him. Very fierce when defending objects over which he has been set to watch. Very gentle with children, and knowing well the habits of the household. Always curious to know what is going on behind a door, or an object which is being moved; showing his impression by his sharp voice and the hackles standing up. He likes the company of horses, hunts moles and other vermin.

Color.—Black, without any white.

Head.—Rather broad forehead, diminishing toward the eyes—seen in profile it is round; fine muzzle, not too elongated; stop not too prominent.

Nose.—Small.

Eye.—Dark brown, small, more oval than round, neither too deep set nor too prominent, lively and piercing.

Ears.—Prick-eared, small, triangular, set on high; lobes strong enough not to be bent otherwise than lengthways; excessively movable, approaching each other when erect.

Teeth.—Very white, strong, and longish, and neither under nor overshot.

Neck.—Strong and upright.

Shoulders.—Sloping and agile.

Chest.—Broad in front, broad behind the shoulders, and deep; belly well drawn up.

Back.—Straight and horizontal, but supple.

Loins.—Powerful.

Legs.—Perfectly straight, and well under the body; fine in bone.

Feet.—Small, round, and close; claws straight, strong, and short, not hooked.

Thighs.—Well developed, long and muscular; hocks, near the ground.

Body.—Short and thick set.

Tail.—Absent.

Coat.—Abundant and hard to the touch; smooth on the head, short on the ears, the front of the legs, and the calves; rather short on the body, but longer round the neck, beginning from behind the ears, where it forms a kind of mane, and on the chest, where it forms a frill, which extends between the forelegs, and on the back of the thighs, where it forms a kind of feathering (*culotte*), the ends of which are turned inward.

Weight.—Four kilos minimum. Dogs weighing less than four kilos, and having the above points, belong to a special class.

Faults.—Ears semi-erect, too long or rounded, narrow and elongated head, thin coat, absence of the mane, and the feathering.—*Stock-Keeper.*

THE AMERICAN PET DOG CLUB.—*Editor Forest and Stream:* I notice an article in your paper of the 13th inst. purporting to be a report of a meeting of the American Pet Dog Club. As president of the Pet Dog Club, permit me to say, that the lady named as second vice-president is not a member of the club, much less one of its officers. Mr. Ormsby has for some reason best known to himself called the said meeting, without either the president or treasurer of said club, who with himself form the executive committee, which has alone the right to call a meeting in conjunction with four other members to be chosen by the club, but which have not yet been chosen for that position. The article further states that nine new members were admitted at the same meeting. As no new members can be admitted without being previously proposed for acceptance or refusal, and as no such persons were proposed at the last legal meeting, that part of the report must also be an error. As president of the Pet Dog Club, I must declare the said meeting to be an illegal one, and its action of no effect.—MRS. CHAS. WHEATLEIGH, President American Pet Dog Club.

Editor Forest and Stream: A meeting of the American Pet Dog Club was held on the 21st inst. at the residence of treasurer Mr. Eugene Clarke. H. R. Surles, M.D., presided. Eleven candidates proposed at the previous meeting were admitted, among them the veteran Jacob Pentz of field trials, dog shows and general sporting newspaper fame. He will prove more than a Keely motor to the A. P. D. C., as he has heretofore to kindred clubs. The subject of holding a bench show in New York was briefly considered and postponed for final action till after the annual meeting in October. A vote of thanks was tendered to Dr. Surles for his generous offer made at the previous meeting, to defray the entire expense of the club's printing matter. In his synopsis of the club's proceedings on the 6th inst., the secretary inadvertently failed to say that the nine then admitted to membership had been candidates for three or more months, during which time the club held no meetings. For this reason the club suspended the rule requiring a candidate to be proposed at one meeting and voted upon at the next, and they were admitted and declared active members. The names of five new candidates having been proposed, the meeting was adjourned. Due notice of the annual meeting will be made through the FOREST AND STREAM. Those wishing to become members may address American Pet Dog Club, Box 1569, New York.—C. ORMSBY, Sec'y.

THE COON'S WHICKER.—*Editor Forest and Stream:* Some weeks ago I read an article in your paper by "Subscriber," on the whicker of the coon, and as I was raised in the country where coons were plenty, I became very fond of coon hunting. We always kept one or two first-class coon dogs, and many coon skins ornamented the old barn every season. Many a time when quite a boy have I rushed out of the house at night to listen to what the "hired man" told us was a coon, in fact almost every night in the fall between nine and ten o'clock we could hear what we were taught to believe was the cry of the coon. It usually came from the old orchard and was kept up for an hour at a time. A few years later when myself and brothers were old enough to go cooning, we would very quietly take old Tige and cautiously make our way to the orchard when Mr. Coon "was sounding his whicker." Many were the trips we made to the orchard for coons; but poor old Tige, though he had a wonderful reputation as a cooner, could never succeed in catching this coon. We quite often located the "whicker" in some particular apple tree, but old Tige would refuse to show the least enthusiasm and I well remember that after repeated trips of this kind we finally had a call from an old coon hunter who came to see Tige hunt coons. We explained about the coons that visited our orchard every night, and were laughed at by our friend "the coon hunter." He said that there were very few dogs that were good coon dogs, that were worth a cent to hunt owls. I afterward followed up the "whicker" and many times saw the little owl that made it.—C. E. LEWIS.

ST. BERNARD LOST.—Woodstock, Ont., Sept. 20.—*Editor Forest and Stream:* My young St. Bernard dog Barry, Jr., is missing since the Buffalo dog show. He was in his correct stall and properly tagged on Wednesday, the second day of the show, when I returned home. My spaniels arrived home at noon Monday, having been delayed longer than necessary, but no trace of Barry has been secured yet. The show committee say that he was shipped, but have so far failed to recover him. He is orange tawny and white, seven months old and has blaze partly up forehead and double dew claws. If any of your readers can give me information as to his whereabouts I will be greatly obliged. Mr. W. Spencer, of Toronto, advises me that two of his dogs, also St. Bernards, have not yet been returned from the Buffalo show. The Buffalo Kennel Club will be responsible for a considerable amount of money if these dogs are not recovered, as it would be difficult indeed to prove that anything besides carelessness could account for the mistake in shipment, or whatever it is.—ANDREW LAIDLAW.

ST. BERNARDS AT BUFFALO.—Arlington, N. J.—*Editor Forest and Stream:* I wish to call your attention to two misprints in the catalogue of the Buffalo show. My rough-coated dog Crystal, vhc. and reserve, is not by Guide, but by A. Knechtenhofer's Guido (formery Turk II.), and is therefore not a son of champion Guide. The name of the winner of second in the open bitch class, smooth, is Apollona, not Apollonia. The former is by champ. Apollo ex Brunhild; the latter was bred by H. Schumacher, imported by me, and is by champ. Apollo ex Bernice. Kindly publish above so as to avoid confusion.—K. E. HOPF.

PITTSBURGH DOG SHOW.—Pittsburgh, Pa., Sept. 24.—*Editor Forest and Stream:* The bench show to be given by the Western Pennsylvania Poultry Society some time this fall is certain to be quite up to the mark of that organization's efforts in past years. A committee consisting of Edward Gregg, Charles Richardson, W. C. Meyer, J. R. Henricks and C. A. Stevens, has been appointed by the directors to fix dates for the exhibition.—C. B. ELBEN, Sec'y.

PHILADELPHIA K. C. FIELD TRIALS.—Philadelphia, Pa., Sept. 24.—*Editor Forest and Stream:* The Philadelphia Kennel Club will hold its fifth annual field trials, open to members only, commencing Nov. 15, 1888, at some place in Delaware not fully settled upon as yet.—WM. H. CHILD, Secretary.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

GARDNER, Mass., Sept. 20.—There have been recently a series of matches at Hackmatack range. In a practice by the Gardner Rifle Club the following totals were made: C. N. Edgell, 81 and 81; W. C. Loveland, 74 and 79; F. E. Nichols, 75 and 74; G. C. Goodale and F. B. Edgell each 77. Members of the Heywood Guards, Co. F, 2d Regiment, M. V. M., have made the following individual scores: F. B. Edgell, 30 and 32; A. E. Knowlton, 30 and 31; C. O'Neal, 30 and 25; Lieut. C. N. Edgell and G. C. Goodell, each 29 and 29; B. F. Thrasher, 28 and 29. Members of the Guards in a team score, the first seven shots to count, with no sighters as per the conditions of the State match resulted as follows:

Lieut C N Edgell	4444445—29	Pvt A Knowlton	4445444—29
Pvt F B Edgell	4445555—32	Pvt B F Thrasher	3544444—28
Pvt F White	4455445—31	Pvt G W Bishop	3344355—27
Pvt G C Goodell	5444445—30		

The Heywood Guards, of Gardner, Co. F, 2d Regiment, M. V. M., have had a telegraphic match with the Richardson Light Infantry, of Wakefield, Co. A, 6th Regiment, M. V. M. The result follows:

Heywood Guards.		Richardson Light Infantry.	
Lieut C N Edgell	4454444—29	Capt G H Taylor	4433354—26
Sergt B F Trasher	4444444—28	Sergt E J Gibson	4354544—29
Pvt A E Knowlton	5455554—33	Pvt H T Mellett	4454535—30

M Beal	5	7	6	7	6	5	8	10	7	5—66
D P Norris	7	8	6	6	2	9	6	7	5	4—60

NEW BEDFORD, Mass., Sept. 18.—Members of the City Guards visited Bay View Range this afternoon to shoot for the medal presented to the company by Mayor Rotch, shot for annually. The distances shot were 200, 300 and 500yds., 5 shots each. The present holder of the medal, Corporal Charles L. McBay, was the winner. The leading scores stood:

Corp McBay	23 19 17—59	Sergt Swain	20 18 12—50
Corp Baudoin	19 18 19—56	Pvt Pope	16 17 16—49
Lieut Perry	21 14 20—55	Pvt Dunham	12 17 06—45
Pvt Bradley	20 18 17—55	Sergt Pope	16 9 20—45
Pvt Gibbs	20 20 14—54	Pvt Loomis	20 14 5—39
Pvt W K Russell	21 17 16—54	Pvt C D O'Russell	17 14 7—38

THE PISTOL SHOOTERS.—Boston, Sept. 24.—*Editor Forest and Stream:* In the report of the late meeting of the N.R.A. in your issue of the 22d inst. you infer that it was generally expected that the Bennett Bros. would be there to "rake the revolver record," and also dwell at some length on the terrible disappointment experienced by Ira A. Paine at not getting a chance at them on neutral grounds, even terms, etc. I think Ira got Bennett enough last June, both shooting on neutral grounds, and also at his own home. If he did not, I shall be pleased to meet him at any time for "fun and money." Had I supposed he had returned to the amateur ranks and would have been at Creedmoor, I should certainly have been there, and saved those tears of disappointment, or possibly turned them into another channel. However, he must bear up, he accumulated much glory, ten dollars ($10) in real money, and enacted the part of "Gulliver among the Lilliputians" with great success.—W. W. BENNETT.

MILLER RIFLE CLUB.—The second annual fall shoot of the Miller Rifle Club, Capt. Richard W. Dewey, will be held at Schützen Park, Union Hill, N. J., Oct. 9. Ring target, prizes to the amount of $133, open to all comers. Bullseye target, open to all comers.

ROCHESTER, N. Y., Sept. 19.—Fifteen members of the Selye Citizens Corps took part in the rifle practice at the rifle range this afternoon and all but three qualified, 25 points being necessary. The target distances were 100 and 200yds. and 200 and 500yds., 5 shots each distance, and the points made in the shooting were as follows:

	100yds.	200yds.	Total.	200yds.	500yds.	Total
H A Swift	25	16	36	17	12	29
C S Gibbs	12	16	28	14	18	32
L B Thrasher	13	13	26	12	15	27

G D Siel	18	9	27	18	11	29
John H Taylor	18	18	36	13	17	30
W C Thomas	13	13	26	16	10	26

MARKSWOMEN.—Queen Victoria fired the first shot on the Wimbledon ranges in 1860, and the target which she aimed at has since that time been conspicuously displayed with its single bullseye on the recurrence of each meeting for competition of the National Rifle Association of Great Britain. On the 21st of July last the Princess of Wales fired the last shot on the Wimbledon range with a Maxim gun. The cartridge case of the last shot fired has been preserved and set up as an ornamental souvenir, and Queen Victoria has accepted the relic as a "keepsake." It bears the following inscription, "This cartridge was fired from the Maxim gun by H. R. H. the Princess of Wales, at the termination of the Wimbledon meeting, 1888."....Rifle competition, open to any lady, has just terminated on the Curragh of Kildare military camp in Ireland. The conditions were seven shots, 100yds., 6in. bullseye, any position, rook rifles. There were 12 competitors, and the winners of prizes were all married ladies. Hon. Mrs. Gough won the first prize with a score of 34. Mrs. Webb and Mrs. Balfour second and third with a score of 30.

NYACK, N. Y., Sept. 19.—An interesting rifle match took place here this afternoon, being one of a series between clubs of the counties of Westchester, Orange and Rockland. There were a large number of spectators present. The shooting was for a large silver cup, elaborately ornamented, which has been held in the Nyack Club for several months. This cup has to be won three times to become the permanent property of either club. The club from Central Valley, Orange county, has now won it twice, the Nyack Club has won it once, and the Peekskill Club has won it twice. The distance shot to-day was 200yds. and the scores were as follows: Out of a possible 300—Central Valley 255, Nyack 251, Peekskill 250. There were six men in each team. The next shooting for the cup will take place at Central Valley in April, 1889.

ALBANY, N. Y.—The eleventh annual meeting of the Third Division Rifle Association will take place at the Rensselaerwyck Range on Oct. 11 and 12. There are nine matches in all, many at short range, some going to 500yds., and a pistol match. The range is pleasantly situated between Albany and Troy, and is one of the best equipped in the State.

WORCESTER, Mass., Sept. 21.—The Worcester Light Infantry Co. C, 2d Regt., M.V.M. went to Peat Meadow Range this week for their annual target shoot. Those who made 10 out of a possible 25 were:

Capt Edward A Harris	34545—21	Frank J Quinn	44344—19
Sergt W H Dewing	43453—19	Flint W Wright	33245—17
Sergt D F Rourke	34034—14	William E Whitney	23353—16
Corp C P Mixter	33333—15	George F Zaeder	24420—12
Pvt F F McInnes	44454—21		

At a practice shoot out of a possible 35 the following totals were made:

Capt Harris	3544343—28	Quinn	3345344—26
Sert Dewing	4033334—20	Wright	2334554—26
McInness	5444454—30		

A PENCIL SCORE.—If the scores made yesterday at the State shoot were not very great, they had the result of stirring up much ill feeling and placing Captain McAlpine, of the Third Infantry Regiment, in a most unenviable position. The shoot was recently ordered by the Adjutant-General, and some 150 members of the regiment met in accordance at Shell Mound yesterday. The conditions were that rifles be used with a six-pound pull of trigger, that a comparison might be made of the result with that of the recent shoot with Springfield rifles. On the latter occasion, with those finer guns, the highest score made was 47 points, and it was expected that with the muskets such accuracy of aim would not be displayed. The Adjutant-General offered a set of medals for the 50, 80 and 90 per cent. scores. An additional gold medal was also to be given the highest score above 90 per cent., and some 3,000 marksmen to-day would have felt discouraged at their prospect of winning it had the *Examiner* reporter not discovered a very questionable joke which was being perpetrated on them. Captain McAlpine, of Company D, was the first to shoot, and the altogether unprecedented score of 47 made with a musket, was placed to his credit. It seemed such an extraordinary success in a possible 50 points for a man who on ordinary occasions can hardly reach 80 per cent., that many of the marksmen present believed that there was something wrong about the marking. The reporter called on Captain Siebe, and both went to the bulks to investigate. The marker stated that no one had been there marking besides himself, but later it was learned that Private O'Rourke had marked for Captain McAlpine, and the paper target used was discovered among the others. As is usual with all perforated targets, small black patches—eight in number—were found pasted on the 6-inch ring on the target. The marker stated that when he had arrived to attend to his duties he had found that target laid aside as having been shot at already, and he had paid no further attention to it. Captain Siebe investigated closer, and removing one of the black papers, noticed that the target was a fraudulent one, which had never been perforated by a bullet. Just as this discovery was being made Captain McAlpine came to the bulks. He looked as though he was very much agitated, and with a soulless laugh he declared the whole matter "a joke." The Captain insisted that he be allowed to shoot "again," and he was given his way. He scored 34 points this time. All those at the range are severe in their criticism of Captain McAlpine's "joke," which, had the *Examiner* reporter not discovered in time, might have passed by unnoticed, giving the Captain the highest score made in the shoot.—*San Francisco Examiner, Sept. 10.*

ST. PAUL, Minn., Sept. 25.—The third annual tournament of the Minnesota National Guard opened to-day for a four days' meet. One day is given up to State matches, and there are nine contests on the other dates.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

OUR TOURNAMENT REPORTS.

OUR full, prompt and accurate reports of the Cincinnati and Cleveland tournaments have excited the admiration of trap shooters. They appreciate the high character of the work of our special staff correspondent. A well-known shooter here in New York said the other day when he saw the Chamberlin scores that it was the best report he had ever seen. These reports speak for themselves. It would be superfluous to point out what is manifest, that they are rivalled by no other reports.

The FOREST AND STREAM has had its own man on the ground at Cincinnati, Cleveland and Corry. He will be at St. Louis for the bombardment there, the first week of October.

For the earliest, fullest, most accurate and in every way the best reports of trap shooting meets, read the FOREST AND STREAM.

THE KEYSTONE TOURNAMENT.

[*From our own Staff Correspondent.*]

CORRY, Pa., Sept. 21.—The first annual tournament given by the Keystone M'f'g Co. closed here to-day. In everything but attendance it has been one of the most successful and best-managed shoots of the season, and was deserving of much better support from the shooters than it received. There were $1,000 guaranteed money, divided into twelve events, $250 each of the four days. In addition to this, there were four handsome trophies, three engraved silver cups, one given by the Keystone M'f'g Co., one by L. C. Smith, in shooting for which all contestants are obliged to use a Smith gun, and a solid silver and gold cup by the Peters Cartridge Co., no restriction as to ammunition, but left to the courtesy of shooters; also a diamond ring given by the Keystone M'f'g Co., to be the property of winner, and to be duplicated each year. The Smith and Peters cups are to be held for one year and then returned to the donors, to be contested for at the next Keystone Tournament.

Notwithstanding the lack of attendance, the guaranteed events were run off, the moneys being paid in full, some of the contests barely filling. No charge for birds was made in these events. It was intended to divide the surplus money for the best averages, but there was no surplus.

The weather during the week was threatening, with frequent showers, but this did not seem to cool the ardor of the shooters, and the game went on just the same.

All contests were shot from 5 traps, set about 5yds. apart, with a rise of 18yds. for 10-bore guns, 16yds. for 12-bores weighing 8lbs. or less, and 15yds. for all smaller bores weighing 7lbs. or under. There were no guns of smaller gauge than 12 on the ground. The arrangements for shooting were very complete and systematic, and the Keystone rules contain one feature which it would be well for all tournaments to adopt; that is, the system of shooting, as follows: Shooting from five traps, six shooters face the score, No. 1 at No. 1 trap, No. 2 at No. 2, and so on, No. 6 to stand behind No. 1. No. 6 steps to No. 1 score after No. 1 shoots, No. 1 to No. 2 score after No. 2 shoots, and so down the line, shooters to load while walking from trap to trap. This style of shooting was new to all the contestants, but proved entirely satisfactory, and was very interesting to the on-lookers. The bang! bang! of the guns was continuous, and as soon as one squad was finished, another stood ready to take their place. It was the most rapid shooting we ever saw, one event, at 15 birds, with 30 entries, 451 birds in all, taking only 45 minutes to entirely complete.

With this system, each day's work was completed as per programme and long before sundown. In fact, the whole tournament was shot from one set of five traps, giving ample time for lunch each day. Another good feature was the blackboard on which the scores were kept, so that each shooter could determine his relative position at a glance. In addition to this, the scores were kept in duplicate on separate cards, which is a great convenience for the press.

The ladies of the Episcopal church profited by the occasion, and each day served an elegant lunch on the ground, which partook more of the nature of a home meal, and was doubly grateful after a routine of hotel fare. The tables were beautifully decorated with flowers, every appointment was clean and tasty, and the smiling faces of the fair ones while ministering to the wants of the hungry shooters was alone worth more than the moderate charge for the meal.

The Keystone Co. say they are "here to stay," and will hold these tournaments annually. The next one will probably be given earlier in the season, and at some of the beautiful resorts on Lake Chautauqua, where a much larger attendance would be attracted by the diversity of amusement. They are progressive and propose to adopt several new schemes for the protection of the poorer or amateur shots. The Ocean Gun Club of New York have been discussing a scheme, which was presented to the Keystone people, and it may be combined with their rules. It has for its end the encouragement of young shooters, and while not handicapping the good shots, still gives the poorer ones an incen-

tive to enter contests by virtually giving them odds. For instance, to divide the shooters into three classes, according to their records, a 90, 80 and 70 class, the 90s to enter say at $5, the 80s at $4 and 70s at $3. Just how this would work, we are not prepared to say, but it seems feasible and is worth a trial. This would be done in guaranteed events, where the good shots would be sure of a certain amount any way, and the odds offered might induce the amateurs to enter the lists. The Keystone people have a good trap and a bird whose flight is beautiful. In one race at 50 birds with 13 entries the time occupied was 46 minutes, and but three birds were broken in the trap. The genial C. H. Wetmore and his partner, C. J. Penrose, do all in their power to make it pleasant for the shooters, and we bespeak for them a much better attendance at their next tournament.

The shoot proper did not commence until Tuesday, but a team race of 100 birds a man, for $10 a team, with two moneys, 60 and 40 per cent., was shot on Monday, with the following score. There were four teams; Pope and Luther shot in one squad, but were not in for the money.

Monday.

Extra sweep No. 1, at 10 singles, $1 entrance: Stice 10, Carter 7, Budd 9, Clover 9, Holzapfel 7, E. D. Miller 9, Sigler 9, Wagner 8, Riblet 8, Peacock 8, Krueger 8, Benscoteen 9, Luther 7, J. E. Miller 9, Heikes 8, Mallery 9, Wetmore 7, Bob White 9. First and third divided; second shot off and won by Bob White, fourth won by Krueger.

Extra sweep No. 2, at 10 singles, entrance $1: J. E. Miller 10, Bob White 10, Budd 10, Sigler 10, Heikes 10, Carter 10, Wagner 8, Clover 9, Krueger 9, Mallery 10, E. D. Miller 7, Riblet 8, Luther 9, Stice 9, Peacock 10, Peacock 8. First shot off and divided by Heikes and Sigler; in tie on 9 Clover shot all the others out and took second; third shot off and won by Riblet; fourth won by E. D. Miller.

Extra sweep No. 3, at 10 single rises, entrance $1: Stice 9, Sigler 9, J. E. Miller 7, Carter 9, Heikes 9, Clover 9, Wagner 7, Peacock 7, Krueger 10, Riblet 7, Budd 8, White 10, E. D. Miller 9. First divided; second shot off and divided by Stice and Carter; Budd, third; Peacock won fourth on shoot off.

Extra sweep No. 4, at 10 double rises, entrance $1: Clover 9, Heikes 8, Stice 6, Krueger 9, Carter 8, Sigler 8, Peacock 7, Riblet 9. Ties divided.

THE FOREST AND STREAM GUN TESTS.

THE interest in the preparations making by the FOREST AND STREAM for a regular and systematic test of all matters connected with shotgun pattern and penetration, is widespread and lively. From the mail on the subject within the past few days two letters are selected. Maine and California each expressing its concern about the question to be looked into:

SACRAMENTO, Cal., Aug. 24.—*Editor Forest and Stream:* Sir: By all means let us have the shotgun tests. I have grappled with a few of the problems mentioned by your Vicksburg correspondent last week. Please give us results on the proportion between shot and powder, and tell us whether it is worth while to spend a dollar a pound for powder instead of thirty to fifty cents, as some of us do. This interested party hopes that the matter of recoil will receive attention as well as pattern, penetration, etc His enjoyment of shooting is closely connected with the headache he has or misses.—G. B. W.

BATH, Me., Sept. 3.—*Editor Forest and Stream:* I am much pleased to hear of your proposed shotgun test. Please test the 3in. chamber with 2⅞in. brass shell. Also see what the result will be in using coarse black powder primed with much finer black.—H. G. M.

THE EASTERN CIRCUIT.

THERE is fun ahead for trap shooters. Prizes of $2,500 cash are guaranteed by the shooting clubs composing the grand eastern shooting circuit as follows:

Marion, N. J., Jersey City Heights Gun Club tournament, $700 guaranteed, Oct. 9, 10, 11 and 12. For particulars and programme address Alfred Heritage, Jersey City, or M. L. Lindsley, West Hoboken, N. J.

Dunellen, N. J., Middlesex Gun Club tournament, $1,000 cash guaranteed, Oct. 16, 17, 18 and 19. For particulars and programme address W. L. Force, Plainfield, N. J., or W. Fred Quimby, New York city.

Clermont, N. J., New York Suburban Shooting Grounds Association, $800 cash guaranteed, Oct. 23, 24, 25 and 26. Address New York Suburban Shooting Grounds Association, 291 Broadway, New York.

Two days shooting at live birds and two days shooting at targets by each club.

SAN FRANCISCO, Sept. 10.—To-day a good crowd assembled at George Bird's grounds, at Birds Point, to celebrate the Admission day holiday by the destruction of live pigeons and blue rocks. About 11 o'clock six men decided to tackle the bluerocks, each one putting up $1.50 entrance money, the $9 being divided into $6 and $3. Carter won the first prize, never giving a shadow of a chance on the ten birds, and Holtz making a good second with 9. The second shoot was another 10 single bluerock affair, for which 8 marksmen put up $2 each, the coin to be divided into $10 and $6. Smith took first prize with nine, Holtz making a tolerably good second prize winner with eight. The third shoot, which came off immediately after luncheon, was at live birds, of which George Bird produced some six dozen good ones. Mr. Walker was unanimously elected sole judge, and business commenced at a dozen birds by six shooters, each putting up $2, the highest score to take the layout. The distance was 30yds. for ten-gauge guns, and 25yds. for twelves, Carter, Bruner and Cole using the latter. The boundary was 80yds. George Bird officiated as trapper. Holz won with eleven, grassing four with his second. Carter came in second with ten, his two lost being stone dead out of bounds, and would have been scored in a 100yd. boundary shoot. The wind-up shoot was a go at ten pairs of bluerocks by Holtz and Smith for $10 each, in which both men broke sixteen and shot off the ties at three pairs of doubles at a distance of 21yds., when Smith won handsomely by one bird. The weather was perfectly fine, but awfully hot. Following are the complete scores:

Ten bluerocks, prizes $6 and $3:

Reuter	1100101101— 6	Corbett	1111101010— 7
Carter	1111111111—10	Bruner	0110001100— 4
Holtz	1111011111— 9	Schroeder	1110111100— 7

Second shoot, 10 bluerocks, prizes $10 and $6:

Carter	1110111001—7	Halpin	0110001000—3
Holtz	1111010111—8	Schroeder	1101101011—7
Corbett	0110011111—7	Cole	1110011000—5
Smith	1110111111—9	Bruner	0011111011—7

Third shoot, 12 live birds, usual handicap, 80yds. boundary, Hurlingham rules. The score:

Carter	112012021121—10	Smith	122012020210—7
Corbett	012012002102— 7	Bruner	201012102100—7
Holtz	1120.122121 -11	Cole	120010021001—6

Fourth shoot, match for $20, 10 pairs bluerocks. The score:

Holtz	11 11 10 11 10 10 11 10 11 11 10—16
Smith	10 11 11 11 11 10 11 10 11 01—16

KANSAS CITY, Sept. 20.—The members of the Kansas City Gun Club held their regular monthly medal contest in Exposition Park this morning, in the presence of several hundred people. The conditions were that each man should shoot at 10 live pigeons, 30yds. rise, with the right to use both barrels. Mr. James McGee won the medal, killing all ten of the birds without a miss. J. E. Riley killed nine birds and was the next highest man. The following is the score:

J E Riley	1212120211— 9	D W Williams	2110021110—8
L Scott	2011122101— 8	C P Fatrman	0110101212—7
D Underwood	0120200010— 4	J W Moore	0110000011—4
Ben Holmes	1020020002— 4	James Bolen	0212121110—8
William Shaw	2001010011— 5	F B Hamilton	2020210100—5
George Yeoman	0120220000— 4	Charles Ditsch	2001221122—8
John Savage	0121222011— 8	J F Wallace	0210212100—6
W S Halliwell	1000101022— 5	A A Bomback	1031112000—3
James McGee	1122222211—10	George Dugan	1200010102—5
F Deuser	2202111002— 7	M Dunlop	0101100010—4
Al Wetzel	1002020222— 6	W J Baehr	1001000110—4

At the conclusion of the contest a $2 sweepstake was shot with twenty entries. Mr. L. Scott won first money, Mr. W. Mensing second and Mr. F. J. Smith third.

BROOKLYN, Sept. 10.—The Phœnix Club of this city, whose members are all over 50 years, and have good records on the pigeon shooting annals of the past, held its annual match at Dexter's (now Dunter's) Park. The match was 15 birds each, 25yds. The score stood: John Freely 11, Abe Rutan 12, Hen Smith 14, Tony Bowty 14, John Chasmer 14, Mose Chichester 11, E. H. Madison, John Ackus 10, Wm. Lang 10.

BROOKLYN, Sept. 11.—Although it rained hard to-day the members of the Acme Gun Club were bound to have their regular monthly shoot at Dexter's Park. Eight of the members shot at 20 bluerocks each. C. Carolan (Texas Charley) not only proves his good shooting with rifle and pistol, but also with shotgun, hitting 18, and winning the medal. This makes the third consecutive time that he has carried off the emblem.

Munk	0011101000110011111—12	Munder	0011010100000110011— 9
Dethloff	1010100100101101111—11	Kollmar	0100101101000011101—10
Link	1111111101011001111—16	Menkel	1001101111110011111—14
Carolan	1111110111111011111—18	Short	1111111111101110100—16

Referee, Mr. W. Miller.

SAN FRANCISCO, Sept. 16.—Lincoln Gun Club brought its season of bluerock shooting to a termination to-day at Alameda Point, where the programme presented consisted of the regulation medal shoot for a dinner by two teams of nine members each. The medal competitions commenced at 10 o'clock and lasted until 1, thirteen members appearing to compete for the first class medal, while four only shot for the junior trophy. In each instance the conditions were similar, viz., 15 single bluerocks each, from five screened traps, at 18yds. rise, international rules. In the senior class Ford and Scovern tied with 11 apiece, C. Cate a good third with 10. On shooting off the tie at three pairs of doubles Ford beat Scovern by a score of 4 to 3. Ford broke the last 7 of his 15 without a miss, and Campbell had a run of 7 in his total of 8. The second class medal was won by Karney with 9, he also breaking his last 7 clean. Quinton won second with 8. Following are the scores:

First Class Medal.

C Cate	1111101101010010—10	Potter	0011100101001l0— 7
Wenzel	0000111000111l1— 8	Bruns	1111000100000001— 6
Campbell	0001111110000l— 8	Foster	1111030101 01001— 8
Mellish	0010110110011l1— 9	Scovern	1101111010011l—11
Ford	0110011011111111—11	Fanning	1111010110001l— 9
Parker	1011000100001l— 6		

Second Class Medal.

Karney	0010001011111l1—9	Horber	1010001011010001—6
Quinton	1101100100101—8		

Immediately after the totals were read the shoot for a dinner was commenced by two teams, captained respectively by F. Venker and Horber. The conditions were six single bluerocks each. Much merriment was caused by the small scores made by some of the best shots, there being none in the whole 18 shooters, more than three, with the exception of Karney, who broke his whole half dozen. Horber's team won by a total of 27 to Venker's 20, the winners only scoring 50 per cent. of the discs shot at.

Below is a tabulated statements of the score made by members in each class, arranged by months:

First Class.

TAUNTON, Mass., Sept. 14.—A series of matches were shot by the Taunton Fish and Game Protective Association. No. 1, 5 clay pigeons, 18yds.:

Plummer	11100—3	J Davis	10111—4
J T Hall	11110—4	Post	01011—3
T S Hall	11000—2	G Davis	11011—4
Homer	01001—2	E Bowen	11100—3
Walker	11001—3	Smith	11000—2

Ties on 4 divided.

Match at 6 standards, 18yds.: Holmes 2, Plummer 5; T. S. Hall 5, Walker 4, J. T. Hall 4, C. Snow 5, Dr. Post 4, G. H. Davis 5, Deane 3, E Bowen 3, Smith 2, J. Davis 3. On shoot-off Snow and Davis divided first, Post took second and Bowen third.

Match at 6 clays, 18yds.: Plummer 3, J. T. Hall 6, T. S. Hall 6, Homer 5, Walker 3, Post 6, G. Davis 5, Bowen 4, Smith 4. On shoot-off: J. T. Hall 8, T. S. Hall and Post 6, and divided; other ties div.

Match at 6 standards, 18yds.: Homer 3, T. S. Hall 5, Plummer 4, J. T. Hall 4, Barstow 2, Hooper 4, R. Snow 4, Dr. Post 6, Bryant 3, Leonard 4. Shoot off for third won by Hall, 9 straight.

Match at 6 standards, 18yds. rise: Homer 4, T. S. Hall 3, J. T. Hall 6, Plummer 6, Hooper 6, C. Snow 5, Post 4, Barstow 5, G. Davis 4, E. Bowen 2, J. Davis 2, R. Snow 3. Tie for first and second div., shot off for third, Homer 3, Post and Davis 3 and div.

Match at 6 standards, 18yds. rise: Homer 3, T. S. Hall 3, J. T. Hall 5, Plummer 6, C. Snow 5, Dr. Post 6, G. Davis 5, Bowen 3, Walker 4, Smith 4, Hooper 4, Doane 3, R. Snow 0, Barstow 2. First div., shoot off for second, Davis 0, Hall and Snow 3 and div., for third. Walker 0, Smith and Hooper 2, and div.

Match at 6 clay-pigeons, 18yds:

J S Hall	111111—6	Hooper	011111—5
Barstow	101111—5	Bowen	111110—5
T S Hall	001011—3	C Snow	110111—5
Post	101111—5	R Smith	111010—4
Homer	111111—6	R Snow	111101—5
Plummer	110111—5		

Shoot off for second won by Snow with 6 straight.

Seven men teams, 10 clays and 10 standards per man:

New Bedford Gun Club.		T. F. and G. P. A. Club.	
Plummer	7 8—15	Hall	10 9—19
Dr Post	9 9—18	C Snow	9 8—17
Hooper	7 6—13	G Davis	8 9—17
R Snow	8 5—13	E Leonard	8 5—13
Bryant	7 7—14	Barstow	8 8—16
Gray	9 9—18	Walker	6 5—11
Homer	8 7—15—106	Bowen	7 9—16—109

G. L. SMITH.

BROOKLYN, N. Y., Sept. 12.—The members of the Coney Island Rod and Gun Club, at Woodlawn Park, Gravesend, L. I., had a big shoot to-day. It was the largest gathering of Long Island wing shots that has been seen at a club shoot for several years. Thirty members competed at the trap for the Blattmacher medal, and six extra prizes; the conditions being to shoot at 7 birds each with the usual club handicap. The birds supplied by Blattmacher were young and loth to leave the trap, but when they did get away they were hard to stop. Some good average shooting was done. The new members have steadily improved and will soon give some of the older ones enough to do to hold their own. The following is the full score of the shoot:

W Cameron (26)	1101110—5	C E Wheeler (24)	0101010—3
A Rockfeller (25)	1110000—3	F Anderson (29)	1110111—6
J E Lake (26)	0100111—4	F McCutcheon (21)	1011111—6
E Rauft (25)	0100111—4	F Lanzer (25)	0011010—3
H Blattmacher (25)	0110111—5	J Schlieman (25)	1111011—6
E Rockfeller (25)	0111110—5	W Green (21)	1110001—4
G L Ayres (25)	1011100—4	R Monroe (26)	1101100—4
Capt Meyer (24)	1101100—4	W A Stewart (26)	0110110—4
H P Donnelly (25)	0111110—5	C A Seddons (27)	1111111—7
H McLaughlin (29)	0111011—5	Dr Shields (30)	1110110—5
T Kerrigan (21)	1111010—5	E Norman (22)	1111010—5
C W Jones (30)	1111111—7	C Plate (27)	1110111—6
W Weber (22)	0011111—5	C Detlefsen (29)	1111111—7
J O'Brien (22)	1110110—5	J J Froelich (25)	0011111—5
Dr Schwartz (29)	1101100—4		

In shooting off the ties C. Detlefsen won club badge and first prize, Anderson and Schlieman divided second, third divided, J. E. Lake fourth. Referee, Mr. H. McLaughlin; scorer, Mr. C. A. Dellar.

WINDHAM, Conn., Sept. 18.—Willimantic Rod and Gun Club, 12th and last shoot of the season. At 25 Ligowskys, 3 angles, 3 traps, 18yds. rise. Shot under National rules, for gold and silver badges:

J Macfarlane	1111111111111111101101—23
Webb	1111110110011110101111—20
Crane	1111111101010111010101—19
Dunham	1010101001111010111110 0—17
G Macfarlane	0101100110110111100110l—16
Culverhouse	0110111011101000101101—16
Baldwin	1011101000011110101010l—14
Ross	1000001100001010011111001—12
Smith	1001001011100100010110101—12
Thompson	1101000101010111001000l1—12
Alpaugh	1001100010000011100111001—11
Johnson	1001011010100001001000001— 9

C. J. Alpaugh owns the badge, having won it the most number of times. The winners of the $25 prize offered by the club for the best scores made during the season are: Webb first money, $10; Smith second, $7.50; Crane third, $5; G. Macfarlane fourth, $2.50. —H. C. R.

WALNUT HILL, Sept. 19.—Barring the dull light the conditions were excellent, and the scores ran high. The event of the day was the third competition for the Climax diamond badge, which had been won previously by Mr. Wheeler, of Marlboro, and by Dr. Gerrish, of Exeter. To-day's contest resulted in a tie, Stanton and Wardwell each breaking 35 birds. Under the rules each scores a point toward the ultimate possession of the trophy. Dr. Gerrish did not appear to defend the badge, greatly to the regret of all present. The scores ran as follows for the climax diamond match, 20 clay-pigeons from five traps, and 20 standard targets from two traps:

Wardwell	11101111011011011011—16		11111101111111111111—19—35
Stanton	11111011111111101111—18		01111111011011111111—17—35
Dickey	11100111101111111111—16		11111000111111111111—18—34
Perham	11111111101011110111—17		11111101011111111110—17—34
Chase	11111111101111110111—18		11011101111111111110—15—33
Knowles	11111111110111100111—17		10111011011111111100—15—32
Wheeler	01110101111011110111—15		11111110111101010101—16—31
Swift	11011101110110111111— 16		01010111101001111111—14—30
Rule	11110010101011111010—13		11111001111101111111—17—30
Houghton	10111111111111111111—19		01101000111000101111—11—30
Nichols	11110111111110001111—16		11111011111100110000—14—30
Bowker	10111111101111011111—17		01111110101011111100—13—30
Crown	11110111001111111010—15		10101011010101111011—14—29
Nelson	01100000011111111010—11		01010110110100110011—11—22

The next most important event on the programme was the "gold coin" match, to consist of 10 clay pigeons from 5 traps and 10 standard targets from 2 traps. This contest was very close and exciting, and a glance at the score will show that most of the shooters meant business. Following are the scores made in the gold coin match:

	Clays.	Standards.
Wheeler	1111111111—10	0111111111— 9—19
Chase	1111110111— 9	1011111111— 9—18

PORTLAND, Ind., Sept. 18.—The Portland Gun Club will hold a two days' tournament Oct. 4 and 5, at Portland, open to all, live pigeons, sparrows and inanimate targets, $250 in special prizes.—D. S. WAKENIGHT, Secretary.

ST. LOUIS TOURNAMENT.—A four days' tournament at Keystone targets will be held at St. Louis, Compton Park, Oct. 2, 3, 4 and 5. All parties entered in the 90 class of the Chamberlin Cartridge Company's tournament at Cleveland, will be barred from contesting in any of the shoots of this tournament. For further particulars, address Fred A. Fodde, No. 19½ North Broadway, St. Louis, Mo.

WELLINGTON, Mass., Sept. 22.—There was a fair attendance at the grounds of the Wellington Club to-day, and some good scores were made in the sweepstake matches. Following are the winners in the several events: 6 clay-pigeons, Snow; 6 bluerocks, Chapin; 6 bluerocks, Chase and Chapin; 6 bluerocks Snow and Chapin; 3 pairs bluerocks, Chapin; 3 pairs bluerocks Chase; 6 clay-pigeons, Bond and Wardwell; 6 bluerocks Chase; 6 clay-pigeons, Chase; 3 pairs bluerocks, Snow; 6 bluerocks, Snow and Chase; 6 clay-pigeons Chase; 15 bluerocks, Chase, Wardwell and Perry; 6 clay-pigeons, Chapin; 3 pairs bluerocks, Snow; 6 clay-pigeons, Snow; 6 bluerocks, Chase; 6 clay-pigeons, Chapin and Perry; 6 bluerocks, Chase; 6 clay-pigeons, Perry; 6 bluerocks, Chapin.

MARYLAND CHAMPIONSHIP.—Font Hill, Md., Sept. 13.—*Editor Forest and Stream:* The Baltimore Gun Club won a gold medal and the championship of the State to-day at a tournament held at Towson, Baltimore county, under the auspices of the Burgoyne Brass Band of that place. Their score was 151 out of a possible 200. South Baltimore Club won second prize, score 127, out of a possible 200; Towson third, 124; Annapolis Club 91. Other clubs entered, absent. Conditions of match: 20 birds, 10 men, 5 traps, National rules.—PICUS.

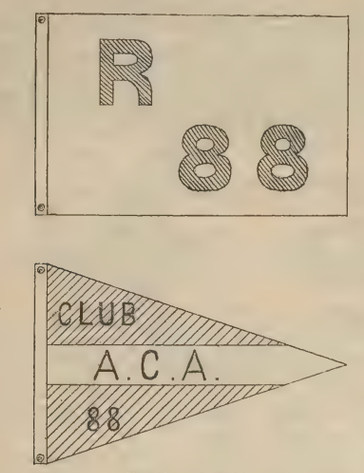
A. C. A. REGATTA RULES, ETC.—SUGGESTIONS.

EACH year makes a decided advance in the methods of running canoe meet regattas; yet there is still considerable room for improvement. For the benefit of the '89 regatta committee, and as the executive committee in November may revise the rules, the following notes on the regatta of this year have been written, together with such suggestions as the experience derived from it dictates. (It will not be possible to publish the full report of the regatta committee).

NOTES ON CONSTITUTION AND BY-LAWS.—REGATTA COMMITTEE.

A. C. A. CONSTITUTION. Article VIII.—*Duties of Commodore.*
* * * The Commodore-elect shall within thirty days of his election appoint a Regatta Committee of three members, for the Annual Camp of the A. C. A. * * * * *

Article IX.—*Duties of Regatta Committee.*—It shall be the duty of each Regatta Committee to prepare and publish, not later than June 1, an order of races for their respective regattas; to superintend the laying out and buoying of courses; to provide the prizes; to appoint judges, starters and timekeepers, and to decide all protests. They shall post the course and conditions of each race in some prominent place at least one hour before the race is called; and shall have entire control of the races at their respective meetings, except that the Regatta Committee of the Division in which the A. C. A. Meet is to be held shall act as a local subcommittee to the A. C. A. Regatta Committee.



Article XIII.—No changes shall be made in the classification, measurement or sailing regulations, unless sanctioned by the Executive Committee.

The construction of the buoys and method of anchoring them will be described in detail in the report, for the benefit of the incoming committee. The laying out of the courses was a very simple matter this year. A rail ship's log was used on a steam launch for measuring the distances and a compass for getting the angles of the triangle. This insured accuracy.

The third duty of the regatta committee is "to provide the prizes." Now this is a difficult matter, and the method of doing it is not stated. Formerly individuals have been asked to contribute. This year the clubs were each requested to furnish a flag; with the results as before stated in the FOREST AND STREAM. All the expenses of the committee have to be assumed by the chairman, who renders a report to the commodore, and after two or three months collects from the Association what he has advanced. No provision is made for such expenses, and no limit is set to the amount, much to the embarrassment of the committee. It seems, therefore, that the Association, to protect itself and treat the committee fairly, should make an appropriation for regatta expenses based on an estimate made by the committee. This estimate can easily be made by consulting the reports of expenses in former years which have been published.

Silk—2d. 9×12

The Course.

If enough money cannot be afforded, the racing men or the clubs can be appealed to for help, or the programme can be shortened and fewer prizes given; the latter should be done in any event, for several reasons, to be stated later.

The fourth duty of the committee is to appoint judges, starters, measurers, time-keepers, police of the course, etc., etc. The demands of the racing men have grown each year, and at the same time, the non-racers, as a rule, are less willing now than formerly to do hard work when off for a vacation—the work of judges, starters, etc. It is very difficult for the committee at the meet to command such help as is absolutely necessary. The use of a steam launch race days has become an absolute necessity (as a matter of safety in case of upsets, etc.), and greatly reduces the number of men needed to run a regatta successfully, and therefore it should be provided by the Association. By means of a launch the chairman of the committee can start all races, and in all paddling races can pounce the course and judge of fouls, etc. Therefore, the only extra men needed are (1) a clerk of the course to keep the records, (2), a time-keeper who needs (3) an assistant to call off the boats as they cross the line, and two buoy men (4 and 5) for the sailing races. The clerk of the course is the most important officer next to the chairman of the regatta committee, and, therefore, he should be a member of such committee, appointed at the suggestion of the chairman, from the same town or club as the chairman, or living near him. The third member can well be a racing man who needs to do no work, unless he should fill the position of official measurer at the meet. The measurer's duties were very light this year, as only the winning canoes were measured by him. The time-keepers and buoy men can be got at the meet, and by appointing a number, need serve only one day each. The clerk should serve all the time to make sure of accurate records.

SAILING RULES, NOTES AND SUGGESTIONS.

From the Programme.

NOTE L.—As there may come a time when larger canoes should be entered regularly for races, the committee have put limits on such canoes for this year, hoping the A. C. A. will take action in the matter, if for no other reason than because larger canoes than the above Class C cannot well be handled by the railroads as the smaller canoes can, and we may therefore lose privileges we now get from the companies if such canoes are shipped under the Franking act now in vogue.

NOTE M.—The regatta committee respectfully recommend that Class A sailing be abolished. No distinction was made in the programme of 1887 between A and B classes, and the results amply justified the change. They would also suggest that the limits of Class B canoes be made to conform as those of Class IV. paddling in the matter of length. The rule should read: "Class B. *Sailing.* Length not over 16ft., with a limit of 30in. beam for that length." As the rule now stands a canoe that can enter a sailing race is not admitted to any paddling race—namely, a canoe 17ft. long by 28½in. beam.

The limits of Class C were fixed at 17ft.×36in. Only two canoes competed in the race, Event 19. It would, perhaps, be well to add this class in spite of the small number of contestants at this meet. Perhaps it does no harm to let Class A stand, simply to avoid an unnecessary change in rule 1. The change in the limits of Class B as above suggested should be made.

The following lines from Rule 1 can be dropped, as they are now a dead letter.

* * * "except as follows: Canoes built before May 1, 1885, may be fitted with centerboards which, when hauled up, may project below the keel, provided such projection of board and case is not more than 2¾in. in depth below the garboard, and not more than 36in. in length. In order to be admitted in races without ballast, the centerboard or boards, including bolts and other movable parts, but not including fixed trunks or cases, must not exceed 15lbs. in total weight." * * *

The carrying of numbers on the sail, as called for in rule IV., has become impracticable and inconvenient. The following changes in the rule—the idea being included in FOREST AND STREAM's account of the races—should be made.

Rule as it stands.

"Every canoe entering, except for an upset race, shall carry a colored signal flag, 10×6in., on a staff forward, when paddling, and [her A. C. A. number of enrollment in *red* block numerals *16in. high and 2in. broad*, when sailing, the number to be on both sides of the mainsail and read correctly on the starboard side and reverse on the port side. The Regatta Committee shall have power to dispense with so much of this rule as requires the carrying of numbers on sails in cases where individuals have private emblems on their sails of such size and character as, in the opinion of the Regatta Committee, will enable the judge to distinguish the canoes as readily as if the numbers were carried.] The Clerk of the Course will lend the paddling signals for each race, and they must be returned to him, [but the sailing numbers must be supplied by canoe owners.]"

Rule as amended.

The lines here written to take the place of the matter between brackets in the rule:

[a number in duplicate printed on pieces of cloth to be sewed on the mainsail on both sides, such numbers to be given owners by the Clerk of the Course in the order of entering the canoes, from 1 up, and to be returned to the Clerk of the Course before leaving camp.] [after each paddling race before leaving the canoe.]

RULE V.—*Prize Flags*—Should be revised to include the suggestions contained in the following extracts from the notes to this year's programme:

NOTE B.—* * * The man getting first Record Prize will receive a large practical flag, showing him to be one of the three Honor men of the year. There will be a Paddling Honor man—the winner of the Paddling Trophy race, and a Sailing Honor man—the winner of the Sailing Trophy race. * * *

NOTE D.—Besides the Silver Trophy (which the winner holds for a year) a large practical flag will be awarded, showing the holder to be the Sailing Honor man of 1888. The flag is the winner's property, and it is hoped that future Regatta Committees will yearly award such a flag in this race, as well as in the Paddling Trophy race and the Record.

NOTE F.—* * * Three flags will be of bunting, and are intended to be used to hoist in front of the owner's tent. They are the honor flags. Each will have the year and honor plainly sewed into it, and when in future these men appear in camp they will hoist the flags over their tents to show the scalps they have taken in the years gone by. The club race flag is also of bunting, 24×36.

The prizes for the record paddling races and sailing race and the record prizes should be given by the Association and provided by it, and made of the same design each year. The prizes for all other races might vary, and be got from clubs or individuals who are willing to contribute them. The designs of this year's flags are appended:

The straightaway (with no turn) paddling courses of the year were much better than those of former years, and the distance (1,000yds.) was plenty long enough to make a fair test of speed and endurance. A note should be added to the rules defining the fouling of buoys and marks, as there is nothing about it in the rules as they stand.

There are two points about the races that surely need attention: First, the start in the sailing races. It has been found impracticable and unfair to start the fleet in squadrons. The first leg is apt to be a reach or a run, and no matter how long the starting line is, a fair-to-all start is impossible. The only true way over a triangular course is to start the race to windward over a long starting line.

The start can be made between the judges' boat, anchored abreast of the leeward-most flag of the triangle and the flag itself. Canoes should not be allowed to either remain still or have the paddle used after the five-minute gun; but should be compelled to keep sailing for position till the starting signal is given.

Second, the point in the sailing and paddling races at which paddling must cease or begin, is not now clearly defined, and many take advantage of it, sailing over a good part of the paddling leg when wind is free. The drawing shows how this can be avoided—the change must be made before the canoe crosses a line between the two flags at each angle, as shown. This method must be adopted to insure fairness.

THE PROGRAMME.

The fixed events must be as follows: (1) a paddling race for each of the four classes, (2) a combined race, (3) an unlimited (A and B) sailing race and the two (4 and 5) trophy races. All other races should be optional. The upset races, gymnastics, tournament, tug-of-war, hurry-scurry, etc., do not take much time, are easily managed, and afford great amusement. The club race is a good one, and should be retained; but it could very well be included in the unlimited sailing race. The maneuvering race is also a good one, and might well be worked in with the combined race. The extra paddling races (tandem, etc.) do not take much time, but could be abandoned if necessary. The 75ft. limit and the consolation sailing races could well be abandoned—or put on merely as extra races if there is time. Fewer races would add to the value of the flags won.

For five years the general verdict has been "too many races," as a look at the FOREST AND STREAM, Sept. 13, prize list will probably convince any one. If it is desirable to give a novice prize (and it undoubtedly is), let it be on the novice record in the unlimited sailing race, and not sail a separate race for it. Class C could also be sailed at the same time. The club flags, too, could be given for the best club record in the same race, thus putting four races into one, without any harm being done. If the maneuvering race is a good test, why not add that feature to the combined race as before suggested on the last (sailing) leg of the triangle—make each man throw over his paddle behind him and recover it somewhere between the two buoys? Two paddling races, having not more than four entries each, could be started over the same course at the same time, and thus very greatly shorten the programme.

Three days of racing is enough, and by careful work in arranging the programme and combining the races pretty much all that is now done in five days would be done in three. I hope these notes will prove of use to the executive committee and the new A. C. A. Regatta Committee. C. B. VAUX.

PRIZE BLANK USED AT LAKE GEORGE.

This is to Certify, that my Canoe.....length,....beam,... depth according to rules, Class.....entered event.....and won.....place, without fouling any other canoe or a buoy, and completed the course, starting, rounding all buoys, and finishing as directed by the regatta committee's notices and the rules, and that therefore I am entitled to.....prize in that event.

.....*Owner.*

The above dimensions have been verified by me, and are certified to be correct.

.....*Official Measurer.*

THE A. C. A. MEET OF 1888.

Canoes and Fittings.

APART from the rig, which is of sufficient importance to demand special consideration later on, there are five leading features in the modern canoe, which we propose to consider in detail, and in the following order: Build, model, arrangement, fittings and equipment.

BUILDING.

While all the leading methods of canoe construction were represented at the late meet, there were no special novelties; and all the methods represented have been previously described in the FOREST AND STREAM. This year all of the leading racers were smooth-skinned boats, and of these the two most notable were Eclipse and Narka. Both of these were built by Mr. Ruggles, of Charlotte, N. Y., on the peculiar system devised by himself. The planks are narrow, 1½ to 2in. wide, and ¼in. or less in the thickness, laid without a lap and caulked with a thread of cotton, rolled in with a sharp-edged wheel. There were a number of Ruggles boats at the meet, and in those of this year's build the faults that we noticed last year had been remedied. The greatest of the two was the lack of finish, both in labor and varnish, but the new boats, Eclipse, Narka, Guenn, Ruggles and others, had been well rubbed down and thoroughly varnished, showing a smooth, hard surface; the seams, too, which in this method are quite wide, were filed up with varnish, a point in which the earlier boats were lacking. In the second detail which we criticised last year, the size and shape of the stemband, a very great improvement has also been made, the flat band, ⅜in. wide, being replaced by a half-round strip of brass filed to a sharp edge. In one case Mr. Ruggles informs us that he took the entire stem out of one of last year's craft, trimming down the rabbet and fining down the fore edge, replacing the stem again and screwing it fast. The Ruggles canoes have been present at four meets, with a steady improvement each year, and after seeing the new craft we have no hesitation in pronouncing them the best built at this or any previous meet. The hulls, whatever the model may be, are all fair and true, with both sides alike, and free from hollows or bumps; in strength and lightness they will compare with any, while from all that we can learn they are very tight. One point in their favor is the ease with which a plank may be removed or replaced, or any repairs or changes made. The clean-grained, narrow planks, all in single lengths, certainly make a very strong hull, while there is less liability to split than with wide planking. The method was an experiment at first, and we have watched the boats carefully each year to see how they stood the wear, but have noticed no signs of weakness not traceable directly to ill-usage.

The boats present were all of different models; in the two Springfield canoes, "Ruggles" and Narka, the midship section, general dimensions, and arrangement and limit of weight were furnished by Messrs. Barney and Rice, the model being worked out by the builder. Eclipse was ordered by Mr. Blake, after seeing Narka, to be 2in. wider and differing in some other details, but in the main an enlargement of the latter boat. Guenn No. 4 was built this year from an enlargement of a design made two years since.

Of the lapstrake boats there were a number present, but mostly old craft. The best of the new ones was the Girofla No. 5, a handsome smoothlap, built by Mr. Rushton for Mr. Nickerson, of Springfield. The comment was generally made about the camp that the Rushton boats had improved much within the past year, and this boat bore out the assertion, as she was a better craft than those of last year, and very far ahead of the boats of 1886. The laps were fined down to make a smooth skin, while the planking was fair and even. The deck was a handsome piece of mahogany. As long ago as 1882 the writer abandoned Spanish cedar for canoe decks in favor of mahogany, at a time when canoeists and builders were both loud in the praises of the former wood and opposed to the latter. To-day it is the exception to see a Spanish cedar deck, the canvas-covered decks have entirely disappeared, and mahogany is almost universally used. One canoe at the meet had a strong and handsome deck of butternut, stained to a dark purple, and the wood seems well adapted for the purpose; but at the present price of mahogany it is to be preferred to any other wood we know of. White pine, as used on Notus, cannot compare with it for strength or beauty, and is apt in a little time to show sappy spots of a dark color. There were plenty of old craft to bear full testimony to the merits of lapstrake work as to durability, but the day of the lapstrake as a racer has gone by.

The new canoe If is one of the first of the Bowdish canoes at an A. C. A. meet, and she certainly made a good showing for her builders. She is built after a method of their own, of narrow planking similar to the Ruggles boats, but with a groove ploughed in each edge, a thin feather of bass wood being placed in each adjoining pair of grooves. All the parts of these canoes are prepared by special machinery, thus differing from the Ruggles boats, the latter being built entirely by hand. There is no reason why the modern woodworking tools should not play a very important part in the boat shop where work is done in quantity, but at present most canoes are built by hand throughout, with the exception of sawing ribs, etc. In the Bowdish canoes a plank over 1in. thick is sawn to the shape required for a given strake, it is then re-sawn into 4 pieces, each being finished by machine to the required thickness, after which a special tool cuts the grooves in the edge. They have also constructed a special cutter by which the rabbet in the stem or stern may be quickly and accurately cut. The If is planked with $^{6}/_{16}$ in. cedar, consequently she is heavier than necessary, in fact the firm have not yet devoted any special attention to the production of a light and fast canoe, being busy with steam launch and boat work. The method of building seems very good, and with a closer study of the special points of canoe design and construction they have a wide field for turning out good boats in large numbers. One peculiar feature of their method is the use of light brass castings to join the ribs to the keel and also to stiffen the deck and gunwale.

The Vesper C. C., of Lowell, had this year a very fine exhibit of canoes, the work of Stevens, a local builder; under the personal direction of Mr. Paul Butler, who has devoted a great deal of time and study, to say nothing of money, to the improvement of canoes. These canoes were all ribband carvel, with Spanish cedar planking of but little over ⅛in. thickness, in fact their great fault was that they were too light for ordinary hard work, either racing or cruising. Mr. Butler has evidently studied the Nautilus pretty closely and copied some of the good points in her construction, the planking being in 3 strakes to a side, with a light ribband inside the seam. It is not an easy matter to build a fair boat with very light planks and ribs, but these boats would stand a careful scrutiny when turned bottom up, being very fair all over. This method, wide plank and ribband carvel joints, makes a very good and handsome canoe, as shown in these boats and the Nautilus, but in the latter the planking was thicker than necessary, nearly ⅜in., while in the Lowell boats it is but little over ⅛in. The proper thickness for the average size canoe is not far from ¼in. whatever the method of building.

There were some very good canoes of the Ontario Boat Co. present, but none of them were raced, in fact nearly all were of the open class. These boats have become very popular as an auxiliary to the decked sailing canoe in the States, many canoeists owning one of each kind. They are also much used in England, being very plentiful on the Thames. Both varieties, the longitudinal and the thwartship rib, are strong, light and tight.

After all that has been said about the importance of building to rules, one cannot have much sympathy for a man who has to reduce his canoe after she has entered for the races, and it was amusing this year to see several at work paring down the stem and ribs. In one case a canoe that had been raced as 16ft. long before the meet, was found to be nearly an inch too long, so off came the stemband and rudder braces and the deadwoods were chopped off. In another case the canoe, a large one with a big rig, had spread to an inch or more over the beam she was built to. As the easiest way to reducing her, holes were bored through the upper strake, two on each side, one at the fore end and one at the after end of the well. An eyebolt was passed through each hole, then a strong line was rove through each opposite pair of eyes and twisted with a stick until the beam was reduced, being left in until the racing was over. In this case it was the fault of the owner, the canoe being built without bulkheads, braces, or even mast tubes, so that there was nothing to hold her in place. In the other case it was the fault of the builder.

The purchaser of a canoe has a right to expect that she will be in every way conformable to the class for which she is intended, and the builder should be held responsible for any shortcomings in this respect. At the same time the owner should not leave the matter until he has sailed a race, when the official measurer may be obliged to refuse a certificate, but should measure the canoe when received, using a steel tape or other reliable measure. The fault arises from two causes, an inexcusable carelessness and disregard of the rules, or the attempt to crowd the rules too closely, leaving no margin for a slight error in measurement or a change of size while building. The beam may and should be made exact, the boat being left a little short in length, say ½in., with such ample deadwoods that a further reduction may be easily made if necessary.

There is a small detail to consider in connection with the measurement that may lead to trouble some day. It is now the practice with some rudders to have a brass tube running the whole length of the sternpost in which the rudder ships. This tube is about ⅜in. wide, and really adds that much to the canoe's length, but it now is not measured in the length. There is nothing in the rules to prevent a similar piece ½in., 1in., or even 1½ins. wide, lengthening out the lines of the boat by these amounts. The only important point about the matter is that the question should be definitely settled how much, if any, a man may lengthen the lines of his boat without having it counted against him. The commonsense method would be to measure the stern in the same way as the stem, by a perpendicular line touching the lines of the boat, whether formed by wood or metal, but not including such isolated projections as the common rudder brace. The stemband is measured very properly, and there is no reason why a sternband, extending the whole length of the sternpost, should not be placed on the same footing.

The weakest point developed in the races was the forward mast tube and step. the breakdowns in this direction being more numerous than in any other, and more serious as well. With a very light tube in the extreme bow and a very large sail, the strain is something enormous for a boat of less than 100lbs. weight, and special care is necessary to insure strength. In many cases the mast tube is further forward than is really necessary, and if placed an inch or two aft it might be made very much stronger. If too far forward, the portion below deck is very short, consequently the leverage on the step is greater. The only way to build a mast step within less than a foot of the stem is to put in a large block of light wood, for instance hackmatack, building it in when the frame is put together, as a part of the deadwood, the planking being accurately fitted to it and fastened. It is an open question with builders whether the mast step should be fastened to the planking, but where the step lays against the planks and is in close contact with them, they had better be screwed to it securely. The mast tube itself should run at least 1½in. down in the step, and the foot of the mast should go down to the bottom of the tube, thus bringing the strain of the mast directly on the step, and not on to the tube alone, as is too often the case. In the Pecowsic this is done successfully, the mast being but 5in. below deck, but the sails are so light that it is allowable.

It is a pleasure to be able to note the general excellence of the canoes present, and also that the builders are doing their part toward the improvement of the canoe. The improvements in model must largely come from the owners, rather than the builders; the latter have not the time for personal trial and experiment which is necessary to test and perfect any canoe, and they must rely to a very great extent on the experience of the men who use canoes constantly. The builder's part is not to furnish the design, but to build well and truthfully from such designs as may be brought to him. This leaves an ample field for him and

relieves him at the same time of much of the responsibility in case of failure if the owner designs as well as sails the boat, or at least if not actually furnishing full detail drawings, lays down the main points so closely that the builder has only to follow his instructions and is responsible only for the workmanship and material. Thus it now is in yacht building, and the same is likely to be the case in canoeing. The leading points in canoe building are strength, tightness, lightness, finish, style and absolute reproduction of the design; if the builder combines all of these to a reasonable degree in a canoe he is doing all that can be required, without being called upon at the same time to produce a model which shall excel all others.

MODEL.

While of the same general dimensions and sailed without ballast, the leading boats differed so much in detail that it is difficult to classify them, or in fact to do more than describe them in a general way. As soon as possible we shall take the lines of some of the best of them, a rather troublesome and difficult matter with such small craft, and will add them to the large collection that has already appeared on our pages. The general dimensions may be set down at 16×30, with a depth of 10in., some being a little deeper.

Eclipse has a rounded midship section, as distinguished from the V form, with a very light bilge; all her fore and aft lines being remarkably easy, in fact she has no abrupt curves in any part. The keel is nearly straight, the stem and sternpost plumb, and the sheer fair, with moderate height at the ends. Compared with Pecowsic the lines are fairer throughout, the bulk is better distributed, with less in the middle and more in the ends; while the boat is apparently larger and abler. The well is very long for a racer, with a plate board near the center; there are two bulkheads and mast tubes, the mainmast near the bow. Narka is similar to Eclipse, but 2in. beam, a very fair and handsome boat, in fact she is the cleanest canoe under paddle we have ever seen, entering and leaving the water without a ripple and apparently running of herself, a feature due in part to the easy style of her owner who is a most expert paddler. As far as speed under paddle is concerned there is no question in our mind as to the great superiority of this model, comparatively sharp and deep, over the shoaler and wider bottom of the Canadian canoe. The manner in which she carried her way and answered to the spurts in every race indicated that the form was an easier one to drive under paddle. She was fitted with a board, one of Ruggles's movable pattern, in the middle of the well, the latter holding two for tandem paddling, and she had two mast tubes and a suit of sails, though not entered in the sailing race; in short there is no reason why she should not prove one of the fastest of the Class A boats in sailing as well as paddling.

The new Barney canoe, Ruggles, is quite a different craft from her predecessors. The chief peculiarity was in the short bow and long stern, the midship section being 18in. forward of the center. Mr. Barney's idea was to place the man and board both in the middle of the boat, to do which it was necessary to fill out the bow at the expense of the stern. The sheer is peculiar and ugly, quite abrupt near the bow, but nearly straight from midships to the sternpost. For the rest, the boat when turned upside down shows a rounding m dship section, with easy bilge, and fair, fine lines all over; in fact, if she could be turned so as to go the other way she would make a very fast canoe. Her failure in the main race was due to a capsize when free in one of the squalls for which Lake George is famous, and which brought many a bold sailor to grief. There are some failures which are as instructive as successes, but it is not so in the present instance, nor in the Rushton canoe, to be noticed later. They tell us no more than has long been known; in the one case, that the bow must be longer than the stern, and in the other, that nothing is gained by an exaggerated fulness on deck at the expense of fair and easy lines.

The fourth Ruggles boat was different from all the others, a large and able canoe, designed for Mr. Whitlock by Mr. John Hyslop. The design was originally 15×28, and the Wraith No. 3 was built from it in 1886. The same design was enlarged by the writer this season to 16 30 at Mr. Whitlock's request, and from it Mr. Ruggles has built a remarkably handsome canoe. The model is one that would naturally require ballast, with a rising floor and considerable depth; but the boat has been sailed on nearly all occasions as without an ounce of ballast. Once at the meet she was tried with 40lbs. of shot, her performance being improved greatly. Mr. Whitlock was in rather hard luck at the meet, having several break downs, but there is no doubt but that the canoe is a very fast one if fully worked up to form, and a specially able boat for New York or Toronto or any of the lake ports; there is nothing tubby about her, the lines are very clean and sharp, but she is a very powerful and able craft, and with the proper amount of ballast would be a racer.

The new Rushton model, Girofla No. 5, was also a powerful boat, 15.6×30, her most noticeable feature being a very fine waterline and underwater body joined to a full deck line. On deck she carried her breadth from end to end, turning in sharply, but below she was very fine indeed. When upright her lines were easy enough, but as soon as she heeled, though very stiff, she offered a great shoulder to the water.

The same idea was worked out by the writer in 1880 in the canoes Jersey Blue No. 2 and Sandy Hook, though not to such a marked extent. A course of cruising in the old lean-bodied Nautili lead to a search for an abler and dryer boat in rough water, and the great sheer of the Nautili was replaced by a full deck line and considerable flare aloft, while the waterline was hollow and very fine forward. These boats proved fine and dry cruisers, carrying large loads, easy under paddle, being then on an even keel, and stiff under sail; but in the racing about New York Bay they were beaten in rough water by the leaner-bowed Shadows, which cut through the waves, washing the decks fore and aft but made greater speed. For a rough water cruiser the idea is all right, but it was proved then that it will not do for racing. The Girofla No. 5 was handicapped by the fact that Mr. Nickerson had never seen or sailed her prior to the meet, but still she sailed very well, and he had her out in some of the worst weather. Her bottom was very good, and, save for the exaggeration of the features we have mentioned, the model was a good one.

There were two canoes present by the same builder, Mr. Spencer, of Hartford, that were of very similar model, being built for speed. These were the Dimple No. 2 and the Agawam, both a little under 16×30. The deck line in each was similar to the Girofla No. 5, very full at the ends, nearly straight on the sides, but from the deck to the keel cut away almost straight, with the least possible bilge, the sections being very flat V's. The only justification for such a model is speed, as the boats were neither handsome, roomy, nor well adapted for general use, and this excuse they did not possess in any marked degree. Mr. Knappe did well in the Agawam, but he is a very good all-round canoeist and went into everything, and he has also done well in his old boats. Mr. Forrest sailed the Dimple very well, showing both pluck and skill, while we had spent a great deal of labor on his rigs, but the result was anything but satisfactory, so far as winning prizes is concerned. The boats had so little freeboard that they looked like a couple of big decks floating around loose, the hull being hardly seen at times. With the V section there is neither room nor comfort in cruising, and unless it can be proved th t such craft are very much the fastest they must be classed as very much inferior to a number of others present.

A marked contrast to their cutaway forms was shown in the Lowell canoes, good honest boats for any work, so far as model goes. The Fly was in some ways the most perfect of the lot, though all were alike in model. The bottoms were long and full, rounding up slowly from the keel, with a draft of only 3in., thus resembling the Canadian canoe, and in marked contrast to both Pecowsic and Eclipse. The waterlines were naturally very full, but the boats were not tubby, the chief defect being the great freeboard. The least depth being 11in. and the draft only about 5in., the freeboard was 8in., a terrible load to carry to windward. It had an advantage in making the boat practically non-capsizable, but at the expense of speed, the cost being entirely too great. The boats were safe and able, good cruisers, and at the same time, as the Fly proved, by no means slow; but the model should be improved by spacing the waterlines a little closer together, thus reducing the depth of the canoe to 9 or 9½in. We have always preached the value of freeboard, but it is doubtful whether more than 6in. pays in an ordinary 16×30 canoe. The Charm we have already described in a previous number, and will publish her lines shortly in addition.

[TO BE CONTINUED.]

A. C. A.—Central Division Regatta Committee.—The following named active members of the Central Division of the A. C. A. are hereby appointed regatta committee, and will be obeyed and respected accordingly: Geo. A. Warder, Springfield, O., Chairman; H. S. Thomas, Albany, N. Y.; Grant E. Edgar, Jr., Newburgh, N. Y.—WM. H. HUNTINGTON, Vice-Com. (Rome, Sept. 12).

IANTHE C. C.—The Ianthe C. C. will hold its record races on Sept. 29, at 3:30 P. M. The illumination will be held on Oct. 3. The club house is near the Woodside Station of the Erie R. R. Trains leave for New York at 10:34 and 10:46 P. M.

A NEW MAST HOOP.—Mr. Thos. Clapham has lately been granted a patent on a new form of mast hoop for canoes and small boats. It is made of spring brass wire, and the ends are so shaped as to grip the eye in the sail without the aid of a lashing.

SPRINGFIELD CUP—FINAL TRIAL RACE.

THE handsome cup presented by Mr. Barney has kept up an interest in racing throughout the season, as by the terms on which it was given five trial races were to be sailed, the winner in each being barred from the other trials; entering only the final race on Oct. 9. The last race was sailed at Calla Shasta on Sept. 15, the starters being: Dimple, G. Forrest, Hartford; Vagabond, C. B. Vaux, New York; Girofla, F. A. Nickerson, Springfield; Narka, H. E. Rice, Springfield. The race started very late in the afternoon with the wind from south, very light and variable, flattening out to almost a calm, and then just at the end of the race bracing up a little. The start was very even, Vagabond taking the lead. Dimple rounded the windward mark ahead (one mile and a quarter from start). The run down to second mark (two and a half miles up the river) was very slow, and with luck first with one boat then with another, Vagabond's large silk spinaker alone enabling her to keep near Dimple with her 130ft. of sail in a standing rig. Girofla was third and Narka fourth. When opposite the starting line on the run Narka withdrew. At the second buoy Dimple was first and Vagabond second, with Girofla third. Dimple gained slightly on the mile and a quarter beat to starting line, and came in 1½ minutes ahead of Vagabond. The course is not over five miles, and it took over 1½ hours to sail it.

A paddling race followed, between Rice and Knappe, which was very close, Rice winning by half a length. Considerable fun was provoked by the paddlers changing hats and jerseys at the start and thus making the on-lookers believe Knappe was beating Rice.

The sailing race for the club championship and cup was postponed on account of lack of wind. There are five races in all, three have been sailed; Knappe and Geo. M. Barney standing even on the record with the same number of points each. The races for the Springfield cup are as follows:

June 23—Calla Shasta.

Agawam, E. C. Knappe, Springfield	1 19 15
Fly, Paul Butler, Lowell	1 19 48
Blanche, D. S. Goddard, Lowell	1 22 47
Girofla No. 4, F. A. Nickerson, Springfield	1 28 53

July 4—Calla Shasta.

Fly, Paul Butler, Lowell	1 00 05
Girofla No. 4, F. A. Nickerson, Springfield	1 04 50
Minnie G., F. F. Walsh, Lowell	1 23 25

Aug. 4—Calla Shasta.

Drift, J. Arthur Gage, Lowell	1 12 45
Girofla No. 4, F. A. Nickerson, Springfield	1 13 35
Sirene, A. S. Putnam, Worcester	1 16 25
Narka, H. E. Rice, Springfield	1 25 00

Aug. 23—A. C. A. Meet.

Eclipse, M. V. Brokaw	0 50 18
If, Geo. A. Warder	0 50 55
Charm, W. Stewart	0 52 54
Ramona, Ford. Jones	0 53 34
Girofla No. 5, F. A. Nickerson	0 55 02
Dimple, G. C. Forrest	0 55 15
Wicassie, Ralph Brazier	0 57 17

Sept. 15—Calla Shasta.

Dimple No. 2, G. C. Forrest, Hartford	1 36 17
Girofla No. 5, F. A. Nickerson, Springfield	.. ..
Vagabond, C. B. Vaux, New York	.. ..
Narka No. 2, H. E. Rice, Springfield	.. ..

Thus the starters in the final race of Oct. 16 will be Agawam, Fly, Drift, Eclipse and Dimple.

BROOKLYN C. C. FALL REGATTA.

ON Sept. 22 the Brooklyn C. C. sailed two races, postponed from the regatta of June 18. The wind was fresh from N.W. and the tide was ebbing. Course triangular, with the first side a beat against the tide. In the first race three classes were sailed, senior and junior canoes and unclassified boats. The starting signal was given at 3:32. The entries and finish were:

SENIOR CANOES.

Eclipse, R. S. Blake	4 09 00
*Vagabond, H. C. Ward	4 11 00
Myth, Wm. Whitlock	4 20 00

JUNIOR CANOES.

Baby Rial, R. N. Denison	4 25 00
Queen Bess, R. J. Wilkins	4 32 00
Niente, F. L. Dunnell	Withdrew.
Adonis, M. M. Davis	Withdrew.

UNCLASSIFIED.

Vim, Johnson and Cammeyer	4 24 40
Crusoe, Griffin and Snyder	4 26 00

The Eclipse took the lead at the start and gradually drew ahead, although Vagabond came in a good second. Myth was handicapped over 7m. at the start from carrying away her deck tiller. Baby Rial is No. 2 of the well known Guenn family, but has been altered into a comfortable cruising canoe. She was easily in her class and was only 20s. behind the Vim at the finish. The Crusoe carried a poorly fitting lateen sail, but was well handled by Mr. Griffin, of the K. C. C.

Messrs. W. Stewart, in Com. Monroe's New York; C. B. Vaux in the Vagabond, and B. H. Nadal, in the Sea Urchin, arrived in time for the second race, which was sailed under the same conditions; started at 4.59:

New York, W. Stewart, Royal C. C.	5 28 45
Vagabond, C. B. Vaux, N. Y. C. C.	5 28 30
Sea Urchin, B. H. Nadal, N. Y. C. C.	Not timed.
Eclipse, R. S. Blake, Brooklyn C. C.	5 28 00
Myth, W. Whitlock, Brooklyn, C. C.	5 30 40
*Vagabond, H. C. Ward, Brooklyn C. C.	Not timed.

New York was first to cross almost at the signal, but Eclipse was to windward and came down the line with everything drawing, and soon took the lead. She turned the windward mark well ahead, Myth second, Vagabond third, New York fourth. Vagabond* was sailing with a reef in and could not keep near the leaders. On the run to the second mark all gained on the Eclipse but could not overtake her. Vagabond and New York finished almost together.

*This canoe is the old Latona, an Everson "Sunbeam."

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $8. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

FIXTURES.

SEPTEMBER.

28. Quaker City, Philadelphia. 29. Toronto, 2d and 3d Classes.

OCTOBER.

1, 3, 5. Sachem-Grayling, Newport.

ORINDA.

THIS name has been given to his new cruising cutter by Dr. W. H. Winslow, of Pittsburgh, Pa, whose cruises in the Pilgrim are known to all readers of the FOREST AND STREAM. Orinda was designed and built by Mr. E. L. Williams, of South Boston, the builder of Mamie, Pilgrim, Velnette and Prince Karl. She was designed for cruising about the New England coast and consequently has iron ballast and a moderate rig. Her dimensions are: Length over all, 38ft.; l.w.l., 28ft. 4in.; beam, 9ft. 3in.; draft, 6ft. 7in.; least freeboard, 2ft. 5in.; overhang aft, 4ft. 8in.; ballast outside, iron, 9,800lbs.; inside, lead, 2,000lbs. The deck is flush, with a small steering well, 2ft. 6in.×2×4ft. The skylight and companion together are 5ft. long and 2ft. 6in. wide. The main cabin is 6ft. 2in. long, with iron hammock beds on each side, and the forward cabin is 6ft. 4in. long, with fixed berths and drawers under. In the forecastle is a berth 6ft. long. She is fully fitted for cruising—water tanks under transoms, gasoline stove, and shelves in forecastle. The mast is 25ft. deck to hounds; masthead, 5ft.; topmast, heel to hounds, 20ft.; boom, 30ft.; gaff, 19ft.; bowsprit, 13ft. 6in. outboard. With a long clean overhang on each end—her rail, smooth black topsides and a copper line carried up at each end, the bottom being painted with Este's English copper paint—she makes a very trim and saucy-looking cruiser. Dr. Winslow sailed from Boston on Aug. 25, and at last advices (Sept. 7) was at Bar Harbor, with four friends on board.

BEVERLY Y. C., SEPT. 20.—The sail-off for third class took place off Monument Beach in a light S. wind, the course being 7½ miles. Daisy, Dolly and Eleanor started, the former winning in 2.01.50, with Dolly second.

NEW YORK Y. C. FALL REGATTA, SEPT. 20.

AS a regatta the turnout of the New York Y. C. last Thursday must be set down as a dismal failure, when the largest club in the country, with a fleet unequalled in size and quality, can muster only eight or nine entries, and half of them of little note, it is time for yachtsmen to attack in earnest the problem of yacht racing, and either to put the sport on a firm foundation or to give it up entirely until owners show some desire for its revival. As the Eastern Y. C. regatta was saved from utter failure through the race of the forty-footers, so the New York regatta was saved by the presence of Katrina and Shamrock in a fair and true breeze, an event in itself of no small interest, but apart from it the rest of the show was only a dreary burlesque on yacht racing, as the following list of starters will show:

SCHOONERS—CLASS I.

	L.W.L.
Dauntless, C. H. Colt	116 07
Alarm, Handren & Robins	113.00

CLASS III.

Magic, T. N. Motley	79.00
Grayling, L. A. Fish	84.06

SLOOPS—CLASS III.

Katrina, Auchincloss Bros.	69.09
Shamrock, J. R. Maxwell	68.05
Fanny, Fiske Bros.	66.00

CLASS V.

Wizard, E. H. Staples	58.00
Adelaide, Robt. W. Inman	46.01

With all due credit to the few owners who showed the spirit to back up the club in its laudable efforts to encourage racing, the fleet cannot be called first, hardly second class. The course was a new and very good one, but unfortunately it is open to the same objection as the old in respect to windward work, the chances being that only one leg of 9 miles, to or from the Lightship, will be to windward; in fact, it may easily happen that three or even all four legs will be reaching. The start was made off Buoy 10, near the Southwest Spit, then out to the Sandy Hook Lightship, 9¼ knots, then to the buoy off Shrewsbury Rocks, where a tug was anchored, 7¼ knots, and home over the same course, making 33 knots. The tide was half down at 11:32 when the starting gun fired, the wind being about S. E. by S. and strong enough to wet the planksheers on the sloops. Wizard was near the line at gunfire, but went off below it, afterward coming up and recrossing with a big handicap. Grayling came for the committee boat, but apparently mistook the line, crossing on the wrong side of the boat and also returning for a late start, though not handicapped. Dauntless was first to cross, on starboard tack, with Katrina on her weather and Fanny on her lee quarter, the trio being almost timed together. Dauntless parted the tack of her jibtopsail at the line, the sail going up the stay. The singlestickers all carried working topsails, Katrina going over the line with small jibtopsail set, but lowering it when once fairly started. Shamrock was considerably astern of the leaders, carrying her small jibtopsail. Alarm crossed ahead of her, there being 4m. 12s. between Shamrock and Katrina. Adelaide, Wizard, Grayling and Magic wandered over the line finally and the procession began.

Dauntless	11 34 14	Adelaide	11 40 06
Fanny	11 34 14	Grayling	11 40 55
Katrina	11 34 23	Wizard	11 42 00
Alarm	11 35 22	Magic	11 42 00
Shamrock	11 38 35		

Had there been a "one-gun" start, the three single-stickers would have crossed together in all probability, and there would have been a very pretty race for at least the first leg; but as it was, Shamrock started so far astern that she was not beside Katrina all day, and though finally winning, it was a matter of guess at all times to say just how she was doing with her black rival, unless one had the times at the marks as a guide. Such a meeting as this is what yachtsmen have been waiting all the year to see, and when it did come it was a great pity that the pair did not start exactly even and sail closely in company all day.

Katrina walked steadily past Dauntless to windward, and was clear of her in two or three minutes, while Fanny dropped astern of the schooner, making a short hitch on the port tack at 11:37, just after crossing the line, soon going on starboard back again, and setting jibtopsail. Katrina steamed away very fast from the pack, walking well out to windward, holding the tack on which she started until 12:20. At this time she looked to be a mile ahead of Shamrock, the latter then leading Grayling by one-quarter mile. Far to leeward were Dauntless, Fanny and Alarm, the rest being well astern. Grayling was carrying both working topsails and a jibtopsail, the single-stickers being contented with working topsails only. The sea was smooth and the wind held steady, just laying the single-stickers scuppers-to.

Shamrock made her first tack at 12:24, and at 12:31 Katrina went on starboard tack not far from the Sandy Hook Lightship, Shamrock at once following her, while at the same time Dauntless, far down to leeward, went on port tack, having stood on far enough to weather of the mark with but one tack. Grayling did the same, coming on port tack at 12:34, with Fanny and Alarm about a minute later. Katrina seemed to gain greatly on Shamrock when on the first long tack, the latter coming up on her when near the Lightship. Of the two, Katrina stood up a little better under her canvas, though the difference was not great. Katrina sent up her large jibtopsail in stops and at 12:38 went on port tack to pass the mark. Shamrock stood across Grayling's bows and tacked to windward of her, both passing the ship together. The times at Sandy Hook Lightship were:

Katrina	12 40 05	Dauntless	12 52 00
Shamrock	12 45 50	Fanny	12 52 45
Grayling	12 45 35	Alarm	Not timed.

Katrina had gained 1m. 13s. on Shamrock in the first of 7¼ miles. The next leg was a close reach out to the tug, 7¼ miles, and Katrina, carrying her large jibtopsail, ran very fast, Shamrock and Grayling sailing in company astern. Grayling set up a maintopmast staysail, but Shamrock ran past her at first, though carrying only lower sail and working topsail. Grayling headed her for a time but Shamrock finally reached the mark first. Katrina swung her clubtopsail and started for home, still at a good pace, while Shamrock lost a little time through some trouble with her jibtopsail halliards, having set the sail on the way out. The times at the outer mark were:

Katrina	1 26 40	Dauntless	Not timed.
Shamrock	1 32 50	Fanny	Not timed.
Grayling	1 34 55	Alarm	Not timed.

Katrina had a lead of 6m. 10s., a gain of 45s. in the reach of 7¼ miles. The wind was much freer on the return to the Lightship, but fell as the leader neared the mark. Shamrock set her clubtopsail and largest jibtopsail. Grayling wasted a long distance at the outer mark, evidently keeping out of Shamrock's way, but she had virtually a walk over, and was not hurried all day, or she would probably have reached away from the single-stickers at times. The last turn of the Lightship was timed: Katrina, 2:10:05; Shamrock, 2:15:08; Grayling, 2:15:42. At the Lightship Katrina lost some time in jibing and trimming sheets for the free reach home, in fact, she lost the wind to a great extent just at the turn, though it soon freshened again. She had lost 1m. 7s. to Shamrock on the reach from the tug to the Lightship. Setting her balloon jibtopsail she started for home, Shamrock and Grayling again turned the mark together, Grayling shifting to her largest jibtopsail. Shamrock carried home her largest jibtopsail, with both lower headsails drawing, while Katrina had a ballooner set, as stated, with no other headsails. Shamrock continued to gain, and at the finish was only 3m, 31s. astern, having started 4m. 12s., thus winning on even time, without her allowance. Her gain on the last leg was 1m. 32s.

The race in the other classes was a mere procession, devoid of interest or incident, save that Wizard carried away her topmast on the way in and did not finish. The full times were:

CLASS I—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Dauntless	11 34 14	3 22 24	3 48 10	3 48 10
Alarm	11 35 22	3 45 26	4 10 04	Not meas'd.

CLASS III.

Grayling	11 40 55	3 10 35	3 29 40	3 29 40
Magic	11 42 00	3 44 03	4 02 03	3 59 22

CLASS III—SLOOPS.

Fanny	11 34 14	3 31 23	3 57 09	3 54 10
Katrina	11 34 23	3 08 13	3 33 50	3 33 50
Shamrock	11 38 35	3 11 44	3 33 09	3 31 50

CLASS IV.

Adelaide	11 40 06	3 55 38	4 15 32	Not meas'd,
Wizard	11 42 00	Did not finish.		

Winners: Dauntless in first class schooners; Grayling in third class schooners; Shamrock in third class sloops; Adelaide in fourth class sloops.

While more wind would have been very welcome, both to the spectators and to both boats, the race between Shamrock and Katrina was very fair and even, there being a steady breeze all day and with no odds of tide or current to interfere. In the windward work Katrina showed decidedly t e better, but with shee s lifted a little Shamrock outran her, gaining still more as the wind freed on the last leg. In itself the race was a pleasing and interesting one, but it still leaves the supremacy of either boat an open question for another season. The two have met so seldom and

under such conditions that no real gauge of their merits can be had save this last race, and it would be a good thing for all concerned if a series of matches could be made between them now, at a season when fairly good breezes may be looked for.

THE ST. LAWRENCE YACHTING ASSOCIATION.

THE match race between the sloop Madge and the cat Lulu to decide the tie for the Commodore's cup was sailed over the usual course of the St. Lawrence Yachting Association, on Lake St. Louis, on Sept. 15. The day was a perfect one, with a blue sky, a splendid south wind and comparatively smooth water. Both boats had been put into the best possible shape for the race, and as during the whole series they have been stem and stem, the excitement ran high. Almost the entire fleet of the Association turned out to accompany the racers over the course, and there was a goodly number of spectators.

The starting gun was fired at 3:14, and the boats went across as follows: Madge, 3:14:17; Lulu, 3:15:30. On the short run to the lighthouse Lulu passed Madge and at this point the time was: Lulu, 3:37:05; Madge, 3:37:15.

The starboard course had been selected and the next leg was a reach to the South Buoy. This is the Madge's strong point, and everything that would draw was heaped on her, not with the best result, for the weight of canvas was too much for her, and her jibtopsail had to be handed to prevent her from being driven under by the head. This was not effected without a serious loss of time, and the time of rounding the South Buoy was:. Lulu, 3:55:45; Madge, 3:57:05. On the run to the North Buoy Lulu gained still more, as Madge was under comparatively short sail. The time at this buoy was: Lulu, 4:08:55; Madge, 4:14:15. On the beat back to the lighthouse Madge did wonders, pointing up as well and reaching faster than the cat, something she has not done before this season. At the lighthouse the time was: Lulu, 4:44:20; Madge, 4:48:20.

On the reach in to the finish line Lulu increased her lead, the result being:

	Finish.	Corrected.
Lulu	4 57 35	4 59 11
Madge	5 01 55	5 01 55

Lulu winning by 2m. 44s.

This race brings to a close the first season's racing of the St. Lawrence Yachting Association, and it has been the finest yachting season that Montreal men have ever had. Already there is a great deal of talk about new boats for next year, and it is not improbable that Lake St. Louis will next year have a fleet of small sloops upon it that will do it credit. Unfortunately the lake is too shallow to permit of the use of anything but shallow craft.

An attempt is now being made to get up a match race between Minnie A., a boat which made a record for herself about the Bay of Quinte, and Lulu.

A NEW YACHT ON THE NORTON SYSTEM.

Editor Forest and Stream:

For some time it has been a pet theory with your subscriber, that where we have great expectations in life, the realizations are generally disappointing; where we have no great expectations the realizations are better. In the latter case we get those delicious bites from the sunny side of a luscious peach. I write this as a prelude to my experiences with the yacht Alista, with which I had proposed to sail singlehanded to Aspinwall, from Panama to San Francisco, and to the further advocacy of the Norton system of ballasting ships with water and air; to explain why, like a man who is struck when he is down, he has not risen before, like Galileo, of old, to proclaim, "*e pur si muove.*"

Unlike yourself, I intuitively believed in Capt. Norton's discovery upon my introduction to it; my observations and practical experiences with the system since have confirmed my belief that he has undoubtedly attained what he claims: a non-capsizable, imperishable and easy-going vessel, a desideratum looked for since the great flood.

Upon launching the Alista at Wilmington, it was gratifying to see how little the weight of ten persons placed on the gunwale of the 30ft. boat depressed her, as it showed remarkable stability. Unfortunately the little craft was built some 120 miles away from the direct supervision of the patentee of the new system, consequently a blunder was made in the flange attachments between her bottom and the bottom of the tanks, where the water is admitted for ballasting purposes, which created leaks in all of them. The unpardonable blunder consisted in omitting to put rivets in holes that had been punched for them. However, in an experimental way, it proved the severest test that the system could be put to. Had the vessel been ballasted in the ordinary way, my pilot and self would have been drowned during our trip on the Atlantic from Delaware to New York. Whereas, the system allowed her to become submerged only until the water showed a little on the cabin floor, the confined air in the crooks of the ballasting chambers along her bilges held her in that position, enabling us to sail as unconcernedly as if things were all right. It was perplexing to discover where the mischief lay, and it took some time to remedy it. In the mean time I have had a delightful cruise to Newport on the Heron, a yacht changed from the iron and lead to that of the Norton system of ballasting. Her former owner found that she had gained 3in. in buoyancy, had lost nothing in stability, and had been transformed from a slow and loggy boat to an active one. *Que voulez-vous de plus?*

Having met an old friend and club mate, Capt. Moody of California, who desires to sail with me, I have concluded to have a somewhat larger boat, 36ft. over all, 12ft. beam, 4ft. draft, built by the Norton Naval Construction Co. The coming yacht, the Surprise, has been designed principally by Thos. Desmond, is well under way at his yard in Hoboken, and will be launched by the middle of September. As it will be too late in the season to carry out my original plan of visiting the upper coast of Maine, we shall sail on the waters between New York and Boston until the beginning of October, and then proceed south to Carthagena, Colombia, touching at all intermediate ports. Returning in the spring to sail north to Canada. While here it will give me pleasure to gratify you and fellow yachtsmen in general who may feel interested and wish to be convinced of the merits of Capt. Norton's excellent and humane invention. The boat may prove worthy of her name, and possibly we may realize that pleasant sensation of the peach aforementioned.

In criticising the new steamship City of New York, one of the dailies states that no ship can be made unsinkable. The writer is evidently not familiar yet with the new system of construction of Capt. Norton, which embraces the compartment feature incorporated in the construction of the steamship. They should have added the peculiar adaptation of confined air in her bilges to make her unsinkable, easier in motion and faster.

E. O. WIENER.

HOBOKEN, Aug. 13, 1888.

On Sept. 14 Alista left Larchmont for New York, to go on the drydock, the holes on the starboard side being plugged up, as the joints were leaking. When in the East River a tug was hailed, as she was making water fast, and she was towed to Jenkins & Tregarthen's dock and tied to a wharf. During the night so much water leaked in that she heeled over on her side until she was partly submerged. On Saturday she was raised and docked, afterward being towed to Staten Island for repairs to the tanks. The accident is ascribed by the friends of the system to faulty construction of the tanks, but it is evident that with the best construction the same leakage is liable to occur at any time from slight damage to the tanks or pipes, or in cold weather from the effects of frost; in fact the last is inevitable unless the boats are hauled up early in the season.

KEEL BOATS IN THE EAST.—The New York *Herald* in spite of its strong partisanship for the old American sloop for so many years, at last comes out frankly in favor of the new Boston keel boats, and at the same time has the honesty to call them cutters and not sloops. In summing up the season it speaks as follows: "The season has been a peculiar one, for though the general public have been less interested in it, yachtsmen have entered into it more heartily than ever and raced the flyers at nearly every opportunity. Even this racing has, however, been confined to the smaller classes, and except the first Eastern race in June, boats over forty-five feet have not met in a match. But if no opportunity has been given to judge of the merits of the larger craft, smaller ones have furnished an interesting study. One thing has been decidedly noticeable—the increase in keel boats of modern design and their success when pitted against the old style of keels or centerboards. The Boston three-beam cutter, with not so much lead outside as her narrower English sisters, has proved a most handy, able and seaworthy, as well as fast, craft, and nothing with inside ballast has been able to touch them in the majority of races. Neither have the centerboards fared any better, and the races show that, though classed separately, the keels have been the ones to lead the fleet." Though all of these facts have been apparent to unprejudiced yachtsmen for a long time, such an acknowledgment as the above adds double force to them. Outside of the open sandbag class the keel has practically driven out the centerboard in the East, and it now remains to be seen how much longer New York will keep in the rear by a refusal to recognize the fact.

POST CHALLENGE CUP.—Bridgeport regattta, Sept. 21. Course, triangular. Start off Bridgeport Light, to and around Fayerweather Island Buoy, to and around Point No Point Buoy to starting point, leaving all buoys on port hand, 10 miles. Weather, fine. Wind, north by west, hauled when off Point No Point to north by east. Tide, ebb half down:

	Length.	Start.	Finish.	Elapsed.
Rival, F. I Hitchcock	21.00	3 03 21	4 49 40	1 46 19
Alice, E. W. Smith	21.10	3 03 02	4 51 30	1 48 28
Surprise, J. Schuitheis	19.06	3 03 00	4 53 20	1 50 20
Mollie Pitcher, McNeil	21.09	3 03 23	Out.	

This course though called triangular is very much flatter than a figure with three equal sides, so that with the wind north or south boats can lay the entire three sides with sheets lifted. The Rival is one of those boats that do best to the windward, and had it not been that by a slant of wind the fleet had to trim aft, for about one mile, she probably would not have been the winner, but the minute the wind hauled ahead she picked up and led the fleet, and having gained first place continued to drop the others, even though the last leg was free. Winner first prize, Rival. handsome silver cup. Regatta committee, editors *Evening Post*. Judges, Geo. Masters, F. A. Brown and T. F. Vose. Timekeeper, E. W. Smith.

SINKING OF A STEAM YACHT.—On Sept. 23, at nightfall, as the steam yacht Adelaide was nearing Whitestone, L. I., on her way from Newport to New York, she came in collision with the Sound steamer Providence, bound for Fall River. The yacht was so badly damaged in the bows that she sank in a few minutes, her captain, W. F. Montgomery, and crew of 7 taking to the boats and boarding the Providence. The latter was badly stove in above the waterline on the starboard bow. She put into Whitestone, but soon resumed her journey, reaching Fall River in safety. For a time there was great alarm among her passengers, one leaping overboard, but being fished out. The Adelaide was built at Mariner's Harbor, S. I., last winter by Capt. Lou Towns, her owner being Mr. L. H. Livingston, of New York. She is a wooden yacht, 80ft. l.w.l. This is her second mishap, as she was seriously stove on the rocks in launching. The details of the collision have not yet been brought out.

NEW YACHTS.—Mr. Kunhardt has sent a complete set of plans for a 30ft. cutter to Pontiac, Mich. This yacht, which is to be used for cruising and summer life on board, has 5ft. 6in. headroom under cabin house, although only 21ft. waterline. There will be 26in. across floor and 20in. sofas, one of which can be extended to 36in. width. There is a desk and library having 2ft. front at after end of sofa on one side and a 2ft. locker opposite. Also liberal arrangements for cooking and a swing berth in the forecastle. About one-half of the cabin roof is in the shape of a large hatch, which can be lifted off in harbor and a tent stretched over the boom. There is also a smaller hatch over the cooking stoves for sea use. The boat has 7ft. 6in. beam moulded, 20in. freeboard, and 4ft. 6in. draft, with 3,000lbs. on keel. Cutter rig, with 450sq. ft. lower sail.

BANTAM—HEEDLESS.—On Sept. 22 a match was sailed between the cutters Bantam, Mr. Woodbury Kane, and Heedless, Mr. Edward Warren, over a course from the Breakwater light out around Brenton's Reef Lightship and return and up the bay, around Rose Island to starting point, about 10 miles. Bantam finished ahead, but was debarred for fouling. A second race was sailed on Sept. 24 over a 12-mile course in a fresh breeze. The times were:

	Start.	Finish.
Bantam	12 42 29	2 59 55
Heedless	12 40 42	3 00 17

RACING AT CANSO.—On Sept. 18 the annual regatta was sailed at Canso, N. S., in a N.E. wind, strong at start but falling later on. The course for class one, 24 to 30ft. l.w.l. was 20 miles, triangular; and for class two, under 24ft., was 11 miles triangular. In class one there were 16 starters, Maud, Mr. Wm. Walsh being first, with Mayflower second, and Star of the Sea third. The prizes were given by the Mackay-Bennett Co., $75, $50 and $30. Hattie S., Mr. Wm. Schneider, won in class two from 5 starters, with Racer second, and Champion third. The first prize was $25.

GRAYLING-SACHEM.—The match between these schooners will be sailed off Newport on Oct. 1, 3 and 5, the stakes being $1,000 per side. The first race will be 12 miles to windward and return; second, 24 miles triangular, and third, if necessary, the same as the first. The time limit is 5 hours. The regatta committee of the N. Y. Y. C. will have charge of the races.

LAKE CHAMPLAIN Y. C.—The annual regatta was sailed on Sept. 21. Fly-Away, Dr. W. S. Webb, being first, and Ripple second in first class. The second class did not finish. A steam yacht race for a cup presented by May Wetmore was won by Nymph, Dr. W. S. Webb. The challenge cup race was sailed on Saturday, Fly-Away winning, while Agnes T. won the second class race.

SOUTHWARK Y. C.—A sweepstakes race for a purse of $50 was sailed on Sept. 9 from Mifflin street wharf around Chester Buoy, by the fourth class tuckups Okey No. 1, Victor P. Dorp, Charles Deputy, A. Rivel and J. L. Nobre. The wind was S.E. and very unsteady. Okey won, with Victor P. Dorp second. A match was made between the two leaders for $50, and was sailed on Sept. 9 over a course from Mifflin street wharf around a buoy off Tacony, Okey winning by 15m. A third race for $100 was sailed on Sept. 23 in a single-reef breeze from N., between the Okey No. 1 and the J. L. Nobre. Okey No. 1 led by 5m. at the turn, but on the beat home against the tide the Nobre caught her, passing her within 200yds. of the finish.

MILL ROCK CUP.—On Sept. 10 the second race for the Mill Rock Cup was sailed over six rounds of a course off Ninety-second street. Only two yachts, Gracie and Julia, started, the times being:

	Length.	Elapsed.	Corrected.
Gracie, Geo. Varian	18.00	1 46 41	1 46 41
Julia, Alf Wright	18.00	1 50 19	1 50 19

Gracie won by 3m. 38s.

DORCHESTER Y. C., 106TH REGATTA, SEPT. 22.—With a strong wind and heavy sea only 3 yachts started, all in the 6th class, the course being 7½ miles. The times were:

Psyche, Frank Gray	1 50 45
Mirage, John Dearborn	1 51 46
Nora, G. B. Bennet	Withdrawn.

Psyche wins also one leg for the Soley challenge cup.

NEW YORK AND BOSTON.—It may be due only to the dullness of the season that no Eastern yachts were present to put a little life into the so-called regatta of the New York Y. C. last week, or it may be that Eastern yachtsmen have not yet recovered from their pique over the action of the New York Y. C. in changing the plan of the cruise; in any event it is plain that New York is not yet in a position to be independent of Boston, even in ordinary regattas, much less in the event of a foreign challenge.

GLEAM.—This steam yacht has been entirely rebuilt at Wordall's yard in Baltimore, being lengthened at both ends and a bowsprit being added; also two pole masts. The bulwarks have been raised 16in. at the bow, with a netting rail and netting above them. The cabins have been painted in light tints with gilt borders. A new cylinder has been also put in. The name of the yacht will be changed by her new owner, Mr. John M. Flagler.

Answers to Correspondents.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

BAKER'S

Breakfast Cocoa.

Warranted *absolutely pure Cocoa*, from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

THE LATEST OUT.

UP THE NORTH BRANCH;

A Summer's Outing.

By CAPT. CHAS. A. J. FARRAR. An interesting story of a hunting and fishing excursion through five hundred miles of Maine and Canadian Wilderness. 336 pages, 8 full-page illustrations. Uniform with the other volumes of the "Lake and Forest" series. Price $1.25. For sale by JAMAICA PUBLISHING COMPANY, Jamaica Plain, Mass.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by

RÉV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

FOREST AND STREAM PUBLISHING CO.

ANSWERS TO CORRESPONDENTS.

THE TOBIQUE MURDER.

THE well-known tendency among certain classes to seek a palliation of the offenses of those who are charged with capital crimes is naturally manifesting itself in behalf of the two men Trafton and Phillipine, now on trial in Andover, New Brunswick, for the murder of Mrs. Howes on the Tobique River. The press dispatches tell us that there is a strong undercurrent of sympathy for the accused. This sentiment is based on a feeling that the assassins were driven to their deed by irritation at the unjust usurpation of certain natural rights of fishing; and that they were infuriated because victims of a vicious system of leasing, which robbed them of their privileges, for the benefit of rich anglers from abroad. They were "village Hampdens," making a stand for liberty, reason their sympathizers; and this argument is said to have so much weight that a verdict of manslaughter instead of murder is looked for.

It appears, however, that the trouble between the accused men and the Howes party had nothing to do with the leasing of fishing rights. Phillipine was enraged against Major Howes, because the Major had ordered him away when spearing salmon. The spearing was unlawful. The law prohibits it. No one is permitted to spear. The law applies to all waters and to all persons. Lessees of streams are forbidden to spear. When Phillipine was engaged in taking fish by this mode he was violating a law common in its application to all. In wreaking his revenge on those who had interfered with him in his lawless salmon spearing, therefore, he was not asserting the exercise of natural privileges that had been taken from him and given to another. He was not vindicating the rights of natives against the usurpations of outsiders.

Whether a poverty-stricken family should go hungry for the lack of a speared salmon is one question, but to manufacture sympathy for these men on the pretext that their crime partook of the nature of an act of self-defense against a tyrannical system of river leasing is clearly not admissible.

FISHING RIGHTS.

Editor Forest and Stream:

I inclose a clipping from the Boston *Globe* of July 30, which explains itself: "*To the Editor of the Globe:* Has the public a legel right to fish, by wading in, or from a boat on a natural stream or pond, leased or stocked by private parties, if it can be done without trespassing on the grounds owned or leased by said private parties?—ANGLER. No; it's the fishing that constitutes the trespass.—PEOPLE'S LAWYER." "Angler" is not quite satisfied, however, and would like the editor to answer the following questions:

First—Is it true that fishing constitutes the trespass?

Second—If so, does the owner of the land bordering one side of a brook, own to center of said brook?

Third—Is it trespassing, or illegal to fish from a highway bridge, crossing a "posted" brook?

Fourth—If a "posted" brook empties into tidewater, is it trespassing to ascend the stream in a boat, and fish from same?

Fifth—Is there a common law governing such cases, or are they decided by State legislation?

An answer to these questions through the columns of the FOREST AND STREAM will confer a favor upon the undersigned, and also will be of interest to others. ANGLER.

The property which exists in game under the common law has been fully explained in these columns. While a man may have absolute ownership of domestic animals, he can have only a qualified property in those of a wild nature while they are alive. The reason is that wild animals in captivity have a tendency to return to their original surroundings. If they escape the property in them is lost. When killed, however, they are the subject of absolute property. The owner of land also has a qualified property in game while it is on his land, and has the exclusive right to pursue and take it. If a trespasser captures or kills game it becomes at once the absolute property of the land owner, who may recover it by legal proceedings if necessary. The land proprietor's property in living game grows out of his ownership of the soil, and terminates when the game passes off his land. This rule includes the ownership of and the right to take fish. Under the common law the right of fishing depended upon and was co-extensive with the proprietorship in the soil, unless specially extended by government grant or by a long-continued use which had ripened into a prescriptive right. It follows that to determine the common law right of fishing in any case, we must ascertain the ownership of the soil under the water.

It was a settled principle of the common law, that the owner of lands on the banks of fresh-water streams and rivers, above the ebbing and flowing of the tide, had the exclusive right of fishing, as well as the right of property opposite to their respective lands to the middle of the stream.

"Where a person owns the whole of the soil over which a water course runs, in its natural course, he alone is entitled to the use and profits of the water; and where a person owns only the land upon one side of a watercourse, his interest in the soil, and his right to the water, extends to the middle of the stream. Concomitant with this interest in the soil of the beds of watercourses, is an exclusive right of fishery; so that the riparian proprietor, and he alone, is authorized to take fish from any part of the stream included within his territorial limits."

To such an extent did a fishery attach to the land under the common law, that it was held to be a tenement, and subject to dower, so that a woman was entitled to one-third of the profits of a fishery of which her husband died seized. An action in ejectment would lie for its recovery, and a person who injured a fishery could be sued for trespass.

The right of fishing in streams and unnavigable rivers was subject to the qualification of not being so used as to injure the private rights of others; and it did not extend to impede the passage of fish up the stream by means of dams or other obstructions.

A person might have an exclusive right of fishing in a navigable river or tide water by special grant from the crown, but not otherwise. On the other hand, in rivers not navigable (and in the common law sense only rivers in which the tide ebbed and flowed were deemed navigable) the owners of the soil on each side had the right of fishery. It was an exclusive right and extended to the center of the stream opposite their respective lands.

Such was the common law, and generally it may be said to maintain throughout this country, though modified more or less by the laws of the various States.

The opinion which seems to prevail in the minds of many people that in this country the public may fish anywhere, was refuted by the United States Circuit Court in Rhode Island as far back as 1828. An action was brought against the defendant for trespass for entering the plaintiff's land and taking fish from his millpond. The principal question was whether the plaintiff, who had a long lease of the land, had any property in the fish, and the court held that, all the land having been leased to the plaintiff, the water and the fish therein passed to him as incidents to the lease.

About the same time the Supreme Court of Massachusetts delivered a similar opinion. The defendant came upon the plaintiff's land and caught fish from his pond. When an action for trespass was brought the defendant offered to prove that the pond in which the fish were caught was merely an enlargement of a stream of water produced by the plaintiff's dam; that the stream was a natural stream large enough for the sustenance of fish; and that the inhabitants of the vicinity had from time immemorial taken fish in the pond and stream, without any interruption from the plaintiff or any of the previous owners. But the court held that "the law does not take notice of the right of fishery in small streams and rivulets any further than to secure to owners of the banks of such streams the right of taking fish therefrom. If the stream is not navigable for boats or any water craft, the owner of the land can exclude every one from the right of fishing; and therefore it is that the Legislature, in establishing the right to occupy such streams for the use of mills have made no provision in regard to fish, except where there is communication with the sea or salt water, through which fish from that element have been wont to pass into the fresh-water streams and ponds to cast their spawn and multiply their species. There is no such general right as is suggested by some of the facts proposed to be proved. The custom is not one that could be sustained in law; for a custom to take anything from another's land, or for a profit *à prendre*, is not a lawful custom."

Our correspondent writes from Massachusetts and an answer to his inquiry must be found in the laws of that State. At an early date the Massachusetts Legislature assumed over its fisheries a control that cannot be questioned now. It has modified the common law in important particulars. The language of Chief Justice Parker, in an early case, is: "It has been argued that, as the fishery in rivers not navigable belongs to the proprietors of the banks of the rivers, the Legislature had no constitutional right to divest them, and vest the franchise in the inhabitants of the town through which the river passes; and upon the principles of the English common law, the argument is well founded; but the constant course of legislation upon this subject from the first settlement of the country, we think has qualified this right, so far as to subject it to the control of the Legislature in the manner and to the extent it has been immemorially exercised. The colonial, provincial and constitutional legislatures having exercised the right for the public good of regulating the fisheries in the several towns, the owners of several fisheries and of dams across rivers held their property subject to such regulations as the Legislature should from time to time, for the preservation of fish, prescribe."

A colonial ordinance gave a common right of fishery in all "great ponds," that is, ponds of more than ten acres in extent, unless appropriated by the Legislature, or towns acting under the authority of the Legislature. This right has been maintained to the present day, except that "great ponds" are now ponds of more than twenty acres in area.

The Massachusetts statutes provide that the fishery of any pond, more than twenty acres in area, shall be public, and all persons shall be allowed reasonable means of access to such ponds for the purpose of fishing.

That the riparian proprietor of any pond, the area of which is not more than twenty acres, and the proprietor of any pond or parts of a pond created by artificial flowing, shall have exclusive control of the fisheries therein.

That a riparian proprietor may, within the limits of his own premises, inclose the waters of a stream not navigable for the cultivation of useful fishes, provided he furnishes a suitable passage for migratory fishes frequenting such waters.

That fishes artificially propagated or maintained shall be the property of the person propagating or maintaining them. Fines ranging from one to fifty dollars shall be imposed upon any one who, without the permission of the proprietor, fishes in that portion of a pond or stream, or other water in which fishes are lawfully cultured or maintained.

Judge Endicott thus construed the statute relating to great ponds: "It was the evident intention of the Legis-

lature in enacting it, that the riparian proprietors of ponds not more than twenty acres in extent, and the proprietors of ponds created by artificial flowage, shall have exclusive control of the fisheries therein existing, and that in great ponds which in their natural condition exceed twenty acres in extent, but which may have been increased by artificial flowage, the owners of the land covered by such increased or artificial flowage have no control of the fisheries existing in such pond. Such ponds are public unless specially granted by law or leased; and, if leased, the lessee has the exclusive right to the fishery therein during the continuance of the lease."

The common law rule that the right of fishing in tidal waters depended upon the ownership of the soil, has been changed in Massachusetts. Judge Gray, now a Justice of the Supreme Court, ruled as follows: "The right of fishing in the sea or rivers in any town of this Commonwealth, either for swimming fish or for shell fish, is a public right, which belongs to all the inhabitants of the town, unless restricted by acts of the Legislature or of the town, inconsistent therewith or by prescription; and a grant by the Legislature to a town of the title in the bed of a river, or in flats covered by tide waters within its limits, does not convey by implication the right of fishing to the town as its own property; for the right of fishing, not being an incident to the right of property in the soil, but a public right to take the fish, which, whether moving in the water or imbedded in the mud covered by it, depend upon the water for their nourishment and existence, is unaffected by the question whether the title in the land under the water is in the commonwealth, in the town or in private persons."

The following statute protects cultivated tidal streams: The owner of an unnavigable tidal stream where the same empties into salt water and in which fishes are lawfully cultivated or maintained, shall have the control of the fishing thereof within his own premises, and also beyond and around the mouth of the stream so far as the tide ebbs, provided it does not ebb more than eighty rods. Any one who fishes within these limits will be subject to fine and forfeiture of his boat and fishing apparatus.

No stream is navigable within the meaning of this statute, above the point where, on the average throughout the year, it has a channel less than forty feet wide and four feet deep during the three hours nearest the hour of high tide.

But the Governor, with consent of the Council, may arbitrarily fix the tidal bounds of streams upon recommendation of the Commissioners of inland fisheries. He may also prohibit fishing for a period not exceeding five years, except in an inclosed, unnavigable stream.

Bearing in mind that, except so far as modified by the law of Massachusetts, the common law is in force, our correspondent should have no difficulty in answering his inquiry, or any similar question which may arise. It is still true that the owner of land bordering on a brook owns to the center line of the water. Cultivated fish, by statute, are the property of the person maintaining them, and without his consent, it is illegal for any person to take them, whether he fish from a highway bridge or his own boat.

But in Massachusetts the right to control and regulate fisheries to a considerable extent, has always been granted to towns and cities. And it would be well for our correspondent to inform himself what control has been assumed or regulations made under this power by the town where the water in question is situated, and also investigate the records and rules of the Fish Commissioners. Should he desire to read more fully the authorities from which we have quoted, they are cited below:

3 Kent's Com., 412-416; Angell on Watercourses, § 61-89; Smith v. Miller, 5 Mason, 191; Waters v. Lilley, 4 Pick. 147; Vinton v. Welsh, 9 Pick. 91; Commonwealth v. Tiffany, 119 Mass. 304; Proctor v. Wells, 103 Mass. 216; Public Statutes of Mass., Chap. 90.

Is it not about time to jail some of the inhuman brutes who advertise themselves by throwing dogs into Niagara River? Two dogs are now dragging out a miserable existence and gradually starving to death, on rocks where they managed to scramble, below the suspension bridge. If there be a society for the prevention of cruelty to animals in that part of the country it would do well to put an end to this practice, if not for the sake of the hapless dogs at least for the good repute of the region.

The Story of the Connecticut Sportsman who prosecuted a butcher for displaying partridges out of season, and when the case came to court discovered that they were stuffed birds hung up to play a game on him, has been brought out for its usual round of the press. It starts this time as a telegram from Waterbury to the New York *Sun*. It will go like the man with the patent cork leg for many years to come.

The topic of the comparative merits of the flesh of wild game, as prepared in camp, is an enticing one; and now that a Boston correspondent has had his say, it is to be hoped that others may give their gustatory tastes and preferences.

The Sportsman Tourist.

AN OUTING IN LAKE COUNTY.

East Oakland, California.—For several months in the early part of the year I had derived much pleasure from a proposed trip in July to Lake county. All the minute details had been worked up and the programme for the two weeks' vacation mapped out time and again, and discussed with a zest known only to those whose hearts during their moments of relaxation turn to nature for rest as unerringly as the needle to the pole. But like the course of true love it is seldom that undertakings of this description are carried out exactly as originally intended. The companions that I had selected and who had entered into the scheme with great enthusiasm while it was yet but a remote contingency began to weaken as the time drew near, and on the morning of the 9th, the day before our intended departure, the last one I had counted on showed the white feather, leaving me still determined, but with all my well digested plans irretrievably shattered.

Having occasion during the day to visit the office of my friend B., I casually mentioned the dilemma I was in, deploring at the same time the probable necessity of going alone. B.'s business cares were of such a nature that I had not dreamed of his being able to leave the city longer than a day or two at a time, although I knew him to be a fine shot and an enthusiastic sportsman. My surprise and pleasure may therefore be imagined when he quietly remarked: "Go ahead, old fellow, and I will join you in Lockport on Thursday evening, armed and equipped as the law directs."

Eight o'clock the next morning found me on the ferry-boat bound for Tiburon, where I took the N. P. R. R. for Cloverdale, the nearest station to Clear Lake. The road followed for many miles the beautiful Russian River valley, with its vast tracts of vineyard and orchard under such perfect cultivation, that at times, for long distances, we seemed to be passing through a garden, until noon, when we arrived at Cloverdale, where we took dinner and prepared for a forty miles stage ride over the mountains. This method of travel is almost always tedious to one accustomed to the speed and comfort of a railway, still, in spite of the dust and heavy grades we managed to get considerable enjoyment out of it. The stage was well filled, but not uncomfortably so, and the passengers being for the most part pleasure seekers were in high spirits, and endeavored to be as sociable as possible. The scenery was picturesque, and the road, which wound for the most part up a long cañon through which ran a sparkling tributary of the Russian River, was as good as could be expected in a section so rugged.

Sometimes the clear murmuring waters of the stream were so close beneath us that we could see the trout darting away at our approach, and at others, although two or three hundred feet above, we could almost have jumped into it from the top of the stage. The possibilities suggested by a glance into the depths below us were of a decidedly unpleasant character, but the knowledge that the six horses drawing us had not only been carefully selected, but were familiar with every foot of the road, and that the drivers were among the most experienced and skillful in the State, did much to reassure us. Game, as might be expected, did not seem to be particularly plentiful in the immediate vicinity of the road, although on account of its extreme ruggedness it was destitute of dwellings, except at the relay stations. A few quail, rabbits and squirrels were seen, and late in the afternoon two deer ran up one of the ridges a short distance ahead, giving us a fine view of them before they disappeared in the brush. Timber of any great size was decidedly scarce, except low down in the cañon, and it did not appear that there had ever been much on the mountainside, which was mostly covered with manzinita, chemisal and buckeye brush from three to ten feet high.

Twenty-five miles out brought us to "Tyler's," where we changed horses, got some sweet milk—unadulterated—and a glimpse of a narrow valley where about fifty acres were in grass and grain, being the first land not set on edge we had seen since leaving Cloverdale. A large two story white house with good barns and fences gave evidence of thrift and prosperity, as Tyler's, besides being a stage station, was also the half-way house for the freighters between Cloverdale and the Clear Lake settlements. On one of the buildings I noticed at least a score of bucks' heads nailed to the wall, ranging all the way from a spike to a five-pointer; and a fine, trouty-looking stream just below the house seemed to indicate that if one were looking for good hunting and fishing he would be as likely to find it there as anywhere.

About sunset we descended into Lake Valley, but it was after 9 o'clock when we rolled into Lakeport and were dumped out upon the veranda of the Mound Cottage Hotel, covered with dust, tired and hungry. A good supper and a refreshing night's sleep in one of the little cottages near the main building (and from which the hotel derives its name), placed the writer in good condition again, and early the next morning he sallied forth to take in the surroundings. I had never visited Lakeport before, but from the frequent descriptions, both heard and read, took it for granted that I knew all about it before I started, and of course found everything different from what had been expected. The imaginary lake had waters of a cerulean hue, was of great depth and was surrounded on all sides by mountains heavily timbered, and pitching steeply into the lake or down to a narrow, pebbly or sandy beach, something, for example, as nearly like Tahoe as possible. The real lake was found to be quite as long as Tahoe and perhaps nearly as wide in places, but here the resemblance began and ended. Its waters were hardly as clear as those of the average mill pond, and the mountains in the few places where they did reach the lake were destitute of timber, and covered for the most part with scrubby chapparal. Its extreme depth was said to be about one hundred feet, and the shores for several miles on either side of the town sloped gently off into broad shallows with a mud bottom margined with a fringe of tules varying in width from a few feet to a hundred or more yards. But for all that, the panorama spread out before us as we sat upon the veranda that lovely morning was full of quiet beauty. In front a lake, its board expanse unvexed by a single ripple, glistened like an immense mirror in the morning sun, not a sail or boat of any description could be seen upon its placid bosom; here and there a gull or loon with a great blue heron slowly winging his way to the further shore, and nothing more. To the left, in a little grove just outside the line of tules, the white tents and wagon covers of a party of campers were visible, the blue smoke from their camp-fires climbing lazily up through the trees as they prepared the morning meal. To the right the town just awakening with activity, and beyond small farms with charming cottage homes nestling amid groves of fruit and forest trees, and flanked by fields of yellow grain or green alfalfa, rolled away for miles to the bush-clad hills.

Just across the lake to the south, and eight or ten miles away with the whole of one side in view, lay Uncle Sam, the highest peak in the county and the refuge of its last elk. A special interest, sad though it usually be, attaches itself to the last lone survivor of a vanishing race; and although the elk are not yet quite extinct throughout the State, a few, I believe, being still left in the extreme northern counties, a brief mention of this one may not be out of place. For two or three years after all the rest had been killed or driven away, this one, a mighty bull, still lingered in the fastness of old Uncle Sam, and by his wonderful sagacity baffled the most untiring hunters, until they finally gave up all hope of capturing him except by chance. One bright moonlight night a rancher living near by was watching a salt lick on the side of the mountain for deer, when the elk put in an appearance; he became suspicious before reaching the lick and turned toward the bush again, but in so doing exposed his shoulders to a deadly shot, which the rancher was not slow to avail himself of. Mortally wounded the great brute managed to escape, and although a diligent search for him was made, he was not found until late in the fall, when a bush fire that laid bare the mountainside revealed the mouldering remains of the forest king.

Having two days at my disposal before B. would arrive, I determined to devote a portion to fishing in the lake, which was said to abound with trout, pike, perch, carp and catfish, the three first indigenous; the others, placed there a few years ago, had increased with wonderful rapidity.

At the end of one of the streets, whose terminus was the lake shore, lay a barge with a small cabin upon it, occupied by a fat old ex-sea captain named Bundy, who kept a number of boats for hire; and wending my way there I engaged a light Whitehall boat for the afternoon. A small barefooted boy, who seemed to be the old captain's major domo, after surveying my "layout" of spoons and flies for awhile in silence, confidentially informed me "them things was no account there" except in the spring, and suggested angleworms as a much more killing bait. Now, the piscatorial lore of the small boy, especially when native born, has always commanded my most profound respect, and a small bribe soon put me in possession of a yeast-powder box half full of the coveted worms; and a few moments later I was skimming over the waves before a vigorous white ash breeze with a troll over the stern. A pull of two miles along the shore not being productive of a single bite, I jointed my rod and tried the fly; but cast after cast bringing nothing to the surface, I then had recourse to the worms, which were faithfully used in every way and at every depth until nearly sunset, when thoroughly discouraged, I started to return without a single fish. Large carp had frequently broken water near the boat during the afternoon, and on my way in I passed an Indian in a dugout who tried to sell me three or four fine ones that he had gigged, but being out for sport only I declined the investment.

The little major domo was waiting for me when I reached the barge, and observing my disappointed expression remarked by way of consolation that there would be fine catfishing in that vicinity about dusk. What a fall was there, my countrymen! After a journey of 150 miles to drop from lake trout to mudcats. After supper I strolled down to the lake shore to enjoy a cigar in the cool of the evening, when I had an opportunity to verify the boy's statement. A bare-legged youth of about the same age as the major domo was standing upon a half submerged scow with a rig which as well as I could make out in the twilight consisted of a toad tied to the end of a string, and he was landing catties 10 to 14in. long every five minutes. From the surface of the lake that evening arose myriads of little white midges about the size of "no-see-ums," almost obscuring the vision, but troublesome only on account of their prodigious numbers, which filled the eyes, ears and mouth; and swarmed into the town so thickly that in some cases they extinguished the lights in the houses. They were evidently very short lived, however, and with the slightest breeze disappeared as if by magic.

Being satisfied by this time that there was no fishing in the lake in July worthy of the name, I put up my tackle, and the next morning took a ride out through an exceedingly fertile section under a high state of cultivation, called Scott's Valley, and then spent the remainder of the day making arrangements for our trip into the mountains. Learning from the residents that although deer were quite plenty it was almost useless to hunt them at that season without dogs, as they were lying during the day in the thick brush and feed mostly at night, I made immediate inquiries and was fortunate enough to secure the services of a guide named Frank Rippey, who possessed all the requisites necessary to make the trip both pleasant and successful. He knew the country perfectly, and owned an excellent deer dog and two horses that had been accustomed to packing in the mountains for years.

B. arrived that evening on the stage, and early the next morning we purchased such supplies as it was deemed necessary to take with us—a side of bacon, some coffee, sugar, potatoes, salt, pepper, etc., with tinware and cutlery for the mess box. Owing to the short notice he had received, Rippey was unable to arrange matters for so long an absence from home before afternoon, and it was nearly 3 o'clock before he drove up in a light wagon to the outfitting store where we awaited him. Blankets, provisions, dogs and guns were hastily tumbled in, and in less than half an hour later we were out of town on our way to the hills.

Our destination was Tieta Creek, about eight miles from Lakeport, where it was expected good hunting and some trout would be found. A six-mile drive brought us to the nearest point approached by the road, and driving the wagon into the brush, we packed the entire load except dogs and guns, upon the horses and began to climb the steep mountainside that formed the divide between us and the creek. The rise was about 1,000ft., the brush

very thick and the trail discernible only to one familiar with the route, and as the writer, who had not attempted anything of the sort for at least two years, was decidedly soft, with B. in a similar condition, our ascent was slow and laborious, so that the sun was just sinking out of sight when, covered with perspiration and puffing like a brace of porpoises, we attained the highest point of the trail, from which we could look down upon the little alder grove where we intended to make camp. The descent was a matter of very few moments; in some places the horses set their feet and slid eight or ten yards at a time, while we eased ourselves down by grabbing the bushes as they passed us; and it was still quite light when we crossed the stream and entered the grove. We expected that night to sit down to a supper of bacon, potatoes and bread, having shot nothing on the way out but a jack rabbit, and these are seldom fit to eat in summer; but while Rippey and the scribe removed the packs, staked the horses and started a fire, B. jointed his single-handed split-bamboo and began casting in a small pool only a few yards from camp. Four fine fish rewarded his efforts before the bacon began to brown, and although they seemed but a mouthful to three hungry men, they made a very acceptable relish and a foretaste of what was to follow.

Making camp in the mountains of California at this season, when there is no rain and but little dew, is usually a matter of the simplest character; no shelter is necessary, and after we had gathered a little dry wood for fuel, and clipped three or four bushels of the small wiry twigs of the scruboak that makes a bed almost equal to a spring mattress, we sat down by the fire to smoke and lay our plans for the morrow. We were not particularly tired, as the day's travel had been light, but at 10 o'clock we turned in with the determination to make a drive for deer at daylight in the morning.

About four o'clock Rippey gave a yell that brought us out of the blankets in a jiffy under the impression that the camp was being attacked by hostile Indians. Our frugal breakfast was soon dispatched, and before sunrise we were climbing, Indian file, the side of a ravine that intersected the Pieta cañon nearly at right angles. Close to our heels followed the two dogs, of whom it is perhaps time some mention were made, as they are rather important auxiliaries. Tell, a very handsome red setter, was owned by B., and had been brought up more for his health than anything else, for although a fair bird dog, he proved to be perfectly useless as a deer exterminator, except when the deer was well cooked.

Grip, the other dog, owned, raised and trained by Rippey, was certainly one of the most remarkable dogs I had ever known, and deserves a more extended notice. He was a large black and tan hound with a cast of melancholy upon his countenance that would have excited the envy of Don Quixote himself. During the seven days we were out, after hunting on the high ridges a mile or more from water, where the low scrub furnished but little protection to the parched ground, I never saw him weaken or require a reprimand, although upon one intensely hot day we hunted from 5 in the morning until 4 in the afternoon. Hunting was with him a strictly business proposition, and when out he wasted none of his energy in any other direction. We usually separated and kept along parallel ridges 200 or 300yds. apart, with the dog working in the gulch between us, where the deer were generally lying, which gave us better opportunities for a shot than any other method. From these elevated standpoints the dog was seldom out of sight of all of us for any great length of time. Fresh tracks could be seen everywhere, but he took no notice of them, unless it was quite certain the deer was close by, and after taking a trail he never gave tongue until the deer was routed out of his bed. He never seemed to lose knowledge of the position of his master, and would relinquish the chase and return, whenever the deer succeeded in getting hopelessly beyond range unwounded. Sometimes when pressed by thirst beyond endurance, he would go to the nearest place for water only to return immediately; and at others, when the distance was too great, he would come to one of us and mutely plead for a drink from our canteens, which, it is hardly necessary to say, was never refused as long as a drop remained. If a deer was crippled by a shot too badly to run, he would lie down close by it, giving an occasional howl until we arrived; but should it attempt to escape, he sprang at once for its throat. When in camp he spent nearly the whole time, night or day, stretched out at full length upon the ground, only raising his head to be fed, seldom getting up even then. One cause for this, no doubt, was because the hot gravel of the hillsides wore out his feet. He took no notice whatever of the setter, never attempting either to play or quarrel with him, and I never saw him seek a caress even from his master, although when such were voluntarily given, he gave faint signs of pleasure by a slight wag of his tail and a lowering of the ears. Begging your indulgence for this digression, my only excuse being that these traits of character, which all came under my own observation, seemed so remarkable to me when all found in one dog that I could but believe they would interest others also, we will return to the hunt.

B. was the only one of the party who had never yet killed a deer, and being of course exceedingly anxious to do so, much speculation was indulged in as to his chances for the buck fever. It was in the height of this discussion and just as we were nearing the highest point of the ridge about a mile from camp, that old Grip, who had quietly slipped away at some stage of the proceedings, opened up in full cry in the gulch to our left, and a few moments later a deer was seen sneaking along through the brush on the opposite slope about 150yds. away. So cunningly was this maneuver being executed, with cramped body and head close to the ground, that had we been in a less advantageous position he would no doubt have escaped unnoticed as many subsequently did. Unfortunately for the writer, he carried on this occasion a shotgun, but B. and Rippey unlimbered their Winchesters and began pumping the lead at him with a rapidity that reminded me of an infantry fusilade. Having nothing else to do I stood watching the puffs of dust that rose from the ground as the bullets struck above, below and behind the deer, which, upon finding that he was discovered, had thrown off all secrecy, and with head and tail up was bounding over the brush in magnificent style, until he reached the top of the ridge, where the last we saw of him was his white flag disappearing over the further side. It was pretty certain that he had escaped untouched, still it was rather a close call, and I was gratified to observe that B. had sent his bullets about as near the game as had Rippey himself. No blood, but no buck ague either, which argued well for the future.

We crossed over to where the deer was last seen, and half an hour later Grip, who had driven him somewhere off into space, returned, and after a short rest stole off again. The next raise was an old doe and one or more fawns, which he bounced out of a clump of bay bushes. They took down the gulch straight for the creek, followed by the dog, who was, however, recalled by Rippey before he got out of hearing.

Scattered here and there all over these hills were small thickets of bay, generally about 10ft. high, which we discovered to be favorite resorts of the deer, especially the bucks, but whether they choose them on account of their superior shade or the pungent aroma of the leaves we could not determine. Grip seemed to be well aware of this fact and never failed to investigate every clump he passed. The next two deer that were started neither of us got a glimpse of, and the fifth was a doe that, like the others, headed at once for the creek. It was now drawing along toward noon, and the vertical sun was beating down upon us with a temperature that was more than torrid; the heated ground scorched our feet through our heavy shoes, and when we sat down we had to thrust them into the bushes for protection. Not a breath of air was stirring and not a sound could be heard, for every living thing except ourselves seemed to have fled from the stifling heat. Rippey and I had stripped to our shirts before leaving camp, but B., who in this respect reminded me of Captain Good, in "Allan Quartermain," had insisted upon wearing his shooting jacket and a pair of very heavy canvas leggings. The leggings were all right, as they protected his legs from rattlers and that villainous white thorn that scratched us unmercifully through our thin clothing, but the perspiration from his well nourished body trickled in rivulets down into his shoes and saturated his jacket in the back and beneath the arms until those portions looked as if they had been dipped in the creek. Poor Tell, the pampered pet of city life, was by this time a total wreck, although he had done nothing for the last two hours but follow, whining at our heels and scratch holes in the ground beneath the brush to lie in the moment we stopped. He now obstinately refused to put up with what to him must have seemed inexplicable if not idiotic conduct, and sneaking off into the thicket, we saw him no more until we returned to camp. Old Grip himself was suffering greatly, especially in his feet, and we began to feel a little anxious as the prospect of another day on bacon and bread loomed up unpleasantly prominent. All this was talked over as we lay cooling ourselves in a clump of bay, and we determined to beat one more gulch and return to camp. Grip, who was fully alive to the importance of getting meat, having eaten nothing since leaving Lakeport, as his appetite had not yet reached bacon, seemed to understand the conversation, or at least the situation, and started down the gulch the moment we were in motion. We could see him occasionally as he went nosing carefully about in the narrow opening, but it was some time before his long, melancholy howl warned us that he had again sighted the quarry, and we all sprang for a knoll that overlooked that portion of the gulch.

"Make a killing now or no meat to-day," shouted the writer, as a forked-horn broke cover and started up the opposite slope about 200yds. away. Both rifles cracked simultaneously, scoring a clean miss, as neither had the range. B. got in the next shot and the deer stumbled and fell, with the bullet through his neck; but regaining his feet, he ran along the hillside until he had nearly reached our own altitude, when a bullet from Rippey's rifle struck him in the back and he dropped in his tracks. Then we hurrahed, threw our hats in the air, shook hands all around, and indulged in other antics supposed to be indulged in only by schoolboys and lunatics, keeping one eye, however, all the time on the spot where he fell to make sure that he didn't get up and "light out" again. After our enthusiasm had somewhat subsided, we started to cross over, and in our eagerness to go as directly as possible, got into the most infernal thicket of chemisal and whitethorn we had yet encountered We must have been a quarter of an hour getting through, and when we finally emerged were sorry-looking objects. Generally speaking, B. rather prides himself on his *distingué* appearance, but now he seemed to be considerably toned down; his shooting jacket was still in fair condition, but the space between that and the top of his leggings was a mass of rips and tears, the least of which was six inches long, while his face and hands looked as if he had just escaped from an encounter with a pack of enraged cats. Rippey, no doubt remembering the adage that "the longest way round is the nearest way home," had taken a more circuitous route and was there in half the time, getting the deer nearly ready for packing before we arrived. The deer was still alive when R. came up, but unable to arise, and Grip lay quietly by, not offering to molest him so long as he made no effort to escape. The old veteran's face wore its usual sad expression, but I fancied there was a twinkle in the deeply sunken eyes that I had not before noticed.

On our way to camp Grip ousted two more deer, which ran within shot, but in both cases we were passing through thickets from which we could not extricate ourselves in time to get into position, and they passed us unseen; besides, we had all the venison we wanted at present, and made no special effort to intercept them. Packing out deer in such a country as I have described, with the thermometer high up in the nineties, is not considered a very exhilarating amusement by the initiated; and although this one would not dress over 65 or 70lbs., and the distance to camp was less than two miles, we were all fagged out when we got there. Tell met us at the grove with many demonstrations of joy, but every hair on his back bristled with fright as he inspected the load his master was carrying.

After eating a light lunch and fairly stuffing the dogs, B. and the writer spread a blanket in the shade, where we smoked and dozed away a couple of hours, while Rippey hung up and finished dressing the deer and built a little smudgy fire beneath it to drive away the bluebottles, as it did most effectually. The aspect of the camp at this time was one of extreme serenity; the apprehended meat famine had been averted, the surfeited dogs had silently crept away into cool spots by the water, and nothing disturbed us but the discordant notes of three or four jays, which had discovered the venison and were screaming about it in the tree above us, until a couple of charges of No. 10 shot reminded them suddenly that they had pressing business elsewhere, and we saw them no more. A few house flies were the only insect pests that invaded our retreat; no mosquitoes, no gnats, no fleas were there; even the yellow jackets, which in the southern counties attack freshly-killed meat like wolves, were absent now. Near us lay two or three "Seasides" we had taken from our valises, but we found that we did not care to read. The soft murmur of the creek fell upon our ears in a drowsy monotone, as with half-closed eyes we watched the smoke of our cigars float slowly upward, and the cawing of a distant crow was all the sound we heard or cared to hear. It was the lotos eaters' afternoon, such a one as we and thousands of our brethren have dreamed of when, after a day of toil, we have laid weary head on pillow and fallen asleep with the din of business still ringing in our ears. Alas! that it should so often prove only a dream.

On the mountainside opposite, and at least 180yds. away, stood the trunk of a dead pine about 150ft. high, straight and bare as the stripped mast of some great Indiaman, with nothing near that approaches it in height. Above it two large foxtail hawks were sailing in circles, and one finally lit upon its top. B. raised lazily up, reached for his rifle and leaned against the butt of the tree we were under, dropped upon one knee and fired. The bullet struck the bird fair in the breast. A puff of feathers like the sparks that radiate from a bursting rocket flew out in every direction, and the bird fell like a plummet, stone dead ere he reached the ground. It was one of the finest shots I have ever seen made in the woods.

Late in the afternoon, when the shadows from the tall peaks to the west began to steal in upon us, although there were still two good hours of daylight, we jointed our rods for a cast among the trout. B. took up the stream and the writer went down. The stream was evidently one of considerable size in the spring, but was now so diminished that it could be crossed dry shod on the rocks at frequent intervals. The bush was very thick, but within a half-mile of camp several good pools were discovered, out of each of which, by the aid of a shortened line and a coachman for a lure, I took from two to eight trout, running from five to eight inches in length; and returned before dark with thirty-four fish in my basket. I found B. already in camp; he had not been quite so successful; but as we had more than enough to supply our wants we were all satisfied. During our absence Rippey had burned down a big bed of coals, over which, suspended by forked sticks, hung several fat ribs of the deer, and the appetizing smell mingled with the aroma from the steaming coffee-pot arose like incense to our nostrils, and assured us that a hunters' feast was at hand. More than fifteen years had elapsed since the writer, then an unmarried man, had sat down in the woods to a meal like this; but indelibly engraved upon the tablets of his memory were recollections of many a similar scene where he had taken a part, in the years long ago. Since then children have grown up around him, whose heads reach his shoulders; the gray hairs have intruded thickly among the brown; and he has followed a life so different that but little except those memories remains to remind him of that shadowy past.

Rippey had spent several years hunting, from the Mexican line to Puget Sound, and had an extensive fund of forest lore and anecdote; and as B. and the writer also had some reminiscences of their own, it was nearly midnight when we sought the blankets. In common with several other hunters I have met, Rippey asserted that the ibex was found in this country and declared he had seen one killed in the Blue Mountains of eastern Oregon. Its scimeter-shaped horns, two feet in length and bending backward, could, he believed, have belonged to no other animal.

The next day being Sunday we had thought to spend the entire day in camp reading and mending our shockingly dilapidated clothing, but the gaunt condition of our horses made a change for their sake advisable; and we concluded to move about three miles down the Tieta to its junction with another somewhat larger stream, with the hope of finding better feed. We did not hurry matters, however, the late hours of the preceding night caused a tardy awakening, which was followed by a leisurely breakfast; and it was 10 o'clock before the horses were packed for the start. There was a faint trail down the cañon, but it was so thickly overgrown that Rippey who took the lead was obliged to make constant use of his heavy sheath knife to clear away the overhanging branches.

Arriving at the forks we unpacked for a couple of hours and began the search for grass, but with very poor success. The few places where good feed had grown that season were already cropped close, and only a little water grass remained. We were also surprised at the few trout to be seen in the larger stream—a mystery which was explained a day or two later—and after enjoying a bath in one of its deep sandy pools, we concluded to push on two miles further up the mountains to High Valley, where there was a farm with nearly one hundred acres of cultivated land at an altitude of about 3,000 feet. The mountain was steep and the day very warm; but we were over the summit before sunset, and following down a ravine came to a little glade with plenty of good grass for the horses, sufficient water for our purpose, and a grove of scrub oak about a mile from the ranch; and here we made our camp during the remainder of our stay in the mountains. We were now in a region celebrated for its tall peaks and big bucks, those great fellows with the rocking-chair heads we had been so anxious to see once more. All B. asked was a "fair show" at one of them anywhere within one hundred yards, and he would attend to the rest.

We had a fire kindled while the stars were yet shining the next morning; and by sunrise were up with dog and guns nearly to the top of a peak just west of our camp. The view from this point was magnificent. Eight or ten miles to the east lay Clear Lake with the towns of Lakeport and Kelseyville in view. To the south, about twice as far away, an immense fog bank that had drifted in from San Francisco Bay flooded the whole country like a sea; its crest, from which some of the higher peaks emerged like islands, and its northern boundary were as clearly defined as those of a tidal wave. In the west, far below us and many miles away, lay the town of Hopland, in a beautiful valley on the Russian River, celebrated for the superior quality of its hops. From this direction, during this and the succeeding days of our

stay, we heard at intervals the muffled explosions from the blasts in the tunnels, by which the railroad was seeking an entrance into the valley on its way to Ukiah.

The brush was not so thick in this section as at our first camp and the dreaded white thorn was rarely met with, but the clumps of bay were plenty, and here and there, especially near the tops of the ranges, could be seen small groves of pines. In some places hundreds of acres had been burned over; in some cases everything destroyed, and in others the brush killed, but only partially consumed, leaving a snaggy skeleton residue that furnished no shelter for game and wrought destruction to all clothing not of the very strongest material. Many of these fires, it was stated, were set every fall by hunters from the valleys in spots where the brush grew so tall and rank that the deer could not be dislodged even by the hounds.

While we were surveying this grand landscape the warning howl of the indefatigable Grip came to us from a gulch, near the head of which we were standing. Rippey and B. ran down the left and the writer the right hand ridge to intercept the deer if possible, should he attempt to cross over. I had reached a point opposite the dog and stood awaiting further developments, when a magnificent five-point buck, much the largest and finest that we saw on the whole trip, bounded out of the bottom and began to ascend the other slope. Rippey and B. had separated, one going on either side of a large knoll toward which the deer was now running. Neither of them could see him, and I was too far away to warn them of his approach. I could see B. walking slowly along in one direction and the deer rapidly approaching in the other, the swell of the hill preventing their seeing each other until within 30yds.; and at this instant B. got his first sight, as the deer came loping gracefully over the brush, which at this point was not over two feet high. It was a situation B. had never before been placed in, and for that matter never got into again, at least on that trip, and his astonishment was apparent even at my distance. Up came his rifle, however, like a flash, and he fired, seeing the deer and no doubt the front sight, but probably nothing more. Straight on came the splendid creature until within ten yards—I actually thought he was running right over him—when B. put in his second shot. How he managed to make a clean miss at that distance is one of those problems "that no feller can find out," but he did all the same, although he afterward solemnly assured me that the deer at that range looked larger than an ordinary house. The deer at the second shot turned back toward the gulch; but before he disappeared in the tall brush B. sent two more bullets after him, the last at a distance of about eighty yards, but without turning a hair with either shot. Rippey, on hearing the rapid firing, hurried around the knoll on the back track, but arrived too late to take a hand or even see the deer, while the writer, who had witnessed the whole affair, sank to the ground in a state of hopeless imbecility. When I met B. nearly an hour later, he inquired if I had a good heavy pair of boots on, and if so, to apply them vigorously, but I thought he had been punished enough already, and only hinted that it looked as if he had been suffering from a slight attack of the buck-ague at the time. Three or four more deer were started in that vicinity, but none nearly as large as this; and about nine o'clock Rippey, from his stand in the ridge killed a fair-sized buck, but our joy was seriously moderated by the loss of that proud monarch of the hills. B., like Rachel, refused to be comforted, and even the writer could not help contrasting the magnificent horns the lost venison carried with the rather scrubby antlers of this one.

Returning to camp before noon we took lunch, and saddling the horses we paid a visit to the ranch. It was a summer resort, with several cottages scattered about the main building, occupied by guests from San Francisco and elsewhere, who, in addition to the pure air of this high altitude, preferred the home life, with the delicious fruits, the bountiful table and the Jersey milk, to all of which they had free access, to the more aristocratic medicinal springs in the country, where there was far more style than comfort. Mr. and Mrs. Randolph, who own and manage the place, received us most cordially, although entire strangers, and the apples, cherries, black, berries, etc., furnished us a treat we shall not soon forget. There were several young ladies stopping there, but unfortunately for B. the thread in camp had entirely given out, and he had been obliged to mend the later rents in his apparel by tying them up with strings; this prevented him from making so favorable an impression as usual. As for the writer, his age and disreputable appearance generally left him entirely out of the race. Having plenty of horses to use, the people took frequent hunting and fishing excursions, especially the latter, being less laborious; and from the stream in which we took our Sunday bath they had already taken over 1,300 trout that season. We returned to camp before sunset, bringing in a big sack of apples and a can of butter.

The next day was oppressively warm and we remained most of the time in camp attending to the meat, reading, etc. It was evident from the number of deer we started the day before that it would be an easy task to average one a day; but we were not there to see how many we could kill and had no desire to get more than we could readily dispose of. One thing that struck me as rather singular was the scarcity of "varmints;" for notwithstanding the number of deer, there seemed to be neither cougars, wildcats, coyotes nor foxes. The chickens at the ranch wandered off into the brush unmolested; and we saw in the hills a small band of sheep so wild that they never came down into the valley, and a number of them had already been shot like deer. In one deep cañon we saw the track of a small bear; and there was some coon sign on the streams, but nothing more that came under our observation. Rattlesnakes had formerly been very plenty, but the bush fires had destroyed most of these, and we killed but one, which although of only moderate size sported twelve rattles and a button.

Late in the afternoon time began to hang a little heavy on our hands and B. and I strolled down into the valley with our shotguns, where we had plenty of sport with the quail of both species, doves and rabbits; but as we all preferred venison for the table, they were wasted even after being dressed, and we killed no more of them.

Wednesday morning found us upon the hills with the dawn, and ushered in the longest, hardest and most exciting hunt of the trip, lasting from 5 A. M. until 4 P. M. Nine deer were started that day, four of which were seen within range, two fine bucks running the gauntlet down a gulch under a crossfire of about twenty shots from both sides at 200yds. range as they reached out for the tall timber at about a two-minute gate. Both escaped untouched as far as we could discover and it was 3 o'clock before we made a kill, getting a buck slightly larger than the last. Not needing it for present wants we packed it upon a horse and sent it to the Randolphs in return for the favors they had shown us.

Thursday morning did not find us climbing the mountain to any great extent. The long hunt of the day before made us loath to roll off the blankets much before the lark, and the fact that there was still plenty of meat on hand no doubt served to intensify the sweet do-nothing disposition that seemed to pervade the whole camp. B. and the writer had been gaining rapidly that which we were most seeking, renewed health and vigor; the tallest peaks had now no terrors for our toughened sinews, and the jaded look we had brought from the city was entirely gone. The change wrought in B. especially was wonderful. The first day's hunt, although an easy one compared to those we took later, had used him up completely; his stomach was also badly out of tune, and he had brought along a pot of beef extract and a package of a particular kind of tea, without which he believed life would be insupportable. These had been thrown to the winds some time before, and a big chunk of roasted venison with a tin pint cup of strong black coffee were now his usual beginning of a "square meal." His vigorous constitution had quickly rallied under the fostering influence of this wild life, until Rippey himself could not wear him out in a day's tramp among the hills. It is but doing him justice, however, to say that he had discarded his shooting jacket after the first day, and had found a woolen shirt and pantaloons ample for all purposes.

Late in the afternoon we took our guns and went out for a short hunt, started three or four deer and banged away half a dozen times at two running bucks at long range, with no visible result except to increase their speed, returning empty-handed to camp at sunset. Old Grip manifested his displeasure at this arrangement in a very marked manner, but whether it was because he was reluctant to return without meat, or simply disgusted at our poor shooting, we had no means of ascertaining.

On Friday, after visiting the ranch and bidding our friends good-bye, we broke camp and started for Lakeport. The shortest cut to the wagon was over two ridges heavily covered with brush, and while slowly traveling Indian file along the crest of the first, a spike-buck, the only deer we saw on the trip not started by the dogs, was seen slowly ascending the other slope. Rippey and B. were in advance of the writer, who was leading one of the horses with the other following, and they both fired at once, sending two bullets through his body; he ran a short distance and fell. Rippey and I then stopped to keep him in sight, while B. hurried down the slope to finish the killing should it be found necessary. Just as he approached the deer caught sight of him, and by a desperate struggle regained his feet and plunged headlong down the steep hillside, but in an instant Grip had him by the throat and succeeded in stopping him within fifty yards. We soon had him in a condition to pack; and arriving at the wagon without further adventure we reached Lakeport about dusk, much to the satisfaction of B., the dusk part I mean, who instantly disappeared in the nearest clothing store, side-tracking from there to a barber's shop, from which he emerged gotten up in style that would have passed muster on Market street.

My story is now nearly told. Warm as the weather was we determined to take the horns of the spike-buck home to our families, which we succeeded in doing by placing them in flour sacks and hanging them up in the stage and cars, reaching the city with them in good order the next evening. While we had not exterminated deer in that section, having killed only four and shot at about twenty, we returned in excellent heath and spirits, and with pleasant memories of the trip for many days to come. B., it is true, had a touch of pathos in his voice and a far away look in his eyes whenever he spoke of the big buck of High Valley, but that was to be expected and was certainly pardonable. One of the most remarkable features of that region was the perfect exemption we enjoyed from all kinds of insect pests, neither of us receiving a bite from anything of the kind during our stay in the mountains.

I cannot refrain from saying a word about the people we met there. The treatment we received at their hands both in Lakeport and High Valley was of the most friendly character, and the many unsolicited and unexpected favors of which we were the recipients, always bestowed in the most unostentatious manner, incline me to place them among the most hospitable people I have ever met.

SNAKES AND THEIR YOUNG.

Editor Forest and Stream:

It is asserted by residents of the Rocky Mountain regions that mountain lions climb trees. I have never seen a mountain lion climb a tree. But have not I as much right to say "it is a mistake," mountain lions do not climb trees, as has Mr. Starkweather to assert, then, because he has never seen the act. young snakes do not take refuge in the stomach of their mother?

The largest portion of my life of forty years has been passed out of doors, in the fields and on the broad plains of Iowa, with dog and gun, by the sides of her streams, and in the forests lining the banks of her creeks and rivers, beginning at a time when the home of the farmer was the exception and not the rule. I also spent several years on a prairie farm in this goodly State, at a time when the prairies, the fields and the sloughs and streams abounded in snakes of all varieties and species. Familiarity with them bred a contempt and roused a desire to know something of them, their ways, their habits, likes and dislikes, their fears and confidences. Consequently I improved every opportunity to observe them, and soon came to handle all the fangless species. Had I seen but once the brood of young snakes take the way to fancied security through the mouth of the parent I would willingly admit my liability to be mistaken, but it is a performance that I have witnessed time and again.

The first time I observed the operation I was uncertain as to where the little streaks of snake had gone, because although I was sure they had taken refuge inside their mother, she took herself into a hole in the ground before I had opportunity to satisfy myself that I could believe the evidence of my own senses, as I knew the said evidence was sometimes defective. It was not long afterward that I witnessed the same grand entry again, and in this case captured and killed the parent and found in her more than twenty-five little reptiles. I have been close enough to the actors in this little side show to see the belly of the parent gradually distend as one after another of the infants disappeared down the throat of their harbor of refuge. There is no action on the part of the receptacle of the swarm of wrigglers. She simply opens opens her mouth, and the little snakes glide down her throat with apparently as little effort as they would down a hole in the ground.

It is Mr. Starkweather, not Miss Wolcott, who is mistaken. I have seen both watersnakes and gartersnakes perform this action, but never saw any other variety do it.

DUPONT.

IOWA CITY, Iowa.

Editor Forest and Stream:

I have read with great pleasure and interest in your valuable paper the pros and cons of "Snake Swallowing Young," and though not a reptologist nor an expert in names, genera, species, etc., I take the liberty to contribute my mite in regard to facts. Some ten years ago I came suddenly on one of the striped black and yellow snakes, so common in New England, and was very much surprised to see three or four small snakes run down its open mouth. I kept quiet, and the old snake being not especially alarmed, two small heads suddenly appeared at the mother's mouth and tried hard to get away. A year or two after my brother and I came across another snake of the same kind, as I remember, but am not certain. She was very much swollen in the middle, and when about to investigate this, she became alarmed, raised her head, opened her mouth and some small snakes ran in. Disposing of the mother we began to dissect her, when two small snakes came from her mouth and we also found forty other snakes inside in every degree of development, from some almost ready to go off on their own account, to those apparently in embryo. In what part of her anatomy these were I do not pretend to say. That some kind of snakes open their mouths and the young run in there can be no doubt. Whether or not, as Mr. Starkweather says, "there is misconception and misrepresentation about them," in this vicinity all kinds are killed, for the simple reason that they kill so many toads, and one toad is worth many snakes to a farmer. In fact here we have found so many snakes, either with toads inside them or else in the act of swallowing them that we have almost come to the conclusion that toads form their chief food and one will last a snake some time.

STEEL.

OTTERS IN EUROPE AND AMERICA.

THE American who reads the angling and fishcultural literature of Europe cannot fail to notice the frequency of otters in the thickly populated districts of most of the countries which have such a literature, and to wonder why this animal, which is practically extinct in the older settled portions of America, should be a pest in the salmon and trout streams there. Even in the mountainous wilds of the Adirondacks the otter is so rare as to surprise the trapper, and in Maine it is not at all plenty; but the German fishculturists have to contend with this fish-eater and reckon it among their foes which must be guarded against or destroyed. The German papers, especially the *Fischerei Zeilung*, publish weekly accounts of the capture of otters in the preserved streams, and print advertisements of ingenious devices for their capture.

The English *Fishing Gazette* says: "The increase of otters on the streams of the Cleveland and northeast Yorkshire district, and the desire for this kind of pastime has led Sir Charles Legard to set up a pack of otter hounds, and show some sport. The pack has only recently been formed, and so far as it has gone has provided much pleasure already. Last week it paid a visit to the lower waters of the Rye, and the streams running into it, and a bit of exciting work was shown to a large field. Just before reaching the bridge a drag was struck, and the hounds gave mouth. At once some very spirited hunting began. The music of the hounds and horn, and the shouts of the onlookers made the dale very lively for a time, and though the hounds did capitally, and were well handled by the huntsman, the capital fifty minutes up and down stream ended in the fish-poacher eluding his pursuers. The chase had been a hot one, but the otter which was a fine dog one, succeeded in getting into deep water, and by diving hid himself and disappointed his enemies. After this the Rye was hunted to its mouth. The old Derwent was there struck into, but no more sport was seen, and the pack turned homeward, reaching the village of Old Malton about four o'clock. Although the field was much chagrined that a kill could not be chronicled after such a day, they had the satisfaction of knowing that a fine quarry exists for a future day, which anglers will be glad to learn will be shortly." In another issue of the same journal is given a spirited description of an otter hunt in the Border Esk by the Carlisle otter hounds, in which a dog otter of 27lbs. was killed by the hounds after an exciting run and a sharp fight.

In Scotland the "river poacher" is also plenty. A correspondent of the *Hawick News* says that he has fished the Tweed and its tributaries for over sixty years, and he never saw otters so rife as at present. In all broad Scotland a pack of otter hounds does not exist, although otters are plentiful, especially in the southern rivers. If a pack could be got together, there is no doubt but splendid sport of a particulary popular description would be the result.

When it is remembered that these districts are well settled ones, and that in America a pack of otter hounds might range through hundreds of miles of almost primeval forest without striking the trail of an otter, it is evident that there must be a great difference in the habits of the people, for the otter once ranged over all the populous Eastern States of America, and is now found only in the more thinly settled portions, and in the wilds of the northwest and of British America. Here the trapper and the hunter precedes the settler, and the beaver, the otter and the wolf are exterminated, or so thinned out as to be a rarity to the farmer's boy, before the district is at all populous, and the mink and the

muskrat are all the fur-bearing animals left for him as a source of revenue in the winter.

The streams of Great Britain suffer from the otter and salmon poacher, the latter having a knowledge of the ways of the otter to make a successful trapper, and it would seem that the price of fur would be a temptation to him to alternate poaching with trapping. The German poacher, if many exist, is not as enterprising and persistent as the one bred in the British Isles, and in consequence is not as well versed in the ways of the wild animals, and consequently the otter thrives along the salmon streams and invades the ponds of the fishculturist in such numbers as to be a nuisance.

Perhaps the reason why otters are so rare in the settled portions of America may be due to the fact that every boy may roam the country with a gun as soon as he is strong enough to carry one, and no living thing escapes if he can kill it.

THE FOOT OF THE WOODDUCK.—Cold Spring Harbor, N. Y., Sept. 18.—*Editor Forest and Stream:* Any man who has held a live woodduck in his hands knows the scratching power of this semi-arboreal bird, and in the young of a few weeks old this power is intensified by the needle-like sharpness of the nails. A bird of a few hours old will climb up a smooth board 10in. high, for I have repeatedly seen it. My breeding boxes are of rough boards, and, from the hole down, are 8 to 10in. deep, and both the woodducks and the mandarins climb out of them. This season I saw them climb the 10in. base board below the wire netting several times, and from what I have seen I doubt the truth of the theory that the old bird brings the young from the nest on her back. My birds climb out and tumble down, but then the boxes are not more than 2ft. from the ground, while I have seen wild birds nesting at 20ft. or more. I never saw the wild birds come from the nest, and a man might spend a lifetime in the woods and not see it; yet it seems a high fall for a little bird. This is what I started in to say: I have seen woodducks rest on a small wire, grasping it and remaining there for some minutes. When I confined my birds by a lath or picket fence they did not often escape, never by climbing it; but last season I divided an inclosure with a wire netting in order to separate two flocks, and they walked up it, sat on the top as long as they pleased, and dropped on the other side, visiting as often as pleased them. The wire was No. 19, the top selvage was doubled and twisted, and few would think that a duck's foot could grasp it. A hen cannot stand on it, although my tumbler pigeons do, and in future where I use wire netting to confine woodducks there will be a projecting top-rail.—FRED MATHER.

THE SEWELL.—Cleveland, Sept. 29.—In FOREST AND STREAM of 27th inst. is an interesting article by Dr. R. W. Shufeldt, a continuation of the "Rodents," in which he remarks that he has not met with a good illustration of the "sewell" or "showel" of the Nesqually Indians. I would refer him to John Keat Lord's "Naturalist in British Columbia," Vol. I., page 346. Here he will find an excellent cut of the animal with its surroundings, also a good description and life history of this rodent. By the way, how few know the charming writings of Mr. Lord, a bosom friend of the late Frank Buckland; both now are studying nature on some other shore.—DR. E. STERLING.

WOODCOCK.

AT this year's early season, about twilight in the evening and for an hour or so after, in the open fields, we heard and saw many pairs of this delightful game bird, uttering its lonely cry, resembling in sound the word *peek, peek, peek, peek.* After calling them four or five times, we have watched them rise from the ground with a twittering noise of wings, loud and distinctly heard at this still hour of the day or evening, and turning round and round in a spiral manner, ascend until they are beyond the reach of hearing, when, if you will retain your position motionless for a space of thirty or forty seconds, the bird will be heard in his passage down again with a *chip, chip, chip, chip, chip* cry, and will presently repeat this spiral ascent in the air and retrace his course to the ground until he alights at nearly the same place from which he took his departure, and thus on. He resumes his plaintive note, *peek, peek, peek, peek, peek,* at intervals of twenty or thirty seconds. After continuing on the ground about two minutes he again ascends. This loving exercise he keeps up for an hour or two during the early spring evenings, after which he is silent for the night.

The birds have thrived well, notwithstanding the past wonderful wet May, and are now at this present writing [June] paying due natural attention to their numerous broods. Methinks I hear a gentle whisper, dear reader, and you ask secretively, where are they to be found? No July murder for you, sir. In nut-brown October we will tell you freely where these cocks of the wood and their broods are to be shot at, and not till then shall living soul know the deep thicket recess haunts of those noble game birds.

A few observations on the woodcock and its habits, the choice between the use of cocker spaniels or springers and pointers and setters in his pursuit, may not be uninteresting to your vast number of young sportsmen. That the woodcock emigrates, or more strictly, migrates, from North to South and *vice versa*, as the temperature of the season changes, is well understood.

When they arrive they generally take up their abodes on the sides of knolls or hillocks, from which intersected springs of water issue. The weather at that season being somewhat inclement and attended more or less with frost through the night and early in the dawn, ere the glint of the genial rays of the morning sun warms the day, the small thickets, contiguous to which are living springs hat keep open not withstanding the cold, frosty night air, are the favorite resorts of this noble game bird.

Worms and insects being his food, his feeding ground at this season is on the verge of warm, springy places not bound by frost, so as to prevent his penetrating with his long bill, with which nature has furnished him to search for this species of provender. It has been said, and supposed by many, that this bird subsists by suction. This erroneous idea may have been imbibed from his "borings," as the holes he makes in soft ground are turned, or from the circumstance of no food being found in his crop or intestines when the bird is opened. When the woodcock thrusts his long bill into the ground and thus comes in contact with small worms or insects, he is enabled by means of his semi-serrated beak to squeeze the dirt out of his mouth and then swallow his food.

It is certainly possible that by boring he may lay hold of and draw from the ground worms and insects, but his general mode of obtaining them and feeding is as follows. Having pierced the ground with his bill and shaken the surrounding earth, all the worms in the immediate vicinity make their way to the surface and are immediately swallowed. This mode of obtaining food may be exemplified by the effect produced by forcing a stick or spade into the ground and moving it about so as to shake the earth; the worms in the vicinity or within the influence of the motion will quickly appear on the surface, manifesting great alarm and eagerness to escape from danger. This has been a common practice with us when desirous of obtaining worms for angling; instinct, no doubt, teaches the woodcock this mode of procuring food. A writer in the tenth volume of the "Annals of Sporting," in the "Ornithological Helps and Habits of Birds," speaking of the woodcock and the manner in which he obtains his food, says: "The eye is not called into use, for, like the mole, they actually feed beneath the surface, and by the sensibility of the instrument which is thrust in the soft earth, not a worm can escape that is within reach. The nerves in the bill, as in that of the duck tribe, are numerous, and highly sensible of discrimination by the touch. A woodcock in our menagerie very soon discovered and drew forth every worm in the ground, which was dug up, to enable it to bore; and worms put into a large garden pot, with earth five or six inches deep, are always cleared by them next morning, without one being left. The enormous quantity of worms these birds eat is scarcely creditable; but really it would be the constant labor of one person to procure such food for two or three woodcocks. * * * The woodcock seems to crush the worm to a jelly as it passes up his bill; and either from this circumstance, or from extraordinary powers of digestion, whatever the bird swallows seems to become almost instantaneously that exquisite table delicacy known by the name of 'trail.' If a woodcock be flushed while feeding, in the very act of swallowing a worm, and be shot at a distance of thirty yards from the spot from whence he ran, the worm will be found changed into a jelly-like substance—the 'trail' we have just mentioned."

Although a woodcock no doubt feeds in the day time, when his place of shelter furnishes a supply, and is so sequestered as to preclude much chance of being disturbed or discovered while moving about in his search for food, yet the periods more appropriated to this purpose are the evening and the early part of the night, together with the morning and a little before the dawn of day up to daybreak. At twilight in the evening he leaves his place of abode and roams over meadows, low soft ground, newly-plowed fields, gardens and grass lawns in search of worms, which at this silent hour come out of their hiding places to partake of the cool air and the refreshing dew of the coming night. It is not supposed he feeds throughout the whole night; having satisfied himself he retires to rest; but at dawn of day is again on the wing, and proceeds in quest of food as early as he can discover it. If the place where he has fed affords him proper shelter he will generally continue there throughout the day, otherwise seek the protection of some cover close at hand. Be this as it may, he always secretes himself before the sun is in full view.

Having thus written our observations of forty-eight years' experience with the nature and habits of woodcock, a few ideas on the selection and choice of dogs to hunt them will not be out of place at this season. A proper strain and breed for the youthful field sportsman to choose lies with either the pointer, the setter or the sprightly spaniel, cocker or springer, in his pursuit of the secluded woodcock—the hermit of the wood. Hence we will now advance a few thoughts in relation to the preference and choice between the pointer, the setter and the spaniel, sometimes called cocker or springers. When used in woodcock shooting it has been our good fortune through many seasons of hunt pleasure to shoot over all three breeds. We have had springing spaniels of our personal importation, breeding and training, that were—

> As good
> As e'er brushed through a cover,
> Or dashed through and hunted a wood.

Sefton pointers and English and Irish setters we have bred and broken, and have been in possession of numbers as high-mettled as ever ranged o'er stubble or quail plain, and as staunch as ever came to point; and to the Irish setter a decided preference is due in the pursuit of all different game birds except woodcock. But the question before us, and now in hand, is to which the choice is to be given for woodcock shooting. We will preface our reply to this question with the supposition that all are well broken, of good true breed and under the most perfect command.

This granted, we confidently and unhesitatingly select the cocker or springing spaniel as undubitably qualified to show and give most sport in close cover hunting. He is more industrious, searching every bush and skunk cabbage, and every hiding place a cock bird would be likely to seek and retreat to. The cocker spaniel's diminutive size and thick coat of hair combined enable him to crawl through thickets and under briers which neither setter nor pointer well can or will encounter. Besides his mode of examining the ground is more minute on his search for game. With his nose down and incessantly at work, nothing lying within the compass of his beat can well escape his wonderful vigilance. The pointer and setter, whose modes of hunting over cleared open grounds or fields, or by beating through cover, are similar, travel with longer stride and more rapidity; they depend more on scenting the bird and drawing on him by the aid of their noses than by minute search and ferreting their game out. If, therefore, it happens to be a bad or close scent lying day, or the birds withhold that odor which enables the dog to wind the cocks at some distance—a faculty which nature in her wisdom has gifted them with to protect their hunted lives—or if it is sultry, with little air, and the dog becomes overheated, he will be liable to pass the bird, and we have known many run over or passed in this way by first-class pointers and setters, while spaniels going over the same ground after them found the birds and gave tongue immediately to a double shot.

The sole advantage to be derived from a pointer or setter—and that alone constitutes his superior worth and gives him any preference over others of his species—is the art of pointing game, drawing and stopping without disturbing it when found until the sportsman approaches sufficiently near to avail himself of taking a shot. This stopping and drawing up, or pointing, is seldom required in woodcock shooting, especially in thick cover, then the object being rather to drive the birds out than to wait for a point; the cover being thick, a dog is little seen, and were he to come to a stand, it would be ten to one that the voice of his master, which is continually employed in encouraging him to force himself through the thicket, would cause him to flush the bird. Thus, that staunchness which constitutes excellence in the open, is really a drawback when hunting the woodcock.

There is, besides, something cheering in the eager note of the cocker spaniel, for they ought all to give tongue, not only when they spring a bird, but when they come upon its scent or track where the cock has run or crept away; this we term questing. When the dog opens with a kind of eager yelp, something between a yelp and a distinct bark, it is time to place your thumb on the cock of your fowling piece, if a hammer gun, and to be ready, for you may next expect to hear the whirring of the bird on wing and the sprightly spaniel in chorus.

There is certainly something more exhilarating in the spaniel's merry little voice than in the still monotony of the setter or dumb staunchness of the pointer.

> "My spaniels ne'er babble, they're under my command,
> Some range at a distance, and some hand in hand;
> When a woodcock they flush, or a partridge they spring,
> With heart-cheering notes how they make the woods ring."

The spaniel is much easier to teach than either pointer or setter, more especially than the latter, which is apt to be wild, and requires continued practice in the field. But you may be told that this wide ranger is not the kind of pointer or setter calculated for woodcock cover shooting, that he ought to be slow, one that will hunt close to hand and range within gunshot, examining every bush and place of concealment carefully, and will stand for an hour on point to his bird if required. But you miss that beautiful bugle call which we get from the cocker spaniel, notifying us to be ready and look sharp as the cock bird crosses the open and says, "Now's your time, shoot!" Your pointer or setter is as dumb at his post at this important crisis as a sentinel awaiting the coming of the guard relief. We admit one exception, and that was the grand and unmatched Sefton liver and white pointer Milo, the property of Uncle Tom (Mr. Thomas Atwater Jerome, of Locust Valley, L. I., then living in this city at the Astor), who many years ago was shot by a miserable scamp in New Jersey, when on this fellow's barnyard dung heap standing a point at quail. This noble dog fell a victim to his grand hunting instincts. A slow toddling setter or pointer may do for a silk-stocking Warwickian sportsman, who would not object to an umbrella in the field, or an old "has been" of '83. Our patience would not keep pace with such slow movement. A beat of two hours in warm weather generally takes the hunt out of a dog of this character. How different our little springing spaniels, all life and animation to the very last.

The close coming October woodcock season reminds me of a hope indulged, if I shall be enabled by its expected arrival, to report the shooting qualities of one of the "100" W. R. Pape new Birmingham exhibition challenge sporting fowling guns, sold at £10 net. None are now to be had as the limit of one hundred was passed upward of a month ago. The gun in all respects is made of the very best material; this good maker of Newcastle-on-Tyne turns out for custom order only. CANONICUS.

NORTH NEW YORK, Sept. 17, Antietam Day, 1888.

WHICH IS MOST SAVORY?

BOSTON, Sept. 28.—*Editor Forest and Stream:* I have been interested in Dr. Shufeldt's paper in your last issue and in his account of his experience in eating the flesh of the beaver. It brings up an old question often discussed by me with guides and sportsmen around camp-fires in the Maine woods, as to what is the most savory meat found in the forest. The upper lip of the moose is generally accorded this honor, and any one who has eaten it when properly treated by a cook will admit its very high claims. For myself, for a long time I thought nothing could surpass caribou steak or the flesh of the same animal properly corned.

I had, however, heard so much from T. W. Billings, of Brownville, Me., a guide of mine on many a trip, of the excellence of baked beaver that I reserved for it a possible vote in its favor. Billings has been a mighty hunter, having in his day slain hundreds of moose, deer and caribou. As an example of his prowess I will mention that at last accounts his tally of bears numbered seventy-one. Here, therefore, was a man whose opinion ought to be of value, and all the more because his wife has the right knack for cooking game.

On one of our trips we were fortunate enough to kill a good beaver, about three years old, Billings thought, and weighing 45lbs. He has killed them weighing 80, but this one was all I cared to "tote" seven miles, as I did, to our canoe. It was duly stuffed and baked by Mrs. Billings, and I am free to declare that it was a *little* the most toothsome piece of game I remember to have tasted. I should like to hear from those of the fraternity who have eaten beaver what they think of it. May not age and condition of the animal have much to do with its flavor? also, the peculiar trees on the bark of which it has fed? I have often eaten the flesh of the muskrat, and when the animal is young and tender and properly cooked, can pronounce it good, though not to be compared with beaver.

In this particular discussion, if one follows, as to the best meat found in the wilderness, I would exclude, for the time at least, the question of birds and fish.

EBEEME.

SOME MORE BEAR STORIES.

Editor Forest and Stream:

Speaking of bears in Oxford county, Maine, reminds me of the daring of a country boy who once killed a good specimen with a shotgun. He lived in the town of Rumford. The incident was some thirty years ago, and as the gentleman is now living, and can vouch for the statement, I may be excused for giving his name. It was Charley Martin, and he tended the rope ferry across the river at Rumford, the ferry which has been looked upon as a novelty by a great many sportsmen who have visited Richardson Lake via the Andover route. Perhaps some of those who read the FOREST AND STREAM may have seen Charley. Well, the bear shooting created a good deal of excitement at the time and people rode in for miles to see the beast. Charley was quite a hero but the shooting was none the less daring and dangerous. Charley's parents lived down the river road a mile or more below the litttle village of Rumford Point. Behind their dwelling there is a very steep hill. It would be called a mountain in a less mountainous part of the country. It was claimed at that time that bears came down that hill in times gone by, and across the intervale in front of the house, for the purpose of crossing to Androscoggin, for there the river is very narrow. How true this may be it is not certain, but at all events this bear came down the mountain, but he did not cross the river. Charley saw the great black fellow lumbering down the hill, and somehow he conceived the idea that he would go through a pair of bars—they call them a pair of bars in that part of the country. The bars were an opening in a stump fence not far from the house Charley ran to the house for the gun, keeping behind the fence as much as possible. The rest of the family were all away from home at the moment. He took the gun, but there was no time to reload it. It had been loaded with shot for crows a few days before. The young fellow crawled with the gun in his hands to the opening in the old stump fence. As he crawled he took the precaution to roll a loose ball into the gun, which, country boy like, he happened to have in his pocket. He reached the opening none too soon, and he had calculated correctly in thinking that the bear would crawl through the bars on his way to the river. The courageous little fellow lay with the gun to his shouder, cocked, and his body completely hidden by one of the great pine stumps of the fence. He had to wait but a moment before the old bear put his forefeet and forward part of his body through between the bars. The bear was not more than six feet from the boy, and somehow he had not seen or scented him. In Charley's own words, "When I saw the spot under the old fellow's foreleg, I pointed the old gun at it and pulled! The old bear tumbled over dead. I jumped up and ran for the house. I never thought till afterward what would have happened to me if the old gun had missed fire. I only thought of shooting a bear." The beast was very thin and poor; it was in the month of May. It only weighed some 250 pounds, but the frame was large enough to have weighed 400 or 500 in the fall.

But this is a story of a light bear for Oxford county. One was killed in the same county last season of considerably more weight. It seems that a couple of men somewhere in the town of Albany cut down a "piece of trees" the year before, and, getting what the forest destroyers term "a good burn," they decided to plant the "piece" to corn. They planted the corn in the spring, and after cutting out the weeds in June, they did not go near it again till late in the season. It was some distance into the woods, and one day they decided to visit their cornfield. They started off with an axe, and a gun to kill partridges in case they came across any. They reached the cornfield. There had been something of a growth of corn there, but, oh! what havoc! Something had torn it down, trampled on it, and eaten off all the ears! It did not take long to find out the cause. They soon started an old bear from his siesta under the shade of the fence. A bear, but, oh, so fat! He could run no more than Barnum's hippopotamus. Indeed, he actually fell down and whined when he saw that he was to be hard pushed by the men. The one with the gun was about to shoot him, when the other suggested that it would be something to kill a bear with an axe, and accordingly they approached the beast and beat out his brains with the axe. He weighed all that a bear should weigh that has had a field of sweet new corn to feed in to his satisfaction. Such is the story that I hear. I cannot vouch for the truth of it, as I can for the light bear shot by the boy. But it is certain that bears are really plenty in Maine, and there is a chance for the sportsman of courage there. But the coward, who must have a helpless deer driven by dogs into the water for him to shoot, had better not try bear hunting in Maine. The bear might show fight

SPECIAL.

Editor Forest and Stream:

While Martin Murphy and Michael Fitzgibon were fishin Bass Lake (a beautiful sheet of water in Hastings county, Ont.,) they were surprised at seeing a large black bear swimming in close proximity to their canoe. Having no other arms than their fishing poles, which, however, differed very much in weight from these rods generally used, they attacked bruin vigorously, belaboring him over the head until he was apparently either dead or "knocked out." They then proceeded to drag him into the canoe, which was no easy task, even though the boat was much larger than usual. The work was nearly completed when bruin himself came to their assistance and pulled himself into the canoe. In the panic which followed the canoe upset, precipitating all three into the water. Fitzgibon had had enough of the sport and started swimming for the shore, but Murphy climbed on one end of the upset canoe, the bear immediately taking possession of the other side. Murphy shook him off, but bruin stayed with him and climbed up again. This operation was repeated three times, and Murphy becoming tired and the bear seeming as fresh as at the beginning of the fight, the man started for the shore after his companion. Mr. Robert Powers, however, heard the hubbub on the lake, and supposing it an ordinary case of an upset came out to Murphy in his canoe without any firearms. On seeing the true state of affairs he returned quickly and borrowed a rifle from Wm. Moore, a lumberman, who was luckily at hand, and killed the bear, which all the time stuck to the canoe. The animal was a large one weighing nearly 250lbs. The body was not fat and the hair very inferior in quality.

W R. W.

ONE GOOD MAN GONE WRONG.

IN the last issue of FOREST AND STREAM, under the caption of "Two Good Men Gone Wrong," reference was made to a certain fish story, located on the grounds of the "Kankakee Cattle Co.," and vouched for by two respected sportsmen of this city, to wit, Mr. A. Montgomery Ward and Mr. E. C. Cook. The story, as told by both these gentlemen, with a singular fidelity to a common standard, stated that fully one hundred fine pickerel had jumped into their boat as they were paddling along a channel of the marsh. There recountal was met with great surprise and regret by their friends, as both gentlemen have always borne a high reputation in this city for allegiance to scrupulous exactness of statement; there was some rejoicing, therefore, when, owing to a failure to agree upon a certain other point, these gentlemen disagreed as to the details of the fish story, and allowed its otherwise finished and monumental character to be assailed with the suspicion of a doubt.

The point of disagreement was the question whether it

was Mr. Ward or Mr. Cook who took the header of out the boat on this same shooting trip. Mr. Cook says it was Mr. Ward who took the header, and Mr. Ward says it was Mr. Cook.

In all such matters as these, it is the aim of FOREST AND STREAM to get to the bottom. By reference to the above engravings it may be seen that it was also the aim of the gentleman who took the header to get to the bottom. The originals of the pictures were secured by a

FOREST AND STREAM artist, who was concealed in the grass near by, and who is not visible in the picture. As may be supposed, the artist, being entirely unprejudiced on either side, and anxious, like the submerged gentleman, only to get to the bottom, would state things exactly as they occured.

While the artist is not personally acquainted with either of the gentlemen in question, he is told that he has fallen upon a very palpable likeness in his portrait of each. He is also assured that the gentleman who in the first cut is shown standing erect in the graceful picturesque attitude, is none other than Mr. Cook, and that the gentleman who in both cuts is shown as comfortably seated in his boat is nobody but Mr. Ward. The artist does not know as to that, his sole business being to be true to detail; but if such should indeed be the case, there would seem to be little room left to doubt that it was Mr. Cook who took the header, and Mr. Ward who did not. Common report, also, would seem to bear out this supposition. For instance, Mr. Cook is mentioned as a man of methodical habits and a painstaking disposition. The gentleman in the second cut displays such traits in the careful manner in which he has inserted his gun muzzle downward into the mud. Mr. Cook's well-known humane habits are also shown by the generous manner in which he offers a part of the bottom of his boot to his dog, who seems to be laboring under fear of a strong order. Mr. Cook, as may be seen by reference to the engraving, is of a retiring disposition. He has, in fact, retired entirely from view. If the artist has done him any injustice in the details of the second drawing, wherein he is represented as hardly able to speak for himself, it is hoped that he will eventually rise and explain. He can, perhaps, do this better than the artist, and better than FOREST AND STREAM, for it would seem that, so far from a mere intention he has actually carried out his evident determination to "get to the bottom of things."

H.

CHICAGO.

DROP OF STOCK.

CHARLESTOWN, N. H.—*Editor Forest and Stream:* I received a day or two since a number of FOREST AND STREAM of July 27, 1887, marked on the wrapper "sample copy," for which I am much obliged to somebody. It was a good number, although I do not think any better than the one for Sept. 20, 1888, which I have just finished reading, and if it came from your office you must have "a new hand at the bellows," in the clerical department to think that I needed a specimen number of my old friend and favorite. However, that was not what I took up my pen for, which was to fully indorse the letter of "Wells" in the last number just referred to, on the drop of gun stocks.

"Wells" is perfectly correct, and a drop of 3 to 3½in. will suit the average shooter far better than a less one, so far as my knowledge of guns and anatomy goes. I have an old English double 12-gauge, which I have used for forty years, and although I have killed what would be a "pile of game" with it, if it were all together, I have missed another by shooting over, and the drop of stock is 2¾in. I laid it aside twenty years ago for that reason and took to a more crooked stock, with which I could get a quicker and surer aim.

I keep the old gun for the good it has done, muzzle-loader though it be, for I do not expect to ever use it much more, and it is a deadly weapon, when I can get time to screw my head down so as to look straight along the barrels.

I have seen a flock of plover drop a foot in their flight as the shot whistled over them, when I have fired a quick shot at a flock coming by me from the rear when shooting on Plum Island, and many a gray squirrel have I brought down, without a shot mark except in the head and throat, when I have fired as they stopped for a second in a rapid race up a tree. The most perfectly fitting gun I ever shot—and I have shot a good many—was a 14-gauge, 3½in. drop; and were I to order a new gun to day I should go back to those dimensions. I never believed in what Frank Forester called "cannon" for ordinary game shooting, neither do I believe a 16 or 20 gauge large enough for average game, including ruffed grouse, ducks and gray squirrels, for I think a gray squirrel game, although Frank Forester did not, and I know "Iron Ramrod" will support me in saying that it requires some woodcraft, as well as some "gumption," to successfully circumvent the wary and nimble climbers; and what makes a better dinner than a squirrel stew or pie?

With such a gun as I have just mentioned, 28in. barrels and not over 7lbs. in weight, with 2½drs. of powder and an ounce of shot, a cardboard and a ¼in. felt wad on

the powder and a cardboard on the shot, the latter to vary according to the special game looked for, but well averaged generally by No 6 or No. 8, I should feel well equipped for any ordinary upland shooting east of the Missi-sippi.

Ruffed grouse are reported plenty; have not been out myself, but a friend shot three last Tuesday and four on Thursday, without a dog. VON W.

CHICAGO AND THE WEST.

CHICAGO, Ill., Sept. 27.—Mr. John H. Taylor, of the big Suggs Bros.' ranch in the Kiowa and Comanche country, I. T., is in this city on a visit. He reports game below Fort Sill in good numbers. The boys on the ranch have killed twelve wildcats and a number of coons with their greyhounds this fall. Cattle are doing well on this big ranch, which is fifty by twenty miles in extent, and a game preserve of itself. The cattlemen do not favor hunting parties.

There will be good deer shooting this fall, it is thought, near Crivitz, Wis., about twelve miles above Jim Plush's house on Thunder Lake. Numbers of deer have been seen in that vicinity by late fishing parties, and the locality is a favorite one yearly with some parties from this point.

Mr. Roll Organ, president of the Maksawba Club, is at this writing absent at the grounds on the Kankakee. Conflicting reports come up that the marshes are very low and dry this fall.

Mr. William Mussy, of the Maksawbas, bagged thirty jack snipe and six ducks last Friday on the Kankakee. The ducks are not in yet.

Sometime in the first of November a party will leave this city for a grand hunt in the Indian Territory. The party will be in charge of Mr. F. P. Taylor, so long known in Chicago sportsman circles, and the membership will consist of Mr. Taylor, Messrs. John and William Haskell, R. Clark and Henry Sloan. Mr. Taylor makes this trip every fall, visiting his cattle interests in the Kiowa Comanche country, where also his son is located. The party will hunt on the North and South Canadian and on the Wachita, thence to Fort Sill. They will be in over two months, and cannot fail of success, as they will be thoroughly posted as to the habits and range of the local game. They will be able to kill all the deer and turkeys they want, and ducks and geese, quail and other small game are very plentiful also. Turkeys are often killed in that country by moonlight shooting from the roost, the dense cover of the black-jacks making it almost impossible to come up with them otherwise. The party will have good ranch greyhounds at their disposal if they wish to try coursing, and in short will be able to follow almost every line of sport one could wish. For pleasant and easy surroundings, and for practical result, the Indian Nations are to-day the best hunting grounds left in the country. The necessarily limited number of this party shuts out many envious sportsmen who would like to go along.

It is not generally known that the genuine Egyptian lotus is found in America. Such, however, is the case. Only two localities are known to furnish it, and both of those are near Chicago. Grass Lake, of the Fox Lake district, has a body of nearly two hundred acres of this singular and beautiful plant; and there is another locality in the Tolleston marsh, in Indiana, which is covered with it. The leaf is perfectly round, and is supported at some distance above the water on a long round stem. The leaf is as large around as one's hat, and when water is poured upon it it resembles liquid quicksilver. The large flower is bright yellow in color, not unlike the yellow water lily, and is a beautiful sight when thus seen massed in large banks. Only a few sportsmen here know this land of the lotus, and that it should be located near this decidely un-lotus eating community, seems one of nature's attempts to keep up the average.

SEPT. 29.—Reports to me from Kansas say the advance guard of the fall flight of geese (Hutchins and snowy) is making its appearance along the Arkansas. The boys are getting ready.

Several members of the Kankakee Cattle Company—which is only a duck shooting club of large and wealthy membership—leave to-day for the club house and will try for the ducks, which, it is hoped, the late raw weather will have started down.

Retired market-shooters blush with envy of Lord Walsingham, of England, who on Aug. 20 killed 1,058 grouse on his own moor in thirteen hours' shooting, assisted by forty drivers to round up the birds for him. He could get long backers here for a rapidity extermination match or for a persistent butchery medal. He can shoot pretty well. He doesn't get tired of shooting. He is a great man.

A telegram received to-day (Sept. 29) from English Lake, Indiana, says that the ducks are flying well. Numbers of jacksnipe are in the market, mostly from Indiana. A fine bunch of woodcock displayed by a game dealer were said to have come from Indiana. Game dealers deny that any regular flight is coming down as yet. They say the ducks are much scattered. E. H.

CONNECTICUT FARMERS AND SPORTSMEN.—Westchester, Conn., Sept. 28.—*Editor Forest and Stream:* I would like to inform Mr. A. C. Collins that Mr. F. L. Carrier, who sent out the card asking farmers to enforce the trespass law, is not the Westchester station agent, but is one of our oldest residents and largest land owners. The farms in this vicinity are all posted, and the trespass law will be enforced. The Westchester game will be protected.—WESTCHESTER FARMER.

CADIZ, O., Sept. 24.—Quail and rabbits are very plentiful here this fall, and the birds are well grown and strong, the coveys being large. Have had several fine runs after the cotton tails, getting the dogs in good shape for the open season. My beagles never did better, and can make "Mollie" go to earth in short order.—S. C. G.

THE MEGANTIC CLUB.—Messrs. Geo. McAleer and W. R. Albertson, the Worcester members of the Megantic Fish and Game Club, have returned. They were present and took part in the dedication of the club house at Spider Lake. The club house, which has just been erected, is a commodious structure, three stories high, capable of accommodating seventy-five or more guests at one time. It is in charge of a steward and stewardess, Mr. and Mrs. Howe, from Boston, who cater very acceptably to the wants of the members of the club. This club as owner and lessee, controls nearly 80,000 acres of territory in the province of Quebec and State of Maine, which constitutes without doubt the best territory for a fish and game preserve in the eastern country, including the famous Spider River, Arnold Pond, Massachusetts Bog, Crosby Pond and Hathan Bog. It holds a charter from the Dominion government, and is organized under the laws of Maine, with a capitalized stock of $35,000 and a membership limited to 500, which is rapidly filling up. The territory of the club is patrolled by game wardens, who are not slow in bringing transgressors to justice. Messrs. McAleer and Albertson report trout, deer and moose in abundance, with better prospects in the future. A party, consisting of Messrs. Brown, Hale and Barry of Boston, and McAleer of this city, in charge of two guides, proceeded up the Spider River in two canoes abreast, Tuesday evening, and when not more than two miles from the club house came upon two deer feeding on the lily pads. Under the skillful management of the guides, with the aid of a jack in the bow of each canoe, they were enabled to enjoy the beautiful sight for some time, when the deer took to their heels and disappeared in the dense thicket. The party were within five rods of them, but it being close season until Oct. 1, they did not carry arms, although at a later date the Worcester members are determined to get a shot.

A SHOCKING FATALITY.—Burlington, Vt., Sept. 24.—On Tuesday, 18th inst., Mr. John Van Sicklen, of this city, accompanied by Mr. A. L. Wright, a commercial man of the firm of Wright & Sawyer, of Boston, left here in a 12ft. canoe for a few days' duck shooting at one of the gun club's stands on certain leased lands north of this city. With a good stiff south wind they proceeded contrary to the premonitions of Wright, and when out about five miles or near the mouth of the Winooski or Onion River, the well known shooting ground, it is conjectured that one of them shot at a passing flock of ducks, the recoil of the gun of course overturning the cranky, overladen canoe, putting both men in the water. Wright's body was found Wednesday night about one mile north, whither it had drifted, being entangled with fish lines attached to the boat, which was but a few feet away. The body of Van Sicklen was found by two Frenchmen who live on Colchester Point this afternoon. There were no rubber boots on the body, and it is reported he had a piece of rope on one foot, indicating that he had tried to drag the boat ashore, as he was a powerful fellow with the grit of a bulldog. He undoubtedly exhausted himself in getting off his heavy boots in the water. Mr. Van Sicklen was of the firm of Van Sicklen & Spaulding, the largest wholesale house in groceries and provisions in the north; he was a young man of sterling qualities and the most enterprising business man of the city, and his loss is deeply mourned by all.—S.

THOSE TOMPKINS COUNTY WOODCOCK.—*Editor Forest and Stream:* "A slanderer" is not an extremely pleasant term to have clinging to one's person these amber autumn days, yet Dr. Morris came pretty near to hurling that epithet at me through the columns of FOREST AND STREAM last week. I have not, as the Doctor intimates, a personal acquaintance with Dr. K. or himself. At the same time, I should consider myself an altogether scurrilous sort of an individual to fling an untruth more willingly into the face of a stranger than across the path of a steadfast companion. I have heard too many clever words spoken in behalf of Morris, Kirkendall and the other good fellows who pass their leisure hours on the wooded slopes of this favored hill country, to attempt, if I were so inclined, to put them in a false position before the public. My information of Sept. 20 concerning the woodcock incident of Aug. 1, came to me from a farmer through the medium of an intimate friend. If the statement was fiction instead of facts, as it now appears, the communicative countryman has simply practiced an imposition that has reduced me, after ever so many years of contact with ozone and exercise, to the deucedly uncomfortable position of having to submit to a doctor's treatment.—M. C. H. (Tompkins county, N. Y.).

CONNECTICUT LAW ENFORCEMENT.—Hartford, Conn., Sept. 29.—If "Game Warden," of Thomaston, Conn., will inform our association, over his own name, and furnish the name of the party who shoots out of season at Meriden, we will find out what foundation there is to the charge named in the FOREST AND STREAM of the 27th inst. We have three more violators of our game laws in trouble, two parties in Ashford and one in Eastford, Conn. They will have their trials early next week. One of the parties is a dog trainer named A. S. Weeks, of Ashford, Conn. Any one having any evidence of any violation of our game laws should send it here. We have organized to enforce the laws and for no other purpose. Sportsmen and farmers ought to aid us.—A. C. COLLINS (Pres. Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish).

BOZEMAN, Mont., Sept. 21.—Maj. H. A. Pease started from this place on the evening of the 19th inst. in pursuit of large game, under the able guidance of Ira Dodge, and returned the following evening, having killed a fine six-point elk and several grouse. Bear and mule deer signs were quite plentiful, but as the major had to return in order to save the meat, all other game was allowed to roam at will. In justice to the friends of small-bored rifles I will say that the above elk was killed with a .32-40 Ballard, and the little 185gr. bullet proved to be quite effective.—BEAR HUNTER.

THE FISHER'S ISLAND SPORTSMEN'S CLUB has been incorporated. It proposes to secure the exclusive right to shoot and fish at the island and to stock it with game. The trustees are Edwin N. Holbrook, William H. Schieffelin, Philips Phoenix, James H. Dunham and William J. Ketcham.

ONTARIO GAME LAW.

THE latest amendments to the Ontario law respecting large game are as follows: 51 Victoria, Chap. 36. Province of Ontario. An Act to amend the Act for the protection of game and fur bearing animals. (Extract). 1. Section 1 of the Act for the protection of game and fur-bearing animals is hereby amended by omitting therefrom the word "deer, elk, moose, reindeer or caribou between the 15th day of December and the 15th day of October," and inserting instead thereof the words following: "Deer, elk, moose, reindeer or caribou between the 20th day of November and the 15th day of October; but the period hereinbefore limited shall not, as to moose, elk, reindeer and caribou, apply before or until the 15th day of October, 1895, and no moose, elk, reindeer or caribou shall be hunted, taken or killed between the 1st day of April, 1888, and the 15th day of October, 1895.

2. The said Act is hereby amended by adding after the word "act," where it lastly occurs in said Section, the words "and where no other penalty therefore is by this Act provided."

3. The said Act is hereby further amended by adding thereto the following as sections 16, 17, 18, 19, 20 and 21 of the said Act:

16. No person shall prior to the year 1895 hunt, take or kill any deer, unless such person has been actually resident and domiciled within the Province of Ontario or within the Province of Quebec for a period of at least three months next before the said time, and any person offending against this section shall be liable to a fine not exceeding $20, nor less than $10, with costs of the prosecution, for each animal so hunted, taken or killed, and in default of immediate payment of said fine and costs shall be liable to be imprisoned in the common goal of the county or district wherein the offence was committed, for a period not exceeding three months: Provided always that this section shall not apply to any person who, being a shareholder of or in an incorporated company, hunts, kills or takes on the land of such company, any of the animals mentioned in this section; Provided, moreover, that this section shall not apply to any person in any year for which he has obtained from the Commissioner of Crown Lands a permit to hunt, kill or take any of the animals in this section mentioned, and the Commissioner of Crown Lands is hereby authorized to grant and issue such a permit upon payment therefor of a fee of $10 for each year during which the same is to be in force, and upon being satisfied that the person applying for the permit may be relied upon to observe and comply with the other provisions of this Act.

17. No one person shall, during any one year prior to the year 1895, kill or take alive more than five deer; and no two persons hunting together or from one camp or place of rendezvous, or forming or being what is commonly known as a hunting party shall, in any one year prior to the year 1895, kill or take alive more than eight deer; and no three or more persons hunting together or from one camp or place of rendezvous, or forming or being what is commonly known as a hunting party shall, in any one year prior to the year 1895, kill or take alive more than twelve deer, and any person offending against this section shall be liable to a fine not exceeding $20 nor less than $5, with costs of the prosecution, for each deer beyond or exceeding the number so permitted to be killed or taken as aforesaid, and in default of immediate payment of such fine and costs shall be liable to be imprisoned in the common jail of the county or district within which the offense was committed for a period not exceeding three months.

"WILD FOWL SHOOTING."

A NEW book on wildfowl has just come from the press. It is written by Mr. W. B. Leffingwell, who has contributed many acceptable papers to sportsmen's journals on his favorite theme.

The present volume is a substantial book of 373 pages, handsomely bound and with fourteen illustrations. The chapters treat of the several varieties of wildfowl, their resorts, habits, flights, and the successful methods of their pursuit; the selection of guns loading, decoys, blinds, boats, retrievers, and all the allied branches, appurtenances and "fine points" of the pursuit. We reserve for another time a fuller and more adequate notice of the work. (For sale by the Forest and Stream Pub. Co. Price, bound in half-morocco, $3.50).

Camp-Fire Flickerings.

"That reminds me."

241.

I HAVE just recalled a good story told by one of the guides who used to accompany Prof. Agassiz when he and his party visited their hunting lodge at Ampersan Pond, in the North Woods. One of the gentlemen, on the way over that wild carry, fell and seriously injured his knee, and it was found necessary to improvise a pair of crutches that he could be able to get about at all. His mishap made him quite nervous and restless, for fear that he might not be able to get back over the mountain; and this being his first experience in the woods, all sorts of imaginary things came into his head. He walked out one evening a short distance to enjoy the beautiful moonlight, while the rest of the party were engaged at a game of cards. All of a sudden a push aud a bang came against the door, as of some one in mortal haste, when the door flew open and a pair of crutches came half across the room, followed by the crippled huntsman, who shouted at the top of his voice, "Panther!" Every gun was in requisition in a moment, and I believe our hunter was sorely in need of a little brandy and water, as the party sallied out to perform deeds of courage and daring. A very careful search was made in the direction pointed out by our nervous friend, who followed very cautiously in the rear, when an unearthly cry rang out into the stilly night. "There he is right overhead," he exclaimed, when one of the guides shouted out, "Why, it's nothing but an old hoot owl." Our friend did not hear the last of the panther for some time. C. H.

Sea and River Fishing.

LARGE MASKINONGE IN CANADA.

Editor Forest and Stream:

Under the above heading you have copied from one of our local journals some notes of the great catches of maskinonge which have been made within the past five weeks at Mosquito Bay, near this city. Necessarily, however, but a small modicum of the facts in relation to this lately discovered paradise was given in your columns. Permit me, then, for the benefit of the lovers of the "gentle art," to give a few details as briefly as may be. Mosquito Bay is situated three miles east of Belleville, and is an offshoot of Big Bay, which is a portion of the Bay of Quinte. It extends in a direction a little to the westward of south for about four miles, and terminates in a marsh which is several miles in length. Its greatest width is about three miles, and it extends to perhaps half a mile less near its head. The maskinonge are found principally some two miles or thereabouts down the bay, the depth of water in which varies from 20ft. to 8ft. It is, it will be seen, a large sheet of water, and is open to winds from all directions, but east and northeast winds are felt to the greatest extent. At Massassaga Point, less than a mile from the mouth of the bay, is a summer hotel, and on Big Island are farmhouses where visitors can be accommodated.

The number of maskinonge taken in this bay since its discovery as their habitat, some five weeks ago, is upward of one hundred. Deducting Sundays and days

when fishing was prevented by high winds, which were unusually numerous during August, and the number taken will average four per day. The size, as well as the number of the fish, has been remarkable. The heaviest was a 51-pounder, and others weighed 40½, 39, 38, 37½, 32 and 30lbs., and so on, a very few of those taken being under 15lbs. To afford you ocular demonstration, so far as a photograph will do so, I send herewith a representation of Mr. Joseph D. Clarke of this city, and his nephew, Master F. Wallbridge, with their string, which was taken in a day and a half with the troll. The largest measured 54in. by 24½in. and weighed 39lbs. The weight of the five fish was 138lbs.

I may add that pike are numerous and large in Mosquito Bay, that black bass are also to be had there in considerable numbers, and that sheepshead are occasionally caught. R. S. Bell.

Belleville, Ont.

SWORDFISHING OFF BLOCK ISLAND.

It was a new experience for your correspondent to go swordfishing; to step out of his birch bark canoe and walk the gang plank of this little black propeller; to lay down his bamboo rod with its silken line for the heavy harpoon and its hundred fathoms of hempen rope. I am sure our experiences are the more sharply cut and made to stand out the more by comparison and by contrast. The pattering of the rain upon the roof sounds pleasantly as from cosy shelter by the fireplace we listen to the driving storm outside; "the shadow of a great rock in a weary land" is the more grateful as we look back, adown the rugged path we have climbed while the hot sun beat against the mountain's side; it is sad to look into the beggar's face who for fifty years has sat by the wayside, blind, deaf and dumb, while across the salt meadows comes the merry laugh of the bathers.

As I sat on the deck my thoughts flew far away. With the swell of the ocean came the remembrance of the quiet, still lakes far off in the Canada woods. Here, across the billows I could see their rugged outline as it seemed to cut into the blue sky and the ragged edge of the hazy curtain shut out all beyond. I remembered how from some tall mountain I had looked across the hills that rose like waves of green, one beyond the other, and had watched the clouds as they lifted themselves from some great valley beyond and like white sails floated quietly out of sight. The fretting tide as it crawled up among the great boulders was in strong contrast with the spring that bubbled out of the white sand close beside our camp, now deserted. Here, the roar of the surf; there, the song of the winds in the balsam trees. There, the still water reflected the white birches along the shore until they looked like coral branches; here, the black rocks shook their matted coats of seaweed as the great waves struck them.

"Keep a sharp look out now," was the cry that woke me from my revery. We had reached the fishing ground, twelve miles out at sea. All eyes were scanning the water, trying to get the first sight of the black fluke or fin of the swordfish, for to the lucky one went the sword if the prize were secured. A few moments and I saw the tip of a sharp black fin cutting the crest of a wave.

"There he goes!" I call out.

Henry, from his seat in the "crow's nest," asks "where?"

"Right youder! There he is!"

"Hard aport!"

As the little steamer swings round, "Come on, R.," calls the captain, and as he runs by me with his harpoon and crawls out to the "pulpit" on the bowsprit, "come on and have a shot." But the rough sea that sometimes made the boat dip its prow in the waves told me that a landsman had better stay where he was. Slowly the great fish moves along, like a water-soaked log, just beneath the surface. Henry, from his lookout, by his calls to the helmsman, skillfully guides the boat until the fish crosses her bows; a quick, savage thrust is made, and the water is red with blood. Down, down he goes, and the rope runs out fathom after fathom, so swiftly that the rail smokes where it crosses. Soon the last coil is reached, and overboard goes the buoy. From the deck we watch it as the angry fish drags it through the water. Henry from his lookout sees that the game is tiring out; and hurrying down he jumps into his boat and pulls for the buoy; he draws it in and takes in a few feet of the line, when the fish feels the sting of the harpoon and with new life starts off. Henry holds on, and a lively race it is as the strong fish drags him along. Close behind follows the steamer, dashing the water from her bows as she plows through the waves. A two hours' fight follows, and then the ship's blocks lift him on the deck; 400lbs. he weighed. As I write this story, from my office wall the great empty eye sockets of the monster look down on me, and close beside them hangs the sword, nicked and scarred, perhaps in some fight with a "foe that was worthy of his steel." This one was the largest and hardest fighter of the three we took that day.

The little steamer's head was turned toward home, and soon Block Island arose from out the sea. South Light, standing on those high clay bluffs, in the dark night flashed out its warning light fifteen miles across the water. As we came in, from the southeast we saw a great bank of fog moving toward the island; soon it reached the shore and pushed itself up the cliff, burying the lighthouse in its folds; and then we heard the great fog horn sounding out its warning. The wind carried the fog so that but part of the island was covered; half was in the bright sunshine, half was hidden by the heavy mist, until it moved off toward the mainland, leaving here and there trailing on the hillsides little fragments of clouds like wool caught on the brambles. Soon we came to anchor inside the breakwater, and as the sun went down and the shadows settled on the ocean, the fleet of fishing vessels ran up their lights; the rocking waves made them move like fireflies on the meadows; the crescent moon hung out her lamp in the eastern sky, and all was still save the moaning of the sea.

I took several strolls across this quaint land. Scattered over the fields were great granite boulders; at the foot of the high clay cliffs they lay where they had rolled as the storm washed the earth away and the waves little by little had undermined their resting place. No "bed rock" showed itself anywhere. The breakwater is built entirely of stone quarried in the hills on the mainland, and is brought over in vessels. No forest trees are to be seen; around some of their homes the farmers have planted a few fruit trees, but I saw no sign of blossom or fruit; the winter gales must shake all good intentions out of their twisted branches and the salt winds suck up all sweetness from their sap. The island is dotted here and there with little fresh-water lakes, many of them 100ft. above the level of the sea. From Beacon Hill they looked like pearls in an emerald setting. From this point far to the south I could see Montauk Light; on the main land, Watch Hill and Point Judith; to the north—too hazy that morning to be seen—loomed up Gay's Head; to the east, the great waste of water. As the western sky flashed his light aslant the water I turned homeward. On my journey back, thankful for all the beauties of the sky, the sea, and the green fields that my eyes had feasted on; with the song of the robins and the sparrows filling my ears with sweet music, I came to a poor man who "sat by the wayside begging." For over fifty years he had been blind, deaf and dumb; I gave him some money; his aged sister touched him on the shoulder, he lifted his withered hand and drew it across her face that he might know who was beside him; then on his fingers she counted the value of the piece I had given. He turned his sightless eyes toward me, a sad tired smile came over his face, and the shouts of the merry bathers on the beach came over the salt meadows. So our experiences are sometimes cut clear and sharp by contrast. Oh how sad to be shut up alone with oneself. No answering look nor word to hear nor see; with dumb tongue, not to be able to tell your thanks for kindly care; walled in for life; only one barred window open to the world, through which to reach out and feel the face and hand and by that quickened sense to know a friend is near. The weary resting, the tired thoughts that try to recall the bird songs, the whispering winds and the roar of the sea; try to picture the blue sky, the green fields and the white sails that vanished out of sight and were hushed fifty years ago; oh it is sad beyond one's knowing to be shut up alone with oneself.

Centralia.

THE CHICAGO FISH DISPLAY.

Chicago, Ill.—*Editor Forest and Stream:* The most interesting part of the annual exposition, now open here, is the fish exhibit, which is by no means a bad one this year. In the long series of big glass tanks there is a large and small-mouthed black bass, pickerel, sunfish, perch, croppies, and several varieties of small bass, to say nothing of ugly gars, catfish, dogfish, and other uncleanly-looking creatures, which may be of a sweet and affectionate disposition, but certainly are not very pretty to an off-hand observer. Some of the bass run as heavy as 4lbs., and there is a big pike which would weigh, I should think, 10 or 12lbs. There are also some big rainbow trout, and a number of our genuine brook trout. Most of the specimens of these captives, *ferœ naturæ*, are normal in markings and conditions, and, as the transparent tanks display their every motion with perfect clearness, one has here an opportunity to study game fish which he does not obtain when he goes fishing.

The bass and pickerel are mostly presented by Col. Lippincott, and were taken from Fox Lake. The Colonel also has a tank devoted to the exhibition of the fry and small specimens of young game fish.

It so chanced, while I was wandering about the tanks, that the small fry tank, owing to some neglect or unfavorable condition, was proving disastrous to its occupants, about two-thirds of which were dead or dying. No police officer or other guardian appearing, I hastily gathered up a handful of the little fellows and going over to the big tanks I began in a stealthy way to indulge in an amusement which always possessed charms for me—that of feeding game fish. I popped a minnow in front of the big pike, but he only sneezed at it, in a dull, muffled way and declined to rise. A tear trembled in his soft blue eye, as he mused on the difference between his artificial rock grotto and the former bed of lily stems where his fair haired babes were wont to prattle about his knee. He had no appetite, he was so lonesome. Besides, there was a tail or something or other sticking out of his mouth.

I tossed a small dark hackle minnow, with yellow abdomen, into the trout cage, but the trout viewed it with a sarcastic stare which made me hasten away.

Going up to the den of bass I flirted a fine fat minnow over into the tank and gazed innocently up toward the skylight as a policeman came by. When I had opportunity to look at the tank again, there was a vacancy where my offering was lain, and near by lay a green-sided old bass who winked pointedly at me and asked me to do it again.

I did it again, and so did the bass. It was just as easy. The bass would scull along, slow, steady, till within a few inches of the bait, then with a flirt of the tail, which with one motion drove him upon his prey and downward, would seize it, always head first. A fish as long as my finger was swallowed at one gulp. There seemed to be no second effort or second thought about it. The bass does not chew the cud, as does the gloomy pickerel.

In another bass tank the big fellows ranged themselves below my wares, looking at them suspiciously, but making no effort to bite. All at once one unfortunate minnow moved his tail, and in a flash an enterprising bass engulfed him. That was the signal for the others, and in a moment not a minnow remained, while the bass circled round and round in a wild search for more.

I went over to the small fry tank and loaded up again, and soon had the water boiling with the repeated rises of the bass. A crowd gathered about the tank, and, seeing an officer coming, I thought it well to absent myself. It seemed plain, however, that the captive fish showed the peculiarities which mark them in a state of nature. They were suspicious of the presence of man, not eager for a motionless bait, and all anxious to bite if one bit.

Of course things in the Exposition are mighty fine. They have a terra cotta fisherman on the edge of the big fountain lake, who is a good specimen of a fisher in the terra cotta line. The trouble about him was he didn't catch anything, although there were plenty of fish in the lake. This seemed rather hard, so some of us made an examination of his outfit for him, and found out what was the matter with him. He didn't have any hook on his line. "Why, of course you can't expect to catch very many fish, if you haven't got any hook," said some one to him, but the terra cotta man didn't let on that he heard.

After awhile somebody or other, I don't know who, quietly tied a hook on the terra cotta man's line and baited it with a great big minnow. A moment later he had a rousing strike and hooked a big pickerel, which at once had business over by the fountain.

There never was such a fool way of playing a fish as the way that terra cotta man did. He just held on and pulled, and didn't show any more judgment than a wooden man, not a bit. At last the pickerel got tired of it and pulled the terra cotta man square into the lake, and would probably have drowned him if an officer hadn't come along about then and helped him out. There wasn't anybody around that saw the terra cotta man tie the hook on his line. E. Hough.

CHICAGO AND THE WEST.

Chicago, Ill., Sept. 28.—There is no place in the United States which to-day is a better central point for fishing regions than Chicago, and so far from her prospects deteriorating, it looks well as if they would bid fair to brighten under the intelligent action of the authorities who have in charge the interests of the fish supply. Especially noteworthy is the work of the Illinois State Fish Commission, whose methods have attracted the attention and admiration of the National Commission, and are apt to be fruitful of imitation elsewhere. At least, it is to be hoped that such will be the case. It is only a question of a little official common sense or practice against scientific theory. So marked have been the results from the methods of this Commission, followed now, I believe, for several years, that one of our great dailies, usually above mention of any sport other than base ball or racing, has thought the matter quite worthy of editorial comment, and thus refers to it in the course of a sensible and approving editorial:

"All along the valley of the Mississippi, close to the river, are long, shallow lakes and sloughs. These are where once was the old bed of the stream, and every spring, when the bottom lands are overflowed, they are filled from the Mississippi, though in later summer they may become absolutely dry. Countless thousands of fishes get into these shallow places in the spring, are imprisoned, and perish in shoals as the waters disappear later in the season.

"It occurred to Maj. S. C. Bartlett, an active member of the commission, that it was quite as well to save fish as to hatch them, and as a result the perishing fish have been taken in boat loads from their prisons and transported to those points in the State whence have come demands for them. They have been sent in large quantities and have thrived wonderfully. Thus not only has the usual work of a fish commission in the distribution of fish been accomplished, but half or full grown fish have been sent instead of fry, and at the same time a great accidental destruction of fish has been largely averted.

"It is pleasant to find a public commission of any sort where as much intelligence and enterprise is shown in the work as in the conduct of a private business, and where new departures are made with profitable results. Maj. Bartlett has set an example which other officials on other commissions may imitate to advantage, and is doing what will prove of benefit to the people of the State."

Fishing in the Thunder River country has been good during the past season. A party of six Chicago men, Messrs. Arrowsmith, Cribben, F. P. Taylor, Chas. Gammon, George Nye and John Whiting, on the first day of their fishing on the Thunder last August, took four hundred and fifty trout. The Thunder River trout run small, a pound and a quarter being about the largest taken by this party.

Parties from the Oconto country report plenty of sport, and trout running fully up to the average weight of last season in that country.

The whitefish near Bradford, on the C. & N. W., and Trout Lake, near by, have yielded fish larger than the average of Wisconsin and Michigan, running from one and a half to three pounds.

Bishop Beckwith, of Atlanta, Ga., has just reached this city on his return from his visit to Eagle River and Tomahawk Lake, where he interviewed the muscallonge militant with churchly zeal. The largest muscallonge that fell to the good bishop's argument weighed 18lbs. He has often taken larger. Bishop Beckwith visits these Northern waters often, coming up from his Southern home at least once a year and sometimes twice. He is an enthusiastic sportsman, and yesterday was displaying a fine ruffed grouse he had killed on the trip. Other members of the party were Messrs. E. T. Watkins and Jno. N. Jewett. These inform us that the bishop once took on the Nipegon River, Canada, a brook trout which weighed 6½lbs.

Game Warden Wentworth, of Wisconsin, last week arrested three violators of the State fish laws, Fred Boyk, C. Nelson and George Crandall, who on Sept. 19 were found guilty of fishing with nets in Lake Buttes des Morts. These men do nothing for a living except illegal fishing. They appealed the case to the Circuit Court, where it is hoped the rebuke administered will be sufficiently severe.

Mr. John B. Ostell, of Spalding's, who has charge of the fishing line, bewails an absence of personal experience with the finny citizens this summer, as he was too busy helping others get ready to get off himself. There is a Barmecide feast in the fine tackle department of a busy house.

The friends of Mr. John Wigelsworth, of the Union Stock Yards, claim for him the championship of Silver Lake and Twin Lake region of Wisconsin. Mr. Wigelsworth's catch of twenty-five bass in one day is thought the heaviest on record at Silver Lake this summer.

The best bass anglers hereabout declare the split-bamboo rods a failure for bait-casting. The lancewood has rapidly grown in favor this summer.

Sept. 29.—Dr. Perkey, of A. Coulter & Co., goes to Silver Lake to-day for a serious time with the bass of that justly esteemed water. This lake has been steadily fished this summer, but has not often failed to yield tribute to those that "knew how." Chicago is fortunate in having so good a water in so accessible a locality.

Mr. Kuhns, manager of Kuhns' European Hotel, starts

to-day for a little fishing trip to Channel Lake, in the Fox Lake system. He will stop at the well-known hostlery, "Savage's," and will doubtless meet good sport. Fishing in the Fox Lake chain holds on well, and the anglers are holding on well also.

Mr. Thompson, of the Domestic Sewing Machine Company, Mr. Sutherland of the same concern, Mr. Hoge of the First National Bank, and Mr. Tiffany have just returned from a pleasant and successful trip to the Eagle Waters. They report the sport very good, and say they took all they cared for. There were a number of parties in from Chicago. E. H.

TROUT IN MAINE.

CAMP BEMIS, Sept. 27.—*Editor Forest and Stream:* Some fair catches of trout have been made with the fly during the past week on the Mooselucmeguntic Lake. Dr. Geo. Trowbridge, of your city, I understand, took in two days' fishing at Sunken Island (near Student's Island) 49 trout that averaged 1lb. each in weight. No trout come to the Doctor's landing net unless they take the trouble to rise to the surface and take the artificial fly, and all that are not wanted for the table go back into the water.

Messrs. J. R. and J. B. Stebbins, of Little Falls, N. Y., took in two day's fishing near the mouth of Bemis Stream 60 trout that weighed 40lbs. Mr. J. M. Randall, of East Orange, N. J., took one of 1¼lbs., casting from the wharf at Camp Bemis. (Mr. R. is another gentleman who puts back all that are not wanted at once for table use.) Mr. J. L. Pease, of Merrimac, Mass., took one of 3¼lbs. near the same place. Mr. R. M. Parish, of Montville, Conn., took from the pool below the Upper Dam two trout at one cast, one of which tipped the scales at 6lbs. 14oz., the other 2½lbs. Mr. P. was fishing from a boat alone, and worked both rod and landing net, although there was plenty of assistance offered from gentlemen who were fishing near him. The rod that the fish were taken on was a 7oz. split-bamboo, and the flies a brown hackle and a Montreal.

Twelve of the trout taken from this pool this fall by Mr. Fullerton, of Windsor, Vt., weighed 73¼lbs.

Two moose were seen yesterday by Mr. Frank Taylor and wife, of Philadelphia, and guides, as they were crossing from Cupsuptic Lake to Parmachenee.

Sept. 28.—Mr. R. M. Parish of Montville, Conn., took with a fly at Upper Dam, yesterday, one trout of 5½lbs., and to-day one of 4½lbs. F. C. BARKER.

THE CURRENT RIVER REGION.

THERE is no more beautiful stream in the United States than the limpid waters of Current River, Missouri. Fed mostly by springs, some of them of immense size, which, when accessible to travel by rail, will be visited by tourists as world's wonders, pouring over continuous beds of clean, many-colored gravel, or gliding quietly under the shadow of overhanging mountains, through rocky gorges, and now and then among handsome farms, it is well worth a visit to any lover of the picturesque, the grand, the beautiful in nature.

The stream rises mostly in Shannon county, though its watershed extends further north and west. Its rapid fall gave it a name, for the current is swift everywhere, and most of its course is a succession of rapids. This fact makes the lower part of the stream difficult of navigation, although the volume of water is larger than in many well known navigable streams. To the eye unacquainted with this river, it appears to be favorable almost anywhere, but woe be to the stranger who trusts to such appearances if he venture his horse in at any point not marked as a ford, for he will find himself swept swiftly down in the cold crystal waters, and may thank fortune if he escapes merely with a ducking. Many a horse thief has made the effort to ford this stream to avoid passing a ferry where he could be traced, only to lose his life in the cold waves.

Where the water looks to be not exceeding two feet in depth, so pure is it, that the actual depth is five or six feet. A person standing on a slight elevation can see every fish that passes in the river. The river is well stocked with fish. Spearing or "gigging" is at present the favorite method of them. The old citizens often enjoy taking a novice out gigging fish on Current River. They give him a gig with a long handle and soon point him out a fish, which is apparently within easy reach and on the gravelly bottom of the stream. Anxious to make sure of the fish he strikes with all his force. Of course he underestimates the distance, and plunges head foremost into the stream to the intense delight of his companions, who promptly haul him out, a wiser man. The game never grows old.

This stream will soon become stocked with speckled trout, when it will be one of the best streams for fly-fishing in the world. There is scarcely a mile of the channel in Missouri that has not many deep pools with huge rocks jutting out above and rushing rapids leading to them, in fact the banks are a succession of fishing points. As one goes up the stream from Doniphan, he finds the scenery more wild and picturesque as he proceeds. Wide detours through deep cañons have to be made to avoid precipitous banks. Immense forests of sighing pine trees cover the hills while the valleys are filled with a bewildering variety of trees, shrubs and vines, often a very jungle of vegetable growth. In the fall the traveler finds the hillsides covered with vines loaded with wild grapes, many varieties of which are delicious and wholesome.

The practical tourists cannot but observe the wonderful power that is running to waste in this stream, with fall enough and water plenty to develop a thousand horse-power for each two miles of its course; yet it is well to consider the fact that damming this stream is no easy job. One of the peculiar difficulties that would probably be encountered, would be that the dam would rapidly fill with gravel, which would then pour in a constant stream through the wheel. The gravel in the river is mostly of a flinty nature, but one can often in a few minutes' search find most beautiful carnelians and agates of large size, besides many fine specimens of quartz. The upper portion of the stream flows through a country containing many rich deposits of copper ore, while all along it on either side are many veins of iron ore of superior quality.

Tourists who wish to enjoy a delightful trip on this charming river, should go first well up the stream in Shannon county, and take a boat, following or rather floating down to Doniphan or Van Buren, Mo., where the railroads touch it. With a good strong boat and oars, and a steady nerve, there will be plenty to amuse and keep one interested. The Current River hills afford excellent sport in the hunting season, as deer are more abundant than in any other part of the State, and the surrounding country abounds in quail, pheasants and wild turkey. Enough farms will be found to afford refuge from storms that occasionally set in. There are few seriously dangerous passages, many that keep the boatsman in good exercise. Such a trip would be healthful and exhilarating. The time will come when this trip will be very popular, as are the journeys through the wild Adirondacks of New York or the cañons of the Rockies.

GROWTH OF HALIBUT.—The following interesting item is from the *Cape Ann Advertiser*, of Gloucester, Mass.: "Mr. P. Diggins, whose name was found cut on a halibut recently, and who has been absent at the Grand Banks, having seen an account of it in our columns, called upon us last week. He states that he has cut his name on a good many halibut, and this is the first one which there is any account of. This one, which was cut so as to take up the whole side of the fish, weighed at the time about 5lbs., and was cut in 1879. Singular to relate, but nevertheless true, his dorymate, Mr. Heber Cahoon, who was with him at the time when he cut the letters, happened to be the man who discovered and weighed the fish when he was landed, and at once recalled the incident. His weight then was 40lbs., showing that he had gained 35lbs. in nine years. Mr. Diggins is of the opinion that halibut grow much faster than this would indicate, and thinks that the growth of this one was stunted on account of its being cut, which is certainly very probable."

THAT BIG SHARK.—Danielsonville, Conn.—*Editor Forest and Stream:* In your issue of Sept. 13 appeared an account of a piscatorial adventure of Dr. H. L. Hammond, of Killingly, Conn. The item is correct, but had it detailed more it would have been far more satisfactory to the other members of the party. It is true that friend Hammond was at one end of the line when the shark made known his presence by nibbling at the other end. Equally true is it that this nibbling completely flustered the doctor, and quicker time was never made in visiting a dangerously ill patient than the doctor then made for the stern of the vessel, where during the ceremonies of killing and hauling the shark on board he nervously calculated on the chances of life and death. The fish was a monster, and it took the captain and Mr. George Jencks, of Danielsonville, Conn., a considerable time to despatch it.—H. M. B.

THE TOBIQUE MURDER.

THE trial of the two men, Phillipine and Trafton, charged with the murder of Mrs. Howes, on the Tobique River, reported at the time in these columns, was begun at Andover, New Brunswick, Sept. 25, Judge Wetmore presiding. In his address to the jury the judge said that the charge against the prisoners was of a most serious and aggravated character. The fact that these men had been fired on as a warning to keep away was no justification for this murder. A mistaken form of sympathy for the prisoners has, it seems, arisen in the community among persons who imagine that certain fishing rights and privileges, long enjoyed by the prisoners, had been taken from them and leased to strangers. Government or any other body had a lawful right to lease for a term of years any of the fishing grounds they choose, and when so leased or licensed, no outsider had any authority to go there. When they did go there they were infringing rights of others and were lawfully responsible for their acts. With reference to shots fired at the prisoners just before the fatality, his honor considered that that act was perfectly lawful, the object being solely to frighten off persons who were spearing salmon by lighted flambeaus. Under all the circumstances, his honor stated that they could not return any other indictment than that of murder against the prisoners Phillipine and Trafton.

There is a strong local feeling of sympathy for the accused, supposed in part to be due to pity, and doubtless in part to resentment, that outsiders enjoy the privilege of fishing with sportsmen's apparatus on these waters, while those residents who wish to fish with spears are prevented from doing so. A notion prevails that the natives here have been shut out from fishing waters running through their lands. Attorney-General Blair discussed this feature of the case at great length in his opening speech. He showed that Tobique River fishing was free to riparian land owners who fished in a legal manner. He assured the jury that even if natives had been harshly dealt with by law, they could not take matters into their own hands and fire on fishing parties proceeding down the stream.

In spite of the judge's strong charge to the grand jury, it was understood that the jurors were divided in opinion and that a true bill was only reached by a majority of more than two-thirds of the grand jurors were in favor of a bill for manslaughter only. No bill was found against Day.

The first witness called was Major Howes, whose account of the tragedy did not differ in any material respect from that given before the coroner. On cross-examination, however, he admitted that four shots had been fired by his party on the Saturday evening previous to the murder, to drive the two men, now known to be the prisoners, from the pool. He also said that he supposed the stream to be open to everybody, and although he had asked permission for the first four years of his fishing from John E. Stewart, and for the last year from Mr. Cram as representing the N. B. Railway Company, who are large land owners on the Tobique, he did so merely as an act of courtesy, and that he had fished the stream anywhere indiscriminately irrespective of who might own the land on the borders. He supposed every one else had the same right. He said that his interference with the men, on Saturday night, was solely because, as he thought, they were illegally spearing. Mr. Gregory endeavored to get before the jury, by putting into the hands of the witness for the purpose of cross-examination, a plan from the crown land office showing the Tobique with the names of the several grantees thereon, and also a printed handbill that had been posted by a Mr. Perley, as agent for the owners of the stream, forbidding all fishing thereon without license from him, but on objection of the attorney general he was not allowed to do so.

Great excitement prevailed when Anna Philippine, sister of one of the prisoners, took the stand and circumstantially contradicted the testimony given by her before the magistrates. Her first sworn testimony was that the night before the shooting her brother returned with one fish and said that he had been fired on, adding that in the morning he would have the drop on his assailant. That on the following morning he took a gun and went out; that, returning about noon, he declared that he and Trafton had fired on a fishing party, and that Mrs. Howes had been killed by a shot fired by Trafton. To-day she swore that her brother had not said anything of the kind, either at night or in the morning, and that she did not know whether he had taken out his gun. Under severe cross-examination the poor girl was overcome and had to be assisted from the court house. After she returned there was another scene. She repudiated her story of this morning and reasserted the evidence given before the magistrates. In reply to Judge Wetmore, she explained that a man had persuaded her that the only way her brother's life could be saved was by her contradicting her first criminating evidence. This person, whom she identified in the court room, had begged her, for God's sake, to take this means to keep the prisoner from the gallows.

Major Howes swore that five shots struck the water or canoes or persons, to his knowledge, and that the shooting continued afterward. The third shot struck his wife just as he had put his hand on her shoulder to make her lie down in the canoe. She fell back to his arms and was dead on the instant, the bullet passing through her head.

TALLMADGE, O., Sept. 24, 1888.—*United States Cartridge Co., Lowell, Mass.:* Dear Sirs—I have used a good many U. S. cartridges, and they have never failed to give satisfaction. Yours truly, (Signed) E. S. METLIN.—*Adv.*

BREEDING THE GRAYLING.

Editor Forest and Stream:

In the Seventeeth Annual Report of the American Fisheries Society, I notice among other interesting and valuable papers one by Mr. J. C. Parker, entitled "Observations on the Grayling." In the course of his paper Mr. Parker describes how he obtained and kept in captivity, until long past the period of the year when grayling spawn, nearly one hundred of these fish; and not only did they not spawn, but also there was not the slightest indication that they ever would, consequently his attempt to breed grayling for stocking purposes was a failure.

Mr. Parker does not say what size his grayling were, but it seems quite certain they were immature fish; in Europe, and I doubt not also in America, it is a curious fact that it is the exception rather than the rule for grayling to spawn under four years of age. One of our most successful pisciculturist, Mr. Thomas Andrews, of Guilford, England, who has successfully reared grayling from the eggs, tells me that he has taken eggs from three-year old grayling bred by himself, but not often; he says both eggs and fry of grayling require more careful treatment than eggs and fry of trout, it is substantially the same treatment carried on with greater care than is necessary in the case of trout. A three-year old trout or grayling bred at Mr. Andrews' splendid fish farm would be as large, or larger than any four-year old wild fish. His success is due chiefly to the fact that he has a perfect knowledge of the subject, a perfect water supply (springs and ponds under his entire control on his own ground), and he has any quantity of natural food—shrimps, crustacea, etc.

The grayling is such a fine fish and has such a wide range on the rivers of Europe—from those of Austria to those of Scandinavia—that I am quite sure it could be successfully introduced into many rivers in the States and Canada. You seem to have gone in heavily for German carp, a fish not to be named in the same day with the grayling.

P. S.—Since writing the above I have the following note from Mr. Wallace, the keeper of the Hungerford Fly Fisher's Club, who has much practical knowledge of breeding the grayling:

HUNGERFORD, England, Sept. 18.—Dear Sir: I am quite certain that grayling spawn when two years old, but, for breeding, it is better to take the eggs from fish three or four years old. Mr. T. Andrews is fishing here to-day and says that he did not mean to say that grayling do not spawn at two years, but four years is soon enough. I think they do well from eggs of three-year old fish.—J. WALLACE.

Therefore in my statement, made a few days ago, I did not clearly represent Mr. Andrews's meaning.

R. B. MARSTON, Editor *Fishing Gazette.*

LONDON, Eng., Sept. 14.

FISH AT THE CINCINNATI EXPOSITION.—The United States exhibit of fish at Cincinnati, O., has received 45,000 eggs of the quinnat salmon from the Government hatchery at Baird, Cal., and some of them are expected to hatch in a few days. The display of live fish has attracted much attention; many of the specimens are local ones. From the Little Miami River a fine lot were recently obtained, consisting of black bass, red-horse suckers, spotted catfish, mud shad, quillbacks and carp. A few days ago Captain Collins, accompanied by Dr. J. A. Henshall, went to Ross Lake, about ten miles from the city, and brought a number of live fish, among which were buffalo fish, mud shad, sunfish, black bass and yellow catfish.

COD FISH HATCHING AT WOOD'S HOLL.—The United States Fish Commission schooner Grampus will begin collecting codfish for spawning purposes, for the Wood's Holl station, about the 10th of this month. The fish will be brought in alive in the well, and the eggs taken at the station. Arrangements have been made to turn out many millions there, as well as at the Ten Pound Island station.

MAINE LANDLOCKED SALMON.—Our commissioners of fish and game have their weir on Crooked River in successful operation, having at the present time taken over one hundred landlocked salmon, one of the number, a male, is said to weigh 25lbs. They hope to secure at least one million of eggs.—M.

FIXTURES.

DOG SHOWS.

Oct. 2 to 5.—Seventh Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Oct. 2 to 5.—National Exposition Dog Show, Kansas City, Mo. C. R. Evans, Manager, Room 16, New England Building, Kansas City, Mo.

Oct. 9 to 12.—First Dog Show of the Virginia Field Sports Association, at Richmond, Va. B. H. Grundy, Secretary, Room 26, Shafer Building. Entries close Oct. 1.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide. Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

FIELD TRIALS.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 15.—Fifth Annual Field Trials of the Philadelphia Kennel Club, open to members only. Wm. H. Child, Secretary, Philadelphia, Pa.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6578**

THE LONDON (ONT.) SHOW.

[From a Special Correspondent.]

THE fourth international bench show, held in London, opened on Monday morning, Sept. 24. The building was specially designed for the purpose by the London Kennel Club, it is 124ft. long by 40ft. wide, with office on one side and feed room on the other. The judging ring is outside, and is 50ft. long by 18ft. wide. The benching is permanent and is furnished with open wire divisions, introduced for the first time in Canada, and was tastefully painted in black and gold. There is bench accommodation for 325; and the entries closed with 301 nominations. There were very few absentees, which will be noted further on. Too much credit cannot be given to the management for the perfect arrangement of every department. We must here congratulate them on the selection of Mr. C. A. Stone as manager; he follows closely in the footsteps of dear old Charles Lincoln. His attention to the details which make up the comfort of both exhibitors and exhibits deserves commendation; every kennel was properly numbered and every dog given his proper number. This made it an easy matter to find any particular specimen.

We noticed quite a number of the familiar bench show faces which added materially to the interest in the show itself; and we trust that the public will here appreciate the endeavors of the management to make it a paying venture, as this is the first show of five which the London Kennel Club have guaranteed the Western Fair Board to hold. It augurs well for its future success in the coming years. London always has a good show, pays its prize money and treats its exhibitors as well as they possibly can be treated Bench show managements in the United States might take a leaf out of London's book and make arrangements with the custom authorities to allow all dogs for exhibition to enter free and not make it necessary for each exhibitor to enter into personal bonds, which makes such a delay at the border. The London management put up a bond covering all exhibits coming into the show, so that exhibitors have no trouble about the custom at all.

Mr. John Davidson judged setters, greyhounds, foxhounds and deerhounds. Mr. Davidson this time judged nonsporting classes, including beagles. Mr. G. Bell, of Toronto, made his debut as judge of the spaniels and did his work well; he stuck to type, which is a very important thing in judging. Spratts Patent fed with their usual care, and Mr. Bates, their agent, made himself most popular with every one, and took the greatest care in having the food warm and properly prepared. The energetic superintendent, Mr. G. Bowman, of the London Hunt Club, was everywhere, and saw that every attention was paid to every exhibit. The whole committee worked liked beavers, and we will be very sorry if they have to suffer any pecuniary loss. The attendance was very good, but two wet afternoons and evenings were a great damper on the receipts. The London Kennel Club have every reason to be gratified that the show has given so much satisfaction to the exhibitors, and hope next year to have them all again and more with them.

MASTIFFS—(MR. MORTIMER).

There were only two in the dog class, and as Wacouta Nap was one, the other had no show. Nap has often been described. His head is good, and he has a deal of character about him. He also won the special for the best mastiff in the show. The bitch class also had only two entries, Bessie B. winning first. She is a rare good one, of a light fawn color; her front is about perfect, her head good, and it was a near shave for Nap that she did not get the special for the best dog or bitch in the mastiff class.

ST. BERNARDS—(MR. MORTIMER).

The two classes for this breed were very well filled for a Canadian show. Twenty entries, with two absentees, faced the judge. As all the winners in these classes have often been shown before it is not necessary to particularize, except to call attention to Prince in the open class for rough-coated dogs. This is one of the best dogs we have seen for many a day. His head is good and his body is all in proportion; good and straight, well-boned legs, and an exceptionally good coat, his being placed ahead of Enterprise speaks for itself. He was claimed at catalogue price. Luna, first in the bitch class, is of the long, low variety, with a good head. She might be better in coat, and was shown much too fat. Barnie, who was in the puppy class, also third in the dog class, is a good stamp. He might be stronger in head, but is a very well developed puppy with good coat and markings. Victor Joseph was the best in the smooth-coat class and deserved his first. He might be better in muzzle, and his eyes are too close together; his coat is rather open for the smooth class.

NEWFOUNDLANDS—(MR. MORTIMER).

There were five entries and all were present. Meadowthorpe Prince George is about as good a one as we have seen. Leo II. came up very well, but is a trifle too high on legs, and was shown in bad condition, his coat is very good. New York Lass is only a moderate one.

GREYHOUNDS—(MR. DAVIDSON).

There were eight entries, one transfered from Class 5, where he was wrongly entered, to face the judge. The first prize winner is a dog that shows a deal of quality all over. Second went to Milo, a beautiful white and black dog shown in the pink of condition, but is a trifle coarse. Josey, third, is a fair bitch shown in wretched condition.

GREAT DANES—(MR. MORTIMER).

There were only two entries in this class, both good specimens and properly placed.

DEERHOUNDS—(MR. DAVIDSON).

There were three entries with champion Mac absent Bevis III. was placed at the head. This dog has an immense coat and plenty of power.

ENGLISH SETTERS—(MR. DAVIDSON).

There were no entries in the champion class for dogs. Mr. Davey's Liddesdale, well known, was alone in the corresponding bitch class. In the open dog class there were eight entries, a great falling off from former snows, but the quality was very good. Mr. Davey won first and second with his Knight of Snowden and Locksley, both already described at former shows. Third went to Mr. Hugh's Blue Eagle, a dog showing a good deal of breeding, but off in head, which is inclined to be thick. Dover, vhc., is a dog of considerable merit, but shown in very poor condition, as were all of Mr. Wells's dogs, they having just returned from hunting in Manitoba. Bitches had but four entries. Mr. Wells's Cambriana got first in this class, which was a hot one. She is very thin, but quality stands out all over her. She has the cleanest cut head we have seen for many a day, and will be heard from again; she also got the special for the best setter in the show. Lu Moll, second, was well shown, and is a very meritorious bitch with few defects. Canadian Lassie, third, has been shown before. Forest Fern, vhc, was in too hot company to get into the money, but she is far above the average. The puppy classes were divided (which we think a mistake) into under 18 months and under 12 months. In the dog class, under 18 months, Mr. Wells's Matane got first, and it was a near thing between him and Dick, but the latter's tail failed him in the ring. In the corresponding bitch class Mr. Davey had it all his own way with two good ones in Liddesdale II. and Tillie, the latter showing extra quality. In the under 12 months class nothing of much merit was shown. We fancied Forest Myrtle for first, but there was little to choose between her and Maid of Brighton.

GORDON SETTERS—(MR. DAVIDSON).

Beaumont beat Lottie in the champion class; they are both well known. Heather Roy, first in the open class, is a good dog of the light made variety. Gus, second, is passable, and Clyde, third, just a fair dog. Gordo, hc., is a fine dog of the heavy type, and would have won under some judges; he has a correct head and good markings, but he has too much weight about him to please Mr. Davidson. Bitches had four entries with one absent. Belmont, placed first, is of a character not seen on this side often; she is racy built with a long head and rather narrow between the eyes, deep chest, well ribbed up and carries herself well; her markings and color are the best we have ever seen in the Gordon class. Becky Sharp, second, is such a good bitch that it was rather a surprise to many that she did not win; her greatest fault is perhaps in her markings, which are not so clear as the winner's, and the breadth of her nostrils, which appear rather contracted when placed beside Beaumont, but we expect to see her win often in the future. The puppies did not amount to much; the decisions were right.

IRISH SETTERS—(MR. DAVIDSON).

There were two entries in the dog class, first going to Farley's Kenmore, a most excellent dog showing any amount of the Irish setter quality. Rover, second, is a good dog but was outclassed. Farley's Cora was alone in the bitch class, she is a rattling good one. Nottingham Bang was alone in the puppy class, he is very good.

POINTERS—(MR. DAVIDSON).

Naso of Kippen was alone in the champion class. In the open class there were four entries. Westminster Naso was placed first over his kennel mate Lad of Bow, reversing Major Taylor's decision at Rochester, and in this we agree, as we think Naso is far more of a pointer all over than Lad, and future shows and judging will settle this. Meadowthorpe Duke, third, is a very good useful looking dog and it takes a good one to beat him, he has no bad faults. In bitches Lass of Bow had an easy win over Beauty II., the only other in the class, there being two absentees. The puppy class was not represented.

SPANIELS—(MR. BELL).

The spaniel classes were a long way ahead of any others in the show, and Mr. Bell took a deal of pains in making his decisions, which were well received by the exhibitors. The cocker classes were very strong, and every color was represented except tri-color, which ought to be a favorite one. We would be glad to see some of our fanciers taking this beautiful spaniel up. One thing was strongly impressed on us, either the standard of the A. S. C. is all wrong or it is not followed, several of the dogs receiving the prizes being markedly not up to standard. One point more than any other impressed us, and that is, that with the very long, low bodies now called for the legs are very defective. It seems that all these long, low breeds need crooked front legs to get them near enough the ground; therefore, when the A. S. C.'s standard calls for straight legs, why don't the judges follow it? As Mr. Bell's decisions were considered correct, why not alter the standard?

In field spaniels Newton Abbot Darkie scored another win in the champion class, beating Boo Jr., vhc., an old time spaniel but out of condition. In the open class for dogs the well-known Newton Abbot Lord, Negro and Pompadour in the order named were awarded the ribbons. The first named, looking well, had no difficulty in winning, Negro being very bad in head. Pompadour ran him very close for second place. Had Bridford Negress been shown in good condition she would no doubt have won in the bitch class, but looking so badly, it was no wonder the judge awarded the coveted blue ribbon to the well-known Lady Abbot with Bridford Negress second, and Topsy third, the last named is not a good specimen, being bad in head and coat.

In any other color dogs Newton Abbot Laddie won with points to spare, but it was a close thing between President and King for second place, the first named scoring. He beat King in length and in shortness of leg, but in other respects they are very similar. Rouse and Beau, vhc., should, in my opinion, have been placed below Lad o' Devon, hc., who beats both of them in head, length and shortness of leg. There were but two entries in the bitch class. Lady A. beat Queen, and rightly so, Lady has the advantage in length, shortness of legs, in other respects they are very similar.

In Irish water spaniels Handy Andy won. Had Jess been shown in good condition she would have pushed the winner hard. Drake, third, is not a good specimen.

Only one Clumber was shown, not very good. First was withheld.

In the cocker champion class Brant, looking well, had a walkover. Miss Obo II. won in bitches, beating Juno II. and Belle, the second named not looking as well as usual. The well-known Jersey won in the open dog class with Black Duke second, who might have changed places with Baby Ooo, third, as the latter beats him in head, coat, legs and body; he is not so large as I like them, but is a typical cocker. The bitch class was a good one, Chloe W. and Psyche being placed equal first. Black Duchess, third, is poor in head but has a good body and coat. Dodo, vhc. reserve, and Bonito, vhc., were placed right; neither of them can win in good company.

The any other color class was by consent divided, and Silver King beat Robin for first place; the former is all around the better cocker of the two, and especially in head and legs. In the bitch class there was not much competition, Goldie winning easily from Pearl, placed second, and Clip, third, both of them beating Senora in head and coat, and cocker action. Psyche was well to the front in the puppy class, beating Dodo in head, legs and feet. Dodo is good in coat and body, and may improve in time in legs which are very crooked. Frisky, third, will improve.

FOXHOUNDS—(MR. DAVIDSON).

There was a very large entry in these classes; in fact I think the largest ever in Canada—thirty-three. At the suggestion of the judge they were divided into two classes—English and American. Dan O'Shea had it all his own way in the American bred dogs, but in the English class we have never seen better, Mr. Morris showing two, Mr. Merriweather four and the London Hunt Club ten. Warrior, placed first, is a fine big dog with good head, which pulled him over Genius, who is otherwise the best hound we have seen. Statesman, third, is a good hound, rather small, as are all the London Hunt Club's dogs, but he is well made and has plenty of bone; in fact all this club's dogs are of the small type, but a very level lot and might be shown better.

BEAGLES.

Dan O'Shea had this class all to himself and his dogs are well known.

FOX-TERRIERS—(MR. MORTIMER).

There were twenty-seven entries and two absentees. The champion classes had only two representatives, but they were good ones—Blemton Kennels' Lucifer and Rachel. The judge placed the bitch over Lucifer for best fox-terrier in show, in which we hardly agreed. Although Rachel has the better head and neck, the dog beats her in other places, especially in coat and feet. The open dog class was very poor, so bad, indeed, that the judge withheld second and third, and gave a few cards after placing Blemton Kennels' Dusky Trap first. The open bitch class was better, New Forest Ethel first and Rose Canina second. The latter was in no condition to show, as an hour after judging she whelped a litter, so that it is impossible to compare these two. In the puppy class there were five entries, with two absentees. Blemton Kennels' Calculus was first, D. S. Booth's Traps second. The whole of the three classes were poor, which we can hardly account for, as the present rage for fox-terriers seems to be very much on the increase in Canada, and if it were not for the Blemton Kennels and Mr. C. F. Wheeler's exhibit there would have been nothing worth seeing. In the wire-haired class Mr. Wheeler's Chagrin deserves to be well noticed. She is about as good all round as this variety is made. The other two entries were unnoticed.

COLLIES—(MR. MORTIMER).

There were twenty-two entries and three of the Hempstead Kennels absent. Chesnut Hill Kennels and McEwen & Gibson had it all to themselves, and as these two kennels competed at Buffalo it is not necessary to enter into any description of them. Nothing new was brought out, and the judge's decisions were accepted all through as correct; in fact, we were never at a show in which there was less kicking. It is a fact that the chronic kickers are beginning to find that no one listens to them, and that they only make fools of themselves for doing so.

BULLDOGS—(MR. MORTIMER).

There were two entries, with Portswood Tiger at the head of affairs. He is good all around, and it takes an extra one to beat him. Remus, placed second, is a fair specimen, but was outclassed.

BULL-TERRIERS—(MR. MORTIMER).

In the dog class there were eight entries with one absentee. Mr. Hobie's two, Cairo and Grabber, were a long way ahead of anything in the class and took first and second, with Royal, a very fair dog, third. In the bitch class there were four entries, with Mr. Dole's absent. Hobie's Bonnie Princess was first, and O'Shea's Scarlet second. The latter shows a lot of character, but Princess is much too good for her.

BLACK AND TAN TERRIERS—(MR. MORTIMER).

There were but two entries, only fair dogs.

DANDIE DINMONTS—(MR. MORTIMER).

This class also had but two entries, Reiver and Pepper, both showing a good deal of quality, were placed first and second.

BEDLINGTON TERRIERS—(MR. MORTIMER).

There were three entries in this class, not first-raters.

SKYE TERRIERS—(MR. MORTIMER).

There were four entries with two absent. Meadowthorpe Coila got first and second was withheld.

HARD-HAIRED TERRIERS—(MR. MORTIMER).

There were two entries in this class. Meadowthorpe Glen Ettle, a good specimen, was first. I have seen very few as good terriers as this for many years, and am glad to see that they have not all been swamped by the more popular breeds.

IRISH TERRIERS—(MR. MORTIMER).

Only three entries, with nothing very good; the awards were about right.

YORKSHIRE TERRIERS—(MR. MORTIMER).

There were two entries, neither first-class.

PUGS—(MR. MORTIMER).

There were three entries in the pug classes, quite good ones; the awards were correct.

TOY TERRIERS—(MR. MORTIMER).

A native terrier and a black and tan comprised this class; the latter won.

MISCELLANEOUS CLASS—(MR. MORTIMER).

There were five entries of good quality; first went to a very good curly-coated black retriever; second to a smooth-coated collie; third to a white English terrier; vhc. to a white Pomeranian.

DACHSHUNDE.

Two very fair reds were exhibited by Mr. Mills; Vixen won. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, St. Joe Kennels' Wacouta Nap; 2d, J. Mitchell's Leo. *Bitches:* 1st, J. V. Batham's Bessie B.; 2d, J. Mitchell's Ashmont Lioness.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—Alta Kennels Norma.—OPEN—*Dogs:* 1st, A. B. Vanblaricom's Prince; 2d, Meadowthorpe Enterprize; 3d, Harriet Gorman's Barnie. Very high com., A. Little's Nero and A. Laidlaw's Barry, jr. *Bitches:* 1st, S. F. Glass's Luna; 2d and 3d, A. Laidlaw's Belle and Sweep.—*Puppies:* 1st, Harrie Gorman's Barnie; 2d, A. Laidlaw's Barry, Jr.; 3d, F. Gorman's Briam. Very high com. and com., Alta Kennels' Miss Fortune and Berna II.—SMOOTH-COATED—1st, Alta Kennels' Victor Joseph; 2d and 3d, J. W. Dunlop's Rigi and Tuisbe. Very high com., J. F. O'Neills Barney.

NEWFOUNDLANDS.—1st, Meadowthorpe Kennels' Meadowthorpe Prince George; 2d, D. O'Shea's Leo; 3d, C. Gianelli's Don Pedro.

GREYHOUNDS.—1st, F. Hobart's Fly; 2d, G. C. Taylor's Milo; 3d, D. O'Shea's Josey. Very high com., L. Sare's Prince. High com., F. Hobart's Lolley Boy. Com., R. H. Siddall's Roxey.

GREAT DANES.—1st and 2d, T. Roedler's Lord and Dine Bianna.

DEERHOUNDS.—1st, E. D. Morgan's Bevis III.; 2d, S. W. Skinner, jr.'s Clunban.

ENGLISH SETTERS.—CHAMPION—*Dogs:* No entry. *Bitch:* T. G. Davey's Liddesdale.—OPEN.—*Dogs:* 1st and 2d, T. G. Davey's Knight of Snowden and Locksley, 3d and com., F. G. Hughes's Blue Eagle and Paris III. Very high com., W. B. Wells's Dover. High com., Forest City Kennel Club's London II. *Bitches:* 1st, W. B. Wells's Cambriana; 2d, H. B. Harrison's Lu Moll; 3d, T. G. Davey's Canadian Lassie. Very high com., Forest City Kennel Club's Forest Fern.—PUPPIES UNDER 18 MOS.—*Dogs:* 1st, M. B. Wells's Matane; 2d and 3d, T. G. Davey's Brighton Dick and Jester. *Bitches:* 1st and 2d, T. G. Davey's Canadian Lilie and Liddesdale II.—UNDER 12 MOS.—*Dogs:* 1st, T. G. Davey's Lion King. *Bitches:* 1st, T. G. Davey's Maid of Brighton; 2d, very high com. and high com., Forest City Kennel Club's Forest Myrtle, Forest Bramble and Forest Violet; 3d, T. H. Southam's Ann of Lincoln.

GORDON SETTERS.—CHAMPION—E. H. Morris's Beaumont.—OPEN—*Dogs:* 1st, Meadowthorpe Kennels' Meadowthorpe Heather Boy; 2d, Dr. J. S. Niven's Gus; 3d, C. A. Gibbs's Clyde. Very high com., E. H. Morris's Shot. High com., J. L. Campbell's Gordo. *Bitches:* 1st and 3d, Meadowthorpe Kennels' Meadowthorpe Belmont and Meadowthorpe Heather Model; 2d, J. L. Campbell's Becky Sharp. *Puppies:* 1st, J. W. Winnett's Bessie; 2d and 3d, J. L. Campbell's Sairy Gamp and Mr. Isaacs.

IRISH SETTERS.—CHAMPION—No entry.—OPEN—*Dogs:* 1st, T. J. Farley's Kenmore; 2d, Meadowthorpe Kennels' Meadowthorpe Rover. *Bitches:* 1st, F. J. Farley's Cora.—PUPPIES—*Dogs:* 1st, J. Maughan's Bang. *Bitches:* No entry.

POINTERS.—CHAMPION—Westminster Kennel Clubs' Naso of Kippen.—OPEN—*Dogs:* 1st and 2d, Westminster Kennel Clubs' Westminster Naso and Lad of Bow; 3d, Meadowthorpe Kennels' Meadowthorpe Duke. Very high com., W. D. Tristern's Don. High com., J. R. Galpin's Volanity. *Bitches:* 1st, Westminster Kennel Clubs' Lass of Bow; 2d, J. R. Galpin's Beauty II.—*Puppies:* Absent.

SPANIELS.—CHAMPION — OVER 28LBS.—Oldham & Willey's Newton Abbot Darkie. Very high com., J. H. Luckwell's Bob, Jr.—OPEN—*Dogs:* 1st, Oldham & Willey's Newton Abbot Lord; 2d, E. H. Morris's Negro; 3d, J. Bland's Pompadour. *Bitches:* 1st, Oldham & Willey's Lady Abbot; 2d, E. H. Morris's Bridford Negress; 3d, J. A. Spracklin's Tonsy. Reserve, Campbell & Blake's Fan II.—ANY OTHER COLOR—*Dogs:* 1st, Oldham & Willey's Newton Abbot Laddie; 2d, Reserve, E. H. Morris's President and Beau; 3d, J. A. Spracklin's King. Very high com., G. Douglass's Rouse, and Brant Cocker Kennels' Shaun Rhue. High com., J. Gambin's Lad o' Devon. Com., A. Laidlaw's Bruce, and W. L. Gill's Jock. *Bitches:* 1st, E. H. Morris's Lady A.; 2d, J. A. Spracklin's Queen.—CLUMBER—1st, withheld; 2d, G. Massey's Fitz.—IRISH WATER—1st, J. F. W. Ross's Handy Andy; 2d, B. F. Lewis's Jess; 3d, J. W. Winnett's Drake — COCKER—CHAMPION — *Dog:* Brant Cocker Kennels' Brant. *Bitch:* Oldham & Willey's Miss Obo II. Reserve, Brant Cocker Kennels' Juno II.—OPEN—BLACK — *Dogs:* 1st, and 3d, Oldham & Willey's Jersey and Baby Obo; 2d, A. Laidlaw's Black Duke. Reserve, A. Laidlaw's Jack. Very high com., A. K. Ross's Smut. *Bitches:* Equal 1st, Oldham & Willey's Chloe W. and J. C. Eccles's Psyche; 3d, J. Luckwell's Black Duchess. Reserve, A. Laidlaw's Dodo. Very high com., Brant Cocker Kennels' Bonita. High com., J. G. Jorgensen's Lady Nell and P. J. Keating's Nelly.—ANY OTHER COLOR—*Dogs:* 1st, J. Luckwell's Silver King; 2d, A. Laidlaw's Robin; 3d, Brant Cocker Kennels' Rocks. *Bitches:* 1st, Oldham & Willey's Goldie; 2d and 3d, Brant Cocker Kennels' Pearl and Clio. Reserve, A. Laidlaw's Senora. *Puppies:* 1st, J. C. Eccles's Psyche; 2d, A. Laidlaw's Dodo; 3d, J. Spracklin's Frisky. Very high com., P. J. Keating's Friday, D. Martin's Sandy and Brant Cocker Kennels' Bertie.

FOXHOUNDS.—ENGLISH—*Dogs:* 1st, E. H. Morris's Warrior; 2d, H. D. Merewether's Genius; 3d, London Hunt Club's Statesman. *Bitches:* 1st, E. H. Morris's Passion. *Puppies:* 1st and 2d, H. D. Merewether's Vexation and Victor.—AMERICAN.—*Dogs:* 1st and 2d, D. O'Shea's Leader and Ranger. *Bitches:* 1st, D. O'Shea's Roxey II.; 2d, H. H. Merewether's Nancy; 3d, London Hunt Club's Bustle. *Puppies:* 1st, 2d and high com., D. O'Shea's Rover, Hark and Ranger II.; 3d, W. Avery's Captain. Very high com., J. Weld's Lyon. High com., J. Evan's Trot.

BEAGLES.—*Dogs:* 1st and 2d, D. O'Shea's Rattler and Tomboy. *Bitches:* 1st and 2d, O'Shea's Fairmaid and Mischief.

FOX-TERRIERS.—CHAMPION—*Dog:* Blemton Kennels' Lucifer. *Bitch:* Blemton Kennels' Rachel.—OPEN—*Dogs:* 1st, Blemton Kennels' Dusky Trap; 2d and 3d, withheld. High com., J. I. Biggs's Ratterer IV. and D. S. Booth's Dandy. Com., H. T. Domville's Teaser, and C. W. Davis's Grip. *Bitches:* 1st, Blemton Kennels' New Forest Ethel; 2d, F. C. Wheeler's Rosa Canina; 3d, G. Douglass's Lassie. High com., J. J. Bigg's Lucy, and D. S. Booth's Gip. Com., H. A. Harper's Jennie, J. Mapson's Fan and J. Rombough's Vashti. *Puppies:* 1st, Blemton Kennels' Blemton Calculus; 2d, D. S. Booth's Traps.—WIRE-HAIRED—1st, F. C. Wheeler's Chagrin; 2d, withheld.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla. *Bitch:* Chestnut Hill Kennels' Luella.—OPEN—*Dogs:* 1st and very high com., McEwen & Gibson's Guelph and Red Gauntlet; 2d, Chestnut Hill Kennels' Roslyn Sensation; 3d, Meadowthorpe Kennels' Meadowthorpe Reality. *Bitches:* 1st and 3d, Meadowthorpe Kennels' Meadowthorpe Parole and Meadowthorpe Blue Berry Girl; 2d and very high com., Chestnut Hill Kennels' Cora II. and Roslyn May; High com. and com., McEwen & Gibson's Merry and Madge. *Puppies:* 1st, 3d and reserve, McEwen & Gibson's Guelph, Ailsa and Keith; 2d, Chestnut Hill Kennels' Roslyn May. Very high com., Brant Cocker Kennels' Parton Ella. High com., J. C. Eccles's Petica.

BULLDOGS —1st, W. T. Tebbutt's Portswood Tiger; 2d, Campbell & Blake's Remus.

BULL-TERRIERS.—*Dogs:* 1st and 2d, W. F. Hobbie's Cairo and Grabber; 3d, O'Shea's Royal. High com., R. Ward's Sport. Com., G. W. Graydon's Murphy. *Bitches:* 1st, W. F. Hobbie's Bonnie Princess; 2d and 3d, D. O'Shea's Scarlet and Lillie.

BLACK AND TAN TERRIERS.—1st and 2d, Campbell & Blake's Nanou and Jack.

DANDIE DINMONT TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Reiver; 2d, L. J. Meredith's Pepper.

BEDLINGTON TERRIERS.—1st, E. D. Morgan's Tees Rock; 2d and 3d, D. O'Shea's Zulu and Sting.

SKYE TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Coila; 2d, withheld.

SCOTCH TERRIERS.— HARD-HAIRED—1st, Meadowthorpe Kennels' Meadowthorpe Glen Eitle; 2d, E. D. Morgan's Highland Laddie.

IRISH TERRIERS.—1st and 3d, Chestnut Hill Kennels' Breda Tiney and Roslyn Eileen; 2d, D. O'Shea's Rock.

YORKSHIRE TERRIERS.—1st, withheld; 2d, Campbell & Blake's Young Prince; 3d, Meadowthorpe Kennels' Meadowthorpe Fairy.

PUGS.—*Dogs:* 1st, G. Bell's Rustic King. *Bitches:* 1st, G. Bell's What's That. *Puppies:* 1st, G. Bell's Rustic King; 2d, G. Stinson's Tiney.

TOY TERRIERS.—1st, Campbell & Blake's Tiney; 2d, D. O'Shea's Nellie.

KING CHARLES SPANIELS.—1st, withheld; 2d, J. R. Loeman's Belle.

MISCELLANEOUS.—1st, Meadowthorpe Kennels' Meadowthorpe Diamond; 2d, Chestnut Hill Kennels' Lady Bird; 3d, O. H. P. Belmont's Diamond Spark. Very high com., Ella Colville's Beauty and Mrs. W. M. Evans' Chickoo.

DACHSHUNDE.—1st and 2d, F. H. Mills's Vixen and Combat.

SPECIAL PRIZES.

Best mastiff, Wacouta Nan; kennel St. Bernards, Alta Kennel; rough-coated, Prince; smooth-coated, Victor Joseph; greyhound Fly; deerhound, Bevis III.; kennel English setters, T. G. Davey; dog or bitch owned in Canada, Cambriana; dog in open class, Knight of Snowden; dog under 18mos., Matane; bitch, Canadian Lillie; puppy, Maid of Brighton; brood bitch, Liddesdale, with Locksley and Canadian Lillie; Gordon setter dog, Meadowthorpe Heather Boy; bitch, Meadowthorpe Belmont; puppy, Bessie; Irish setter, Kerry; kennel of setters, Westminster Kennel Club; dog, Naso of Kippen; kennel spaniels, Oldham & Willey; field spaniels, the same; field spaniel owned in London, Jock; cocker spaniel, Jersey; bitch, Miss Obo II.; owned in Canada, Brant; kennel foxhounds, H. D. Merewether; dog, Warrior; bitch, Roxey II.; kennel fox-terriers, Blemton Kennel; dog or bitch, Rachel; owned in Canada; Rosa Canina; in London, the same; kennel collies, Chestnut Hill Kennel; best, Scotilla; bulldog, Portswood Tiger; black and tan terrier, Nanou; Bedlington, Tees Rock; Irish terrier, Breda Tiney; pug, What's That.

A VOTE OF THANKS.—*Editor Forest and Stream:* The American Kennel Club has capped the climax of absurdity. At its last meeting no less a one than Mr. Peshall moved a vote of thanks to its president for his defense of the A. K. C., and Mr. Terry amended it by the solemn assurance that the A. K. C. was thoroughly in accord with what Mr. Belmont had done. Great snakes! Mark you, it was not a vote of thanks for Mr. Belmont's interest in the club, his liberality toward it, or his unselfish devotion to it—this would have been perfectly proper—but it was a thanksgiving for the defense he had made; and an assurance that the A. K. C. was with him in it all. And yet if there was one statement in Mr. Belmont's "defense" that was correct it has slipped my memory. And this is what the A. K. C. is thankful for; thankful that its president shows that it approved of the "Chicago special" and "bogus medal" disgraces; that he stated the rules of the A. K. C. not as the statute gives them; that he declared the practice of the A. K. C. to have always been just what it has invariably not been. Just imagine Mr. Peshall defending a man for larceny and succeeding in proving him not guilty of that, but guilty of burglary and murder, and his client thanking him. Imagine his receiving the thanks of the bar of his county for asserting the law was thus, when they all know it is that. And Mr. Terry says that the A. K. C. approves of every one of these blunders. Is it possible for anybody to more effectually realize Dogberry's wish than the A. K. C. has thus succeeded in doing? And I would respectfully ask Mr. Peshall if he indorses the correctness of Mr. Belmont's statements in his famous reply to Mr. Rewalt. Remember, I do not ask whether he indorses Mr. Belmont himself, which is a very different thing. What a upas tree the A. K. C. seems to be to common sense and ordinary judgment.—W. WADE.

THE HISTORY OF A MUSHROOM.

Editor Forest and Stream:

In looking over some musty papers belonging to the estate of my great-grandfather (who, I trust, has received the rewards of the just) I came across an old musty manuscript which puzzled me not a little. It bore every mark of extreme age—yellow in uneven blotches, faded ink and brittle paper; it was torn in a few places, and some words were so nearly effaced, by fading, that it was with much pains and labor that I managed to get this very correct transcript. The meaning I cannot fathom. I can see that it is a dog story of some kind, but its bearing or connection, if such it have, will take a more learned head than mine to determine. Whether it is a truthful history of events that actually occured among the ancients, or whether it is in the nature of an apology, there is not the slightest external evidence to afford a clew. If it is a true story of dog life among the ancients, it is valuable as tending to show that they had their trials and troubles, and were not in advance of us in any of the circumstances which make dog matters of the present day so vivacious and pleasantly diverting. It is possible that, in this learned age, when sportsmen have the savings of the ancients at their fingers' ends as if they had hobnobbed with the ancient gods and men, some of your many readers may be able to shed some of their bright mental light on it if they should note any importance worthy of their high attention. The absence of all chronological data and the length of time which has elapsed since Atlantis was submerged will doubtlessly consign the identity and life of the actors to the oblivion from which, apparently, they so suddenly emerged. Dropping all speculations as being useless and wearisome, I subjoin a true copy from title to signature, viz.:

THE GROWTH OF A MUSHROOM:
OR,
THE GRAPHIC RISE OF LORD JIM.

In the province of Atlantis there lived a plebian-patrician, who had emerged from the obscurity of an honest calling by means of a judicious marriage and a large amount of brass. After becoming comfortably ensconced in a mild way in the social and domestic world, time began to hang heavily on his hands, so he must needs divert himself in some of the accomplishments of gentlemen of wealth. After the manner of newly made gentlemen, he did not seek diversion for its own sake, being a man of great vanity, he simply sought to draw attention to himself and dazzle the multitude by the surpassing splendor of his equipments. The plebian-patrician was named Jim, and his ancestry was supposed to extend in unbroken lines to Adam and Eve; therefore no genealogy could be better or longer, for it comprised everything.

The reigning fashion of his age, in which the gentry, old and young, took great delight, was in the ownership of rare, fine dogs, which were brought to Atlantis from a distant country, where they were owned and raised by noblemen; and it is said that these noblemen received vast sums of money for dogs of pure blood from the birdmen (so they were called) of Atlantis. To own a fine dog raised in the distant country was an open sesame to fine company at home, even if the owner had few other qualifications, the common interest in the dog of pure breed making a kind of goodfellowship and fraternity. The dogs were used for chasing birds.

The fraternity of birdmen had some peculiar customs and festivals. It is related of them, how truly I know not, that they would travel enormous distances with their dogs and meet in multitudes at some place previously agreed on, to show their dogs. Some man, wise in such matters, would, with much show of wisdom, look the dogs over limb by limb and hair by hair, and would then impressively state which one was the prettiest, and would mark the decree with a blue ribbon and a pencil. The ones who did not have pretty dogs would raise their voices, weep, and refuse consolation for weeks, so strong was their affection for their pets and perquisites. Then they had other gatherings, where the skilful birdmen gathered in large numbers, to try their dogs one against the other in the chase of birds; and to decide the chase many days and nights were required. The judges, after going through some prescribed forms of concatenation, would tell which dog was the best. After the decree, some of the birdmen with weak minds would be full of wailing and anguish for a year, and they would not be comforted. Such were recognized as a class by themselves, called kickers, and were rarely true birdmen. The bird-chasing contests were so open that the interlopers could not be kept out.

It is said that this diversion required a great deal of training and skill to be proficient in it to a common degree, and an impostor was sure to be found out in a short time. The birds, when chased, were knocked down while flying, and the dog and man had to so time their efforts that neither was remiss in a single circumstance, else the whole affair failed.

Although he was wholly untaught and untrained in this diversion, and therefore as ignorant of the noble dog and sport as the quintessence of ignorance could be, Jim was seized with as whimsical a conceit as ever entered the head of a madman. He believed that by his intuitions and the absorption of gas he could become a full-fledged birdman and an exponent of all difficult questions of dogdom. It came to pass that, in the amicable rivalry for superiority, provision was made for wealthy men who could not catch birds flying or who were ignorant of the nice points of noble dogs. The wealthy man could buy a finely-executed image of a dog in a distant land, and so true to life were these imitations that they often deceived wise birdmen. The man who owned one of these images was supposed to know that the fraternity winked at the harmless fiction, while according such owner all the privileges and immunities of a true birdman. Now Jim bought one of the costliest images in the far land, and with the utmost good faith tried to pass it off on the birdmen as a genuine bird-catcher; he being a bit light-headed and would not learn that the images by tacit consent were to be kept quietly in the background in actual bird-catching contests.

The whimsical conceit of Jim carried him to such a length, that he paid all the fees which were required to let his dog try and catch birds in a great contest which was held annually not far from the great ocean. To steer this image, Jim and a most estimable gentleman, over whom Jim gained an inexplicable ascendency, engaged the services of one Llet, the one after whom he of apple-Gesler fame was named. This dog steerer was known to be a most ruffianly fellow, one who had been debarred from bird chasing contests for misdemeanors, and had publicly threatened to poison large numbers of the racing dogs which went to the bird catching races. He was a loud, turbulent lout, insolent to a degree, and unfit company for a gentleman to associate with; yet Jim, the plebian-patrician, engaged his services, and Llet became my gentleman's gentleman.

At the bird catching race he had the costly image named Chiparg in charge, and as was to be expected the race was not far advanced before Jim became dissatisfied at the way the true bird-catching dogs worked. It was the first public chase that Jim had ever seen, yet he talked loud and long, as if he could be aggressive from his great knowledge, when truly he had none. Jim withdrew his costly image from the chase, giving as a reason therefore, that he was "out on a lark." My gentleman's gentleman was so atrociously unbearable that the synod of bird men properly debarred him. Then Jim had a great grief. How did any one dare to affront him by so much as remotely disapproving what he sanctioned? He raved, swore, blew his nose and wrote many lines of italics and small capitals to show that it was sinful to "be out on a lark," but blasphemy to meddle with my gentleman's gentleman. There was no question of the guilt of Llet, and there was no qestion that he had done several things worthy of debarment; but Jim based all his sayings and doings on a technicality. He threatened, swore, traduced, consulted his lawyer, disturbed the birdmen for months, talked loudly of instituting legal measures and—did nothing at all, this being a trait in which Jim was an adept.

Then Jim affected the other contests where many men were gathered to see who owned the prettiest images and dogs. Having some success in this line he sent to the far land and bought many dogs, and on the strength of his ownership his conceits grew, and he thought he was a breeder; for so disordered had his senses become, that he thought to buy was the same as to breed. By uttering several thousand vulgarities and absurdities his head became lighter, and as his conceits grew he thought himself an authority on all matters, and loudly prattled in public and private; and simple Jim became Lord Jim. He had a felicitous way of asking a judge at a beauty show to oblige him by explaining wherein his image was inferior, and when shown he would roundly curse the judge. He would run here and there, flitting from one man to another, telling most woeful tales of his ill-usage, and would darkly caution every one against the judge who dared to decide against his dog.

As he grew in experience he grew in boldness and obnoxious traits, immunity from his offenses being a great encouragement. Whenever one of his costly images was beaten he forthwith filed a protest, and the protest was a marvel in its way. It was no more nor less than Lord Jim's gusty opinions written at length, but never contained a line of pertinent evidence to show fraud, collusion or mistake. So extensive did his protesting duties become, that he carried a large number of protests ready written, and all he had to do then was to affix his signature to the first one to hand, one being as good as another, they all being his opinions.

He had one specially vile habit—whenever he could get an unsuspecting judge or exhibitor to lunch with him, he would discuss the judging of his dogs with the greatest affectation of candor and show the judge wherein he was in error in the merits of his costly images; or he would kindly show the exhibitor wherein his dogs were faulty, and inferior to those of his host. In this manner he sacrificed his duties as a host to gain a point he could not as a gentleman; that is, some one to listen to him.

But Lord Jim sighed to become a victor in the bird catching contests. There were irritating winks and nudgings here and there, and hints about "tenderfeet," that multiplied rapidly, and were in a fair way of being believed. The East would not, much to his happiness, remove the debarment from my gentleman's gentleman, so he started on a long trip to a tiny bird catching contest in the interior known as the "wild and woolly." My gentleman's gentleman located in a contiguous province, and had only settled there a few days when my gentleman's gentleman became so popular that he received a peremptory notice to quit, the "wild and woolly" having no manner of use for my gentleman's gentleman.

He staid not upon the order of his going, such being an honored custom. When the "wild and woolly" native says "git," honored tradition requires that the subject should meander in a direct line. My gentleman's gentleman then went to the place where the contest was to be held. There were signs of a contest that exceeded their expectations, the "wild and woolly" having more advances in civilization than Lord Jim dreamt of. He noticed a few thorns and burrs about in sundry places, so he tied some thorns and a few burrs together, sent them to the editor of a paper as proof that the country was full of burrs and thorns, and in a lengthy explanatory note, learnedly showed that a dog was in constant danger of being impaled on a huge thorn or in danger of breaking his neck on a burr; whereupon he abandoned the contest to its fate. The contest was run according to programme, and many wishes of long life and happiness were drank to "tenderfeet."

With every year Lord Jim grew more garrulous and odious. He determined still to win a bird-catching contest; so, the year after the events mentioned above, he again went into the interior to catch birds in a contest. He made a desperate attempt to have Llet recognized, but the debarment of the East was honored. Lord Jim started in in bad humor. To be thwarted of the companionship of my gentleman's gentleman was unpardonable. However, he had a very worthy young man to pilot his dogs through the bird-catching races. He required that the dogs should have their eyes wiped carefully every morning and night, and grumbled bitterly if they were not wiped with the grain of the hair. If the dog choked while eating he blamed the handler for it. Every dog had his own pan and they were not interchangeable. He required his handler to rise at 11 or 12 o'clock at night to let the dogs out. He discussed elaborate theories of breeding at the table where ladies were present.

He ran his dogs in the contest. There was a rigid rule that no living man should make any remarks on the dogs in the hearing of the judges Lord Jim, while taking advantage of the position allowed him near the judges while his dogs were running, repeatedly violated the rule. A real lord was not governed by ordinary rules. He was mildly admonished of his lapse, but he then became more demonstrative than ever. When patience ceased to be a virtue, he was brought up with a round turn, and he had to live within the rules. But life was becoming miserable; he had no chance to make a protest. At last, when a better dog than his was placed equal third as a bird catcher, his chance came; out came the protest. The judges were correct under the rules, and there were no grounds for a protest; but Lord Jim was spoiling to express an opinion. He had a lengthy one which did not contain a single pertinent thought. He thereupon vilified the club and all connected with it.

A terror of reporters was he. As he approached, the reporters would scatter like a fan. His interminable prattle and ignorance of work were a serious affliction. It was ludicrous in the extreme to see one reporter drift with him toward another, engage the other in conversation, then unload Lord Jim upon him and steal away. If one of his dogs stole a point, it was an exhibition of fine nose. If the competing dog got birds, he had no business to do so. Running riot he called good ranging; and so on *ad nauseam*.

Lord Jim returned home with new matter for notoriety. He would conduct a lengthy private correspondence, writing his own letters in a stilty, look-at-me kind of style with a view to publication. Then, when the correspondence was ended, out would come all the correspondence, whether marked "personal" or otherwise. To such a frenzy did he arrive that he employed a stenographer to secrete himself and take down private conversations in his office. At this part of his career he settled into the self-satisfied belief that he was a breeder, although he had bought much but bred nothing. He had two or three puppies that would be something, in his mind, if they did not brain themselves against an "if" which he had in his mind.

Next, Lord Jim was invited to act as a judge in a bird-catching contest on the civilized frontier of the "wild and woolly." For some reason soon to be known, the committee on executions told him that his services would be dispensed with. Lord Jim threatens to publish the fact that the said committee learned his character and discharged him.

Since then Lord Jim has blindly butted his head against every obstacle in sight. All that is necessary is to whistle, show Lord Jim a body of any size or kind, and on the in-

stant he will wheeze, blow, sweat, paw the ground and run into it full tilt, head first. None can do it like Lord Mushroom Jimmie.

The mushroom still grows and is spongier, danker. The top is almost too heavy for the stem. Some day it will tipple over and quickly disappear, as is the nature of mushrooms. There will be nothing left of it to attract the notice of posterity except a small spot of unhealthy matter.

IT'S ME.

ATLANTIS.

Thus the M.S. ended. The man called Lord Jim must have been in his day what is termed a crank by the moderns. It should be a source of congratulation that there is no man in the fancy who is so foolishly vain as Lord Jim. Perhaps, with all his freaks he was but a harmless sort of ninny, and if left alone, would succumb to the fate of all mushrooms when brought into a strong light. CORN CRACKER.

SEPTEMBER 20, 1888.

THE INDIANA FIELD TRIALS.

Editor Forest and Stream:

In cancelling the appointment of Mr. Jas. L. Anthony as judge of its coming trials, the Indiana Kennel Club corrected an acknowledged error, resented a rank insult, protected the interests of its entries and retained its self-respect.

The public may judge the merits of the case by the character and extent of its support and opposition. The club's action is sustained and approved by every member of the Board of Control, consisting of Messrs. D. C. Bergundthal, Ed. S. Shultz, J. E. Dougherty, J. M. Freeman, S. H. Sockwell, P. T. Madison, H. A. Comstock, Royal Robinson, A. P. Craft, M. R. Williams, F. W. Samuels and Joseph Becker. It is opposed only by Mr. Anthony and Mr. J. E. Isgrigg. The former's acts and utterances condemn him as being unfit for the self-sought position from which he has been deposed, and as lacking the instincts and requirements that render a man a proper associate for a genteel dog.

Mr. Isgrigg may be dismissed with the statement that the club expelled him for acts unbecoming a gentleman, but reconsidered the vote, on the ground that he was *non compos mentis* and permitted him to resign his membership.

The Indiana Kennel Club will not magnify the importance of these gentlemen, nor belittle itself by any controversy with them.

The public may be assured there will be a public trial of pointers and setters at Bicknell, Ind., beginning Nov. 1. It will be under the management of the Indiana Kennel Club, and that organization will be responsible for the character of the judges and the fairness of the methods pursued.

It is left to the interested dog owners to see that worthy ends promoted by clean and decent means are not defeated by the blackguardism and disappointed egotism of any individual. By order of the Board, P. T. MADISON, Sec'y.

INDIANAPOLIS, Ind., Oct. 1.

ST. PAUL DOG SHOW.

WE have received the premium list of the second annual dog show of the St. Paul and Minnesota Kennel Club, to be held at Jackson Street Rink, St. Paul, Minn., Oct. 23 to 26. The prize in all of the champion classes is $10; the important classes are divided by sex. In the open classes for mastiffs, rough-coated St. Bernards, Great Danes, English and Irish setters, the prizes are $15 and $8, with $5 and $3 for puppies. Chesapeake Bay dogs have classes for rough and smooth-coated, with $12 and $7 for dogs and the same for bitches; open classes for pointers, large and small, the same. Other classes have $10 and $5, with the exception of King Charles and Blenheim spaniels, and the miscellaneous classes, which have $5 and $3. The club will give $20 each for best kennel—not less than four—of mastiffs, St. Bernards, Great Danes, pointers, English setters and Irish setters, and $15 each to Chesapeake Bay, collies, cocker spaniels, Irish water spaniels, fox-terriers, other terriers and pugs, and $25 to exhibitor making the largest entry. Upward of fifty valuable specials are already offered and many more are promised. The American, United States and Northern Pacific Express companies will take dogs to and from the show for one rate, and the railroads will carry dogs in the baggage cars free when accompanied by attendant. Spratts Patent will bench and feed. Chas. Weil will superintend the show. The judges are Messrs. John Davidson, sporting classes, and Chas. H. Mason, non-sporting. Entries close Oct. 15. The address of the secretary is J. E. Stryker, 98 Globe Building, St. Paul, Minn.

OUR BOSTON SHOW REPORT.

HAVING publicly made an untruthful statement respecting the accuracy of the FOREST AND STREAM'S Boston show report, and a second untruthful statement respecting the purpose of that report, Mr. August Belmont, Jr. now adds another untruthful statement as to the character of our comments on his last two untruthful statements. He publishes in a horse paper this:

"I also desire to state to my fellow-breeders and exhibitors that, while I shall never shrink from affording explanations to those seeking for statements publicly made by me, I must, in deference to my own self-respect, except such an instance as that of the FOREST AND STREAM relative to its Boston show report, or any other similar case where the request is made in foully abusive language and in the spirit of blackguardism."

The FOREST AND STREAM has a reputation for honesty and fair intent in its show reports. No man can put his finger on a single word in any report ever written by our kennel editor which was not written honestly and with fair intent; no one who knows that editor would ever accuse him of writing a dishonest report. We propose to maintain and protect our reputation in this respect. It is a part of our capital. When Mr. Belmont or any other man falsely impugns the character of our reports and their purpose we shall defend ourselves. Because we do this Mr. Belmont now says we are possessed of a spirit of "blackguardism." Does Mr. Belmont imagine that it is only "blackguards" who resent being taxed with untruthfulness? ED. F. & S.

COLLIE SWEEPSTAKES.—Rahway, N. J.—The executive committee of the Collie Club at their meeting Sept. 25, decided to divide the Collie sweepstakes and Futurity Stakes in two sections, the same as provided for in the Produce Stake. Puppies born previous to July 1, 1888, will compete at one of the early spring shows of 1889, and those born between July 1 and Dec. 31 will compete at shows in September or October, 1889. This will give late puppies an equal chance with the early ones as those born even as late as December will be nine months old when judged, at which age they are generally at their best. The sweepstakes and Futurity Stakes are open to all; the Produce Stake is confined to members. Entry blanks can be obtained by addressing the secretary—J. D. SHOTWELL.

CONNECTICUT STATE KENNEL CLUB.—Bridgeport, Conn., Sept. 24.—*Editor Forest and Stream:* At a meeting held at the Atlantic Hotel, this city, Sept. 18, the Connecticut State Kennel Club was organized with the following officers: President, John White, Bridgeport; Vice-President, A. R. Kyle, South Norwalk; Secretary, Dr. Jas. E. Hair, Bridgeport; Treasurer, W. H. Longden, Bridgeport. All persons becoming members at or before the next meeting, Oct. 2, will be admitted as charter members, and after that date an entrance fee of $2 will be charged. We propose holding a bench show in Bridgeport next April.—Dr. JAS. E. HAIR, Sec'y.

MR. ANTHONY'S HALLUCINATION.

Editor Forest and Stream:

F. C. Richter, editor of the *Sporting Life*, Philadelphia, Pa., has been pleased to contradict that portion of my statement referring to the use of a certain letter by the Eastern Club as a basis for the bar of Wm. T. Mitchell in January, 1886, which portion is as follows: "*And on the contents of a stolen letter taken from my possession by fraud and put into the possession of the club by James Watson.*"

I reiterate the statement in its FULL MEANING and am prepared to prove it LEGALLY when the proper time comes. In the meantime, for the public, I will give such *general* facts as can be given without dates or names or prejudicing the legal proof so that evidence to rebut the same may not *perchance* be *manufactured*.

For a long time prior to the trials of 1885, the *Sporting Life* (kennel department) was in direct antagonism to *both* the Eastern Field Trial Club and the Westminster Kennel Club, scarcely an issue appearing that did not contain some item attacking either the one or the other club or its members.

The editor, desirous of securing all the facts derogatory to those clubs, placed himself in communication with those he could reach, and having real or fancied grievances against them.

In this way Wm. T. Mitchell was *foolishly* induced to write *in confidence* a letter reciting certain supposed events, but saying in *this very letter* that IF the facts were EVER used his (Mitchell's) name *must not be mentioned*.

This letter was treated, as it had been intended, by *both* parties *as confidential*, till through *malice* and *spite* the "*Porcupine Combine*" found opportunity to use it.

In the scurrilous columns of the Kennel Department of the *Sporting Life* appeared a notice warning the Eastern Club that Mitchell *ought to be barred*, pitching into me *generally* because I dared *openly* to state my opinion of the Beaufort-Lucia heat, and suggesting that if the Eastern only had this letter in their possession, *how easy* the bar could become an accomplished fact. To make a long story short, *the record shows* that Mr. J. Otto Donner *placed himself in* communication with *either* F. C. Richter or James Watson *in order to obtain* the damaging document, BUT HERE CAME THE RUB. Inquiry of James Watson to whom this *private* and *confidential* letter had been intrusted (F. C. Richter's denial to the contrary notwithstanding) revealed the fact that the columns of the *Sporting Life* were *a little hasty*, that they had agreed *to deliver* a letter *they did not possess*, for at that *very moment* the letter *lay sealed* in an envelope *in a safe* in the city of New York, said envelope inclosed and signed with my name and one other, *not to be opened or used except by mutual consent*.

Taken to task, I suppose by Richter, James Watson began to scratch his head and try to think *where* the letter was. He finally hit on the party *to whom he gave it, wrote* the party for it, that party came to me with the Watson letter and read it to me and *handed it to me as well*.

I failed to give Watson my compliments and say that it was *securely locked up*, that the newspaper to which it had been sent, having violated all *known rules of decency*, I had *purchased* the letter on Mitchell's behalf and *to protect him* and *it should not go back*.

In the meantime, and while the letter was in the city of New York, Mitchell wrote this same Richter, requesting the return to him of *the letter, as it was written in confidence*, and this man Richter, *mark you, Messrs. Editors and Gentlemen Sportsmen of America!!* this man who *denies* my statements, this *corrector* of morals, *this hero* of the hour who descries *scurrilous remarks* (because, forsooth, he has no kennel department now, I suppose, it having *died the death of all rotten things*), wrote Mitchell that the letter *was in his possession, had never gone out of it*, was not *confidential*, and that he should make such use of *it as he chose*, and Mitchell *sent me this letter*. For a week or so after first seeing the original letter written by Mitchell, sealing it up in *the presence of a witness*, and placing the superscription thereon together with the two signatures above referred to, I saw nothing of the receiver of the Watson letter, but one day he came into my office saying he had no end of trouble with Watson, that he wished to protect Messrs. Heath, Mitchell and myself, that he also wished to protect himself, that Watson would not hesitate to defame him, etc.

Finally it was agreed that I should hand him back the letter *sealed*, that he should place it in his safe unopened, and that if Watson again wrote for it he should immediately destroy it *unopened* with other papers he intended destroying, and write Watson that he had done so, and pledging me *his word of honor that he would carry out the agreement*. Believing his statement and his pledges, I handed the letter over in the presence of a witness.

On the 25th day of December, 1885, this person again visited my office, saying he had heard again from Watson, and assuring me that he would *immediately* return to his office, *destroy the letter as he had promised, and so write Watson*.

The public now have the *partial* history of this letter and the *base uses* for which *it was purloined*. Whether the letter was returned direct to James Watson and by him handed to F. C. Richter, or whether he or Richter sent it to J. Otto Donner, the latter using it as the basis for the Mitchell bar of January, 1886, does not alter the statement that "the letter was taken from my possession *by fraud* and put in the possession of the club *through James Watson*, if not handed to the President directly or mailed to him *through the post. Fortunately a certified copy of this letter is in existence*, and now one word to F. C. Richter.

No one but a man of the *lowest type*, Mr. Editor, associating *with the scum of all that is indecent* would descend to the level of *decoying* a man into writing a *confidential letter* and then use it against *the man so entrapped*.

It is well for the public to have this history, a history that can and will be proved whenever the proper moment arrives. Mr. Mitchell will need no suggestion from me that F. C. Richter's public confession of his use of the letter is good grounds for heavy damages.

I further make the suggestion, Messrs. Editors, that as the Eastern Club had only this letter as the *real basis for a bar*, prudence and common forethought would have suggested not alone the propriety but the wisdom of *including* this letter, and a true record of the proceedings had in January, 1886, in the statement sent both the American and Indiana Clubs, and not have substituted *what is practically a rank forgery instead*.

Any other *little data* that may be needed in proof of my assertions made in your issue of Sept. 20, 1888, I stand ready to give whenever my statements shall be questioned, either by the club, its officers or any one having authority.

Yours, JAMES L. ANTHONY.

NETHERWOOD, N. J., Sept. 29, 1888.

PUBLIC JUDGING AT BIRMINGHAM DOG SHOW.

THE Birmingham dog show has a longer history than any other. Following close on Newcastle, which was the first of these institutions, Birmingham has an unbroken record since 1859. The National, as it is called, or rather as it calls itself, was considered the premier show of the year, even for some time after the formation of the Kennel Club in 1870, and its early series of shows at the Crystal Palace. At that time, and for some few years thereafter, the National Canine Society's shows at Nottingham held a high position, and at one time looked like being a formidable rival to both the Birmingham Society and the Kennel Club.

I thought then, and I have seen no reason to alter my opinion, that the National Canine Society was founded on the soundest principles, and the best calculated to attain the objects professed, which with all of them was, and continues to be, the improvement of the dog. The active opposition of the Kennel Club, together with the apathy of the general body of exhibitors, by whom the real merits of the several schemes never seemed to have been seriously considered, swamped the National Canine Society, and Nottingham soon ceased to appear among the list of annual fixtures.

An attempt was made by the National Canine Society to combine all individual interests in one, but the Kennel Club knew their strength, and evidently thought they saw their way to securing irresponsible power over canine interests in Great Britain. Events have shown that they did not overestimate their chances, for the club has a power, and exercises it under conditions so opposed to the spirit of the age as to be something marvellous.

Birmingham rode a very high horse for a long time, vainly assuming that it could keep off its neck the iron heel of despotism exercised by the Kennel Club. That was short-sighted enough; but it was perhaps eclipsed by the folly of attempting too late the formation of a truly national society on an elective basis in opposition to the Kennel Club. It was painfully evident, even to those who wished the scheme well, that Birmingham proposed a kennel parliament on the broadest elective basis, not from love of the principle, but to save their own existence. The result of the attempt, with that memorable volume of a stud book, wherein the editor, like the wise builder he was, began laying his bricks at the top of the chimney, proposing to work down to the foundation, was a miserable fiasco.

Birmingham had been goaded into the temporary adoption of a principle far too big and generous for them, simply because the Kennel Club, having grown in strength, felt secure in turning the screw on Birmingham and boycotted the show, utterly ignoring its existence in the Stud Book. Birmingham felt the iron enter its soul; hence the spasmodic effort to appear as the champion of public virtue, and by parading in liberal clothes many sizes to large for it, to appeal to the people as the protector of their interests. If Birmingham had had the principle at heart, it would have given practical expression to it years before; but adopting the nobler part out of compulsion, and in craven fear of its own existence, its efforts proved a most disastrous failure, ending in a most undignified surrender.

Bit by bit Birmingham has given way to demands for privileges which the public call rights, and now, under the severe pressure of increasing competition, private judging (which it has always declared to be an essential and almost sacred institution) is given up in favor of public judging, and there is even an attempt to meet the demand for limiting the duration of the show. I always objected to the exclusion of the public from seeing how the dogs were judged, and claimed that if it were impracticable to admit the public that the newspaper reporters, who are the representatives of public interests, should have free admittance and be left untrammeled in the performance of their onerous duties.

At last we are to have public judging at Birmingham, a fact I am glad to recognize; still, I wish it had been granted under conditions more honorable to Birmingham than compulsion. No concessions, however, whether from the National Society or the Kennel Club, can ever prove more than mere temporary makeshifts and avoidance of what is sure to come eventually, and that is the election of the rulers by the ruled.—*Hugh Dalziel in The Bazaar.*

JUDGING AT BUFFALO.

LONDON, Ont., Sept. 24.—*Editor Forest and Stream:* In the report of the Buffalo dog show in your issue of the 20th, your reporter, in the open dog class for English setter dogs, speaks of Roger, first prize winner, as having been previously overlooked by New York judges, and takes upon himself the credit of having given him his first blue ribbon. If we are not mistaken Roger got second at the last New York show, before your reporter ever judged him—proving that he had not been entirely overlooked by New York judges. With this criticism he passes him over and criticises the second prize winner at Buffalo by saying his head, while not bad, is a trifle plain. Admitting that his head is not perfect, are we to suppose Roger, with his faulty muzzle, to be the correct type? Next, Locksley's eyes are too light in color, while Roger's eyes are much lighter, or yellower, more correctly speaking. Without mentioning the good neck, beautiful shoulders, chest and back of Locksley, he passes to his loin, which is "too long"—this must be in your reporter's mind, as he is not a long dog—his hocks are a trifle too close, which we consider a much better form than the opposite, and his tail, if long, is carried much as the dog feels, not invariably in the same position. We must further disagree with your report in the matter of substance, as Locksley is a hardy, stout, muscular dog, or he never could weigh as much as he does in such light condition as he was shown, and he is possessed of more quality than any dog shown in his class. We are pleased to notice that other reporters differ from yours about the merits of the two dogs mentioned, and however good a judge of non-sporting dogs he may be we would prefer some one else of more practical experience to select a dog for our use in the field, and also as a bench show dog.

I am not adverse to criticism, and am willing my dogs should have their share of it, but would prefer reliable criticism, not slight imperfections magnified and fancied ones brought forward where none exist. T. G. DAVEY.

BEAGLES AND FOXHOUNDS.

HORNELLSVILLE, N. Y., Sept. 29. *Editor Forest and Stream:* Your correspondent who spells his *nom de plume* backward and hides behind it, says he "has no grudge against Bannerman or his owner," and that "Bannerman has produced but one really good dog and he has gone to pieces." My advice to "S. Reicnaf" is to try and find some of the pieces and improve the interbred and rabbit-shy Rowetts. As I own sons and grandsons of the great and only Bannerman, I cannot let him be abused without a reply.

"S. Reicnaf" has probably been asleep, or he would have heard of more than one good one by Bannerman. What would he call Banner Boy II., Royal Krueger, etc.? Royal Krueger is said by competent judges to be the best beagle dog living, and he transmits his good qualities to his get. They do not lack in head qualities nor earage. Else "Uncle Dick" could not have won first at Buffalo and Syracuse. His ears spread over sixteen inches, and the Syracuse judge, President A. B. Club, also a breeder of the Rowetts, said "he was the best pup he ever saw," and he also said the same of his sire at Philadelphia, 1888.

"S. Reicnaf" will not improve the Rowetts by interbreeding. They have too much Rowett blood now. The largest breeder of beagles and rabbit hounds told me that he never saw a pure Rowett that was not afraid of a rabbit; and Messrs. Phœbus, Wixom and Krueger indorse it. Surely four of the largest beagle breeders in the world should know something about breeding, and the value of an out cross from the Rowetts.

I received a letter to-day from a well-known breeder. He says "at Buffalo Mr. Watson's type was the very small dog, while at Syracuse Mr. Schellhass stuck to the large type. I saw several that should have been thrown out, being over height, but I suppose the judge was easy on that point, as many say his champion Trailer is in the same boat. Of course Cook and Schellhass wrote up the beagles and foxhounds for Major Taylor and they did not forget to praise their own style, and Cook tries to belittle the real English foxhound. You see what he says of Dan T. and Pride of Hornell. Why either one is better than any Cook owns; and I would not trade the brace for Cook's whole pack. No judge that knows anything about fox hunting or foxhounds but would send every one of Cook's pack out of the ring. I wonder why he does not show under an English judge, who knows what a foxhound looks like. Schellhass is not a judge of any breed; it takes more than five years to be a master mechanic in any line of business; and five years ago he was only a boy, unknown to the fancy.
